The Secret of Achievement

Partial List of Contents

The Law of Great Thinking.
The Four Factors on which it depends.
How to develop analytical power.
How to think "all around" any subject.
How to throw the mind into deliberate, controlled, productive thinking.
Detailed directions for Perfect Mind Concentration.
How to acquire the power of Consecutive Thinking, Reasoning, Analysis.
How to acquire the skill of Creative Writing.
How to guard against errors in Thought.
How to drive from the mind all unwelcome thoughts.
How to follow any line of thought with keen, concentrated power.
How to develop Reasoning Power.
How to handle the mind in Creative Thinking.
The secret of Building Mind Power.
How the Will is made to act.
How to test your Will.
How a Strong Will is Master of Body.
What creates Human Power.
The Six Principles of Will training.
Definite Methods for developing Will.
The NINETY-NINE METHODS for using Will-Power in the Conduct of Life.
Seven Principles of drill in Mental, Physical, Personal power.
FIFTY-ONE MAXIMS for Applied power of Perception, Memory, Imagination, Self Analysis, Control.
How to develop a strong, keen gaze.
How to concentrate the eye upon what is before you—object, person, printed page, work.
How to become aware of Nerve Action.
How to keep the body well-poised.
How to open the Mind and Body for reception of incoming power.
How to exercise the nerves.
How to throw off Worry.
How to overcome the tyranny of the Nervous system.
How to secure steady nerves.
How to train the Hand.
How to maintain the Central Factors of Body health.
Difficulties in Mastering Harmful Habits.
The Law of Will-Power in Habits.
The Mental Law of Habit Cure.
Fifteen Methods of mastering Anger and Irritability.
The Psycho-Physical cause of the Drink Habit.
Nine demonstrated regimes for mastering this curse.
How to overcome embarrassing Hesitation of Speech.
How to prevent Mind-wandering.
How to hold the mind closely upon any desired line of thought.
How to speak tersely, emphatically, and think ahead for best expression.
How to school yourself against Thoughtlessness.
How to overcome Indecision.
The Principles of Memory.
How to throw Attention and Energy into Memory culture.
The Psychological Principles for memorizing words, sentences, anything.
The Law of Memory.
Method for remembering the substance of any book.
How to plan ahead in your career through IMAGINATION.
How to plan conduct so as to avoid former mistakes of Thought, Action.
How to make the imagination fill the mind with Life, Action, Energy, Beauty, scenes of Pleasure, Profit.
How to work the Imagination for discovery and invention.
How to cure diseased imagination.
How to banish unhealthy mind states.
How to banish fear of Men, Ill Luck, Death, Misfortune.

"POWER OF WILL"

By Frank Channing Haddock, Ph. D., M. S.

A Scientific Course in Will-Training Which Has Helped Over 20,000 People—Sent Free for Inspection for 5 Days

THIS great work provides a thorough course in Will-Training, consisting of 28 lessons. It reveals the secrets as to how great men train their wills into wonderful power.

All psychologists will testify that great men are not born with more gifts than others. They simply make something of their gifts, and others do not. They learn how to use their wills. We, on the contrary, allow the great powers we possess TO LIE DORMANT.

How to Develop Inflexible Will

It has long been known that the Will can be trained into wonderful power—like memory, or like any one of the senses—*by intelligent exercise and use.* The trouble with almost everyone is that they do not *use* their wills. They carry out other people's wills, or drift along with circumstances.

If you held your arm in a sling for two years, the muscles would become powerless to lift a feather. That is exactly what happens, in most people, to the faculty we call "will-power." Because we never use the Will, we finally become *unable* to use it. We degenerate into beings little more than slaves—unhappy, discontented, envious, hoping blindly that "some day"—without any effort—we will attain what we most want in life.

Helps Everybody

"Power of Will" provides the shake-up that ninety-nine out of every hundred people need. Men like Judge Ben B. Lindsey, Supreme Court Justice Parker, Wu Ting Fang, ex-U. S. Chinese Ambassador, Lieutenant-Governor McKelvie, of Nebraska, General Manager Christeson, of Wells-Fargo Express Co., Asst. Postmaster General Britt, E. St. Elmo Lewis, of Burroughs Adding Machine Company—and literally thousands of other men of action and ambition like them—read, use, and praise "Power of Will."

Its readers talk of it as of a Bible. It has made decisive men of action out of the most miserable "down-and-outs." It has cured victims of drink and other vices. It has made big men bigger by showing them how to use their brains better. It is a goad to young and old alike. It has reawakened ambition in men and women who have been turned from their life purposes, and shown its students how to carry forward their ambitions into consummation.

Sent on Free Trial for Five Days

The price of the book—although it is really a complete course in Will-Training—is only $3.00. The publishers will gladly send a copy free, for five days' inspection. Send no money now. Merely mail the coupon below, enclosing your business card, or giving a reference. If you decide to keep the book, send the money. If not, mail the book back. Tear out and fill out the coupon now, before you forget.

Pelton Publishing Co.

72 Wilcox Block, Meriden, Conn.

What Readers Say

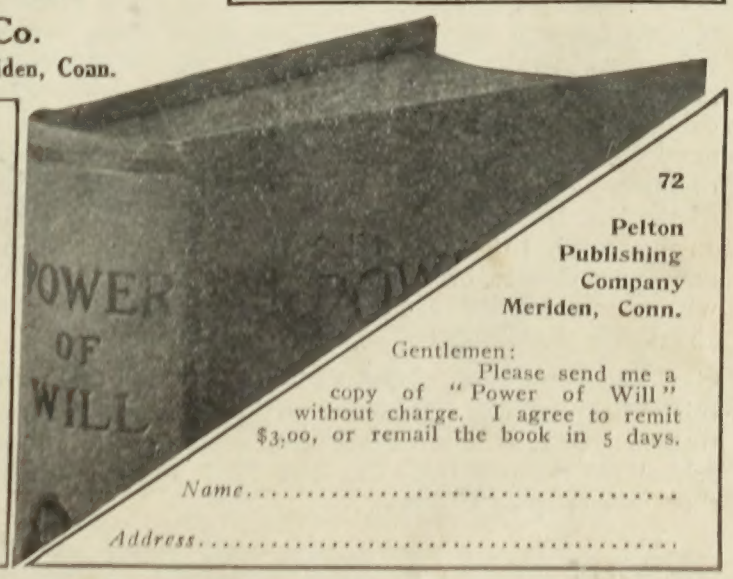
"I would not willingly separate myself from it."—CHAS. W. MEARS, Adv. Mgr. Winton Motor Car Co., Cleveland, Ohio.

"The five day examination period allowed by you is certainly long enough to convince anyone that this is a book one needs. I regret I did not know there was a book like this long ago. My enthusiasm is beyond description."—ROY S. THARP, Passenger Dept., Southern Pacific R. R. Co., Oakland, Cal.

"In it I found rules and principles that make it worth its weight in gold."—DIST.-ATTY. GOODWIN, Oil City, Pa.

"I have your 'Power of Will' and would not take $100 for it."—J. A. WAGNER, Sec.-Treas., Toronto Academy of Music, Edmonton, Can.

"Dollars-and-cents do not count when buying Prof. Haddock's books. I want everything he publishes, because I consider his works of priceless value."—OLIVER N. MOXEY, Moxey Realty Co., San Francisco, Cal.



"Only wish I had a little of this knowledge years ago."—R. W. OSBORN, Office of the Sec'y, Gov't Porto Rico.

"I consider 'Power of Will' invaluable to the systematic and thorough student in any walk of life."—DR. WM. GROUND, Ex-Pres. Wisc. State Med. Asso., Superior, Wis.

"The best book of the kind published. I haven't exhausted its possibilities, and probaly never will."—ROLAND MILLER, P. O. Box 830, Denver, Colo.

"Has startled thinking men all over the world. If you want to know what you are, or can be—get it. It opens up a new world."—JAMES F. ELLS, President National School of Salesmanship, Minneapolis, Minn.

"Better than anything I have met in FORTY YEARS' study of these subjects. I am certainly grateful to secure this book."—REV. WM. HENRY BARNES, 612 N. 43d St., West Philadelphia, Pa.

THOUGHTS ABOUT CHAUTAUQUA

SAYINGS AND JOTTINGS FROM NOTABLE SOURCES

"I cannot be present at the meeting called to organize the Chautauqua Literary and Scientific Circle; but I am glad that such a movement is on foot, and wish it the fullest success. By giving a portion of their time to a vigorous training of the intellect and a study of the best books, men gain the power to deal satisfactorily with questions with which the mind might otherwise become bewildered. . . . I perceive this important advantage in the proposed organization; namely, that those who engage in it will mutually encourage each other. I shall be interested to watch, during the little space of life that may yet remain to me, the progress and results of the plan which has drawn from me this letter."—William Cullen Bryant.

"I could say nothing better than the great truths Chautauqua has taught to everyone, that if you have a rounded, completed education you have put yourselves in relation with all the past, with all the great life of the present; you have reached on to the infinite hope of the future. I venture to say there is no man or woman educating himself or herself through Chautauqua who will not feel more and more the opportunity of the present moment in a present world."—Alice Freeman Palmer.

"Chautauqua, like Judaism in its best estate, is an institution for the promotion of the higher life, social and intellectual. . . . Chautauqua cultivates faith and works."—The late Prof. Herbert B. Adams, of Johns Hopkins.

"To direct the reading for a period of years, for so many thousands is to affect not only their present culture, but to increase their intellectual activity for the period of their natural lives, and thus, among other things, greatly to add to the range of their enjoyment. It appears to me that a system which can create such excellent results merits the most cordial praise from all lovers of men."—Prin. A. M. Fairbairn, Mansfield College, Oxford, England.

"The true significance of the Chautauqua movement seems to me not to lie chiefly in the great summer gatherings, in the crowded lectures, the enthusiastic conferences, and the inspiring commencement addresses at Chautauqua itself, nor in the diplomas awarded there. But the Chautauqua circles throughout the land mean useful, wisely-directed home reading and intelligent general conversation in the home circle wherever their influence extends. Not only is it true that neighborhoods which have been stagnant for the lack of any common themes for conversation higher than the local gossip have been stirred to new intellectual life when the circles met to consider the facts of history or science and the noble thoughts and perfect forms of the best literature of all time, but in the home circle as well. In the family life of thousands of homes, children and parents have new themes brought into their horizon and talked about with a common interest at the table and in the evening."—Ex-President Merrill E. Gates, Amherst College.

"The New York Chautauqua—father and mother of all the other Chautauquas in the country—is one of the great institutions founded in the nineteenth century. It is essentially a school for the people."—The late Prof. Francis W. Parker, of the University of Chicago.

"My heart swells with pride every time I look at my own diploma, because it was secured during the very busiest portion of a busy business life. I heartily recommend it to any one who can possibly find time and a few dollars to try it."—John R. Pepper in "Thirty Years at the Superintendent's Desk."

"It is among the most enlightening of our educational agencies in the United States."—John Graham Brooks, author "The Social Unrest."

"It has helped very many to redeem small portions of time which otherwise would have gone to waste. Some savings banks refuse to receive fractions of a dollar. But, with a book at hand, the smallest fractions of an hour may be turned to good account."—James H. Carlisle, President Wofford College.

"It is the most inclusive, democratic, and available educational institution in the world."—Alfred Edward Lavell in "The Christian Guardian."

"Many a movement that goes by another name has lit its torch by the fire the C. L. S. C. has kindled. As it looks to me, the great achievement of the C. L. S. C. has been that it has prevented an arrest of development. There is no danger so great, so universal, as mental arrest and stagnation. When we get through high school or college we are absorbed in other affairs and we never advance or grow. We are more intense in our own special calling or line, but as for general mental growth, we have stopped. Senescence, the golden period of life, the crown of age, which used to be symbolic of wisdom, but which is now too often not wise but foolish, that glorious consummation of life we ought to strive for as a people, as family stocks, as a race."—G. Stanley Hall, President Clark University.

"Your scheme to induce business men and others to pursue useful courses of reading in science and history is worthy of all commendation. While we cannot expect to make such persons scientists or scholars, we may expect them to become appreciative of things scientific and scholarly, and to be able to discriminate between the false and the true. The books for such a curriculum should be very carefully chosen. In science they should be such as only give the aspects of nature and a few fundamental principles. Anything technically scientific would either disgust or mislead In history they should be clear outlines, rather than exhaustive philosophic treatises."—Howard Crosby.

"What is education? It consists in the formation of certain habits. When a man is truly educated he has acquired the habit of observing facts and people; of thinking about them; of reading what other people think about them; of growing his own thoughts on a variety of subjects; of regulating his own thoughts, avoiding idle reverie, and acquiring the art of concentration; of expressing his thoughts by voice and pen; of embodying his knowledge in action, and this in the service of the individual and society. This man is the truly educated man. Of course, school contributes to education. Its advantages we have no time now to consider, but Chautauqua stands for the idea that these habits may be formed and cultivated out of school. Chautauqua emphasizes the value of fragments of opportunity."—Bishop John H. Vincent.

"The Chautauqua Assembly is the visible center of the greatest university in the world."—New York Herald.

CALENDAR

In *July* the International Congress of South American students will be held at Santiago, Chile.

From *July 6* to *July 11* in St. Paul will be held a meeting of the National Education Association.

The open championship of France in golf will be played for at Le Toquet, beginning *July 6*.

The annual convention of the Music Teachers Association of California will be held at San Diego *July 13, 14, 15* and *16*.

A conference of the members of the legal division of the Reclamation Service will be held at Salt Lake City, Utah, *July 14* to *21*, in order to secure the fullest measure of coöperation and better mutual understanding among those engaged in legal work of the service.

Wagner performances at Bayreuth this summer are scheduled as follows: "The Flying Dutchman," July *22* and *31*; *August 5, 11* and *19*; "Parsifal," *July 23, August 1, 4, 7, 8, 10* and *20*; the "Ring," *July 25, 26, 27* and *29*, and *August 13, 15, 17* and *19*.

The Gold Cup races for the Challenge Cup of the American Power Boat Association will be held on Lake George *July 29-31*.

The annual art exhibition of the Royal Academy is open in London until *August 3*.

A Colonial Exhibition will be held at Semarang, Java, from *August to November, 1914*. It is to "give a comprehensive picture of the Dutch Indies in their present prosperous condition attained since the restoration of Dutch rule in 1814."

The British Association for the Advancement of Science will hold its next meeting in the antipodes. The Commonwealth of Australia will pay the expenses of 150 members, who will be taken on a tour of the principal cities from *August 8* to *September 1*.

The National Negro Business League is to hold its fifteenth annual session at Muskogee, Oklahoma, *August 19, 20* and *21*. This organization is composed of negro men and women who have achieved success along business lines.

There will be an eclipse of the sun on *August 21*—total in parts of Europe and Asia, and partial in northeastern America. The full effect will be seen in Persia, Russia and Scandinavia. At sunrise, a partial eclipse will be observed in Canada and in our northern states.

The Biennial Conference of Friends (Liberal) will be held at Saratoga Springs, New York, from *Ninth Month, 2d*, to *Ninth Month, 8th*.

September 6 has been designated as Labor Sunday by the Federal Council Commission on the Church and Social Service.

At Denver, Colorado, from *September 8* to *9* will be held the eighth annual conference on taxation, in charge of the National Tax Association.

The races for the America's Cup are to be held at New York on *September 10, 12* and *15*.

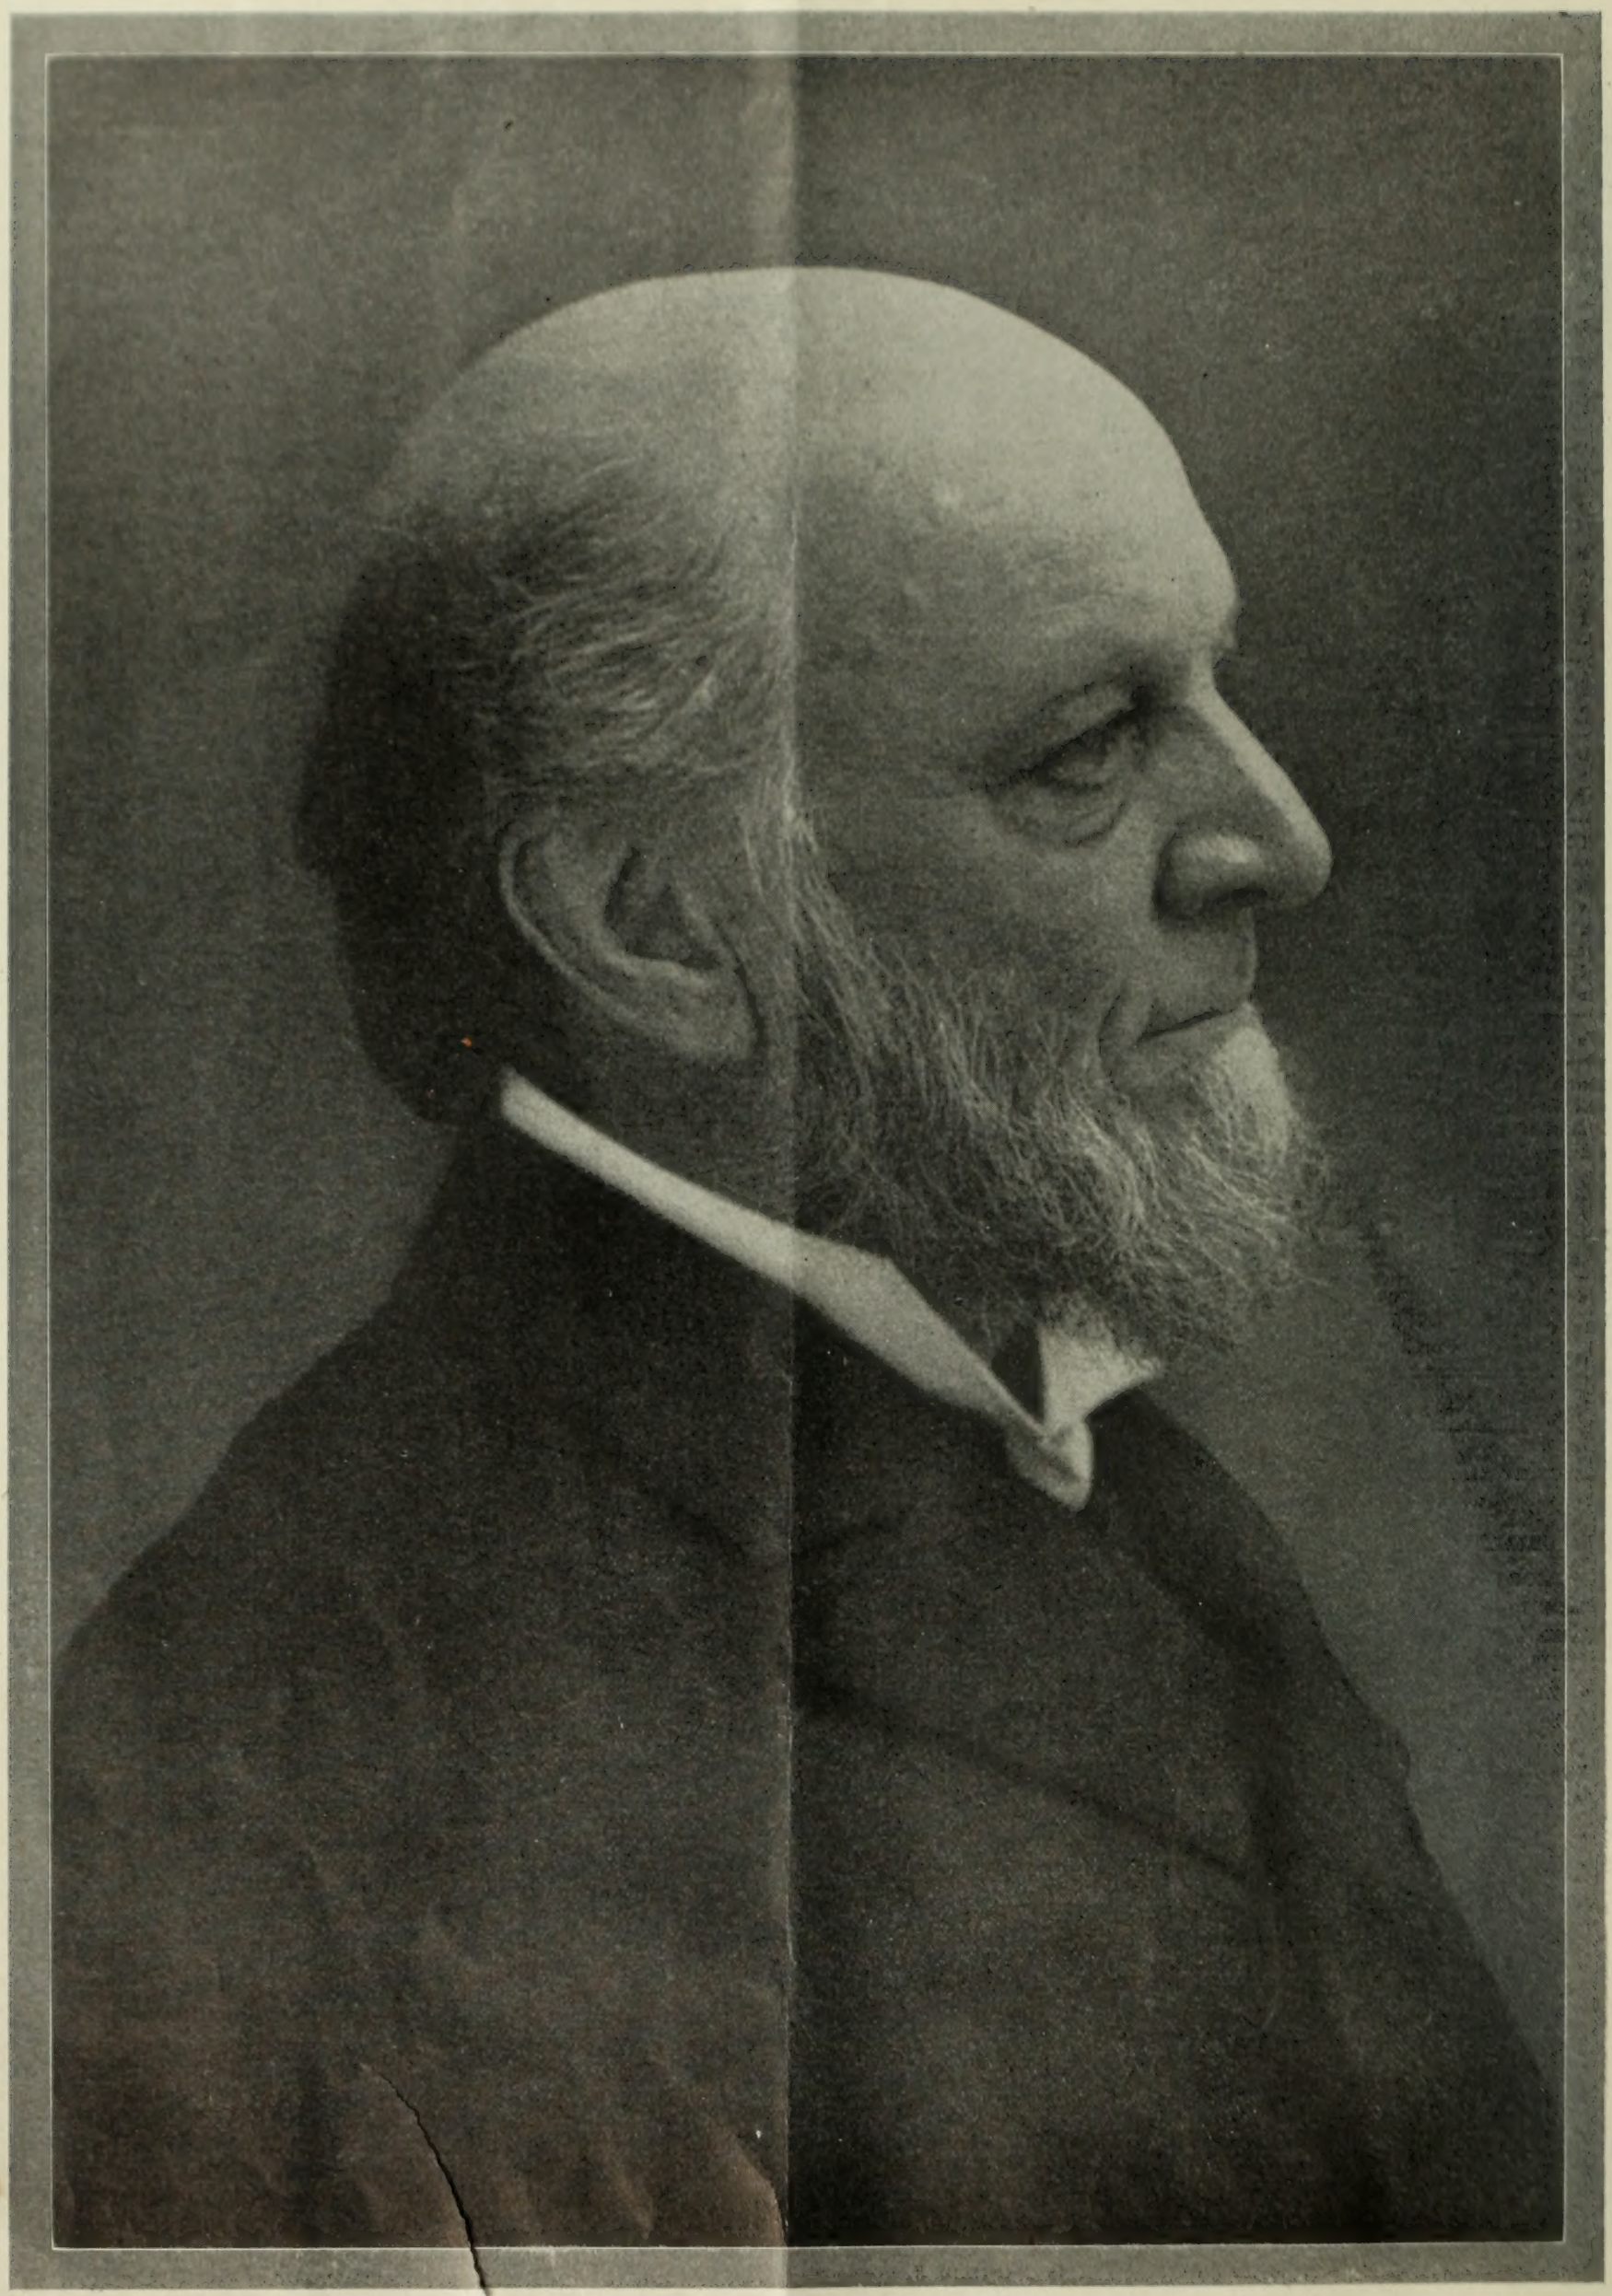
The twenty-first World Peace Congress will occur in Vienna *September 15-19*.

The Baltic Exhibition at Malmö, Sweden, to which Swedish, German, Danish and Russian exhibits have been sent, is open on *September 15*.

An Anglo-American exposition to celebrate the centenary of peace and progress in arts, sciences and industries is open at Shepherd's Bush, London, till *October*.

At Leipzig an International Exhibition for the Book Industry and the Graphic Arts will remain open until *October, 1914*.

The United Typothetae and Franklin Clubs of America will hold their twenty-eighth annual convention in New York *October 6, 7, 8*.



On May 17, 1814, Norway adopted a Constitution as a free and independent kingdom, having just been released from Danish control. To commemorate this event a Centennial Exposition is being held at Christiania until *October 15*.

The American Bar Association will hold its annual meeting on *October 20, 21* and *22*, at Washington. There will be addresses by William Howard Taft, president of the association; Senator Root, the Ambassador from Argentina, and Sir Charles Fitzpatrick, Chief Justice of Canada.

The seven hundredth anniversary of the birth of Roger Bacon will be observed at Columbia with commemorative exercizes and the publication of a volume of studies. A great pageant of the culture of the thirteenth century will be given on *November 4*.

Barnard College, in Columbia University, will celebrate its twenty-fifth anniversary on *November 5*.

The annual convention of the National Suffrage Association will be held at Nashville, Tennessee, *November 12* to *17*.

UNCONVENTIONAL EDUCATION

IT is well to be graduated from the grammar school. That gives something of an education. It is very desirable then, if possible, for a boy or girl with the least bit of ambition, to pass to and thru the high school. If then it is anything more than a ten-dollar boy or girl, it is a privilege to be allowed the thousand-dollar education which the college will allow. It is a further advantage for the choice student to take the post-graduate instruction which the universities and professional schools offer. Then the privilege of a period of study in a foreign institution and in another language is no waste of time. Fortunate is the boy or girl, with brains and will to make it worth while, to whom such manifold advantages are given.

But all this is not necessary in order to get real culture and a genuine education. Shakespeare did not have it. Milton did have what corresponds to it. Milton had the culture of books and schools and travel. Shakespeare had the mental training which came to one who made the most of contact with men and rubbing against the world. A student he must have been, a reader of books, a listener to the addresses of statesmen and the converse of the best culture of his day. His was an anticipative Chautauqua education.

We have now evening schools and correspondence schools, and university extension courses, the Chautauqua lectures and books of instruction in various branches of learning, which will give to the student at home very much of what he would otherwise miss by his inability to go to a university. It has often been said of The Independent that the reading of it is a university training, and so is the faithful pursuit of one of the courses provided for home study.

All that we can learn at a university we can learn from printed books and journals. It is from books and journals that college professors get their knowledge, or most of it. In a good public library the same sources of information are open to any one who cares to look for them. He will not find it on the ball-field or in the best selling novels. It means real study, and study is not confined to schools. One can be a worthy and successful student at home.

We do not expect many of those who pursue home courses of study to be like Shakespeare or Edison, or to add by their investigations to the sum of human knowledge. But what they can expect is to be competent, intelligent, or even learned men and women. They can be able to know literature or science or history or philosophy. They can be able to criticize and judge. They can tell bad from good, false from true. They need not be misled by charlatans in science or politics or sociology. They can appreciate the beautiful in art or poetry, and can know and tell why they love it. They can have the enjoyment of knowledge and the enthusiasm of mental growth and equipment. It is to give inspiration to such ambitious young people and old that Chautauqua courses and university extension courses are offered. And it is the dearest ambition of the editors of The Independent to help in such happy training—not to give mere amusement, but to teach both knowledge and wisdom; to provide the instruction and the inspiration that will give force to character, and discrimination in enjoyment, and the basis for a sound judgment on all the main lines along which humanity is moving on to its highest achievement.

BUSINESS AND CONGRESS

PRESIDENT WILSON had just heard of the great Claflin failure when he began an address to a party of editors from Virginia. In that address, which was intended for the general public, he asserted that "the signs of a very strong business revival" were "becoming more and more evident from day to day." Action in Congress upon the trust bills would not be postponed, he declared, and under the constitution of freedom provided by those bills there would be a "boom of business in this country such as we have never witnessed in the United States."

It must be admitted that for some time past the condition of business in this country has not been satisfactory. This Claflin failure is the greatest bankruptcy in the history of the American drygoods trade. The firm or company had a long and fine history. At the time of its downfall, in connection with its wholesale trade it controlled 27 department retail stores, scattered about from New York to Tacoma, and holding companies associated with it controlled 10 more. Partisans on one side say that the causes of failure were tariff reduction and depression due to pending legislation at Washington; those on the other assert that they were local conditions and overextension. The truth appears to be that some loss had been caused by tariff changes; that the central company had not enough capital for the great task it had undertaken, if allowance were to be made for fluctuations in business; and that while a continuance of general prosperity would probably have averted disaster, the prevailing hesitation and caution and apprehension precipitated the wreck.

We do not point to the Claflin failure as an example of a collapse due directly and exclusively to public apprehension as to national legislation. There are special conditions and contributory causes to be considered. Still, it is probable that the company would have gone on, without paralyzing embarrassment, if general business had not been suffering from depression.

This depression is by no means extreme, but it exists. We should be glad to believe, as the President does, that it will soon be displaced by the greatest boom ever known in the United States. If such a boom shall come, however, it will not be due to enactment of the trust bills recently passed by the House. We fear that enactment of those bills, or of many of their provisions, will not only prevent the boom he has in mind, but even deepen the depression or stagnation that exists.

WE have recently spoken briefly of the causes of that stagnation. Tariff revision is not one of them, altho certain partizans insist that it is. Our manufacturers, if we take our industries as a whole, have not been harmed by the tariff changes. There are a few exceptions to this rule. Nor have consumers gained any measurable benefit from the revision. The full effect of the changes, however, cannot yet be seen or estimated. They compel a readjustment which involves some cost. But the new tariff law has not caused depression.

One cause, as we said recently, has been the failure of the Interstate Commerce Commission to make and announce a decision in the railroad freight rate cases. The time is at hand when the decision will be given to the public. We do not see how the long delay can be defended or excused. The public and the railroad companies have been led to expect that the application for permission to increase the rates would be refused. The railroads need the additional revenue. This is shown by official and trustworthy reports. They have economized by reducing service and dismissing a large number of employees. They have also refrained, so far as possible, from buying the products of the steel mills, of which they are the largest consumers. Therefore the iron and steel industry, one of much importance, has suffered, and other industries have been affected indirectly. There has been no time in the last six months when a decision favorable to the roads in this rate case would not have sharply stimulated general business.

Hesitation and dullness have been due in great measure to a prevailing conviction on the part of a large majority of business men that the proposed and pending business legislation—the trust bills, and such measures as Senator Owen's Stock Exchange bill, which he recently sent from committee to the Senate by a trick —was in the hands of legislators wholly unsympathetic. These business men have seen evidence of this in repeated public utterances and many legislative propositions. They know that the pending trust bills cover a great deal of ground, but they know very little about their provisions, altho they are familiar with the unwise exemption of labor unions and the legalizing of various strike methods. A result of their belief and apprehension has been restraint, and restraint has caused dullness.

It has been said that business interests would be affected more favorably by final passage of the trust bills before adjournment than by postponement until the next regular session or to a special session two months earlier. We might agree to this if the bills were good ones that ought to be enacted. They are not what they should be, and they should not become laws either in the form given to them by the House, or with the slight changes foreshadowed in the Senate.

They were passed in the House without due consideration, and after inadequate debate. In the Senate committees there has been some attempt to improve the work of the House. But the Senate is weary. Its members, like the Representatives, want to go home or to seek rest elsewhere. Already several have departed. This is legislation of a very important kind. It relates not only to all corporations engaged in interstate business, but also to an official supervision of the issue of all securities by the railroads of the United States, which are nearly half of the railways of the world. The provisions of this railway securities bill may, some railway officers assert, very perceptibly promote government ownership.

FOR years we have held that there ought to be a Trade Commission, empowered to act in the field of interstate trade. If the pending Federal Trade Commission bill, with some amendments, should be passed, the commission thus created could from time to time recommend such legislation, supplemental to the Sherman Act, as the result of its inquiries might suggest. If Congress should be content with the passage of such a bill, business interests would be well served.

Mr. Vanderlip, president of the largest bank in the country, and formerly an Assistant Secretary of the Treasury, suggests that Congress should now perfect the bills, that the Senate and the House should agree upon the exact form of them, and that then there should be adjournment, giving the country three months for a study of the proposed laws, and voters three months for reaching a conclusion to be expressed at the polls. It is a suggestion that deserves much consideration.

It seems to us that much that is proposed in the bills —a brief bill creating a commission excepted—should be made the subject of careful and prolonged study; that legislators should seek all the light that can be given by the testimony of business men, railroad officers and bankers, and that much help could be gained from the experience and inquiries of the commission. All this would require postponement of action. But action before adjournment is demanded by the President, and we presume that action will be taken. We hope that the crops will be bountiful enough to prevent the discouragement, or compensate for the injury, which may be due to hasty and unwise legislation.

THE TRIUMPH OF MEDIATION

THE proffer of mediation by Argentine, Brazil and Chile to prevent war between the United States and Mexico we have characterized as one of the most dramatic and glorious events in the history of international relations. The acceptance of mediation by Wilson, Huerta, and "in principle" by Carranza was proof positive that all parties to the dispute were sincerely desirous of finding some bloodless path to peace.

The resort to mediation is now justified by the out-

come and proves to be a victory in the greatest of all wars—the war on war, for last week a peace protocol was signed at Niagara Falls by the mediators and the delegates of both the United States and Mexico which not only completely settles the international aspects of the controversy, but what is likely to be of even more importance, refers the internal questions for settlement to a peace conference of the warring factions, the A B C powers and the United States acting jointly as advisers and mediators. To this conference the Constitutionalists have agreed to send representatives.

The United States promises to recognize the provisional government to be set up, and to exact no indemnity from Huerta. The question of the salute is entirely waived. The alphabetical powers agree likewise to recognize the new government. Mexico binds herself to make full payment for the property of all foreigners destroyed during the revolution.

Thus war is averted. But something even better than that has been accomplished. Not only do Mexico and all Pan-America now perceive the disinterestedness of the United States, but the four greatest republics of the New World, acting for the first time as a political unit, pledge a lasting friendship to Mexico and prove that the nations of America, unlike the nations of Europe, can work disinterestedly and in harmony for the mutual peace and prosperity of a hemisphere.

Thus peace dawns in Mexico, South America comes into her own and President Wilson, who led the American people up to the very brink of the abyss, has saved the country from what Thomas Jefferson called "the greatest scourge of mankind."

This is a feat of statesmanship scarcely surpassed in the annals of government, and Woodrow Wilson is the man who deserves the chief credit for it.

ON THE ART OF LYING IN A HAMMOCK

THIS is the season, the all-too-brief season, between the passing of frost and the coming of mosquitoes, when one may practise the gentle art of hammocking with the greatest satisfaction. It is not to be acquired in a moment; one may well spend hours at it. There are few employments more profitable for those who live in this country and century. An hour in a hammock is a vacation in itself, more of a vacation than a day's excursion at half-rates for the round trip, everything included, and don't miss the train. Of all the New World's contributions to the Old—and the list comprizes such things as bananas and phonographs, rag-time and dentistry—there is none in which we can take more just pride than the hammock. Other forms of furniture, stools, chairs, sofas and beds, force the human figure to conform to their own often highly inconvenient shapes and attitudes. If suited to one person they are necessarily unsuited in hight, length or curvature to another. But the hammock has no mind of its own. It adapts itself spontaneously and perfectly to its occupant, be he or she fat or lean, long or short, rectangular or curvilinear. The body is supported evenly at all points and when the posture changes the balance is automatically adjusted with almost fluidic sensitiveness. That is, if you know how. Otherwise not.

We are speaking, of course, of the real hammock, the net which Johnson defined in his dictionary as "a reticulated fabric with interstices between the intersections." The kind that used to be made out of a barrel by weaving the clothesline thru holes in the staves and then knocking off the hoops, or the modern kind which is merely a flat wire mattress suspended by its four corners, is not to be classed as a true hammock. The interstices are useful not only for ventilation, but also for catching buttons and hair and so preventing sudden motions, inharmonious with the reticulated environment. Not every one can learn the art. It requires, we might say, the hammock temperament. People born with an ankylotic backbone, due usually to the inheritance of a Puritanic chromosome, may never be able to enjoy the reclination of a hammock. Such people have only two possible postures, the perpendicular and the horizontal. They must be either fast asleep or wide awake. They do not know that intermediate state, perhaps more delightful than either, to which the hammock is most conducive. The even equilibrium of the airy cushion, the rhythmical rocking back and forth induced by a push of the toe or the pull of a cord at regular intervals, the double draft of air passing first in one direction then in the opposite, puts one into a hypnoidal state, the realm of reverie, suspended like Mohammed between two worlds, the world of dreams and the world of reality, with no desire to enter either.

THE CARNEGIE FOUNDATION

IT was at the commencement of Manhattan College (Catholic) that Thomas W. Churchill, President of the New York Board of Education, in the presence of Vicar General Lavelle, who appeared to agree with him, made a severe attack on the Carnegie Foundation, which gives pensions to college teachers. His main criticism was not for what it does, but because it does not do more. It gives no pensions to denominational institutions, Protestant or Catholic. Because certain denominational colleges have ceased to be such, Mr. Churchill charged that the Foundation bribed them to change their charters.

It is rather poor business when a man does a good thing to abuse him for not doing more. If Mr. Carnegie's gift does not pension Catholic teachers, then let them find some Thomas F. Ryan who will make the desired benefaction. And yet, of all college teachers, the Catholics least need pensions, as the most of their teachers belong to religious orders and have no families and are provided for as long as they live. There is no reason to believe that it was from any hostility to religion that Mr. Carnegie limited his gift to the benefit of colleges not tied to a religious sect.

Mr. Churchill said that "many religious colleges have been seduced by great wealth to give up their independence and forsake the faith of their founders." We know of not one that has forsaken the faith of its founders. There are those that are no longer tied to it by having the majority of their trustees of a given sect, but that is not giving up faith, and it is not a bad thing, and it does not involve "the abandonment of religion," as the speaker declared it does. Mr. Churchill further entered "a protest against the standardization which the Foundation attempts to secure, and against the interference with religious education." That is all non-

sense. Harvard University is one of the recipients of these pensions, and it teaches religion, has a special professor appointed to that duty and has college prayers and Sunday preaching. As to standardization, if a gift is made to colleges it becomes necessary to decide what is a genuine college worthy of the name. It must have a certain amount of funds, a certain number of teachers, a certain provision of equipment in library and laboratories; and a standard of admission for its pupils. This is what the Carnegie Foundation does and has to do; and of course those institutions are likely to complain which cannot meet the conditions. Then let them find other patrons. Mr. Carnegie is under no obligation to give to everybody.

If inquiry be made as to the actual changes that have occurred in administration and teaching in consequence of the stipulations of the Carnegie Foundation for the Advancement of Teaching, an astonishing record may be studied. Careless accounting has been simplified and made businesslike. Loose investments have been converted into prudent ones, which are carefully watched. Foolish building operations have been stopped. Reckless accumulation of indebtedness has come to an end. Bills receivable from the student body and other sources have been collected. The giving of degrees, honorary and in course, not earned by the completion of adequate studies, or by distinguished service, or intellectual achievement, has been greatly diminished. The teaching body has been more carefully selected, it has been made more energetic, its work has been brought up to date to an extent that only those who have inside knowledge of the facts can believe. Institutions really weak and unable to draw new strength from any source, have gone out of business as purveyors of what was essentially a fake education.

All this may be described as standardizing, but it is the kind of standardizing that balks no initiative, destroys no independence. On the contrary, it distinctly heartens the men who have ideals, who know what educational effort ought to be, and what results are worthy of praise. Nothing is more discouraging, nothing more humiliating to the professor who aims to keep abreast of knowledge in his own field, than to realize that the institution which he serves is satisfied with the commonplace, the Philistine, the insincere, the meretricious. American productiveness in science and scholarship has been discouraged by this specific cause in the past to an extent beyond calculation, and as scandalous as wasteful.

OUR DUTY TO SANTO DOMINGO

ON account of the absorbing interest of Mexican affairs the American people have paid little attention to the similar tho lesser disorders in Santo Domingo, but now the shots from the "Machias" remind us that we have a more imperative responsibility for that turbulent little island. It is our business at least to see that Santo Domingo pays its debts and does not drift into anarchy. Our task would have been easier and our reward greater if President Grant's plan for annexation had been adopted when Santo Domingo sought the protection of the United States. But for the Senate's refusal to back up the Administration in 1871 the island might now be as prosperous as Hawaii, instead of which it has sunk steadily into poverty and disorder until 1905, when we were forced to intervene to prevent the Government from going into bankruptcy. Since then the honest and efficient administration of the customs by American agents has restored the credit of the nation, but internal affairs have continued chaotic. The island is one of the richest of the Antilles in natural resources and under a stable government might again be made an important center of tropical civilization.

WHEN OARS FLASH

HOPES long deferred were realized in this year's thrilling races both at New London and at Poughkeepsie. Yale broke a six-years' fast, particularly trying after an habitual diet of victory, and troubled by a succession of discouraging experiments. Columbia's dashing finish, that placed her varsity crew beyond question at the head of American college eights, was relished with a keenness that can be felt only by the partizans of a university with a rowing record brilliant in isolated memories and brimful of tantalizing approaches to success.

There are those—strangers to the river's bank—to whom these stirring regattas are only a further evidence of the decadence of sport into spectacle. It is an ungenial criticism. We believe wholeheartedly that college athletics must be so broadened as to provide normal physical stimulus for all students—most of all for the "rooters." But that is no wise incompatible with such intercollegiate contests as these—where stroke for stroke the slender oars keep pace down the long lanes of rippling water.

It *is* a spectacle. But as such it is no whit less worthy than the great pageants and eye-filling dramas whose richness we are more and more completely realizing. We all surrender our individual comedies and tragedies for the time to a Forbes-Robertson; we may with equal justice be sportsmen—on occasion—by deputy. Sharp rivalries of muscle and judgment and will and loyalty are dramatized on the river with clean-chiseled simplicity, and staged in beauty beyond the skill of a Reinhardt. On the Thames, and in larger measure on the Hudson, there is sport, and the sport is good; there is also spectacle, and that is superb.

A FLOATING FEATHER

SOMETIMES a small item shows drift and progress, as a feather on a stream proves the force of the current. The Central College of Bangalore, South India, wants a young professor of English language and literature. The requirements of scholarship and attainment are high, and even interest in athletics is desired. First-class passage to India will be given, and the salary will be $250 a month, rising by annual increase to $500. But what is significant is not so much the character of the universities supported by the Government as the name signed to the advertisement published in the British journals. It is "M. Shama Rao, Inspector-General of Education in Mysore, Bangalore, South India."

That responsible position belongs to a Hindu, not to an Englishman. Such an incident is hopeful for the permanence of British rule in India, notwithstanding that three British officers were shot dead the other day by a Hindu servant.

THE STORY OF THE WEEK

Mexican Protocol Signed

While our Government sought to procure Carranza's consent for the participation of his representatives in the conference, the conciliators discussed the international questions involved. For a time there was some expectation that Carranza would yield. Then it was reported that he would not. "I will treat with Huerta," said he, "only on the battlefield." On the other hand, Huerta declared that he would not accept a rebel sympathizer as provisional president, and that his delegates at Niagara Falls would never consider Mexico's internal affairs at the conference.

Signatures were attached on the 24th to the protocols already approved, and thus one great purpose of the meeting was accomplished. Two weeks ago a brief protocol providing that a provisional government should be set up in some way was signed, and this later agreement refers to it. The text is as follows:

The Provisional Government referred to in the first protocol shall be constituted by agreement of the delegates representing the parties between which the internal struggle in Mexico is now taking place.

Upon the constitution of a provisional Government in the City of Mexico the Government of the United States will recognize it immediately, and thereupon diplomatic relations between the two countries will be restored.

The Government of the United States will not in any form whatever claim a war indemnity or other international satisfaction.

The Provisional Government will proclaim an absolute amnesty to all foreigners for any and all political offences committed during the period of civil war in Mexico.

The Provisional Government will negotiate for the constitution of international commissions for the settlement of the claims of foreigners on account of damages sustained during the period of civil war as a consequence of military acts or the acts of national authorities.

The three mediating governments agree on their part to recognize the Provisional Government organized as provided by the first section of this protocol.

The part which especially excited comment was our Government's promise to claim no war indemnity and not to ask for a salute or other apology on account of the flag incident at Tampico. There was no agreement as to withdrawal of the troops at Vera Cruz. President Wilson desires that they shall remain until after an election. The conciliators explained that they had invited the representatives of Huerta and those chosen by Carranza to confer at a place near Niagara Falls, where they should discuss and agree upon terms of pacification. They hoped such a conference would be held. They felt, it is understood, that their five weeks' work had been crowned with success. The leading South American journals exprest great satisfaction, saying that Argentina, Brazil and Chile were bound by a new tie, and that by her grand example the United States had won the respect of the world.

THE WEEK IN CONGRESS

Leading subjects of debate were the Indian and Sundry Civil Appropriation bills, the bill concerning corrupt practices in campaigns, and the effect of tariff revision. The Sundry Civil bill, carrying $107,000,000, and the Indian bill, $12,000,000, were past. In the latter bill are provisions to regulate fee contracts of Indians with attorneys.

Owing partly to the influence of the President, an agreement was reached authorizing the sale of the obsolete battleships "Idaho" and "Mississippi" to Greece, and the use of the proceeds, $11,750,000, in building a new battleship. A protest had been made by Turkey. It was said that the sale would prevent war between Turkey and Greece.

A subcommittee report severely criticizes Federal Judge Emory Speer, but says the evidence of his misconduct is not sufficient to warrant impeachment. He had gone as close to the line, the committee said, as safety would permit.

Before sailing for Europe, Senator Owen reported his bill for the regulation of stock exchanges. It was shown that only three members of his committee had voted for it, and the Senate rebuked him by sending it back to the committee.

Representative Underwood defended the new tariff against Republican criticism, and Representative Payne replied.

A long minority report, severely criticizing the River and Harbors bill, was submitted by Senator Burton.

Services in memory of the late Representative T. D. Sullivan were attended by 700 friends from New York. There were many eulogistic speeches, and the scene is said to have been the most remarkable of its kind in the House for many years.

The House declined to provide for an assistant to Secretary Bryan, and in the debate reference was made to his lecture tours.

A committee is considering a recommendation from postal officers that steps be taken to recover $57,600 for misuse of Senator Lodge's frank in circulating a pamphlet about the sugar tariff.

Action in the House Rules Committee on the proposed constitutional amendment for prohibition was postponed until August 1.

Villa Captures Zacatecas

On the night of the 23d Zacatecas was captured by Villa and his army, after four days' fighting. It was a costly victory. On the rebel side Generals Ortega and Rodriguez were killed, and General Herrera was severely wounded. There had been a Federal garrison of 14,000 men; of these, 4000 were killed and 5000 were made prisoners, a majority of these joining Villa's army. The rebels captured 12 cannon. Their losses are said to have been 700 killed and 1500 wounded. The 118 Federal officers taken were lined up before firing squads, and then unexpectedly Villa spared their lives. Among the rebels killed was Colonel Fierro, an intimate friend of Villa. It is understood that he put to death William S. Benton, the British subject and ranch owner. This murder was charged to Villa. A commission of inquiry appointed by Carranza will soon publish its report, but the death of Fierro will prevent the punishment of any one in this memorable case.

After the fall of Zacatecas, Villa's cavalry pursued the fleeing remnant of the Federal army, attacking the fugitives at Soledad and elsewhere. After restoring order in the surrendered city, Villa, with 18,000 men, set out for Aguascalientes, 70 miles south. He learned that the town had been evacuated. The next battle in the march of 400 miles to the capital will be, it is expected, at Guanajuato, and Huerta's troops may make their last stand at Queretaro.

Zapata has attacked the capital from the south and been driven back. His followers have surrounded and are besieging Acapulco. On the west coast, Mazatlan, Guaymas and Manzanillo are still held by Federal garrisons, but Guaymas is to be given up. The rebels have taken Zapatlan, a city 100 miles south of Guadalajara.

Important Court Decisions

Several important court decisions were announced last week by the Supreme Court. In what were known as the intermountain rate cases, the power of the In-

terstate Commerce Commission to fix rates was upheld, with the commission's orders reducing by about twenty per cent. the rates on traffic westward to Rocky Mountain cities. These reductions were made in order that the rates to these points should not exceed those for the longer haul to the Pacific coast. The companies had claimed that the rates affected were reasonable, and that low rates to the coast were required to meet water competition. The power of the commission to fix blanket or zone rates was affirmed. The title of certain transcontinental roads to public lands on which oil was found, after the issue of patents, was confirmed. This decision affects land of the Southern Pacific Company said to worth $700,000,000.

It was held that organizations of retail dealers in lumber violated the Sherman act by circulating blacklists of wholesale dealers who sold directly to consumers. The Kentucky statute permitting pools or combinations of producers of tobacco, in order that prices higher than those received by separate and individual sales might be obtained, was declared to be invalid. The law making interstate pipe lines common carriers, and subjecting them to the authority of the commission, was upheld, and the claim that the so-called poverty vows of members of religious orders are void, as against public policy, was rejected.

Hayti's Revolution and Debts

The condition of Hayti causes some anxiety at Washington, and has been considered at Cabinet meetings. Led by Senator Davilmar Theodore, the rebels are gaining, and have been assisted by a mutiny of Government troops. President Zamor has left the capital. Some say he has gone to the front; others that he intends to leave the country. Until recently the activity of the rebels was confined to the northern provinces, but the Government troops last week lost a battle in the south.

Hayti cannot collect her customs revenue (much of which is taken by the rebels), and is virtually bankrupt. The Government some months ago borrowed $500,000 at 30 per cent, and a little more at even a higher rate. It is understood that Germany and France, Hayti's chief creditors, are asking for control of the customs, and there have been reports that they were about to seize custom houses. They do not seek political control, but only the payment of debts. Our Government is unwilling, of course, that custom houses or territory shall be seized. It might be induced to establish such a fiscal protectorate as exists in Santo Domingo, but it is said at Washington that there is no treaty providing for such a protectorate, and that the request for one must come from Hayti. There are now four United States warships in Haytian waters.

South America

In Ecuador a revolutionist plot for the assassination of President Leonidas Plaza was discovered a few days ago by the Government, and many arrests were made at Quito. The conspirators intended to proclaim Colonel Carlos Concha provisional president. Concha is the leader of the rebels who have been attacking the Government in the northern part of the country.

Owing to the Government's control of the telegraph, there are no news dispatches forwarded directly from Venezuela, but it has become known in neighboring West Indian ports that an attempt was recently made to assassinate General Juan Vicente Gomez, who retired from the presidency in April to become commander of the army, having put Dr. Bustillos, formerly Minister of War, in his place. At the time of the attempt, General Jurado, Governor of the State of Sucre, was wounded. Revolutionists are active in several states. General José Hernandez (El Mocho), the leader of several revolts in the past, has issued a long proclamation in which he denounces what he calls usurpation by Gomez.

Carranza and General Felipe Angeles examining a war map before the break between Villa and the First Chief. General Angeles, a Villa partizan, was dismissed from his post as sub-Secretary of War in Carranza's Cabinet, and has been charged by Carranza's secretary with instigating Villa's insubordination

The Home Rule Contest

The Home Rule bill which the House of Lords has twice rejected is now before that body for the third time, altho the measure will go into effect whether it is past or not. But Premier Asquith consented to bring in his amending bill even before final action was taken, in the hope that some practicable compromise might be worked out. The amendment which the Marquis of Crewe, the Liberal leader of the House of Lords, proposed was the same as was suggested by Mr. Asquith in the House of Commons. It provides that each county of Ulster shall vote on the question of its inclusion in the new system of government to be established in Ireland and that any county voting against it shall remain out for a period of six years from the assembling of the Irish Parlia-

WHERE'S THAT BONE?

HASTE AND DELAY AT WASHINGTON

ment. Lord Crewe's speech was very conciliatory and stated that "the bill gives the widest latitude for an amendment." The Marquis of Lansdowne, leader of the Opposition, declared the amendment was a profound disappointment and that it was shabby and undignified in the Government to present an unacceptable bill and expect the Opposition to make it passable.

The Nationalists are now following the example of Ulster and organizing a volunteer force of their own which is already larger than that of Ulster, altho not yet so well armed and drilled. But American arms are fast being imported and smuggled in along the Irish coast and funds are being raised in the United States in response to an appeal from John Redmond, leader of the Irish parliamentary party, who cabled to the United Irish League of America as follows:

> The Orange movement has been financed by all the wealthy and aristocratic enemies of popular liberties. It has been patronized by the leading generals of the army and has been further accompanied by an active and partially effective campaign to produce such a feeling in the army as would insure that a rebellious body could count on the refusal of the army to maintain the law.
>
> This body of Orange Volunteers has now succeeded in arming a considerable portion of its followers and the people of Ireland are faced with an armed force which threatens to stand between Ireland and Parliament's decision to give her liberty.
>
> Such a movement made it absolutely necessary that the Irish people should be placed in a position to defend the country and defend themselves. Therefore I request you to appeal to our countrymen and friends in the United States to aid in supplying the funds to strengthen the Irish Volunteers and enable them to confront adequately this audacious attempt of the British aristocracy and the Irish minority to put down forcibly the liberties of the Irish people.

The Anarchists of Italy

On the outbreak of the recent riots the Government determined to put down the insurrection with as little violence as possible and this policy was adhered to notwithstanding the provocation. Police and soldiers stood being stoned and even shot at without retaliation and when it became necessary to fire or charge they took care to do as little hurt as possible. Consequently the number of persons killed was surprizingly few considering the extent and turbulence of the rising. In some places the revolutionary movement came to a stop thru mere exhaustion of the impulse rather than the force of the Government. The destruction of property was, however, considerable. The mobs everywhere directed their fury especially against anything ecclesiastical; fourteen churches were burnt and many more looted or partially destroyed.

Now that the disorder is over and all the village republics have dissolved, the efforts of the Government are directed toward running down the ringleaders. Hundreds of arrests have been made, but it is feared that the men most wanted by the authorities have escaped over the Swiss border and are on their way to England or America. Among them is probably Enrico Malatesta, the notorious anarchist of Ancona, who is believed to have planned the outbreak as a demonstration of republican strength. A search among his papers showed that he had been receiving money from the Italian anarchists in the United States. It will be remembered that the plot to assassinate the late King Humbert in 1900 was hatched in Paterson, New Jersey. The six Italian officers who were seized by the revolutionists and forced to surrender their swords have been dismissed from the army in disgrace.

In the municipal elections of Rome the alliance of Clericals and Liberal Monarchists headed by Prince Colonna were successful in defeating the Anti-Clericals and Socialists, whose leader is Ernesto Nathan, former Mayor of Rome and now the representative of the Italian Government to the Panama-Pacific Exposition.

Kiel Canal Enlarged

On July 1 Kaiser Wilhelm declared formally open the enlarged canal which bears his name. This is one of the most important of the artificial waterways of the world, as it is ten miles longer than the Panama Canal and carries every year more than ten times the number of vessels passing thru Suez. But it was constructed more for military than commercial purposes, as it gives to the German fleet a short cut from the North Sea to the Baltic, while an enemy would have to go two hundred miles around. During 1912 the German

AMERICA. THE FLYING BOAT THAT WILL CHALLENGE THE ATLANTIC

Rodman Wanamaker's craft, which Lieut. John Cyril Porte of the British Naval Flying Corps is to pilot in an attempt to make the first transatlantic passage by airship, was launched at the Curtiss factory at Hammondsport, New York, on June 22 and has been tried out over Lake Keuka

warships made 1400 passages thru the canal.

The Kaiser Wilhelm Canal was completed in 1895, but the rapid increase in the size of shipping in the present century have made it inadequate for both mercantile and naval use. Accordingly, new tide locks have been put in of double the length and breadth of the old and the channel has been deepened from twenty-eight feet to forty-six feet. These are now among the largest locks in the world, holding about sixty per cent more water than the locks at Gatun. The length of the lock chamber is the same as at Panama, 1100 feet, so even the "Vaterland" could be accommodated if necessary.

•

A Hungry Strike

The Paris postmen, indignant at not getting from the Government all of the increase in wages they had demanded, barricaded themselves in the Central Post Office and held up the mails all day. A body of five hundred police surrounded the building, but were unable to effect an entrance, for the postmen threw stones down from the upper windows and knocked out several of the policemen. Then four regiments of soldiers were called out and laid siege to the Post Office in order to starve out the garrison. An attempt was made to get provisions by lowering mailbags to the street, but the police cut the ropes as soon as these had been filled by the friends of the strikers.

The Minister of Commerce, Gaston Thomson, appeared on the scene with the Prefect of the Police, and harangued the besieged postmen. He explained that the Senate had already voted an increase of salaries amounting to $2,400,000, and promised that the Government would favor the additional appropriation necessary to put the carriers on the same salary as the sorters, which was the principal demand of the postmens' union. But the Minister was received with jeers and curses, and it was not until they got too hungry to stand it any longer that the postmen gave in and consented to undertake the distribution of the four million overdue letters.

The Finnish Judges

In our issue of December 11, 1913, we published a dramatic account of the arrest of the sixteen judges of the Appeal Court of Viborg because they declared unconstitutional the legislation of 1912, extending the rights of Russians in Finland. The Finnish parliament refused to pass this, but the Czar, in violation of his coronation oath to protect the liberties of the Finnish people, is determined to bring the grand duchy under the same régime as the rest of the empire. The judges, after serving their term of eight months imprisonment in St. Petersburg, were released and returned to Helsingfors. On their arrival in the Finnish capital they were received with enthusiasm by the people, but the Russian gendarmes dispersed the crowd with their whips and arrested a number of them on the charge of "unlawful cheering."

The Heir of Austria Assassinated

While the world was expecting to hear of the death of Francis Joseph, Emperor of Austria, now eighty-four years old and in feeble health, there comes instead the news of the assassination of the Archduke Francis Joseph, in the prime of life and expecting soon to succeed to the throne of the dual monarchy. The Archduke had gone with his wife, the Duchess of Hohenberg, to the capital of Bosnia, to attend the military maneuvers as the representative of the Emperor. As they were riding thru the main street of Sarajevo to the Town Hall where the Burgomeister awaited them a bomb was hurled at the automobile, but the Archduke warded it off with an arm and it exploded on the ground, slightly wounded the aids in the following car and some of the bystanders. The Archduke stopped to see the extent of their injuries and after his visit to the Town Hall was on his way to the hospital where they had been taken when a second and this time successful attempt was made upon his life. A young man stepped out from behind a house and coming close to the car fired several shots from an automatic revolver. The Archduke was hit in the face and the Duchess in the throat and abdomen, and both died in a few minutes.

The Revenge of the Serbs

The murders at Sarajevo are the result of the intense resentment of the Serbs at the incorporation of the provinces of Bosnia and Herzegovina into the Austrian empire. The Congress of Berlin in 1878 declared these provinces separated from the Turkish empire and placed under the administration of the Austro-Hungarian Government. In 1908 the Emperor-King announced their annexation; an act that frustrated the ambition of Servia for a union of all their race, and so precipitated the Balkan wars.

The man who threw the bomb is a compositor of Herzegovinan origin named Gabrinovics, twenty-one years old, who had worked at Belgrade. The man who fired the fatal shots, Prinzip, was a student only nineteen

ARCHDUKE FERDINAND AND HIS WIFE

Killed by a Servian anarchist. The Archduke was the eldest nephew of Francis Joseph. The Duchess of Hohenberg was the daughter of one of the minor Bohemian nobility and the three children of this morganatic marriage are debarred from succession to the throne

years of age. He also was born in Herzegovina and had been recently in Belgrade. Both men were captured and gloried in their deeds.

Another bomb unexploded was found near the scene of the assassination, showing that a third attempt had been planned in case the others failed.

The Archduke Francis Ferdinand was a strong imperialist and by his efforts to extend the empire toward the east by the incorporation of the Slavic races he had more than once come near to bringing about a war with Servia, Italy or Russia. By his morganatic marriage with the Countess Chotek, the hired companion of the princess to whom he was expected to become engaged, he deprived his children of the right of succession to the Austrian throne.

The new heir presumptive is therefore the Archduke Charles Francis, nephew of the Emperor, who is now twenty-seven years old. He was educated in the public schools of Vienna and is popular with all classes altho he has hitherto taken no active part in public affairs.

COLUMBIA'S VARSITY EIGHT WINNING THE AMERICAN CHAMPIONSHIP

After a thrilling race in which Pennsylvania and Cornell seesawed in the lead for three and a half miles, with Columbia a little behind, the Blue and White crew came to the front and won in a driving sprint that gave them a length over Pennsylvania and two and a half lengths over Cornell. The time was 19:37 4-5. Syracuse finished fourth, Washington fifth, and Wisconsin sixth

The Defense of Durazzo

The position of the Mpret William is becoming daily more insecure and unless the Powers comply with his appeal and provide an international force for his protection he is likely to be forced to leave the country after a nominal reign of a few months. His latest tactics, of calling upon the Catholic tribesmen of the north, to defend Durazzo against the Mohammedan besiegers. Their leader, Prenk Bib Doda, with his three thousand Mirdites, is reported either to have gone over to them or been captured by them. The insurgents are reported to have captured Elbassan, an important town of Albania, southeast of Durazzo. It is suspected that Essad Pasha, the former minister of war, who was banished by the Mpret, has returned to Italy and is leading in person the rebellion that he is accused of fomenting.

The predicament of the unlucky Mpret of Albania has aroused much sympathy in Austria, and in Vienna sixteen hundred men volunteered to go to the rescue. Among them were several hundred students, some of them American, and many officers and privates of the Austrian army reserve. As the volunteer force was about to embark for Durazzo the Government intervened and ordered the reservists to remain.

THE NEW HEIR OF FRANCIS JOSEPH

Archduke Charles Francis Joseph is a nephew of the reigning Emperor and now twenty-seven years old. He married in 1911 the Princess Zita of the Bourbon House of Parma, and they have two sons, the oldest Francis Joseph Otto, born in 1912

Williams versus William

The Albanians have gained a new ally. George Fred Williams, United States Minister to Greece and Montenegro, who went to Albania to investigate the conditions in the new principality, became so strongly impressed with the evils of the present régime that he sent in his resignation and without even waiting to hear from Washington made public declaration of his intention of espousing the cause of the people against Prince William of Wied, who was placed over them by the powers. When he reached Durazzo he found as he says:

> Five ostensible governments were in sight: First, the six great powers with all the power; second, the commission with control of the civil administration and finance; third, the Holland gendarmerie with control of the military; fourth, the Prince with any powers remaining; fifth, the Ministry with no powers. Each one of these governments was fighting every other, saving the first, which apparently is so discordant within itself that it has abandoned all the rest to their fate. All are cursing the powers for their discord and helplessness and are expecting at any moment to be driven out of Durazzo. I found a state of anarchy, and that the sovereignty of Albania remains where it belongs—in the people of the country.

Mr. Williams first visited the Epirus and his conversations with Professor Zographos, the insurgent leader at Agyrocastro, doubtless convinced him that the only possible government for Albania was that for which the Epirotes are striving, that is, a cantonal system of local self-government like that of Switzerland.

This action of the American minister reminds of a similar incident in Persia where Mr. Shuster, young American financier, who was sent to Persia as treasurer-general, interested himself so actively in the defense of that country against foreign aggresion that he was dismissed by Russia with the acquiescence of Great Britain.

Woman Suffrage in Denmark

The electoral reform bill which removes the property qualifications for suffrage and enfranchises the women, past the Danish Chamber of Deputies by a vote of 102 to 6. In the upper house, the Landthing, the bill commanded thirty-three, but the Conservatives withdrew in a body and the president of the House refused to hold the vote valid unless more than half of the sixty-six members voted. The objection of the Conservatives was not to the extension of the ballot to women but to the reorganization of the upper house by depriving the King of the power to appoint twelve of its members for life. The King has ordered the dissolution of the upper house but insists that his twelve appointees shall retain their positions. The Ministry threatens to resign if the King will not give way on this point.

RESPONSIBLE STATE GOVERNMENT

A REPUBLICAN CONSTITUTIONAL PROGRAM

BY HENRY L. STIMSON

To students of politics no question is more acute than that affecting our state governments. Mr. Stimson has been Secretary of War in President Taft's Cabinet and was the Republican candidate for Governor of New York in 1910. What he has to say on this question warrants the attention, not only of Republicans, but of all good citizens, irrespective of party.—THE EDITOR.

FOR some years past we have been flooded thruout the Union with proposals for changes in the constitutions and structures of our state governments. It is true that those governments have not been working altogether well. For over sixty years, ever since the rapid progress of mechanical invention has produced large business with its many problems, and has brought these problems into the zone of governmental activity, there have been complaints of inefficiency and corruption brought against the governments of the states. Our executives have seemed impotent and helpless in protecting individual rights, and our legislatures, instead of being "the refuge of our liberties," as our forefathers described them, have more often been charged with being the subservient tools of private interests.

But much of the criticism has not been careful nor analytical, and in spite of the fact that a large part of the evil seems directly traceable to machinery which is already too complicated to be easily operated by the voting public, many of the suggested remedies have been in the direction of greater complication and would necessarily tend to make the situation worse.

Of late, however, there have been indications that many leaders of the Republican party are gradually coming together upon the essential outlines of a constructive policy in dealing with these evils. Senator Root, when he presided last December at the great mass-meeting of Republicans in the Waldorf-Astoria, outlined such a policy in his opening address and resolutions were subsequently adopted by the meeting approving his recommendations with substantial unanimity. Similar proposals of reform have been advocated by Dr. Nicholas Murray Butler, of Columbia, and by the Young Republican Clubs of New York and Brooklyn and they will undoubtedly be proposed to the unofficial State Convention in August, which is to draft a platform for the Republican party in the coming contest for delegates to the Constitutional Convention.

The essence of the proposed policy is that reform is to be effected by concentration and coordination of the functions of government rather than by a further diffusion of them. It rests at bottom upon the principle that before you can hold a man or government responsible for doing wrong you must first give him adequate power to do right. It is in line, too, with the historic doctrine of Republicans, whose ancestors, the Federalists, believed that efficient government must be based upon responsible concentrated power, and whose great work, the Federal Constitution of 1787, carries out to a high degree that particular principle of concentration which in modern times we call the Short Ballot. It rests on the belief that very many of our present troubles have come directly from a fear of trusting anybody with power enough to do anything—a fear which was so frequently voiced by Thomas Jefferson as to the executive, and which found its way into our state constitutions in the shape of short terms of office for our Governors, the division of official power among many officers, and the provision that they shall all be elected at frequent intervals by the people.

This new policy of responsible government is directed toward two main purposes—first, toward securing responsible administration by applying the principle to the Governor and his associates in the Executive; and second, toward securing responsible legislation and effective criticism by applying it to the relations of the Executive with the Legislature in the performance of their joint functions.

The proposal for securing this first aim has been much discussed during the past four or five years under the name of the Short Ballot and is simple and well understood. Executive power in New York, as in most other states, is now divided between half a dozen officers, all of whom are elected by the people, and none of whom is directly responsible to the others or to the Governor. By the Short Ballot it is now proposed that we shall elect only the chief executive, the Governor (including with him his possible substitute, the Lieutenant Governor), and entrust to him the appointment and removal of his cabinet, thru whom are performed the executive functions for which he is held responsible. In a word, it is proposed to apply to the state government the system which has existed for 125 years in the Federal Government, in respect to the President and his Cabinet.

Personally, I believe that the Governor should be given this power without it being made subject to confirmation by the Senate. Such a situation has been practically reached by tradition in the Federal Government, where the President's nomination of a cabinet officer is now confirmed by the Senate as a matter of course. The President is able to enforce this tradition thru his wide power of appointment of minor officials in whom Senators are interested. In the case of the Governor of the state, who is without such power and without such a tradition, to provide that his choice of his cabinet must be confirmed by the Senate would be likely, in my opinion, to lead to holdups and deals and backstair politics. It would inevitably tend to lessen the principle of executive responsibility at which the reform aims.

The second great field for the new movement lies in the relation of the Executive to the Legislature, and its aim is a dual one—to produce responsible legislation, on the one hand, and effective and responsible criticism on the other. For over a century government in this country has been laboring under the influence of a stubborn tho curiously inconsistent tradition. We recognize in practically all of our constitutions, State and Federal alike, that the Executive and the Legislature share jointly in law making. We recognize that it is proper and necessary for the Executive to suggest laws and we usually give him a veto upon their enactment. And yet for all these hundred years it has been the fashion and the tradition to make such coöperation as difficult, as artificial, as clumsy and as ineffective as possible. Instead of permitting the Governor to make his suggestions as to legislation in person, and to support them in the natural way in which legislative propositions are supported, namely, by open debate on the floor of the houses, he has been reduced to the rôle of making communications in writing—always formal and perfunctory and usually ineffective. On the other side the Legislature has been deprived of the greatest of all powers of criticism, the power to ask awkward questions in public, at a time and place when they must be answered. It is left with no means at all of meeting such proposals as the Governor does make. If he chooses to

go out on the stump and support his program by unfair argument, backed by the advantage which he, as a single popular leader, has over a mere group of men, he is subject to no effective cross-examination whatever.

The evils which have resulted from this practise of separation have been twofold. First, the Executive has been deprived of that normal leadership or initiative in legislation which is recognized in practically all other countries. Even in America, in the sphere of ordinary private business, we regularly act on the principle that the Executive, the man who is to be responsible for carrying regulations into effect, is the best man to lead in the work of framing them. We never dream of excluding the president of one of our corporations from the room of his board of directors. And the policy of exclusion of the Governor, acted on in our political affairs, has been one of the most potent means of producing irresponsible government. How many times have we seen a bill recommended by the Governor, recommended by the platform of the party in power, apparently earnestly desired by the people of the state, yet held up in committee of the Legislature, without the possibility of getting it out on the floor to be debated in the open? Such methods of throttling executive suggestions in secret are prevalent, I firmly believe, not only because the Governor cannot address his arguments directly to the Legislature face to face, but also because when he goes out on the stump and belabors the representatives before the people, the legislators cannot get the public's attention for their answers to his arguments, and are driven almost of necessity to the use of weapons of secret assassination instead of honorable warfare.

On the other side, the separation from the Governor has made it necessary for the Legislature to assume functions of administration for which it is not fitted, and which, by reason of that unfitness, have led directly to the greatest evils of extravagance and log-rolling of which the nation complains. In the system of American government alone, of all other nations, a scientific budget is practically unknown. In the system adopted by substantially all the rest of the world a budget is an estimate of the moneys necessary for the coming year, together with a suggested program of how to raise such moneys by taxation, laid before the Legislature by the Executive. The Executive being the branch of the government which pays the expenses of government, is assumed to be the one best able to estimate the amount necessary. Then, and this is the most important point of all, when the budget is once laid before the Houses, its items cannot be raised by the Legislature without the consent of the Executive. The representatives of the people can of course cut down; they cannot pile up the appropriations.

What a different and chaotic situation is presented by our own lack of such a system! The President or the Governor not being permitted to propose his own budget, that duty has fallen into the hands of the Legislature indiscriminately. The first step is usually taken by various appropriation committees, but after they have produced their bill, any legislator is free to try to raise it. And even in our national Congress the course of an appropriation bill thru the two Houses is generally like a huge snowball, gathering volume as it rolls, with no effective way of keeping it down.

For right here is regularly shown one of the inherent weaknesses of a legislative body. Each representative comes from a single district. He is responsible to the district and not to the state at large. If the interests of the state come into conflict with those of the district, and he sides with the state, the district can put him out of public life. Under an almost universal tradition of American constituencies he cannot be elected to the Legislature from any other district than the one in which he resides. And so legislative action, when left to itself without the leadership of the executive who represents the entire state or nation, necessarily and inevitably tends to sink into a series of log-rolling deals between the various members, acting in the interests of their respective districts, and often quite oblivious of the interests of the state at large.

Our annual expense bills are monuments of the result of our methods. It costs just five and one-half millions more every year to house our army than it would cost if the War Department were permitted to locate army posts at the places where the interest of the army demands them instead of where they will be most profitable to the districts of influential Congressmen. We are maintaining many navy yards at places and under conditions not suited to the needs of our modern navy. In 1909 the Postmaster General reported that over twenty million dollars had been appropriated by Congress that year for postoffices which his department had not asked for and did not need. The meaning which has come to attach to the phrase "pork barrel" symbolizes the whole defective system. It is a direct result of the evil of diffusion of responsibility and the short, simple remedy for it is to concentrate responsibility. No one has ever summed up the situation and the remedy more tersely or clearly than Prof. Henry J. Ford, in his book on the *Cost of Our National Government*:

> The logical significance of this action is that the numerous pass-keys to the national treasury now held by Congressional committees must be given up and that there shall be but one key, which shall be in the custody of the President. Upon the creation of just such a situation as that, the efficiency of representative government depends. Its essential principle is to fix the representatives so that *they* cannot put their own hands into the till; then they will keep a good watch over those who *do* handle the money. Congressmen will take a very different view of pork barrels from that now held, when they can no longer help themselves to the pork. —Ford, *Cost of Our National Government*, p. 115.

Put into concrete form my proposals are:

First: The Governor and Lieutenant Governor shall be the only elective executive state officers, and to the Governor shall be given the power to appoint and remove all the other state officers who are the heads of executive departments and thus in a sense constitute his cabinet.

Second: To the Governor shall also be given the right to introduce bills, and either in person or thru the heads of his departments to support these bills in debate upon the floor of the Houses. Such bills shall be given preference over all other bills, except appropriation bills, on the calendars of both Houses.

Third: Included in the foregoing he shall have the right to prepare and introduce a budget setting forth an estimate of the expenses of the government for the coming year, as well as a proposal of the necessary new legislation, if any, which he suggests as proper to raise revenue for the purpose, and to the items of such budget, when introduced, no additions shall be made without his consent.

Fourth: Correspondingly, it shall be the duty of the Governor and the heads of the executive departments to answer at stated times on the floor of the Houses interpellations addrest to them by members of the Legislature in regard to public business or policy.

These suggestions of reform may at first sight appear to be almost trifling in their simplicity. I believe them to be of the most fundamental and far reaching importance. It is an axiom of constitutional history that

where for any reason coördinate action of the various branches of government is made difficult or abnormal, those branches will be made to work coördinately either by violence or corruption. In the United States in the past the influence of the patronage of the Executive has taken the place of legitimate influence in the Legislature in order to make both branches of the government work together. Not only has the Governor used his patronage directly to get thru legislation for which he is responsible, but to a much greater extent patronage has been used to cement together party machines which controlled both the Executive and the Legislature. A great wave of protest has now arisen against that régime—a protest both against such a misuse of the civil service and against any such domination by an unofficial party machine. But that protest and the reforms which it precurses cannot become effective until we remove the underlying cause which instigates and provokes those methods of avoiding a complete breakdown of our law-making machinery. Reform in the civil service of Great Britain was never fully achieved until after the modern English system of responsible government had been fully established. I believe that similarly the establishment of responsible government among us is a necessary condition precedent to final success of the reformed civil service for which for so many years we have been striving.

If the Republicans of New York, as recent events indicate is possible, can unite upon some such program, they will, I am firmly convinced, not only solve state problems which have been in recent years provoking many vague political experiments, but they will at the same time establish a precedent of far-reaching value in the domain of the nation at large.

New York City

WHEELS

BY WILFRID WILSON GIBSON

To safety of the kerb he thrust the crone:
When a shaft took him in the back, and prone
He tumbled heavily, but all unheard
Amid the scurry of wheels that crashed and whirred
About his senseless head, his helmet crushed
Like crumpled paper by a car that rushed
Upon him unaware. And as he lay
He heard again the wheels he'd heard all day
About him on point-duty . . . only now
Each red-hot wheel ran searing over his brow—
A sizzling star with hub and spokes and tyre
One monstrous Catherine-wheel of sparking fire
Whirring down windy tunnels of the night . . .
That Catherine-wheel, somehow it wouldn't light—
Fixed to the broken paling; and the pin
Pricked the boy's finger as he jabbed it in:
He sucks the salty blood—the spiteful thing
Fires, whizzing, sputtering sparks: he feels them sting
His wincing cheek; and, on the damp night-air,
The stench of burnt saltpeter and singed hair . . .
While still he lies and listens without fear
To the loud traffic rumbling in his ear—
Wheels rumbling in his ear, and thru his brain
For evermore, a never-ending train
Of scarlet postal-vans that whirl one red
Perpetual hot procession thru his head—
His head that's just a clanking, clattering mill
Of grinding wheels . . . and down an endless hill
After his hoop he runs, a little lad,
Barefooted 'neath the stars, in nightshirt clad—
And stumbles into bed, the stars all gone
Tho in his head the hoop keeps running on
And on and on: his head grown big and wide
Holds all the windy night and stars inside . . .
And still within a hair's breadth of his ear
The crunch and gride of wheels rings sharp and clear—
Huge lumbering wagons, crusted axle-deep
With country marl, their drivers half-asleep
Against green toppling mounds of cabbages
Still crisp with dewy airs, or stacks of cheese
Smelling of Arcady, till all the sky
In clouds of cheese and cabbages rolls by—
Great golden cheeses wheeling thru the night,
And giant cabbages of emerald light
That tumble after, scattering crystal drops . . .
While in his ear the grinding never stops—
Wheels grinding asphalt . . . then a high-piled wain
Of mignonette in boxes . . . and again,
A baby at his father's cottage-door
He toddles, treading on his pinafore,
And tumbles headlong in a bed of bloom,
Half-smothered in the deep, sweet honeyed bloom
Of crushed, wet blossom, and the hum of bees—
Big bumble-bees that buzz thru flowery trees—
Grows furious . . . changing to a roar of wheels
And honk of hooting horns: and now he feels
That all the cars in London filled with light
Are bearing down upon him thru the night,
As out of hall and theater there pour
White-shouldered women, ever more and more,
Bright-eyed, with flashing teeth, borne in a throng
Of purring, glittering cars, ten thousand strong:
Each drowsy dame, and eager chattering lass
Laughing unheard within her box of glass . . .
And then great darkness, and a clanging bell—
Clanging beneath the hollow dome of hell
Aglow like burnished copper; and a roar
Of wheels and wheels and wheels for evermore,
As engine after engine crashes by
With clank and rattle under that red sky
Dropping a trail of burning coals behind,
That scorch his eyeballs till he lies half-blind,
Smoldering to cinder in a vasty night
Of wheeling worlds and stars in whirring flight,
And suns that blaze in thunderous fury on
For ever and for ever, yet are gone
Ere he can gasp to see them . . . head to heels
Slung round a monstrous red-hot hub, that wheels
Across infinity, with spokes of fire
That dwindle slowly till the shrinking tyre
Is clamped like aching ice about his head . . .

He smells clean acid smells: and safe in bed
He wakens in a lime-washed ward, to hear
Somebody moaning almost in his ear,
And knows that it's himself that moans: and then,
Battling his way back to the world of men,
He sees with leaden eyelids opening wide,
His young wife gravely knitting by his side.

THE CHAUTAUQUA IDEA

DESCRIBED AND INTERPRETED BY GEORGE E. VINCENT, LL.D., PRESIDENT OF THE CHAUTAUQUA INSTITUTION AND OF THE UNIVERSITY OF MINNESOTA; HON. WILLIAM JENNINGS BRYAN, SECRETARY OF STATE; AND FRANK CHAPIN BRAY, CHAUTAUQUA EDITOR OF THE INDEPENDENT

WHAT IS CHAUTAUQUA?

BY GEORGE E. VINCENT

FORTY years ago, Chautauqua was a geographical name; today it is a common noun. It has made its way into many lands and languages. Four million Americans in a single year respond to its summons. It brings many pictures to the public mind; handkerchief-waving throngs; summer camps under canvas; correspondence courses and short cuts to higher education; spellbinders arousing country folk to war upon Wall Street and the Interests; personally conducted trips to Europe; puritanical observance of the Sabbath; a summer city of school teachers; a center of genuine popular education; a clearing house of new ideas; a great national influence making for intelligence, religious tolerance, and real democracy. How and why has such diverse imagery come to be associated with the Indian name of a county and a lake in southwestern New York?

On the first Tuesday of August, 1874, a group of earnest people met at Fairpoint on Chautauqua Lake to found a Sunday School Assembly. John H. Vincent had long wanted to establish an institute for training Sunday school teachers. His colleague, Lewis Miller, proposed to take this into the woods. Dr. Vincent feared that the new enterprise would be confused with the camp meeting which just then was a highly emotional institution. Mr. Miller's counsel prevailed and Chautauqua was chosen. The spot was full of natural charm—a heavily timbered point stretching out into a lovely lake. Behind, the ground rose in wooded terraces to a rolling countryside. The men and women who responded to the call were devoted Sunday school workers; they were anxious to put their teaching on a higher plane. All the leading denominations were represented at this first assembly.

It is significant that the "Chautauqua Idea" was a logical development of the purpose to make Sunday school instruction more efficient. Bible teachers ought vividly to visualize oriental lands and life. Behold, an earth model of Palestine 300 feet long, a plaster model of Jerusalem, an oriental house of stucco with residents in costume and a muezzin calling to prayers from a minaret. Sunday school officers should be familiar with teaching methods; therefore pedagogical courses, and instruction in mental philosophy. They should be broad in their interests; hence lectures on science, travel, literature, social problems. The esthetic side of life should not be neglected; so music and an art collection were provided. From the outset entertainments and games were deemed a natural and wholesome feature of the Chautauqua summer life.

GEORGE E. VINCENT, LL.D

Son of Bishop Vincent, who was one of the founders of Chautauqua, and president of the Institution since 1907

Before long the enriched course began to attract other than Sunday School teachers. Within a few years instruction was provided in languages, history, literature, science, pedagogy. Dr. William R. Harper (president of the University of Chicago from 1891 to 1906) came in 1883 and by 1890 a complete system of summer schools had been established. Correspondence teaching was introduced and was maintained until endowed universities relieved Chautauqua of this task. Men and women from the leading institutions of the country joined the summer staff, and firmly established the reputation of the schools to which many thousands continue to resort. Richard T. Ely and Herbert B. Adams of Johns Hopkins, A. S. Cook and George B. Adams of Yale, H. E. Van Holst of Chicago, were among those who gave aid at a time when certain journals were declaring that summer study was psychologically futile and physiologically dangerous.

Garfield said at Chautauqua in 1880: "The American people are gaining leisure; upon their use of this leisure the future of the nation will depend." For the employment of this margin Chautauqua had already proposed a plan—the famous Home Reading Circle, organized in 1878. The time was propitious. Thousands felt the need of personal culture; the idea of organized reading groups made a strong appeal. There were in those days no books written for such readers; no cheap popular magazines. Chautauqua created a new type of text books and manual, and founded a periodical which sold for $1.50. Thousands joined the society. Edward Everett Hale and Lyman Abbott were members of the Advisory Board. William Cullen Bryant wrote a letter of greeting and good

THE ORIGINAL HALL OF PHILOSOPHY IN THE GROVE
A wooden building erected in 1879 in what was called St. Paul's Grove. Here was inaugurated the famous Chautauqua Vesper Service

will A ritual of graduation was devised. Diplomas with spaces for scores of "seals"—records of continued reading—were awarded after a four-years' course. The plan was imitated in Great Britain in the British Home Reading Union; branches were established in Japan and South Africa. Chautauqua preached the gospel of education as a process of personal growth; insisted that all education is self-education and that for ambitious people "education ends only with life." The Circle past thru a stage of rapid growth, then settled down to a normal plane which it has maintained for years.

Chautauqua from the outset was a community, not a resort. It developed a social spirit. The life at first was simple, even primitive. Frank Beard, the "chalk-talker," who was the humorist of the early days, declared that the Palestine model craze extended even to the Chautauqua beds. He complained bitterly of sleeping with his back in the Jordan Valley and his head on Mt. Hermon. There was good comradeship and good feeling. All distinctions of wealth and position were minimized. There were no opportunities for ostentation and display. Northerners and Southerners came to understand each other. Sectarian religion and party politics were taboo. A good deal of the atmosphere of a communistic settlement was created, altho the main economic basis was individualistic. To the support of the platform and program all contributed on equal terms; to all public exercizes all had equal access.

The Chautauqua platform early gained distinction. During forty years it has welcomed the famous men and women of America and England. Here Grant was eloquently silent; here John B. Gough made people forget the dinner hour. It was at Chautauqua that Susan B. Anthony pleaded for woman suffrage long before the leaders of fashion took up the cause. Drummond repeated his Lowell lectures at Chautauqua in 1893. Theodore Roosevelt, as a young man, on the first of four visits, gave lectures which he later developed into his volumes on *The Winning of the West*. Fairbairn of Oxford tried to make clear the philosophic issues that Joseph Cook's oratory had clouded. Mahaffy, of Trinity College, Dublin, delighted to portray to his abstemious audience the bibulous joys of the ancient Athenians. Sir Owen Seaman, now editor of *Punch*, visited the United States solely for the purpose of lecturing o Chautauquans on the Greek drama and on Tennyson and Browning. One of the most exciting events of the eighties was a debate on Standard Oil between Washington Gladden and George Gunton. James Bryce, while British Ambassador, gave here one of his scholarly addresses. Noted authors have read from their own works: for example, Riley, Cable, Hopkinson Smith, Thomas Nelson Page. General Lew Wallace read for the first time in public the famous chariot-race scene from *Ben-Hur*, but as a wit remarked "He never got the horses off a walk." It has been the policy of Chautauqua to invite to its platform not sensation-mongers and self-seekers but men and women who from experience and training are able to speak with sincerity and authority. The Chautauqua programs reflect national life for four decades and record the names of presidents, statesmen, university men, clergymen, leaders of social reform, authors, artists.

Chautauqua has been dominated by a religious spirit at the same time that it has avoided sectarian strife and theological narrowness. The institution has stood for a conception of religion which includes all the essential elements of a well-rounded life, intellectual integrity, moral earnestness, appreciation of beauty and above all a social solidarity and the obligation of service. Chautauqua has played an important part in breaking down the barriers between churches, in promoting tolerance and good will, and in shifting the emphasis from a personal, individualistic salvation to the concept of "The World the Subject of Redemption," from the idea of the Kingdom of God

THE PRESENT HALL OF PHILOSOPHY
A replica in concrete and timbered roof of a fifth century Greek temple, dedicated in 1906 In this building graduates of the Chautauqua Home Reading Circle receive their diplomas

as a remote society in another world to that of a social order to be realized in this.

Chautauqua Institution today has a well-equipped plant worth over $1,000,000, with over three hundred acres, many permanent public buildings, a large clientele, an inspiring history and an encouraging prospect for the future. The charter of Chautauqua provides that all surplus revenues must be used for building up the Institution There are no stockholders and no dividends. The property is vested in a self-perpetuating body of trustees who serve without pay. The characteristic features of Chautauqua may be summarized as follows: (1) a resident summer population organized into a community; (2) a system of summer schools; (3) lecture courses of the university extension type; (4) symposia on current social problems; (5) popular lectures, concerts and entertainments, and (6) a plan of home reading. The fundamental aim of Chautauqua is educational in a broad sense which includes not only mental alertness, but ethical earnestness and spiritual idealism.

Recent events have called attention to the so-called "Chautauqua Circuit." From 1880 to 1890 Chautauqua assemblies which imitated more or less closely the original institution sprang up in many parts of the country, especially in the Middle West. Gradually the lyceum bureaus, thru their control of prominent speakers and superior executive ability, began to dominate the field. First the assemblies secured a few speakers from the bureaus, then the whole program. Finally the bureaus began to conduct assemblies direct and there are now something over 2200 of these bureau Chautauquas, organized in circuits, as compared with 600 of the independent assemblies.

The Chautauqua circuit has been developed largely thru economic causes—savings thru efficient organization, the elimination of long railroad jumps, guarantees to "attractions" of continuous seasons, better publicity, concentration of responsibility. In each place a big tent is pitched for a week and a daily program carried out. Local organizations guarantee the sale of a minimum number of tickets; the Bureau does the rest. College boys make up the tent crews; a Scout Master organizes the Boy Scouts; "morning hour men" give lectures in series and endeavor to arouse the civic life of the community; musical companies, bands, individual artists and dramatic companies furnish the popular programs; political leaders find here the greatest forum for their messages.

It must renew faith in democracy

ARTHUR E. BESTOR
Director of Chautauqua Institution since 1907

in any one to study these audiences. Here are men and women who can listen, who can follow a line of reasoning, and who are able to tell claptrap and buncombe from sincerity and earnestness. With occasional crudities and violations of good taste, the commercial Chautauqua circuit is rendering a service to democracy by fostering an interest in things of the mind, by quickening the social spirit, and by helping to create the public opinion which in response to leadership slowly gropes its way to collective action.

These local programs, however, can never take the place of a summer community where far from the routine of daily life people can give their attention to new ideas, enjoy the broadening influence of social intercourse with men and women of many different types and find true re-creation. Chautauqua as a summer city combines the attractions of nature with exceptional opportunities for study, for hearing noted speakers, for listening to fine music, and for gaining new inspiration for life in home and community. Chautauqua provides social groupings of many kinds, so that it is an organic whole, not merely a temporary collection of unrelated individuals. The permanent demands of human nature find gratification in the stimulating community life and spirit which Chautauqua offers.

> *There is probably no other one educational influence in the country quite so fraught with hope for the future of the nation as this [Chautauqua] and the movement of which it is the archetype.*
>
> THEODORE ROOSEVELT

The Home Reading Circle has many possibilities. The need for it does not disappear with the increasing mass of books and the flood of periodical literature. Auguste Comte, after reading voraciously for years, began to write his philosophy. Then he practised what he called "cerebral hygiene," i. e., he read little and that very carefully selected. The average man and woman today needs direction in reading, needs to organize knowledge more carefully, to limit attention and interest at a given time to a few subjects. This is the only way of escape from hopeless mental distraction and superficiality. Chautauqua says: "Read these books carefully, let your collateral reading bear upon the subjects treated. Keep abreast of the times by following week by week in a forward-looking publication a clear report of current events. Here, too, you will find articles by authoritative writers on important themes. Read systematically, reflect upon what you read; interpret current happenings in the light of what you already know. But do not try to know everything."

Chautauqua will continue to adapt its plans and methods to the changing demands of the national life. It will be in the future as in the past a center from which new knowledge, skill and idealism will be distributed to all parts of the land. It will stand for social unity, mutual confidence, democracy. It will exalt religion not as a creed but as a life; it will help men and women to turn leisure into things of the mind and of the spirit. And in doing this Chautauqua will not be departing from its original purpose but only realizing in a larger way and under new conditions the ideal which lured the early Chautauquans to the grove beside the lake.

THE NATION-WIDE CHAUTAUQUA

BY WILLIAM JENNINGS BRYAN

SECRETARY OF STATE

THE growth of that unique and peculiarly American institution, the Chautauqua, has been phenomenal. Its peculiarly American character is attested by the fact that scarcely any eminent foreigner has written or spoken at length about America in recent years without mentioning it, Charles Wagner, Abbé Klein, James Bryce, George Adam Smith, the Baroness von Suttner, Duke Litta, Chentung Liang Cheng —from all nations and climes those acute minds that come to study American life recognize the Chautauqua as a significant factor. Its growth may be suggested by the fact that 2800 assemblies will be held during the summer of 1914 and that no less than three or four millions of persons will listen to the serious addresses as well as the music and the wholesome entertainment features that go to make up a Chautauqua program.

It all started at Chautauqua, New York, in 1874. It might have started at Akron, Ohio, or at any one of several other places where John H. Vincent had been a pastor and had conducted "institutes" of a broadening character for Sunday school teachers and others; but in the summer of 1874, when young Vincent wished to do something larger and more thoro than previously, Lewis Miller, of Akron, persuaded him to take to the woods with it. The name of the spot chosen was Fair Point, New York, but the name of the lake on which it was situated was Chautauqua. The name of the lake became the name of the summer community that sprang up. It has become the name of five different post offices in as many different states. More than that, it has become a common noun in the language to represent a new institution and a new social force. Whoever is unacquainted with Chautauqua has ignored one of the greatest agencies at work upon American national character.

Chautauquas are now scattered thruout the entire country, but they are most numerous in the northern Mississippi valley. They last from a few days to all summer and are held, some in auditoriums built for the purpose, some in halls and some in tents. A number of Chautauquas have presented programs for more than a quarter of a century. Next to the parent Chautauqua, the assembly held at Winona Lake, Indiana, is the largest and best known. It is under Presbyterian management and conducts the largest summer Bible school in the world.

Sunday school teachers have continued to attend Chautauqua gatherings ever since the 70's; but there are so many other good people that one does not specially notice them. The public school teachers, and the clergymen, and the editors of local papers are there too; but one recognizes them only as citizens. The "first families" of the place are seldom absent; but the only way in which they enjoy peculiar distinction at a Chautauqua is usually on a list of "guarantors." The Chautauqua is a means for putting ideas into circulation, and whoever is interested in such a project on his own account, for his family, or for the neighbors, becomes a patron of the Chautauqua. Those who are employed in functions of conventional education are attracted, with the incidental result that many of them escape a good deal from conventions; and those who are impatient of books and machinery find here a direct way of getting at things much to their liking.

In a farming community little besides "the chores" is done while Chautauqua is in progress; and in many a moderate sized town business hours are considerably reduced for the time being. Everybody has learned, nevertheless, that the Chautauqua is good for business and there is no doubt it is good for farming as well as for the larger life of those who have the farming to do. Grange Day addresses on soils and crops and appliances, on the social center, on rural education, are intermingled with more general topics.

One talks freely here about politics; but not generally as a politician. He has been invited to speak as a citizen about matters that concern all alike. Democrat, Republican, Progressive, Socialist, Prohibitionist, or

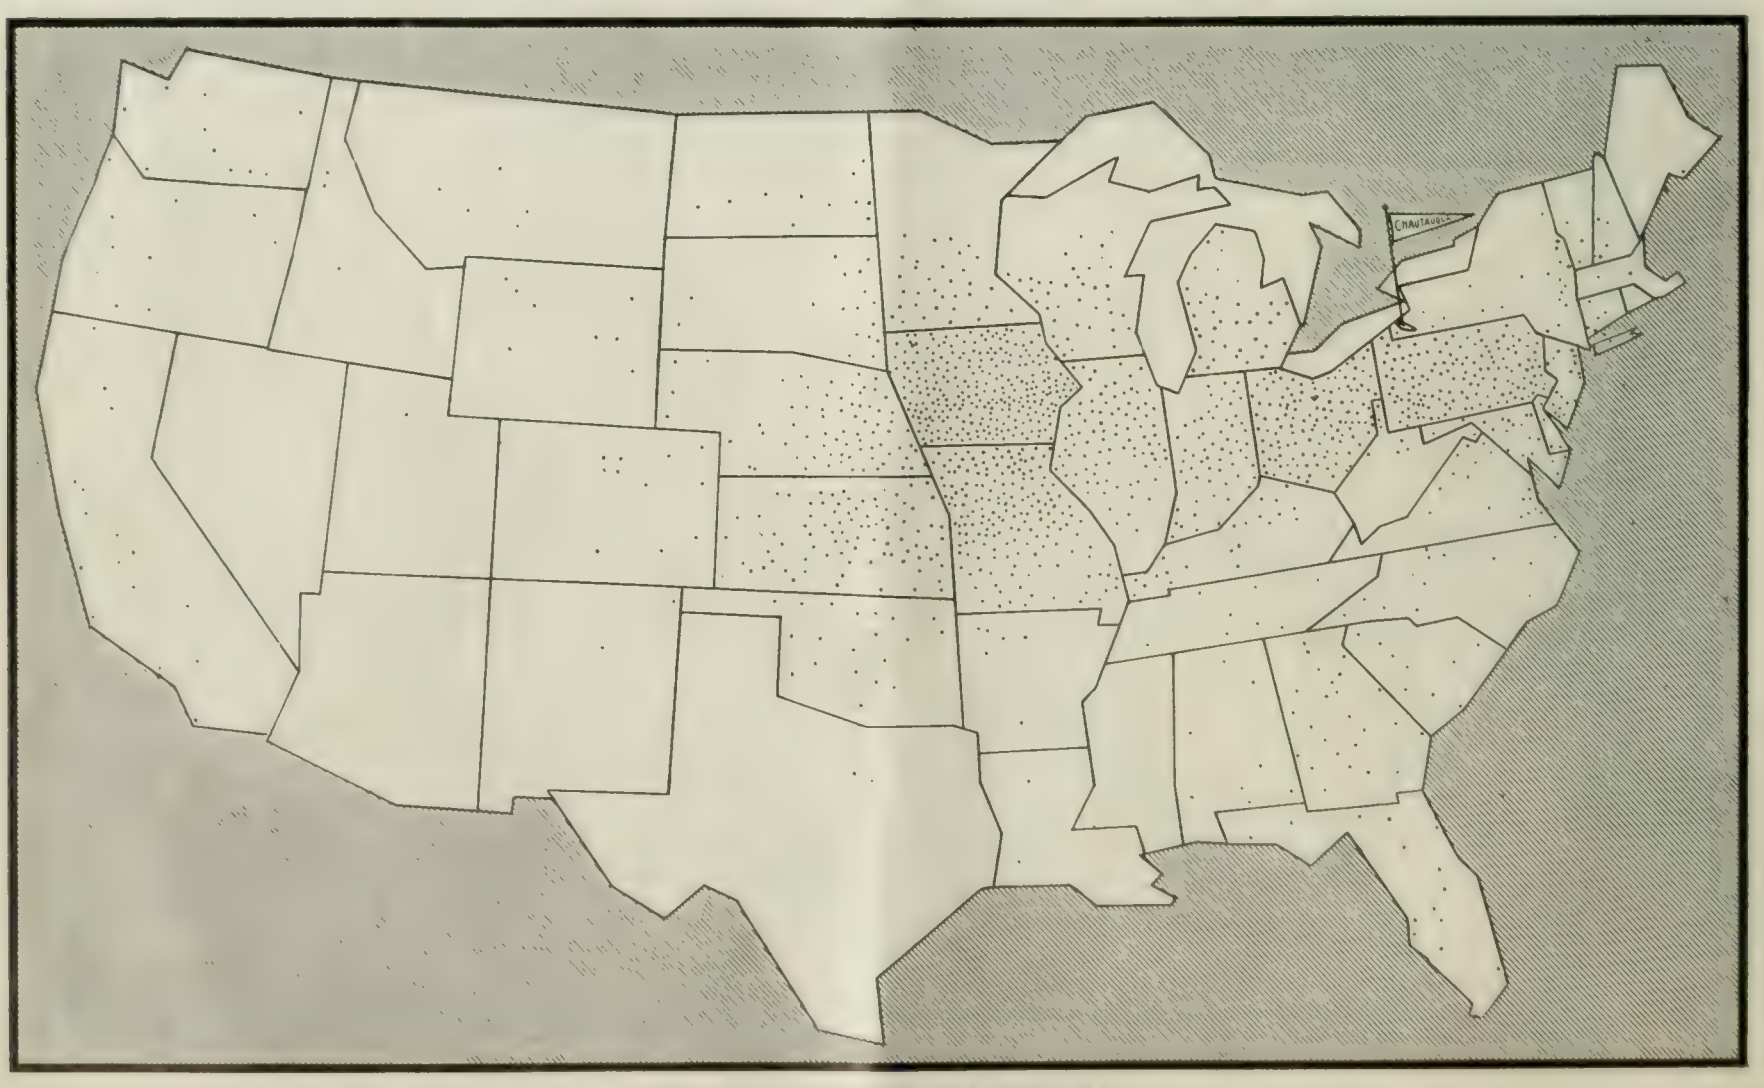
whatever, he finds eager hearing as long as he keeps to views in which he may invite all good Americans to share. When he violates that implicit or explicit understanding — sometimes it is explicit—he makes of himself an ungracious and unwelcome person so far as that Chautauqua is concerned; when his engagement is finished it will have no more of him.



One talks about religion. Roman Catholic priest, Protestant minister, Jewish rabbi, and representative of some Oriental faith may perhaps speak from the same platform within a few days of each other. Sympathetic and joyous response will be given to each as long as he voices the larger hope of all mankind or tells of those ideals and practises among his own people which liberal men and women of all persuasions may consider without prejudice. If there is in his composition one grain of bigotry or of malice, however, he will do ill to betray it here. Chautauqua is a forum where all have agreed to meet and to discuss on common ground.

The parent institution at Chautauqua, New York, manages the program of no assembly except its own, on the original grounds bordering Chautauqua Lake. Of the other assemblies, many are independently managed by local organizations, tho these are linked together in "associations" and "alliances" for mutual advice and coöperation. Still greater numbers, and the preponderance is increasing, have their programs made wholly or in part by bureaus, several of which conduct so-called circuit Chautauquas. These have a program of a week or ten days and are so close together that the expense and effort required of speakers and entertainers in traveling from one to another is reduced to a minimum.

Summer schools, offering formal classroom instruction in a variety of subjects, are not an accompaniment of the circuit Chautauqua as they have long been of the better locally organized Chautauquas, but the circuit Chautauqua rouses interest in regular study, in systematic home reading, in civic activities, in many personal and social endeavors toward which in its limited time it can only give a general understanding and a mighty impulse. Its program is made with this object definitely in view. The Chautauqua has its roots deep in the minds of common-sensible public-spirited Americans.

Those who are pessimistic about the newspapers—about the magazines, too, now and then—about the working of our legislative bodies, about our privately endowed and very precisely and decorously regulated colleges, ask from time to time why certain interests or the propagandists of certain special theories should not get hold of the Chautauqua and warp it to their own designs. Especially why not, they ask, when we have come to see a hundred and more Chautauquas controlled by one management? The matter would appear to be simple. The answer is equally simple—the manifest fact is that nothing of the sort has happened. Inclined perhaps a little more to the radical than to the ultra-conservative, on the principle of "trying all things" and seeing that the ultra-conservative have already had their hearing, nevertheless the most striking characteristic of the Chautauqua platform has always been a sane catholicity. Whoever has any message that everybody has not heard to weariness and whoever can deliver it well finds audience awaiting him.

This peculiarity was so marked and became so fully recognized in the original Chautauqua and its earliest imitators that the public have learned its value. A Chautauqua is peculiarly dependent on the approval of the better elements of a community and when the better elements of a community pay for a Chautauqua program they seem more alert than in any other relation to see that they get what they pay for. The "loaded," or "stuffed," or "doctored," or in any way adulterated Chautauqua with special personal or group interests to serve has little chance of success. The International Lyceum Association, which is to hold its twelfth annual convention in September at

THE COLONNADE AND PERGOLA FOR THE GENERAL OFFICES AND SUPPLY STORES OF THE INSTITUTION

Chautauqua, New York, does much to fix and to maintain standards of taste and ethics for the platform. The I. L. A. is composed of a thousand speakers, bureau managers, and committeemen interested in behalf of the best things for their towns; and developments are frankly examined from their different angles. Whatever is disapproved falls under a pretty general ban.

The privilege and the opportunity of addressing from one to seven or eight thousand of his fellow Americans, in the Chautauqua frame of mind, in the mood which almost as clearly asserts itself under the tent or amphitheater as does reverence under "dim religious light"—this privilege and this opportunity is one of the greatest that any patriotic American could ask. To the man on a Chautauqua circuit it is multiplied by as many as there are days in his engagement. This privilege and this opportunity carry with them a peculiar responsibility of which no American with a conscience could remain insensible. It makes of him, if he knows it and can rise to its full requirements, a potent human factor in molding the mind of the nation.

Washington, D. C.

SEEING CHAUTAUQUA

BY FRANK CHAPIN BRAY

CHAUTAUQUA EDITOR OF THE INDEPENDENT

MY cynical friend, the Wall Street broker, exprest the lingering suspicion that Chautauqua must be a cross between a camp meeting and a highbrow feminist outing. His fellow clubman couldn't remember the exact words of the newspaper funny column, but he semi-quoted: "Chautauqua, dear reader, is a sort of intellectual merry-go-round where political and religious freaks ride their hobbies in the silly season, providing uplift amusement for hoi polloi, at so much per." "And yet," resumed the cynic, "that hard-headed, globe-trotting uncle of mine came back from a chance stopover last summer so hypnotized by The Chautauqua Idea —that's the lingo—that he is determined to plant the whole family at Chautauqua. You've been in it. What's the game?"

No "game" in a broker's sense of the word, was the answer. But if your type of mind is able to conceive of an educational game of living, above the level of mere grubbing and sporting, you will get a line on the invigorating Chautauqua game which attracts thousands of the backbone class of people in American democracy.

"Sounds like a western game," quoth my provincial cynic.

The original Chautauqua is west of Albany, yes, but still within the Empire State, let me remind you. Only an easy, thru-ticket, overnight trip from New York. You might take it if—

"Information, not invitation, thank you," he broke in. "My uncle will be trying it on the whole family. I was a bit curious to know why."

Perhaps there is something in having some members of the family "see America first." Long ago the famous author of *A Man Without a Country* said that "unless you have spent a week at the original Chautauqua you do not know your own country." And Mr. Roosevelt characterized Chautauqua as "the most American thing in America."

"Teddy is sometimes misquoted, I understand," commented the doubter. "It's Bryan who put Chautauqua on the map, anyhow, isn't it?"

Hardly, was the reply. You are confused by the hundreds of local assemblages called Chautauquas, at which public men without fear or favor have the opportunity to speak face to face with crowds of people in tent or auditorium. Don't underestimate the value of this direct contact with the American citizen who wants to check up his newspaper impressions by a personal size-up of the man he reads about or has seen chiefly in cartoons. These Chautauquas, however, refer to Chautauqua Institution as the "Mother Chautauqua," having independently developed the Lyceum-Chautauqua-Program idea for local consumption. Chains or circuits of these local Chautauquas under a single booking management constitute a most interesting extension phase of the Chautauqua Movement.

At Chautauqua, New York, the home of Chautauqua Institution, now forty years old, you will find a fenced-in town (200 acres, 600 houses and public buildings, in a grove on the shore of Chautauqua Lake, 1500 feet above sea level) built exclusively for Chautauqua purposes

THE GREAT THRONG OF AMERICAN-MINDED FOLK AT CHAUT

The whole town is an educational plant which trustees run on the same basis as a university plant. It exists to provide certain protected conditions and daily schedules of life for every member of the family during a summer season of two months. Here from ten to twelve thousand people come to live for a time in an exceedingly highly organized community.

At either the land or water gate of the town you pay a gate or tuition fee (fifty cents a day or $7.50 for the season of eight weeks) for the public privileges of Chautauqua citizenship, including a daily program of lectures, addresses, concerts and entertainments. The family will choose, according to purse limitations, between hotel, large or small boarding houses, private cottages or rooms to dwell in, just as at any other summer resort, but it is the varied kinds of organized activities offered to the resident that distinguishes Chautauqua from other summering places.

The boy you farm out all day long to the Boys' Club with 350 other boys, for a schedule of play, manual training, camping, nature study, etc., under a staff of boy masters. Similarly the girl goes into the Girls' Club, also with its own club house, games, basket-making, weaving and the like. Junior, of the important college age, will join the Athletic Club, officered and managed by college men of athletic renown, for all kinds of sports, bowling, billiards, tennis, boating crews, baseball, track events. For the young lady of the family socially inclined, there is the Outlook Club, altho her interests are likely to be divided by schools of physical education, languages, expression or music.

"Forget not the babies," interpolated the bachelor.

Kindergarten and sand piles for them, of course, was the rejoinder.

You see the result of all this is that father and mother are care-freed to such a remarkable extent that they go in for other organized activities themselves. While the young people are enjoying a good time under wholesome conditions, the enthusiasm of mature people over Chautauqua opportunities for grown folks is amazing. Mother attends the Woman's Club, which is a daily federation seven or eight hundred strong. She joins the choir to renew the neglected gift within her, or she enters the physical culture class of "Seventy Years Young"-ers. Father hobnobs at the Men's Club, pitches quoits, plays roque, attends the ball games, fishes, or ranges the golf course between lectures that appeal to him. The lawyers, the ministers, the educators, the masons, have voluntary group organizations.

Thus the Chautauqua life is a veritable "mixing," different from that at home, effected by grouping people from all parts of the country on lines of common interest instead of ordinary social distinctions. One introduces himself by becoming a member of a group.

"Socialistic bunch, I suppose," murmured the pessimist.

Merely coöperative in social spirit for a limited period. Knockers get lonesome. All ordinary functions of government are assumed by the chartered management. No initiative, referendum, recall, or ordinary suffrage privileges are yours. If you should lease a lot or build a house you would have a voice in the selection of four out of twenty-four trustees on a self-perpetuation board, and the administration of the whole proposition centers in an appointed director, not an elective mayor. All sales privileges for commodities, board or lodging are conducted on a license or concession basis. You fall into line where you fall into line, or you fall out. Nothing like common ownership of either the means of production or distribution obtains at Chautauqua. The Institution controls material conditions in order to offer an unusual plane of community life.

"Some proposition," ventured my companion. "Go on."

Your specialized morning newspaper, *The Chautauquan Daily*, will contain an "official program" for the day, sometimes listing as many as forty features from which you may choose according to taste. Regularly there will be a ten o'clock devotional hour address, an eleven o'clock lecture, a 2:30 address or concert, a five o'clock reading hour, and an eight o'clock illustrated lec-

A: A SYMPHONY CONCERT IN THE OPEN-AIR AMPHITHEATER

ure or entertainment. A majority of the town popula-on will be gathered together from time to time in the mphitheater for the afternoon or evening performance, nd the assemblage of such a crowd at least once a day a common meeting place plays an important part in he quick development of a community spirit.

This is a peculiarly out-of-door spirit. You will notice hat the women do not wear hats or gloves, and many f the younger men go hatless about the streets that ind among the trees. The great Amphitheater, con-ructed at the head of a natural ravine, is roofed, but pen on the sides; no way has even been devised for eeping an audience from walking out if the speaker annot hold them. Summer school class rooms are ostly windows, and verandas are the omnipresent rchitectural fashion of Chautauqua town. The entire hore line of the lake is a park reservation and other ark and open spaces are conserved.

Of the twenty-five public buildings used for the sched-ed activities of the composite community more than alf are devoted to summer school classes, organized in fteen departments, under eighty instructors brought rom different educational institutions, offering nearly hree hundred courses during the season.

Mary has musical ambitions. She chooses the special ogram of the Music colony. She registers for her les-ns, practises in the isolated studios, attends organ nd artists' recitals, takes part with chorus and orches-a in the rendition of oratorios and operas, really gets me of that musical life longed for at home.

Chautauqua community life is full of such colony fe. For instance: The Athletic colony—from the nor-al classes of the School of Physical Education down the children's playground with its modern equip-ent; the Arts and Crafts colony—from fine arts to ead work; the Religious Education colony—from the chool of Religion with critical Bible study, teachers' ormal classes and mission study institutes, to tours ver the lakeside model of the Holy Land and receptions nine separate denominational houses; the Chautau-qua Home Reading colony (members of the Chautauqua Literary and Scientific Circle) with class headquarters, reunions, councils, round tables, rally day, baccalaure-ate, and "recognition" or graduating exercizes marking the completion of a four years' course of cultural read-ing at home.

"Tango colony?" queried the cynic.

Goes elsewhere. Land and water sports outdoors for both sexes, folk dances and gymnastic posturing in the School of Physical Education seem to have satisfied Chautauqua people.

Chautauqua isn't a "society" resort. It attracts the sort of people who are sometimes called "key" people in their home communities, active in church, school, civic or social betterment, interested in progressive thinking and sane living, who have the desire to keep in touch with the best thought and life of the times. They put themselves on the Chautauqua schedule of daily living for a while and go back invigorated and better equipped for intelligent social service at home.

"Where do they come from?"

Both town and country. Most from the nearby middle states, many from the South, some from every state, and not a few from foreign lands. Presbyterians house a score of missionaries and their children free every season. Berea College has its own houseful. There are two or three houses of summer schools scholarship hold-ers for whom a "commons" or common dining hall is conducted by the practise students in the School of Do-mestic Science. Your hotel porter wears a Greek letter fraternity pin. Your boarding-house waitresses are probably from the schoolroom. Your bookstore salespersons are college-bred. The unconventional Chautauqua idea of creating a "college atmosphere" of daily life for adults and their families in vacation time, is original and decidedly American.

"Wise uncle of mine, that," mused the broker. "If I had a family—I have a notion to take a long chance and drop in on him at your idealized Chautauqua, and see if I can see it."

The World is so full of

A NUMBER OF THINGS

I'm sure we should all be as happy as Kings

AN OCCASIONAL PAGE BY

EDWIN E. SLOSSON

FINE writing is rapidly becoming one of the lost arts. Even the sophomores and circus posters have discarded it. In the newspaper where once fine writing flourished it has been replaced by a bald and jerky journalism. But I am pleased occasionally to discover that it has not become absolutely extinct, but yet lingers like other folk-crafts in country places, biding the time when fickle fortune shall again call it forth and restore it to its pristine popularity. For instance, could the palmiest days of the art have produced a finer example of fine writing than the following description of the "Auchinleck Farmers' Dance" as reported by the Auchinleck correspondent of the *Glasgow News?* How the author must have reveled in the display of his voluminous vocabulary and delighted in the indulgence of his polysyllabic propensity. How sorry it makes the reader feel that he wasn't there. It is different with the reports of festivities in our papers. We are always glad we didn't go when we read about them:

The above dance came off in the Town Hall on Friday night. There were about forty couples present. . . . The young ladies, a galaxy of youth and beauty, were neatly, becomingly, chastely, elegantly, and fashionably attired in habilaments and costumes of silks, satins and velvets, of virgin or pure white, light blue, cream, and pink, and from visual observation there was conspicuously in evidence an overwhelming preponderance of virgin white, and the diversity of hues added to the appearance on the whole considerably of the figures in lithesome movement. The young ladies in ecstasy of delectation, with sparkling bright eyes in their heads, so redolent of vivacity, with frequent alternations and fluctuations of risible faculties, beaming countenances in active operation of full measure of enjoyment, were indulging in a high degree of ecstasy their saltatorial proclivities with the gallant, lively and sprightly young men, who, too, were suitably attired for the felicitous occasion. The dance, with short intervals of relaxation, went continuously onward, merrily and with animation in the performing of recent and up-to-date dances, requiring activity and celerity of movements in the execution thereof, in circling, gyrating, eddying, and pirouetting alongst the floor, hither and thither, to and fro, forward now and then retrograde alternately, in the various evolutions, and in combination of all these motions thereby resultant to the participants thereof in exhilaration, exuberation and delectation. Spectacularly looked upon, in verity a most brilliant, a most enjoyable function of a dance. . . The viands were of a most palatable kind, ambrosial and delicious to the taste, and as regards quantity and quality, both combined enough to satisfy the gustatory and gastronomical proclivities of the most fastidious epicures and connoisseurs.

A. Savage Landor's recent book on his sufferings in South America reminds one of his still more harrowing experiences in Tibet, and recalls the amusing misinterpretation of the first report of his exploration in an Australian paper. The cable rates being high, the news is condensed as much as possible and in the expansion of it more knowledge of the subject is sometimes required than is available. The dispatch as received was certainly blind enough to excuse any misconception:

savage landor arrived petersburg from tibet suffering hands natives

As expanded and published in the *Melbourne Times* it read:

A savage landor got into St. Petersburg yesterday and the people of the city were terrified. After considerable difficulty the beast, which came from Tibet, was captured, taken to a remote place and there dispatched. It is said that this is the first animal of the sort ever seen in Russia. How he reached the city after his fights with the natives of Tibet, which is a comparatively unknown country, is a mystery.

But as an expansionist the Australian can be matched by the American journalist who, coming across the words "charlemagne tower decorated" in the cabled account of some St. Petersburg festivities, played it up in this wise:

The Charlemagne tower was magnificently decorated for the occasion and the venerable edifice attracted the favorable attention of every passer-by, particularly at night when it was lighted up.

It would not be courteous to omit reference to the famous case cited by Barrie, where a dispatch from the seat of war in Afghanistan closing with the words, "natives take umbrage," appeared in an English paper with these headlines:

UMBRAGE CAPTURED
Natives Seize an Important Afghan Town

Friends living in Mexico tell me that if a person claims to be an American he is laughed at, but if he says he is a Texan he is treated with respect. The Lone Star outshines the whole constellation, since it is the nearest and light diminishes with the square of the distance.

The Mexicans hardly realize yet that the annexation bill has past Congress. Nor do the Texans. They still talk as tho they were an independent republic. The Sabine is in some respects more of a boundary than the Rio Grande. This is recognized on the other side as well. Last year in a banquet speech Huerta said: "The Texans who beat Santa Ana at San Jacinto, you must know, were not Gringoes, but brother Mexicans of whom we have reason to be proud."

I learn from *Zeitung der Zeitungen* of Berlin that the *bundesstaatliche Schulkommissar* Claxton is undertaking the *Beseitigung des Analphabetismus.* I thought I had been keeping a close watch on Washington, but I had not realized that all this was going on there.

The way of the transgressor is hard. Madame Caillaux, imprisoned in St. Lazare for the murder of M. Calmette, is allowed the services of her coiffeur only twice a week and her manicure only once a week.

Literary men are of two kinds: great authors and parasites on their bad grammar.

Which had you rather not be, President of Mexico or Prince of Albania?

Memory is a good servant but a bad master.

FOR HE CARRIES THE LAMBS

BY LOUISE DUNHAM GOLDSBERRY

THE early part of the night was not hard. The flames in the little fireplace sang soft and delicate, the room was ruddy with firelight comforting and the noises from the city, hoarse from the rushing streets, seemed like the presence of friends. But it was when the night outside the window hushed into after-midnight stillness and but she and the singing flames were alive in the great silences of the city below and the skies above—then it was hard. Then her thoughts were so loud they seemed voices and her heart's beating so loud that it, too, was a clamorous live voice. And the little face in the crib not her baby; not her own, own baby. A neighbor's baby; dying. And her heart was breaking for the poor, poor mother who must stay behind in the rose-red firelight and let that little, little, *little* baby go out alone into the wide ways of the night and the skies.

The wide, wide ways of the night. And the skies. The dark blue of the skies. The great skies, flowering into stars. And down, down the lanes of street-lamps, yellowly cold and mysterious and beautiful. Beautiful, beautiful; and far-off in fallow darks, the clocks tolled off the hour. A live sound, like a barricade against the still stars. She counted—*one—two—three*—on up to midnight. *One—two, one two,* over and over, as all the bells and all the reverberatings hid in the vast silence. *One—two*—all the numberings and hour-striking of all the years would forever end at *two. One—two.* Just but two baby-years. After the birth—nothing. A song, a laugh; a cry in the night, a faltered step, a hand at her breast, a witless babble of lovely sound—and the end.

The thoughts that were voices went on. In a round, rimmed by a young ring on her finger. After birth—nothing. A babble of witless sweetness, a kiss of lips just in from voyaging with God's months, a laugh, a cry in the night. After birth—nothing.

This was the hardest; this, now. The silence of the streets; as if all the world hearkened at her housetops, to hear the cry for the dead. The shadows along the roofs stretched longer, darker. A shimmer of hoar frost on the black roofs. A black cross bodiless in the void between, where a telegraph-pole lifted. A cross? A crucifix. There was a woman, once, who bore a child who died on a cross; died in the open, on a lifted-up cross. *How* her heart yearned over that woman! *How* she longed to gather her head into her bosom and weep.

These little feet so still in the crib—that woman's child had just such little feet—little, little, little precious feet—that had faltered their first scared step into the proud snatching arms and the proud showered kisses and the babblement and endearment. That woman's child had died—her child lay in his crib and the flames sang delicate on the hearth and the stars were all out and the winds were still for her baby's going. *Her* baby's going.

Then, the blessed tears came. She suddenly remembered it, as tho that other wild-faced woman crouching at a cross on the hill had spoken—"*He carries the lambs in His bosom.*"

And she forgot the hurt and the bruise of the years. Forgot the years.

For along the lanterned fields of the skies she seemed to see a Form going in a brightness that faded the stars and in His arms a little child.

And the face of the little child was the face of her baby. And the face of the little, little child was the face of her baby.

A PAGEANT OF THE TENEMENTS

DOWN on New York's East Side there was held recently a great pageant of play. More than three thousand immigrant boys and girls of all nationalities took part, while from the bleachers and surrounding roofs the show was watched by many times that number.

Properly speaking, this gigantic play spectacle was known as the "Pageant of Nations," and was meant to depict the history of Manhattan and of the East Side in particular, from the time of Hudson's discovery down thru the successive immigrations. Practically, it was an opportunity for these foreign children to "play Indian," be Dutch or English soldiers to their heart's content, like any other normal American children, while for their elders in old world folklore songs and dances the pageant brought back memories of the Fatherland.

Quite different was this pageant, held on a playground squeezed in amid congested tenements, from the spectacle presented on the shores of the Mississippi only the week before. There in the midst of a beautiful park, where wooded slopes formed a natural amphitheater, St. Louis celebrated its history. Here the stage was a vacant lot in the blistering sun; the fire-escapes and roofs of the surrounding tenements were the grandstands. Yet as their guest of honor these newest of citizens had Margaret Wilson, the President's daughter.

Not because of history or spectacle was this Pageant of the Nations remarkable. It could not be compared with St. Louis in that respect. But its significance lay in the fact that in it, for the first time, the dozen and more nationalities of the East Side, dwelling often within a block of one another, met and knew each other in any mass. Poles, Russians, Germans, Hungarians, Bohemians, Rumanians, Italians, Jews, all laid aside petty national jealousies to join in a common brotherhood under a new flag.

But aside from the play and the fun, this Pageant of Nations had some very serious objects. It was designed first to bring the adult immigrants in touch with the public schools. Too frequently these older folk are left behind in the process of Americanization by the children who have attended the public schools. The children come to feel that they know more than their parents; they have no sympathy, or even a silent hostility, for the speech, customs and habits, to which the old folk cling so tenaciously in their new environment. The pageant is designed to show that in the picturesque customs of the old countries there is much

that must be preserved as an American heritage.

In arranging the pageant recreation was the one fusion point for all these races. In the less than square mile that makes up the heart of the East Side more than a quarter of the population of New York lives. But in the congested blocks there is little thought for the children—or for the grown-ups either. Aside from the few playgrounds, the only places of recreation are the streets or the places of commercialized amusement—the dance-hall, the moving-picture show, or the saloon. For the huddled immigrants, despite the foreigner's natural love of his kind, there is little social life.

New York's school system represents an investment of $135,000,000, idle and unproductive more than forty per cent of the time. In the vacant rooms of these buildings at night and on holidays some of this pressure of space on the social life might be removed. By using the city's five hundred schools as social centers there might be supplied some of the home elements which the tenement can never give. Two years ago such an experiment was started in Public School 63. Here in the neighborhood clubs, in the open political forums, and in the musical organizations was developed the first common bond between these discordant races. An orchestra, organized among the cloakmakers of the East Side and using the school as a meeting place at night, now numbers over a hundred pieces. During the season it gives numerous concerts thruout the neighborhood and in the public schools.

Organized to show the need for play and of a center for the coalesence of all the drifting social elements of a great city, this simple pageant of simple peoples convincingly demonstrated one point to those who watched it under the sweltering sun: one could not forget that during the summer months ahead there are still 499 schools in New York, each with the possibilities of Sixty-three, destined to remain big, spacious, empty and cool, while children play in streets with the temperature of ovens, and a crowded population gasps for breath outside their doors. The school as a social center evolved in Wisconsin. When it becomes a definite part of the city's schools, surely to the tenements of the East Side its discoverer will be a new St. Francis of Assisi.

THE NEW CHINA ON A CALENDAR

THIS calendar, distributed among its readers by a Chinese newspaper, epitomizes the spirit of the new China as contrasted with the old. Above the central picture are represented the tools of the republic—the wireless telegraph, the locomotive, wealth, the aeroplane, implements of modern warfare and the transoceanic steamer. Below, under the great foot to the left and the sword to the right, are represented the cringing, ignorant masses under the old régime. At the bottom of the calendar is a general Hurrah! for the new Republic. The triangular tablets surrounding the central picture are the months, beginning with January, just to the left of the aeroplane.

This is the heyday of prosperity for Chinese newspaperdom. The Chinese are eager to read, to learn, to know. Before the Revolution there were fifty newspapers in the country. Now there are over one thousand.

Methodist Board of Foreign Missions

A CALENDAR THAT REEKS OF PATRIOTISM

LIGHT STRAINED THRU MARBLE

THE visitor to Florence will recall the ancient church of San Miniato al Monte and particularly its apse suffused with a soft, cool, bluish light which seems to come from nowhere and to penetrate everywhere. If he is of an inquiring turn of mind he will discover either by personal investigation or a reference to Baedeker that this effect is secured by substituting thin slabs of marble for glass in the five windows of the apse. The church is some six hundred years old, yet no one seems to have followed up this ingenious idea. But, recently, two Germans, Voege and Engel, have been experimenting with marble as a light screen and find it advantageous and practical.

As is well known the light we see is accompanied by invisible rays beyond both ends of the visible spectrum. The ultra-violet, those having too short a wave length to affect the retina of the eye, are injurious when at all intense; in the sunlight they cause sunburn and in the X-rays they produce more serious sores. The Finsen treatment of lupus and cancer uses the ultra-violet rays. Fortunately these rays are mostly cut out of ordinary artificial light by the glass which is opaque to them.

But the infra-red rays of a wave length more than twice as long are also harmful. They are heating, for one thing, as well as hard on the eyes, altho invisible. By passing light thru thin sheets of marble, however, these rays beyond the red are filtered out as effectually as the rays beyond the violet are by glass. The loss of light by transmission thru the marble is not so much as might be expected, for by impregnating the polished slabs with oil under pressure the spaces between the crystals are filled and the marble becomes so translucent as to absorb only one-fifth of the light from an electric lamp behind it, which is only about half the proportion absorbed by the ordinary milk glass used in shades. The panes of marble may be from an eighth to four-fifths of an inch in thickness. The transmitted light is diffused and white and very agreeable.

THE NEW BOOKS

JOINING PEACE WITH WOMAN'S RIGHTS

ALMOST simultaneous with the death of Baroness von Suttner in Vienna on June 21 comes the publication of her *When Thoughts Will Soar,* the successor and companion novel of *Die Waffen nieder,* which brought its author the Nobel Peace Prize in 1905. But while peace is again the major theme, hardly less important is the advocacy of the "elevation of woman," a term which the Baroness prefers to woman's rights or suffrage. Published only a short time before her death this latest book may be said to be her prophecy as well as her last message to the world on the causes with which she identified her life.

An American multimillionaire, for whom one has little difficulty in seeing that Mr. Carnegie furnished the inspiration, founds a great world peace conference at Lucerne, which he calls "Rose Week," to which he invites annually as his guests the world's leaders in thought and affairs. Here in the interchange of ideas international public opinion is to be formed, and what President Butler has called the "international mind" developed:

> The engineers, mechanicians, and technicians of the moral forces are the poets and prophets, the philosophers and the artists; they are the dynamic agents of thought, the leaders of intellect, the pathfinders in the jungle of social institutions, the aviators in the eternal sphere of ideas! Yet they are scattered thru the centuries, scattered in space. One lives in New York; another in Paris; the third at Yasnaya Polyana. . . . How much more powerful their work would be if it were coördinated, if the knowledge of their doctrines, the glory of their names, the magic of their art, proceeding from one central point, should radiate in all directions. Motors and propellers have taught us that power must be concentrated and compressed, in order—by explosions—to drive the vehicle.

Glowing, indeed, are the pictures painted of these conferences, which by the year 1920 have come to exert a permanent influence on world affairs. It is at the "Rose Week," too, that we see the efflorescence of the two careers which are the moving forces of the novel, Franka Garlett, the apostle of the new woman, and Helmer, the poet of the "Hohenmensch," in contrast with Nietzsche's "Uebermensch." Not in militancy, but in education, does Baroness von Suttner see the advancement of womankind:

> Most important is a knowledge and understanding of the universal laws that govern nature and the world; then only can she judge and coöperate where social arrangements are to be decided. To take a hand in the transformation of these arrangements, to become themselves lawgivers: that is a goal the attainment of which may stand for the future. . . . But how shall they bring their views and their feelings to effectiveness if they stay in voluntary ignorance of all these things that regulate the conduct of social, political and economic life?

BARONESS BERTHA VON SUTTNER
The late author of *When Thoughts Will Soar*

And to the establishment of lecture courses and schools for women Franka Garlett devotes the large fortune which, after years of privation with a professor-father, suddenly descends upon her from her grandfather, Count Eduard, with whose daughter her father had eloped. It is in dealing with this romantic background, and the attempt to portray the amenities of Austrian life, that Baroness von Suttner is least convincing. She is less the novelist than the advocate. Perhaps it is the contrast of dull life with the vivid visions of the future, such as the Lucerne "aeroplane masquerade" with the whole history of transportation floating in the air, in "slender ships with inflated sails, Roman chariots, Venetian gondolas and Lohengrin swans." Like the fantasies of Wells, the future may be made realistic, but when thoughts do soar care must be taken that they are not befogged with earth. Whatever of literary merit the original may have had has been lost in the translation.

When Thoughts Will Soar, by Baroness Bertha von Suttner. Boston: Houghton Mifflin Co. $1.50

A BUDGET OF SHORT STORIES

Gouverneur Morris has added to his reputation with *The Incandescent Lily.* The title story of the book introduces us to a secret valley somewhere in the depths of the Chinese Empire—beg pardon, Republic—which brims like a cup with the rarest and most beautiful flowers in the world, including a glowing lily with ink-black stems and foliage, unique in the world. Here also there is a sweet little princess who shows the inquiring botanist the lily at the risk of her life, for it is a sacred flower which few are permitted to see. But the botanist is engaged to a girl in America and has to choose between taking back the flower to the Boston Arboretum and his fiancée and staying with the princess in the hidden valley. No other story in the book has such charm, but all have good, romantic plots fittingly clothed in the author's style.

To those who know Irvin S. Cobb as the irrepressible humorist, as light-hearted and irreverent as the earlier Mark Twain, *The Escape of Mr. Trimm* will come as a distinct surprize and perhaps as something of a shock. The tales in this book deal chiefly with the pathos of a small Southern town, a back eddy in the current of national life, where tragedy appears all but robbed of its dignity by the dull meanness of the environment. When the author shifts his stories to other scenes he ventures on the purely horrible, as in the uncanny story of "Fishhead." If the South has many writers as strong as Irvin Cobb in comedy or blackest tragedy the literary center of the continent will shift to below Mason and Dixon's line.

All Men Are Ghosts, by L. P. Jacks, editor of the *Hibbert Journal,* are the work of one of the greatest and best known mystics of today, but at times his mysticism runs into fantastic obscurity and the thread of the narrative becomes far too tangled to unravel. The atmosphere which pervades the book is not only confused but sad: *The Professor's Mare* is perhaps the most pathetic story that Mr. Jacks has ever written. Another and elder mysticism is represented by W. B. Yeats, whose *Stories of Red Hanrahan* are tales of the borderland between ancient Ireland and Fairy land. The greatness of the author's name and the unfailing charm of his style will always command the reader's attention, but we must confess

On Sale Wherever Books Are Sold

that he makes neither country attractive. Mr. Yeats is not at ease with the supernatural, as Chesterton would be; he vaguely fears it, perhaps because the Irish fairies are more subtly sinister than the English, perhaps because they have quarreled with their author.

The Secret Book, by Edmund Lester Pearson, is a delicious string of facetiousness, all the more remarkable as told from the point of view of the staidest of occupations, the librarian's. The list of things that a librarian at the information desk is asked in the course of a day, the scene in which Stevenson's *Treasure Island* is destroyed as a "dime novel," the interview of a popular author with his stock characters, all make entertaining readings, but perhaps the book is funniest when it drops into poetry in a friendly way, as:

> The foolish man, 'tis he who takes
> His way along the Rue de Paix,
> Or stands bewildered 'mid the roar
> That sounds thruout Rue St. Honore;
> Or to escape the city's noise
> Doth ride or drive within the Bois,
> Or seeks relief from dirt and grime
> In quarters of the old régime.

The Incandescent Lily, by Gouverneur Morris. New York: Charles Scribner's Sons. $1.25.

All Men Are Ghosts, by L. P. Jacks. New York: Henry Holt & Co. $1.35.
Stories of Red Hanrahan, by W. B. Yeats. New York: The Macmillan Co. $1.25.
The Secret Book, by Edmund Lester Pearson. New York: The Macmillan Co. $1.25.

WHAT'S TO BECOME OF THE GIRLS?

Some two years ago a committee of the National Federation of Settlements undertook to study the problem of the adolescent girls in the tenements, in the city factories and in department stores, to find the "ultimate reactions" upon them of the modern industrial city. Series of conferences were held, in which the questions raised by experienced social workers were arranged in schedules; the answers received to these answers were edited and make up the substance of *Young Working Girls*, which is published with an introduction by Jane Addams. Incidental to the gathering of the facts, the committee received many practical suggestions, from which a "provisional program" was drawn up. This book should be in the hands of all who have to do with adolescent girls outside the sheltered home or the fashionable boarding school. From a different point of view a committee of the Fabian Women's Group in England has set out to study the problem of women's economic independence thru productive labor, and has published its

results in the form of a description of seven professions in which women have successfully established themselves. The details are furnished by specialists in the various groups—which include teaching, medicine and dentistry, nursing, sanitary inspection, civil service, secretarial and clerical work, and acting. The requirements in each occupation, the preparation, the cost of education, the probable returns, the conditions of work and the extent of opportunity, etc., are all considered.

Young Working Girls. Edited by Robert A. Woods and Albert J. Kennedy. Boston: Houghton Mifflin Co. 12mo. $1 net.
Women Workers in Seven Professions. Edited by Edith J. Morley. E. P. Dutton & Co. $2 net.

THRU THE EYES OF A WESTERN CHILD

Somewhere out in the Missouri valley, east of that indolent river, lived a little girl, in the years when the prairie was unplowed and wild flowers, now vanished, were as tall as she. Out of those days in the early West has grown the *Stepdaughter of the Prairie,* by Margaret Lynn, a volume full of the fresh charm that prairie-lovers knew, the wind that rippled the tall grass into a mimic lake whispers thru its pages mysterious messages from a child's heart and from the nation's childhood, now a memory, but a vital influence in the history of our country.

Macmillan. $1.25.

MOROCCO THE BIZARRE

This title is well chosen, for the volume in which George Edmund Holt has embodied his experiences while American Consul-General to Morocco is neither a guide-book for tourists or a statistical study, but fugitive observations of country and people written in a humorous style.

McBride, Nast. $2.

INCREASING SHAKESPEAREAN LITERATURE

"Multum in parvo" would well describe the compact little volume into which Professor Neilson and Professor Thorndike have put all *The Facts About Shakespeare* that are of value in estimating his life and work. The style of presentation is simple and direct, and the facts are handled in a judicious and constructive way. It is an ideal handbook for the reader and student and is issued in connection with the complete set of "The Tudor Shakespeare."

Macmillan. 35 cents.

A SYMPOSIUM ON HELL

If the question *Is There a Hell?* can be decided by a poll of distinguished theological and religious leaders, then only those with clear consciences may look into the future with unruffled minds. The sixteen contributors to this symposium answer the question in the affirmative, and not only discourse on the certainty of hell, but explain the justice of it, give its "history," describe what it is like, declare it to be a "philosophic necessity," show how it "completes the universe," and assure fearful mortals that verily "the love of God is the efficient cause of the burning pains

The Call of Decency

A Big Campaign Against Scavenger Books But Not One of Personalities

By E. W. REYNOLDS

We sometimes have in our great cities seasons or periods of an unusual amount of lawlessness designated as "crime waves." These are not of great duration and are quickly forgotten after the stern hand of the law has said "nay."

For "crime waves," however great, we have equal forces for combat, and the evil doer when brought to the bar of justice expiates his wrong doing even unto "an eye for an eye; a tooth for a tooth."

But not so with the awful tragedy of "scavenger books." Human law does not provide adequate punishment for literary scavengers creating an inheritance of degeneracy for the youth of the land, nor for publishers of scavenger books prostituting capital and business.

The source of scavenger books must and will be dammed, but their poisonous streams of vice and crime, filth and vulgarity, lust and sensuality, will flow on through the life streams of **generations yet unborn.** The "viper" stilled in death may be forgotten as it lies in the dust by the roadside, but the poison from its bite has yet its own time to accomplish its awful result

Our fight for the cause of more wholesome books is a fight against scavenger books It is not a fight against an author or a publisher, nor a **fight of personalities,** but when, after August 8th, **"The Eyes of the World"** assumes command of the conflict, the foes of decency will be brought to make their last stand.

Harold Bell Wright must have written his greatest novel, "The Eyes of the World," **with jaws set and soul on fire.** He strikes a mighty blow at artists and authors prostituting their work and other present day evils in art and literature. **The story is so convincingly told** that it is stamped with the truthfulness of a chapter out of real life. The underlying purpose is clearly defined, but **the real charm of the story** is its style, color, conception and fancies. They admirably fit the theme and make "The Eyes of the World" of over 400 pages of wholesome action, plot, counterplot, mystery and love, sweet sentiment and strong passions, **more romantic than any novel the author has yet written.** Harold Bell Wright proves, for the sixth consecutive time, with "The Eyes of the World," that **a novel does not have to be unclean to be interesting nor does it have to be uninteresting to be good literature.**

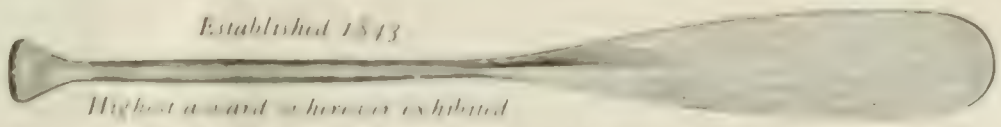
When salacious books began making their appearance the reading public was stunned, bewildered, fascinated, by the bold daring of their suggestiveness. Because of this, thousands of men and women read them as if under a spell. This gave rise to the conclusion, by authors and publishers, that people wanted that sort of thing, with the result that authors having no hesitancy or scruples against prostituting their genius are now fairly and literally **emptying themselves of all the rottenness** that a publisher, who will likewise prostitute capital and business, will print between the covers of a book or magazine.

Some publishers and authors in their wild scramble and jealous desire to outdo and excel in their effort to fill the scavenger literary trough with the stench and offal of their perverted minds, guard their nefarious occupation with "clubs of exclusive contract" that others of like design may not overfeed those who root for a place at their salacious slough for the germs of mental and moral depravity.

The splendid custom that has long been commendable and profitable, of friend giving friend a wholesome book, so appropriate for many occasions and universally popular at Christmas time, will soon be one of question that will bring business deterioration to the proud profession of bookselling **if scavenger fiction continues to predominate.**

Harold Bell Wright's books are the germ of a new order of fiction for the strength of the race. His first book, "That Printer of Udell's," has given a new hope, a new inspiration, to millions of readers. "The Shepherd of the Hills," "The Calling of Dan Matthews" and "The Winning of Barbara Worth" are important factors in the life and thought of the present generation. "Their Yesterdays" is the author's greatest contribution to the race **for the perpetuation of the race.**

"The Eyes of the World," convicting and convincing, throws the searchlight of condemnation on the dissipation of genius that means moral, intellectual and physical prostitution, social degradation and commercial ruin—**to be published August 8th.**



To secure a copy from the first printing (also a complimentary photograph of the author and his family) **you should place your order now,** with your bookseller THE BOOK SUPPLY COMPANY, Publishers, Chicago. **$1.35 Net.** Illustrations in colors by Cootes.

SCRIBNER EDUCATIONAL BOOKS

The Modern High School

Its Administration and Extension

By Charles H. Johnston, Ph.D. (Harvard)

(Professor of Secondary Education in the University of Illinois) and other educational experts.

A discussion by unquestioned authorities on all the important problems of the high school with special emphasis on social aspects. The book takes up the relations of the high school to the elementary school, to the college, to the industrial life of the community and to the home; and such topics as religion, fraternities, school activities and athletics.

$1.75 net; postage extra.

The Administration of Education in a Democracy

By Horace A. Hollister

Professor of Education and High School Visitor at the University of Illinois.

This sort of preliminary treatment of the field of educational administration as an organic whole fills a very present need. From the study of the evolution of free common schools the author proceeds to a discussion of types of schools which have sprung up in the country, the maintenance of public education, physical equipment, the teacher, etc., etc. The book closes with a hopeful look into the future.

$1.25 net; postage extra.

SCRIBNER BOOKS ON PROBLEMS OF THE DAY

THE UNITED STATES AND PEACE

By William H. Taft
Ex-President of the United States.

With an Introduction by Hamilton Holt.

The ex-President here discusses such topics as "The Monroe Doctrine, Its Limitations and Implications," "Shall the Federal Government Protect Aliens in Their Treaty Rights?" "Has the Federal Government Power to Enter into General Arbitration Treaties?" and "The Federal Trend in International Affairs."

$1.00 net; postage extra.

AMERICAN POLICY

The Western Hemisphere in its Relation to the Eastern

By John Bigelow
Major, U. S. Army, Retired.

A treatment of the subject from the South American as well as the North American viewpoint, and with careful attention to the Monroe Doctrine and its effects on Pan-Americanism.

$1.00 net; postage extra.

THE AMERICAN JAPANESE PROBLEM

By Sidney L. Gulick, D.D., M.A.

Professor in Doshisha University, Late Lecturer in the Imperial University, Kyoto, Japan.

"A clear and temperate statement of issues in the unending conflict between east and west. The author writes with authority."—*Philadelphia No. American.*

"Dr. Gulick's book, because of its moderation and its respect for facts, is an important contribution to a subject which even now is recognized as of the first moment in diplomatic circles."—*Chicago Record-Herald.*

$1.75 net; postage extra.

Charles Scribner's Sons **Fifth Ave. at 48th St., N. Y.**

of hell and purgatory." This would seem justification enough to continue the existence of hell, at least for a generation or two.

Funk & Wagnalls. 60 cents.

LAMBASTING THE FATHERS

Following the fashion popular among a certain school of historians, Allan Benson has republished the series of papers which appeared in *Pearson's Magazine* under the heading, *Our Dishonest Constitution.* Having had the shackles fastened on us by capitalistic forebears, he advocates the repudiation of all state and national debts, which he says are inventions of servitude for the working class.

Huebsch. $1.

WHAT CONSCIENCE WILL DO

An impossible heroine revelling in self-sacrifice and self-effacement handicaps Ellen Thornecroft Fowler's latest book, *Her Ladyship's Conscience.* The results of the Conscience force the author to kill the rival crudely in order to bring about the desired happy ending. The conversation and description are often curiously stilted as if the fondness of the writer for portraying the Victorian in character had left its mark upon her style, but the clever, epigrammatic remarks of the characters redeem the book.

Hodder & Stoughton. $1.25.

CLASSIFYING GOVERNMENT

The long-felt need of a cyclopedia of American government containing brief and specific discussions of many aspects of the field has been satisfied by the *Cyclopedia of American Government* edited by Prof. Andrew C. McLaughlin, of the University of Chicago, and Prof. Albert Bushnell Hart, of Harvard University. The work includes the theory or philosophy of political society, the forms of political organization, and the methods and agencies by which law or governmental purposes are usually carried out. Only the first volume, from Abattoirs to Finality, has appeared; but, judging from it, the work deserves careful consideration on the part of all who specialize in government and also by the layman as the source of much valuable information.

D. Appleton & Co.

MODERN MIRACLE PLAY VERSE

Mrs. Marks (Josephine Preston Peabody) has now given us three plays. Of these *Marlowe*, the earliest, was the most dramatic and made her reputation; *The Piper*, after some years, disclosed her gift for religious sentiment, with diminished dramatic effect; and now *The Wolf of Gubbio* sets this sentiment before us in what is no drama at all, but a charming lyric in dialog. When we know that the Wolf has long terrorized the village of Gubbio, and that at last he meets St. Francis of Assisi, we know all the plot. In style and method the poem is intentionally—and perhaps unfortunately—exotic; Mrs. Marks has followed the naïve manner of the English miracle plays, thereby denying herself any moments of exalted or deep expression, and depending for her appeal upon quaint

ness and prettiness. Remembering certain noble passages in *Marlowe*, the reader regrets this later manner. But the story in its kind is beautiful, and the carol of the crusaders, in act III, is worth many volumes of contemporary verse.

Houghton Mifflin. $1.10.

INTERPRETING THE PROPHETS

The new volume of "The Bible for Home and School" on *Amos, Hosea, and Micah*, by Prof. J. M. P. Smith, is a fine addition to this series. Altho some of the interpretations, such as that of Hosea's marriage and Amos' attitude toward ritual, will not meet with universal acceptance, the work as a whole is admirably done and makes clear the difficult writings and sublime messages of these important prophets.

Macmillan. 75 cents.

RECURRENT PROBLEMS

In his new volume Rev. J. R. Cohn discusses with sound logic and orthodox zeal some *Vital Problems of Religion*, such as the relation of science to religion, the freedom of the will, and the place of evil in a good world. It cannot be said that he has thrown much new light on these problems, but his style and treatment are fresh and vigorous and his conclusions support idealism and faith.

Scribners. $2.

NEWSPAPER ENGLISH

In order that the high school student and the college freshman should have a more complete knowledge of the fundamental principles of newspaper English, John Baker Opdycke has written *News, Ads, and Sales*. The book is primarily meant to supplement a course in English composition and it treats the commercial aspects of the newspaper, magazine and advertising.

The Macmillan Co. $1.

BIBLE PHRASES

Readings from the Old Testament and its companion volume, *The Old Testament Phrase Book*, contain excellent collections of Biblical extracts, selected and arranged under appropriate headings by Louise Emery Tucker. The varied beauty of this great literature is very attractively displayed for the use of young readers.

Sturgis & Walton. $1.25 and $1.

THE FOUNDATION OF MECHANICS

Galileo's epoch-making work, *Dialogs Concerning Two New Sciences*, which was published in 1638 at Leyden because prohibited by the Italian Inquisition, has not been accessible in English, but now we have a handsomely printed edition of a translation by Henry Crew and Alfonso Salvio, of Northwestern University.

Macmillan. $2.

THE SOCIALIZED SOUL

Professor Joseph H. Coffin has written a wholesome and useful text-book of ethics based upon *The Socialized Conscience* as the moral criterion and point of departure in selecting materials. The applications to social situations and institutional life are clean cut and practical.

Baltimore: Warwick & York. $1.25

STEINWAY

Steinway Skill, Experience and Ability Alone Can Produce a Piano of Steinway Merit

TO attain the world-popularity of the Steinway was possible only by superior merit. This merit consists in the unsurpassed qualities of tone and workmanship. These are the distinctive features in the Steinway of to-day. The first Steinway Piano was the result of an art ideal. Through four generations this ideal has been upheld and maintained, to the end that proficiency has become a tradition in the Steinway factories and that the Steinways are recognized everywhere as past masters in their craft.

Purchase a Steinway and you possess the world's greatest piano—perfect in tone and workmanship.

Abbot Academy
A School for Girls. Founded 1828. 23 miles from Boston. General course with Household Science. College Preparation. Address Miss Bertha Bailey, Principal, Andover, Mass.

PEOPLE WHO WRITE

Eleanor Hallowell Abbot's recreations are outdoor sports, and being the wife of a physician. Vocationally, she writes.

Miss Mary J. H. Skrine, author of *Bedesman 4* (Century) is the wife of the rector of St. Peter of the East, Oxford—the second oldest church in England, so they say.

Amélie Rives (Princess Troubetskoy), author of what the Stokeses say is the best seller in New York City—*World's End*—has sailed for England, where she will shortly do another.

It appears that Miss F. Tennyson Jesse, author of *The Milky Way*, is not the niece but the greatniece of the great poet. Not that she is loth. But to admit to it would make Miss Jesse considerably older than she is as yet willing to 'fess up to.

Mr. Richard Clough Anderson is well fitted to write a satire on society, suggestively entitled *Animals in Social Captivity*. Stewart and Kidd, his publishers, have given us a long list of his prominent clubs, class at Yale (where he won his Y) and his picture in company with Mrs. N. Longworth's big dog.

Mr. T. Fisher Unwin, some weeks after *Century* told who wrote *Home*, comes along in a "news-immediate" envelope with the announcement that the book is about to be published anonymously in England. The author, he says mysteriously, "is likely to establish his (or her?) reputation quickly with the public."

The modest H. De Vere Stackpole found, after writing a translation of Villon, that time hung so heavy on his hands that he felt constrained to cut out and paste together all the reviews of his book, and measured them. Nine yards one foot was the startling result which he special-deliveried to his publishers, the Lanes!

Dr. Wu Ting-fang's publishers (Stokes) say that he once bought a dress suit in America and took it back with him to China. "To wear? Certainly not! I called on a lady the other day and observed a blue and gold mandarin coat hanging on her wall. It was a good idea—I shall hang the dress suit on my wall, when I get back to Pekin, for a decoration."

A visitor at Indianapolis asking for the Riley House was told there was no such hotel. On explaining that he meant the James Whitcomb Riley House, he was referred to the directory. When he failed here his guide remarked that "some of them Irish never do stay long in one place." Which we know to be a true story, it being told us by the Bobbs-Merrill Company.

S. S. McClure, an editor of some sort who, *sotto voce*, has been writing a modest little autobiography, says that the first time he heard Mr. Kipling's name it struck him as "so unusual that I had to write it down to remember it." Personally, we find the unusual ones the easiest. Fancy forgetting a name like Benvenuto Cellini, or, say (to be local), S. S. McClure!

THE REALM OF MUSIC

Emil Sauer played a pianoforte concerto of his own composition—his second—at a recent concert in Zurich.

It is reported from Germany that Sam Franko, widely known in America for his many years of activity as violinist and conductor, has been winning new laurels recently with his concerts of old music. His researches in the musical field of long ago have brought to light many forgotten works of rare beauty, and the German critical press has praised his work warmly, even admitting that he, an American, has shown the Germans what old music really is when properly presented.

Edgar Stillman Kelley's "New England Symphony" scored a brilliant success at the recent Liszt festival at Altenburg, being warmly received by the public and praised heartily by the leading German critics. This symphony, which lasts in performance fifty-three minutes, is one of the most ambitious musical works ever written by an American. A curiously interesting fact about it is that its *andante* is evolved entirely from the songs of New England birds treated symphonically.

According to the announcement of the New York representatives of the Wagner Theater at Bayreuth, the plans for the festival performances this summer include seven representations of "Parsifal," two performances of "The Ring of the Nibelung" triology, and five of "The Flying Dutchman." The festival will begin on the last day of July and continue until August 22. The conductors who will direct the performances are Dr. Karl Muck, conductor of the Boston Symphony Orchestra, Michael Balling and Siegfried Wagner.

George Henschel, veteran concert singer and vocal teacher, gave his "farewell" song recital in London a few weeks ago, thus bringing to a close a career of forty years on the concert platform. At the end of his program a group of friends presented to him a beautiful old lute with the inscription "A token of gratitude for forty years' song." Dr. Henschel was the conductor of the Boston Symphony Orchestra for a term in its early years, and he has sung in many American cities. Tho he will be heard no more as a singer, he will continue to conduct an orchestra from time to time.

Felix Weingartner, one of the most eminent of living orchestral conductors, and one who has visited America several times, is greatly impressed by the success of a set of motion pictures showing how he conducts several classical compositions. A Berlin film company recently took the pictures of him conducting, and these can be thrown on the screen for players to follow even when Weingartner himself is thousands of miles away. A test made in his presence filled him with enthusiasm. He said that the orchestra played just as if he had actually led it and declared that this method of "absent treatment" will create "a new epoch" in the field of orchestral training.

All branches of study under patient and enthusiastic instructors. Address Rev. Thomas Bickford, Miss Faith Bickford, Principals, P.O. Box P, Brewster, Cape Cod, Mass.

THE BROOKFIELD SCHOOL

A New Open-air School for a Small Family of Girls

DIRECTORS

Miss Helen Fairman Cooke, A.B., Wellesley
Miss Marion F. E. Cooke, A.B., Wellesley

School Year—September 24, 1914—June 17, 1915

The wonderful increase in bodily and mental vigor observed in the case of the delicate child taught in the open-air school is making parents ask why similar conditions should not produce similar results with the normal child. Where can such conditions be found? It is in response to this growing demand that the Brookfield School has been established. The development of a sound mind and heart in a sound body is the aim of the school. No one factor has more to do with establishing and preserving health than life in the open air. Girls especially need to have a taste for out of doors developed; that hunger and thirst for the open, which, when satisfied, transforms a pale and listless girl into a ruddy and vigorous one. Add to this abundant sleep, wholesome food, suitable exercise and play, cheerful surroundings, worthy occupation for hand and brain, and the girl's health is assured. The school aims to produce bodies not merely free from disease and reasonably well, but brimming with health.

Address MISS HELEN FAIRMAN COOKE

The Brookfield School **North Brookfield, Mass.**

New England CONSERVATORY OF MUSIC

Year opens September 17th, 1914

Boston, Mass.

GEORGE W. CHADWICK, DIRECTOR

The Largest and Best Equipped School of Music

Located in the music center of America. It affords pupils the environment and atmosphere so necessary to a musical education. Its complete organization, its imposing Conservatory Building, splendid equipment, and the Residence Building offer exceptional facilities for students.

Complete Curriculum. Courses in every branch of Music, applied and theoretical, including Opera.

Owing to the practical training in our Normal Department, graduates are much in demand as teachers.

The free privileges of lectures, concerts and recitals, the opportunities of ensemble practice and appealing lower prices, and the daily associations are invaluable advantages to the music student.

A Complete Orchestra offers advanced pupils in voice, piano, organ and violin experience in rehearsals and public appearances with orchestral accompaniment.

Dramatic Department. Practical training and acting.

Scholarships. A limited number of scholarships in Competition (Director's Class) available 1914.

Address EDWIN L. TURNER, Manager.

OUT OF DOORS IN JULY

Bluefish are running; sea-bass are racing alongshore; swordfish have appeared in the offing of Montauk Point—this news means July to the northern sea-angler.

Now comes to market the fine Spanish mackerel, caught in the bays, where it spawns in the open, scorning the secretive methods of various fellow-travelers from the south, which hide away at this time in weedy shallows while they drop their eggs.

A noticeable thing in July is the conformity of the butterflies to the glaring light and landscape of midsummer. Now appear the hot-looking "coppers," and that dappled band of fritillaries and angle-wings, blocked in red and black above, and often variegated by odd dashes and spots of burnished silver, or by peacock-eyes beneath, which are characteristic of the month.

July is the heyday of bees, wasps, and of those rascals of the race, the ichneumons, that spend their lives in trying to impose their young as deadly parasites on other insects. Brilliant steel-blue mud-wasps, brown, spider-catching mason-wasps, slender, red-bellied ground-miners, the big yellow "diggers" that toward the end of the summer will spread terror among the singing cicadas, and the various paper-makers, with which it is easy to make friends as they seek the hospitality of the garret or the porch-ceiling—all these are multiplying fast, and inviting our curiosity. No group of animals better rewards study.

The sunfishes are now forming their nests along the marginal shallows of every pond and quiet stream—saucer-shaped hollows in the sand, floored with pebbles pushed into place by the male sunfish, and kept free from silt by his fanning wings. When he has persuaded some female to deposit there her burden of eggs his watchfulness of the treasures is tireless, and he fans them incessantly, both to keep them clean and to supply oxygen. It is a pretty example of domestic attentiveness and absorption that he presents as he hovers day after day over the nest, now lost to the eye as he poises head-on, then flashing brilliant hues as he whirls to face some suspected danger.

One of the most amusing things in nature may be seen this month wherever a brood of baby bullheads is undergoing education. This little catfish, lurking in sluggish streams from whose muddy bed it gets good fare of worms and the like, is a pattern of paternal care, for when the young are hatched in the tunnel-like burrow under the bank where the mother had left her eggs, the father becomes nurse and guardian—the mother has long disappeared. As the fry swim about in a close flock he moves round and round them, keeping them together; and the moment he thinks danger threatens he hurries them back to the cave, and shuts the door by placing himself in the entrance, his ugly horned head peering out and, ogre-like, defying intruders.

INDEPENDENT OPINIONS

THE COLORADO LABOR CONFLICT AS SEEN BY COLORADO CORRESPONDENTS

Our issue of May 11 containing an article on the Colorado situation by Senator Helen Ring Robinson, a statement in behalf of the operators by John D. Rockefeller, Jr., a statement in behalf of the mine workers by President John P. White, and an editorial discussion of the issues involved, brought to us many letters of comment and criticism which show how diverse are the views of what actually occurred as well as of its causes and significance. As the space we can devote to this subject is so limited we will quote only our Colorado readers who have personal knowledge of the situation or express community sentiment. Our first quotation is from the communication of a Methodist minister in Wet Mountain Valley:

Senator Robinson says that men in the uniform of militia "killed a score of women and children." Why such statements, when the facts clearly show that the women and children were undoubtedly suffocated in a pit too small for their comfort and died before the tent colony burnt? These two women and eleven children were placed in this pit by the miners themselves and when rescued by the soldiers were dead, not a mark of a bullet wound on their persons nor of any violence whatever.

Violations of the flag of truce and many other treacherous acts are recorded and fully sustained by witnesses, for instance the killing of Major Lester. The strikers, flushed with victories, were crowding the militia and others to the hills. They were bent on destruction of property, having burnt tipples, mine offices, store buildings and frame residences in and around Forbes, where large camps of the C. F. and I. mines are located, went on to Berwin with probably the same intent. Preparations were made to prevent this attack, and while these skirmishes were at hand another battle was raging at Walsenburg, where Major Lester lost his life. He was a prominent physician in Walsenburg, went in the field ministering to the wounded under a flag of truce and also wore a Red Cross badge. He was attending a wounded soldier who had been shot thru the breast, and was at that time lying on the field of battle, between the two firing lines. A truce had been declared, but was not recognized. He was deliberately murdered by some one firing and seemingly directly at the Red Cross brassard, the bullet seemingly coming from the strikers' side, and witnesses testified that the strikers stripped the body of coat, hat, shoes, watch, sword, and all available cash. Mr. Lester was major in the hospital corps of the Colorado National Guard. How can American citizens, with good, red blood and iron in their veins, consent to such guerrilla warfare, and sympathize with the miners in their struggles for what seems to them their liberties and their rights?

MAINE

ABBOTT

FOR BOYS

Location. The Blue Foothills of the famous Rangeley Lake Region.
Climate. Dry, bracing air—fragrant of the Maine woods.
Ideals. Obedience, Manliness, Thoroughness, Achievement.

See Time Tables.

No one questions but that at the outset, the beginning of the strike, the sympathies of the public in general were on the side of the miners, who have undoubtedly suffered burdens unbearable by American workers. The operators have ground them down to the last ditch and should be censured in no unmeasured terms. Look at the foreign element now in the strike zone, brought about largely because of the domineering power of the operators. Their unjust demands could not and would not be tolerated by the Yankee spirit of American manhood. The best moved out and many of the lower class, who could be used as practically slaves and roustabouts, have taken their places and who could be ruled by those in charge, and they stay. It is a well-known fact, however, that the great trouble is not with the miners or operators, but with the bosses of the pit, some of whom are more brutes than human. The writer knows of one boss in this zone who was kicked out when his inhuman treatment of miners was known at headquarters.

I am in favor of unions, just as Mr. Rockefeller states it, but we must also remember that the union as organized today is an unincorporated body of men, and as an organization cannot sue or be sued, and until the union rises to that dignified position cannot expect to gain or hold a position it is trying to assume, and thru no power can they legally or morally enforce their demands upon corporate bodies of incorporated organization.

The U. M. W. of America have overstepped all bounds of reason in Colorado, and with agitators and demons of various kinds have committed outrages that cannot and will not be forgotten or overlooked by operators, and the people of Colorado in general.

REV. S. H. SPERRY

Cañon City, Colorado

The following comes from the editor of the Cañon City *Daily Record:*

The sentiment publicly exprest in this state has changed wonderfully in the past two months. In the beginning of the strike the great bulk of the people had little to say about it. It was considered a fight between one class of labor and one class of capital, neither of which had much sympathy in the state. And both of which were controlled in the East. We all know the great coal companies are grasping enough and that the United Mine Workers have often been most unfair in strike troubles. So the great common people took no part.

The muckraker, the yellow journal, the demagog politician came out strong for the cause of the union. The operators have had little to say and nobody to talk for them. So in the beginning the controversy was all on one side. The operators went on doing business and two months ago the mines in the state had as much labor working as they needed for the coal they could sell. The strike was practically broken.

About this time the agitators armed the miners and a systematic attack was begun on the mines and on non-union labor. This was combated in a measure by the state militia and so the war began. To understand what this war means, you should know that of the several thousand miners in arms many are Slavs and Greeks, some of whom have recently been active in the wars of Europe and all of whom are under the

dictation and influence of the most radical agitators of the United Miners' Union.

In the face of this open rebellion the people in general have lost sight of the original demands of the strikers and believe that there is no question before the people now so important as that of putting down the insurrection. All over the state mass meetings are being held and these and many organizations are passing strong resolutions on the matter. Of course some of the hysterical people, women, politicians and newspapers who were strongly committed to the strike, still talk in favor of the union demands. But the great masses of the people are not with them.

Governor Ammons has been strongly condemned by demagogs and yellow journals, as well as the union agitators, because of his having sent out the militia, and he is freely charged with being the tool of the corporations. I have never supported Governor Ammons when a candidate for office and probably never will, but I can truthfully say that he is in nowise ruled by the corporations. If he had been, or if he had had the backing of the conservative people of his state, at the right time, this strike would have been settled long ago without the loss of life. Governor Ammons was elected on a ticket largely filled by labor agitators and in that campaign the labor vote was strongly appealed to. When Peabody was Governor and similar troubles were on in the Cripple Creek district, Ammons was in the state senate and made loud protests against Peabody and the militia. When this trouble came up he was slow to act because of his past record and present associations. He has no doubt tried to do the right thing, but because of his sympathy for labor has been slow in doing it. He sent out the militia only after he knew well that it was the only course for a self-respecting state to follow, and only after thousands of foreigners had been well armed.

There is a great principle at stake here—the question of whether the law shall govern or men in arms and in open rebellion to the state. And if the men in arms win, the trouble will not end in Colorado, or the principle be confined to the United Mine Workers.

GUY U. HARDY

Cañon City, Colorado

A civil engineer who is now living on a Colorado ranch and occupies the standpoint of an impartial observer having no connection with either party comments as follows on the controversy:

Two things about your treatment of the Colorado situation impress me—your evident attempt at fairness and the amount of gross misinformation given. Before generalizing I advise you to be very careful about your facts and even then the chances are ten to one that you will not get them right. Indeed I doubt if the real facts are known by any one person or set.

Undoubtedly the mine owners were to blame at first. They ought never to have tried to reduce wages by bringing in this horde of ignorant foreigners and they ought never to have waited for strikes and strikes to compel them to deal fairly with their men. These things were the occasion of the present trouble. Mark, I say occasion, not cause. In my opinion the cause was that the In-

A charming cottage to rent for the season.

JOSEPH H. MARVEL.

dianapolis crowd saw in these conditions a chance to further their own ends by bringing on this war. Their Mr. Hayes stated last fall before there was any bloodshed: "This is not a strike; it is a war." I think further proof of this lies in the fact that last fall the thing could have been settled but for their insisting on unionizing the mines and in that other fact that they at once set out to attack and destroy the mines as soon as the militia was withdrawn. At Trinidad there is some doubt, but in the Cañon City field there can be no doubt, for there was no militia within a hundred miles and only a handful of mine guards who could not do anything but act on the defensive.

You hear a great deal about the strikers and the mine owners, but there is a third and voiceless class about which you hear nothing, and that is the farmers and men of small business who make up the mass of the population. We foot the bills and in the end, as consumers, stand all the losses and yet we must be unheard and unconsidered. Neither the mine owners nor the strikers are after justice. . . . In my opinion, if any change is to be made neither the mine owners nor yet the strikers should get the whole income from the mines, nor should they be allowed to divide it between them, but after paying fair wages and fair return on investment whatever is left should either go to consumers in lower prices or to the public thru state control or taxation.

L. M. SPERRY

Pueblo, Colorado

A Denver dealer in real estate sends us some further information:

We are firmly convinced that the Ludlow battle was started by Greeks, the majority of them having come to this state since the end of the Balkan wars; the man Tikas who was killed was not a miner, but the proprietor of a pool hall in Denver, and a sort of boss among his countrymen in this state.

There were no women and children killed in Ludlow except those suffocated; that was an accident, and clearly the fault of the strikers. Other accidents equally distressing occur constantly all over the country and are soon forgotten by the general public, but the strikers, or, to speak more correctly, the revolutionists, for that is what they really are as surely as there are revolutionists in Mexico, keep this accident before the public, and make all the capital out of it they can, when really they were to blame for it.

The militia served all last winter without pay, so it was necessary to accept whoever could be persuaded to serve. The militia may have committed some acts not strictly justifiable, but soldiers are chosen for their ability to fight, and fighters are not recruited from the ranks of philanthropists, reformers, humanitarians and other peaceful citizens. At Ludlow the militia were engaged in actual war, and fighting for their lives against an enemy which outnumbered them several times over. As I have stated the large majority of the revolutionists in the Ludlow battle were Greeks but recently returned from the Balkan wars. You will realize the kind of people the militia had to deal with if you refer to what The Independent of May 29th tells of the atrocities of the Greeks in the Balkans. WILLIAM C. HOW

LLOYD EVANS, MGR.

THE PROGRESS OF WOMEN

Policewomen have lost their novelty in Chicago, but Massachusetts is interested in the appointment of Miss Ethel B. Osborne, of Salem, as its first woman constable.

Men are coming forward rapidly into the equal suffrage ranks. The president of the National Men's League for Woman Suffrage announces the organization of ten new leagues.

Professor Graham Taylor, of Chicago, is to be succeeded as president of the National Conference of Charities and Corrections at Memphis, Tennessee, by Mrs. John M. Glenn, of New York.

Five campaign states are to be won in four months, Nevada, Montana, Nebraska, North and South Dakota. The action of Congress and the great political parties of the United States depends largely on the success of this struggle for woman suffrage.

Twenty-eight nations and over seven millions of women were represented at the Rome meeting of the International Council of Women, which voted unanimously that every representative government should grant women full suffrage with the right to hold office.

Illinois women are eager for the political activity now open to them. Mrs. Grace Wilbur Trout, president of the Illinois E. S. A., and Miss Catherine Goggin are to represent Chicago women on the City Council's permanent charter commission. Miss Josie Westfall was elected Judge of the City Court of Macomb, Illinois, defeating Dean Franklin in every precinct.

Since women were enfranchised in New Zealand in 1893 the following laws of benefit to women have been past: Infant Life Protection Act; Act to Regulate Adoption of Children; Industrial Schools Act Amendment; Juvenile Smoking Suppression Act; Servants' Registry Offices Act; Shop Assistants' Act, safeguarding the interests and health of shop-girls; Divorce and Matrimonial Causes Act, providing equal standard of morality; divorce for wilful desertion for five years, for habitual drunkenness, failure to support a wife, cruelty or for seemingly incurable lunacy; Criminal Code Amendment Act; Act enabling women to receive compensation for slander without proving special damage; Summary Legal Separation Act, to safeguard poor women against brutal or drunken husbands; Factory Act, recognizing in some cases equal pay for equal work, not generally, however; Municipal Franchise Act, extended to women ratepayers or ratepayers' wives (women eligible for town boards, hospital and charitable aid boards, and to mayoralty); Old-Age Pensions Act, which acknowledges economic partnership of husband and wife; women admitted to practise law; technical schools, giving girls equal opportunity; scientific temperance instruction in public schools; Testators' Act, compelling testator to provide for wife and family.

THE MARKET PLACE

THE CASE OF MR. JONES

It is unfortunate that completion of the Federal Reserve Board is to be delayed by sharp opposition in the Senate to the confirmation of two of the President's nominations. The men opposed are Paul M. Warburg, of New York, and Thomas D. Jones, of Chicago. Mr. Warburg has exceptional qualifications for a seat in the board. His knowledge of banking, practical and theoretical, local and international, and of the problems which the authors of the new law sought to solve, is unsurpassed in the United States. Mr. Jones is the President's personal choice, and it is reported that the President desires to make him president of the board. Therefore the controversy as to his connection with the International Harvester Company, or Harvester Trust, deserves some consideration.

In his letter to the Senate committee, President Wilson said: "He went into the board of the Harvester Company for the purpose of assisting to withdraw it from the control which had led it into the acts and practises which have brought it under the criticism of the law officers of the Government, and has been very effective in that capacity. He has won credit and admiration for his courage in that matter." That is to say, Mr. Jones went in as a reformer, to correct the practises on account of which the company has been prosecuted by the Government.

Such information as is available now leads us to believe that Mr. Wilson was misinformed. When Mr. Jones became a director, several years ago, he did so at the request of President McCormick, a personal friend, and with the approval of the directors then in office. In other words, he was invited and welcomed by the men who were and had been responsible for the company's organization, course and methods. Evidently they did not regard him as an invading reformer, intending to reverse that course and change those methods. Thus far there is no evidence that he sought to do this.

George W. Perkins, a prominent and influential director, speaks of the circumstances attending Mr. Jones's election. At that time, he says, there was no division in the board, and therefore the new member could not join a faction. There was no suggestion that he was coming in as a reformer. "There has been," Mr. Perkins adds, "no revolution in the methods or conduct of the company since Mr. Jones became a director. We have without exception been a unit in believing that the company's methods have been not only legal but honorable and fair."

We see no reason, in the absence of any statement from Mr. Jones to the contrary, why Mr. Perkins's assertions as to the attitude of the board toward Mr. Jones should not be accepted. Mr. Jones has explained to the Senate committee that he became a director at the request of friends.

We are not saying that Mr. Jones is disqualified for the Federal Reserve Board because he is a Harvester director, and has been in harmony with his associates. Probably Mr. Wilson selected a good man for the place. But if he is to be a member of this important board, he should go in upon a just and truthful record of what he has done.

THE STOCK EXCHANGE BILL

For some time Senator Owen, chairman of the Senate Committee on Banking and Currency, has been striving to secure the support of a majority of the committee for his bill to regulate stock exchanges, and for a report written by himself. The bill is substantially a copy of the one prepared by the Pujo Money Trust Committee, with nearly all of the original measure's restrictions and penalties. A majority of the committee opposed both the bill and the report. On the 25th, Mr. Owen, in a committee meeting attended by only five members, obtained the votes of three of these for the bill, and forthwith reported it to the Senate. Then he sailed for Europe.

On the following day the Senate, after his curious action had been laid before it, by an overwhelming vote sent the bill back to the committee. There had been no consideration of proposed amendments in commtitee, and Mr. Owen's course in making a report had been distinctly irregular. The Senate's vote was clearly a rebuke to him.

The bill, as it stands, ought not to become a law. It is not a good bill. Mr. Owen's attempt to bring it into the Senate as a bill supported by his committee shows that he is out of place. He is unworthy to be chairman of that committee or any other.

A friend residing in Lahore
Insists it is pronounced Tagore.

Another thinks of Gustave Dore
And says he knows it is Tagore.

Another, with a knowing way,
Declares it must be Tagore.

While yet another thinks it swagger
To call the noble Poet Tagore.

Prof. Wise, gray as a badger
Authoritatively says Tagore.

Ah, me, how foolish all this waggery,
Of course it is correctly Tagore.
—*Carolyn Wells.*

Hurrah for the country where breezes are sweet,
And the newly laid eggs are too costly to eat;
The beautiful country where rivulets flow,
And they sell all their butter and eat oleo;
The calm, peaceful country where berries turn brown,
And every last berry is shipped to the town;
Where Nature has painted a canvas full rare,
And folks are too busy to look or to care;
And the farmer who gazes at eve o'er the plain
Merely speculates whether those clouds will bring rain!
Let us hie to the country, away from the stress
And hurry back home on the eight-ten expres!
—*Judge.*

WIRELESS FLASHES

According to the report of the Dominions Royal Commission which met in London recently the demand for domestic servants in Australia and New Zealand is so great that nowadays before a ship carrying women emigrants sights land many of its passengers are engaged by wireless telegraphy.

William Marconi has agreed with Signor Ernesto Nathan, Italian Commissioner to the Panama-Pacific Exposition, to show at San Francisco next year the largest exhibit of wireless apparatus ever yet set up anywhere. Mr. Marconi also promises that by the time the exposition opens he will have perfected his wireless telephone so that any visitor who wishes can do a little wireless talking.

Greece has contracted with the Marconi Company for fourteen wireless field stations. Eight of these, for use in rough country, are to be motor-car sets each of 1½ K. W. power and having a maximum range of about 250 miles. The rest are special ½ K. W. pack sets with a range of eighty miles. The masts of the motor-car sets are to be seventy feet high, and those of the pack sets fifty-four feet high.

There is now a chain of wireless stations around the Australian coast so close to each other that as soon as a vessel gets out of the range of one it enters that of another. Communication, in fact, can be obtained in a zone of 400 miles by day and 1500 miles by night from any position on the seaboard. Stations in the north and south of New Zealand and a short-range installation at Fiji complete the system; and it is proposed to link the outlying British possessions in the South Seas.

Announcement was made on June 20th that the United States Navy Department has arranged to equip at once its wireless station on Fire Island with the Telefunken wireless signal system for warning ships in fog. This first installation will be an experiment to give the apparatus a thoro test, and if the Navy Department considers it a success the Atlantic coast will be dotted with other similar signal stations. The high power radio plant to be employed will flash radio waves in a circle, like the light rays from a lighthouse, to a distance of about one hundred miles.

In some recent experiments at Leghorn, Italy, to show the practicability of setting off mines by "wireless," the control apparatus was placed in a small building about 2500 feet from the two mines to be exploded. These mines were submerged in the sea about 400 feet from shore and 100 feet apart. Manrico Compare, the inventor of the control device used, exploded the mines separately, at an interval of two seconds. Raised ground with trees, stone fences and buildings obstructed the space between the firing apparatus and the mines, while several wireless stations were in close proximity. The experiments proved that the destination of the waves could be fixed without interference.

American Telephone and Telegraph Company

A Dividend of Two Dollars per share will be paid on Wednesday, July 15, 1914, to stockholders of record at the close of business on Tuesday, June 30, 1914.

G. D. MILNE, Treasurer.

American Telephone and Telegraph Company

Four Per Cent. Collateral Trust Bonds

Coupons from these bonds, payable by their terms on July 1, 1914, at the office of the Treasurer in New York will be paid by the Bankers Trust Company, 16 Wall Street. G. D. MILNE, Treasurer.

UNION PACIFIC RAILROAD CO.

Extra Dividend on Common Stock.

The date of payment of the extra dividend on the common capital stock of this Company, declared on January 8, 1914, **has been postponed from July 1 to July 20, 1914,** subject to such further postponements as shall be deemed necessary or advisable by reason of litigation.

UNION PACIFIC RAILROAD COMPANY,

ROMANCES OF MODERN BUSINESS

THE American romance is in the large office buildings and the marts of trade; it is the romance of great achievements in commerce, in industrial leadership. And it is a wonderful romance! The child of the world's nations is leading them!—ARNOLD BENNETT.

"The Making of a Cleanly Nation"

It is the privilege of the reporter of current affairs to view in wide perspective the sweep of events. Contemplation of the panorama induces appreciation of what is vital to the furtherance of human welfare.

The writer of this series of stories has been impressed with the far-reaching benefit the public has derived from the periodicals of national circulation. Such publications through their advertising pages alone have contributed abundantly to the progress of the time.

From all parts of the country have come remarkable stories of achievements through national periodical advertising. Many of them are written large in the business annals of the nation. They reflect on economic and intellectual advance. They illustrate the commercial and educational force of magazine advertising.

These narratives have had all the elements of romance. The one here presented appears to this chronicler as dramatic. Its stage is the United States. Its actors are the thousands of people of every-day life. The spectacle unfolded is "the making of a cleanly nation."

A broad statement that! It came from a business official who has taken an active part in this national housecleaning. And that the words are no empty boast this story would seem to prove.

Forty years ago, in Allegheny City, Pennsylvania, a young firm was manufacturing and selling porcelain-enameled kitchen utensils. The business was not large. But the products were an innovation and appealed to housewives.

The Standard Manufacturing Company thus began its mission of ministering to sanitary advancement. The porcelain enameling as applied to kitchen appliances had proved satisfactory. Members of the firm conceived the idea that the same process might be used successfully on bath-tubs and other sanitary fixtures.

This was only an *idea*. The manufacturers knew the application of an enamel coating to a metal body as large as a bath-tub would be costly and difficult. But, like all pioneers, they fought their way through handicaps. The story of the development of their *idea* is the story of the success of this significant industry.

Several years of research and experiment ensued. It was not until 1879 that the first tubs made by the Standard Company, under a new process of enameling, were placed on the market. For a considerable time thereafter the output of the concern was only two bath-tubs a day. But little was known of the new products, and this capacity was equal to the demand.

Plumbing fixtures in use at this time were of an unsatisfactory, unsanitary kind. Open plumbing was unheard of thirty-five years ago. Stationary fixtures then were encased in woodwork of ornate designs The housewife of today would not countenance them Nor would they now be tolerated in hospitals or public buildings.

Ten years past without bringing more than limited recognition to the manufacturers of these sanitary products. Their *idea* had been realized, but few knew of it. Then the company decided that this *idea* was big enough for the entire country to know about. The manufacturers had a vision of a new sanitary era being ushered in through the use of their products.

The people of the country at large first learned of the "Standard Idea" twenty-five years ago. A half-page advertisement appeared in several weekly and monthly periodicals of national circulation. The advertising was neither extensive nor systematic. It embodied no new advertising ideas. But it carried to the public a message. "Health depends on sanitation," this read. And the public, then just awakening to a new consciousness of living problems, became deeply interested. The advertising was started at the psychological moment. It created a great subconscious need of these sanitary products.

Thus was realized the hope of the manufacturers that their fixtures might play an important part in sanitary development. The extensive sale of their products has gone hand-in-hand with an enormous growth in the desire for cleanly living during the last two decades. The advertising of these sanitary commodities created so much interest that many publications printed instructive articles on sanitation in the home and public building.

Forty years ago there were few houses, however luxurious, that boasted a tub or ordinary bathing facilities. Today the humble home of the mechanic or laborer has its comfortable and sanitary bathroom. We see sanitary products everywhere in our daily life—in the store, club, hotel, barbership, office-building, and railroad station. These fixtures have removed dangers of infection and made for sanitation in the home, the factory, and public place. They have demonstrated the sanitary value of water.

As the crusade for cleanly living advanced with the campaign of educational advertising in the national periodicals, the business of the company grew in leaps. Within the year after the first advertisement appeared, the factory trebled its output and the expansion continued year after year. The original plant occupied two-thirds of an acre of ground, with buildings containing sixty thousand square feet of floor space. Today the "Standard" factories cover sixty acres, with buildings having nearly three and a half million square feet of floor space.

Since the "Standard Idea" took hold, there have been sold over three milion "Standard" baths, a like number of lavatories and not less than ten million miscellaneous "Standard" sanitary fixtures. The combined daily capacity of the factories is two thousand each of tubs, lavatories, and sinks, in addition to a large output of miscellaneous fixtures. The great demand for these goods has been created by magazine advertising. The large distribution made it possible for the manufacturers to reduce the prices of their products, placing them within reach of every builder.

Eleven years after the advertising campaign in the national periodicals began, the Standard Sanitary Manufacturing Company was incorporated with a capital of five million dollars, which was later doubled. Before the advertising started, the Standard Company was making only a few tubs a day.

The last decade of the nineteenth century and the first part of the present century will go down in history as the most remarkable years in the progress of the world. In no other period has so much been accomplished toward improving living conditions. Ideas of sanitation and hygiene, unknown a few years ago, have become so inbred in our lives that were we compelled to forego them we should feel that we had retrogressed for centuries.

The educational campaign carried on by the Standard Company in the national periodicals, appealing for cleanliness in the homes and in public and business buildings, has been a whip and a stimulus to the nation.

"Much of the sanitary progress of this country," said Mr. E. F. Gregg, manager of publicity for the Standard Sanitary Manufacturing Company, during the past fourteen years, "including that of National, State, and municipal boards of health and private organizations, has been influenced by the educational work carried on by the Standard Company during the past twenty-five years."

The national periodicals have reason to be proud of their part in the campaign of publicity that established a new era in the sanitary principles of living. As the media of expression for the Standard Sanitary Manufacturing Company they contributed their own force as public educators in driving home the theories which these manufacturers were striving to impress upon the public consciousness. The result has been a happy one. *The nation indeed has been made cleanly.* And the pioneer and foremost workers to this end have been rewarded with an enormous business.

This is one of a series of articles that is being published by the business department of The Independent to show how magazine advertising is serving the public.

Atlantic Mutual Insurance Co.

Atlantic Building, 71 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

[illegible] to 1842, [illegible] a similar [illegible] Upon [illegible] and [illegible] of $1,000,000 [illegible] the stockholders, to [illegible] Company and [illegible] with interest at the [illegible] date of [illegible]

During the [illegible] the [illegible] premiums [illegible] to $27,219,043,826.00

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

LIFE INSURANCE PROTECTION AND ITS COST

It appears from another letter received from R. F. Wood, of Hancock, Michigan, that I not only failed in my effort to make myself clear to him when I answered his criticism in The Independent of June 15, but that I have sent him so far astray as to cause him to conclude that I underrate the intelligence of my readers. I am amazed to find myself pointed at as the victim of a delusion peculiarly his own: as when in another letter, referring to some leaflets, he describes them as easy of understanding by high school students, "or by even the readers of The Independent."

But to his rejoinder to my answer. He tells me:

"You would justify 'surface results' as 'illustrating the wisdom of building up a large cash surrender element,' and you apparently believe that anything deeper than the surface would be incomprehensible to inquirers and too complicated for demonstration to them; I believe that superficial treatment is almost sure to be misleading and that a simple statement of fundamental facts would be entirely comprehensible to persons of average intelligence, and less confusing than the methods you have employed. To illustrate: On page 230 you state that under the Whole Life policy the protection cost $6.18 per year, while in the following sentence you reverse yourself by precluding other and equivalent deductions. This, I think, is more confusing and less comprehensible than a straightforward explanation starting with bottom facts would be, for one certainly would have to go beneath the surface to explain away the contradiction.

"I think it does make a vast difference to the insured (it would to me), how much 'net insurance protection he has the fifth, ninth, or any other year,' and any man that marries after he has carried insurance for a few years of his bachelor life is the man who will come to a strong, lively, realization of that difference, if he cares for what becomes of his wife and wee ones, should misfortune befall; if he has carried some form of insurance in which the protection has not petered out as it does in the endowment, he is wise; if in addition he has been financially able to carry some endowment insurance, or build up a bank account, he is also fortunate.

"In conclusion I wish to emphasize my conviction, that the basic facts and principles of Life Insurance are not too complicated to explain to people of ordinary intelligence, and that the readers of The Independent are neither so limited in understanding nor so slow of perception as to require expositions which deal only with those figures which are 'easily obvious to the insurant' and which attain only 'surface results.'"

What I "apparently believe," as interpreted by Mr. Wood, and what I actually believe happen to be two different things. I am fully aware now what it is he wants in the shape of mathematical results in life insurance; but I also know what information a man wants when he asks me a question. One who inquires about the general results under a given life insurance contract isn't seeking, as it were, a chemical analysis—"qualitative and quantitative"—and he neither expects nor desires an essay on actuarial science by way of reply. I have never set up either as a teacher or expounder in that line, and I am quite sure that only an infinitesimally small proportion of my audience would give me any attention if I did.

Mr. Wood says that it makes a vast difference to him how much net insurance protection he has during each year of the period constituting the term of his contract. Well, it doesn't make a vast difference to most people because, whatever amount they have, be it larger or smaller, they pay for, and they don't pay for it unless they have it. If the companies they have it in are honestly, skilfully and economically managed, they have it at actual cost. It may be some satisfaction to a few men of the analytical temperament and mathematical attainments of Mr. Wood to know the cost each year, but that is all there is to it. What he has learned will not alter the facts; it will neither raise nor lower the cost.

Reduced to a word, the pivot upon upon which this controversy turns is the reserve. When I say in ordinary language that a man with a policy of $1000, on which the reserve happens to be $300 at the time I say it, has had $1000 of life insurance protection, he challenges me: points to the $300 reserve and asserts that by reason thereof the protection (using that word technically) was at that time but $700, net. He would argue that the premium paid the first year was on $1000 of protection and that in the last year it was in payment of but $700 of protection. But he forgets, or deliberately ignores, the fact that the premiums are level—the same in amount the last as in the first year—only because of the reserve. The man who objects to the influences of the reserve in diminishing the annual "protective" element of a policy must turn to term insurance, with its constantly increasing premium. He will have his full face "protection," but he will pay for it dearer and dearer every new term period, with no return whatever from his premiums unless he dies. But he will have had protection. In the

meantime he will have no trouble at all figuring out what it cost; all he need do is to add together all the premiums he paid, and he has his answer.

Whether Mr. Wood thinks so or not, the reserve (which he would deduct in getting at the net "insurance protection") is part of the protection; and, to be elementary and "superficial" again, I will say that the proof of the assertion lies in the fact that at the terminal age (96) of the table upon which premiums are based, the amount of the reserve on a whole life policy exactly equals the face of the policy.

Again: The net single premium is the basis for calculating annual premiums, the latter being exact mathematical equivalent of the former. The single premium, or its equivalent, must be paid in advance. The net single premium at each age, invested at the assumed rate of interest, equals the face of the policy at the end of expectancy, under the table. That being so, it is the insurance fund, the fund out of which death claims are paid. In other words, the "protection."

Therefore, when my critic takes this invested fund as something saved up by a policyholder, segregates it, as it were, treats it as a piece of private property, and deducts it from the face of the policy in an attempt to ascertain the annual current cost of the "protection," he errs. He sincerely and seriously insists that the "net protection" is the difference between the reserve and the face of the policy.

Insurance Superintendent Potts, of Illinois, has postponed to July 10 the promulgation of his ruling against underwriters' agencies or "annexes."

The Lorimer and Munday bank failures in Chicago and elsewhere in Illinois will not seriously affect the financial condition of the surety companies which have outstanding bonds on them.

Last week there were several costly fires in New England. A conflagration in Salem, Massachusetts, on June 25, destroyed half the city, rendering 15,000 persons homeless. The loss is estimated at $10,000,000.

Disinterested observers of the fire insurance business are speculating on what the fire companies will do in connection with the decision of the Federal Supreme Court, affirming the right of Kansas to regulate rates. Up to the present time they have made no move in the matter.

The London and Lancashire Indemnity Company of New York, capital $750,000, paid in surplus $375,000, has been organized by interests controlling the London and Lancashire Fire Insurance Company of Liverpool, England, to transact a general casualty business.

The casualty companies with headquarters in New York City, writing liability insurance, have been swamped with applications for coverage on workmen's compensation risks for protection against the liabilities incident to the provisions of the new law, which goes into effect July 1.

St. Louis & San Francisco Railroad Co.

To Holders of 4% Refunding Mortgage Gold Bonds Due July 1, 1951:

The Receivers have now operated the property for over a year and no reorganization plan has as yet been agreed upon. **They inform us that the earnings have been largely in excess of the amount needed to pay interest on the 4% Refunding Bonds and all charges prior thereto, including rentals on leased property,** but that they have been applied to the physical rehabilitation of the property, the payment of car trusts and to other capital purposes. The Court objecting to the issue of further Receivers' certificates has denied the application to pay the July 1 interest, and the junior interests in the property, to whom has been offered the opportunity to pay such interest, have failed to provide the necessary money.

The undersigned Committee, which was formed early in June, 1913, and which has since kept in close touch with the Receivership and its affairs, has for over a year deemed it unnecessary to call for a deposit of bonds, but it is now of the opinion that the rights and interests of the bondholders can only be adequatelysafeguarded by an immediate deposit thereof. The period of grace in the Deed of Trust securing the Refunding Bonds is three months, after which the principal of the bonds may be declared due under the terms of the Trust.

Bonds may be deposited with the Depositaries named in the Deposit Agreement, viz., **CENTRAL TRUST COMPANY OF NEW YORK,** 54 Wall Street, in the City of New York; **MISSISSIPPI VALLEY TRUST COMPANY,** in St. Louis, Missouri; **BERLINER HANDELS-GESELLSCHAFT,** in Berlin, Germany; and **ASSOCIATIE CASSA,** in Amsterdam, Holland. Bonds in coupon form must be accompanied by the coupon maturing July 1, 1914. Bonds in registered form and registered coupon bonds must be accompanied by transfer executed by the registered owner or his attorney duly authorized. Certificates of Deposit will be issued by the Depositaries for the bonds respectively deposited with them. In due course, application will be made for listing the certificates issued in New York on the New York Stock Exchange.

The Committee, in accordance with the provisions in that respect contained in the Deposit Agreement, has arranged to purchase the coupons and claims for registered bond interest due July 1, 1914, appertaining to the deposited Refunding Bonds, and Central Trust Company of New York, and Mississippi Valley Trust Company, Berliner Handels-Gesellschaft, Berlin, and Associatie Cassa, Amsterdam, on behalf of said Trust Company, will accordingly be prepared to pay depositors for their coupons upon depositors filing properly executed certificates in the form required by the United States Income Tax Law and the regulations of the Internal Revenue Department.

Copies of the Deposit Agreement may be obtained from the Depositaries, or from the members or Secretary of the Committee. For further information application may be made to the Chairman or Secretary of the Committee.

The Receivers are unanimously of the opinion that the Refunding Bonds are amply secured, and in order that this security may remain unimpaired the committee urges prompt action on the part of the bondholders. This Committee will neither adopt nor approve any plan of reorganization that, as a condition of participation therein, requires the expenses of the Committee to be paid by an assessment upon the Refunding Bonds.

Dated, New York, June 23, 1914.

CALENDAR

The annual convention of the Music Teachers' Association of California will be held at San Diego *July 13, 14, 15* and *16*.

A conference of the members of the legal division of the Reclamation Service will be held at Salt Lake City, Utah, *July 14* to *21*, in order to secure the fullest measure of coöperation and better mutual understanding among those engaged in legal work of the service.

The American Peace Centenary Committee will hold a conference at Mackinac Island, Michigan, on *July 21* and *22*, to which the governors of the border states and provinces will send delegates. The share of these governments in the celebration of the Hundred Years of Peace will be the special subject of consideration.

Wagner performances at Bayreuth this summer are scheduled as follows: "The Flying Dutchman, *July 22* and *31*; *August 5, 11* and *19*; "Parsifal," *July 23, August 1, 4, 7, 8, 10* and *20*; the "Ring," *July 25, 26, 27* and *29*, and *August 13, 15, 17* and *19*.

The Forty-first Assembly at Chautauqua is now in progress. Music Festival Week is *July 27-August 1*. The Fortieth anniversary will be celebrated on Old First Night, *August 4*. Recognition Day falls on *August 19*. The assembly closes on *August 30*.

The Gold Cup races for the Challenge Cup of the American Power Boat Association will be held on Lake George *July 29-31*.

The annual art exhibition of the Royal Academy is open in London until *August 3*.

A Colonial Exhibition will be held at Semarang, Java, from *August* to *November, 1914*. It is to "give a comprehensive picture of the Dutch Indies in their present prosperous condition attained since the restoration of Dutch rule in 1814."

The British Association for the Advancement of Science will hold its next meeting in the antipodes. The Commonwealth of Australia will pay the expenses of 150 members, who will be taken on a tour of the principal cities from *August 8* to *September 1*.

The National Negro Business League is to hold its fifteenth annual session at Muskogee, Oklahoma, *August 19, 20* and *21*. This organization is composed of negro men and women who have achieved success along business lines.

There will be an eclipse of the sun on *August 21*—total in parts of Europe and Asia, and partial in northeastern America. The full effect will be seen in Persia, Russia and Scandinavia. At sunrise, a partial eclipse will be observed in Canada and in our northern states.

The Biennial Conference of Friends (Liberal) will be held at Saratoga Springs, New York, from *Ninth Month, 2d*, to *Ninth Month, 8th*.

September 6 has been designated as Labor Sunday by the Federal Council Commission on the Church and Social Service.

At Denver, Colorado, from *September 8* and *9*, will be held the eighth annual conference on taxation, in charge of the National Tax Association.

The races for the America's Cup are to be held at New York on *September 10, 12* and *15*.

The twenty-first World Peace Congress will occur in Vienna *September 15-19*.

The Baltic Exhibition at Malmö, Sweden, to which Swedish, German, Danish and Russian exhibits have been sent, is open on *September 15*.

An Anglo-American exposition to celebrate the centenary of peace and progress in arts, sciences and industries is open at Shepherd's Bush, London, till *October*.

At Leipzig an International Exhibition for the Book Industry and the Graphic Arts will remain open until *October, 1914*.

The United Typothetæ and Franklin Clubs of America will hold their twenty-eighth annual convention in New York *October 6, 7* and *8*.

On May 17, 1814, Norway adopted a Constitution as a free and independent kingdom, having just been released from Danish control. To commemorate this event a Centennial Exposition is being held at Christiania until *October 15*.

The American Bar Association will hold its annual meeting on *October 20, 21* and *22*, at Washington. There will be addresses by William Howard Taft, president of the association; Senator Root, the Ambassador from Argentina, and Sir Charles Fitzpatrick, Chief Justice of Canada.

The seven hundredth anniversary of the birth of Roger Bacon will be observed at Columbia with commemorative exercizes and the publication of a volume of studies. A great pageant of the culture of the thirteenth century will be given on *November 4*.

Barnard College, in Columbia University, will celebrate its twenty-fifth anniversary on *November 5*.

The annual convention of the National Suffrage Association will be held at Nashville, *November 12* to *17*.

VOLUME 79 MONDAY, JULY 13, 1914 NUMBER 3423

A MORAL QUARANTINE

HEREDITY irritates the sentimentalist. Few things irritate him so much. He cannot abide the scientific doubt that everything can be set right in the world by improving "the environment." It is not enough for him that opportunities and conditions be equalized in the attempt to give everybody a chance. He insists that men are born equal in capacity and ability. One ancestry is as good as another in his eyes, and genealogy is the most senseless of human vanities.

The facts are against him, but never mind. If certain of his fellow men die prematurely of diseases that others withstand, he tells us it is because the unfortunates were wrongly fed in infancy, or inadequately fed in childhood, or lived in overcrowded quarters, or had to work too hard in tender years. If others steal or kill, it is because their moral training was neglected; they had no playground but the street, or overwhelming temptation fell with full force upon them. All of us, he believes, come into the world with the same inherent defects, the same inherent strength and virtue.

From these premises he draws the practical conclusion that mercy, consideration, opportunity, the helping hand, are the only justice. Retribution he abhors as superstition, and punishment as vengeance. Imprisonment he describes as barbarism, and the death penalty as savagery. For the "repression" of crime he would substitute "reformation," in full faith that every human being, old or young, can be made into a good man and a "useful citizen."

We are not about to tell him again, as he has been told a thousand times before, that he is all wrong in his philosophy and mischievous in his activity. That would be a childish waste of words and printer's ink. The mischief that he does he would perpetrate in one or another way whatever theories he might be brought to substitute for those that he now holds, because, heredity being a fact, he has been born without that specific kind of ability which mankind calls imagination. He has no power to make a mental picture of anything that is not immediately before his eyes.

What the words "cause" and "effect" mean to him, no mortal will ever know. They at least do not mean what they mean to the scientific investigator, to the inventor, or to the man of practical affairs. Proof that this is a true description of his intellectual inadequacy is afforded by his complete failure to see and to deal with the chiefly important factor in that sum of environmental influences upon which he tirelessly descants. It is the man of scientific training who knows something about heredity and its relations to environment, and never the sentimentalist, who has a sober sense of what environment really is, and of what its influence is upon human behavior.

To be definite, the sentimentalist, insisting that the criminal is a victim of environment to be sympathized with and uplifted, is obtuse to the terrible fact that the specific environmental element which, with deadly certainty, makes criminals out of neglected boys and wayward youths, is the criminal at large. The unimprisoned thief, the unhanged murderer, heroes both in the eyes of childish gangsters, these are the "environment" by which crime is propagated.

What would be thought of the public health expert who proclaimed the relation of cholera to dirt and destitution but neglected to mention actual cases of cholera as centers of infection? It is not a gracious thing to say, but this is precisely what some of the prison reformers and crime experts of the present time are doing in their mischievously sentimental dealing with a problem which is becoming every year more serious, and which, we feel bound to tell them, they have disgracefully failed to master.

THE steady growth of the volume of crime in proportion to population is a failure of civilization. It calls for clear thinking and resolute action. The public becomes more and more unwilling to inflict the death penalty upon murderers. Unhappily, this is not proof of increasing intelligence, of sounder judgment, or of a more sensitive conscience. A sheer lack of imagination has more to do with it. If imagination were a common gift, a mental picture of the murderer's deeds and of the anguish of the families that he has bereft would hold in check the outcry over his taking off.

Even imprisonment for long terms is now objected to in the assumption that it is not proper if it does not "reform."

A sound policy for the repression of crime must take account of this weak, unreasoning state of the public mind. It is probably useless to expect henceforth enough legal executions to eliminate a large proportion of the brutal element of the population by way of the electric chair. The chief hope lies in convincing men of fair, common sense that crime cannot be diminished until the centers of infection are destroyed or cut off.

If criminals must be treated with more consideration than honest folk who show kindness to their neighbors, let us at least make a paradise for them somewhere by themselves. Give them the fat of the land if we must, build them separate cottages, send them the best preachers, the prettiest flower-girls and the handsomest roses, give them music and "movies," and strawberries at Christmas, but put a hedge and a ditch around their

garden, and prevent their mingling with untainted children and youth. Stop their swaggering about the world as heroes of a peculiarly compelling quality.

Let us give over the whole theory and practise of punishment, if that is best, but let us have at least a moral quarantine.

THE COLOMBIAN TREATY

THE contribution of the Colombian Consul-General to this issue of The Independent is of especial interest because it admirably exemplifies one side of the controversy between Colombia and the United States. It also shows how great are the industrial and commercial opportunities of Colombia and what part the United States might take in the development of its natural resources. This is indeed an unworked field of incalculable opportunities, but we wish that the present treaty had, like that which Minister DuBois under the last administration attempted to negotiate, made specific provision for the entrance of American enterprise instead of leaving it dependent upon the presumed gratitude of Colombia for the $25,000,000 we are to pay.

Since the State Department has not given out the official text of the treaty it would be profitless for us to discuss the exact significance of the disputed phrase in the Spanish version which comes from Bogota. A polite expression of regret at the breaking of friendly relations between the two countries is perfectly proper, but it would not enhance the respect of the world for our foreign policy if one administration should apologize for the acts of another while enjoying the benefits of the action it repudiates.

AN EARLY VERSION OF THE DELUGE STORY

WHEN George Smith found in an Assyrian tablet of the seventh century B. C. the Babylonian story of the Deluge, it was really a momentous discovery. For the first time we had from the monuments a parallel story of one of the most striking stories told in Genesis, and every student of the Bible was deeply interested. To be sure, we already had a similar story of the Deluge as told by a Babylonian author named Berossus, but that was later. Some were ready to declare that George Smith's discovery was a confirmation of Genesis, but that could not be, for the whole tone of it was mythical with its crude polytheism, and its gods that were as frightened as were men, and fled like flies. The result was to confirm rather the view now generally held that the Genesis story of the Deluge is a finely cleansed monotheistic version of the Flood myth, which was current long before the author of Genesis or even before Moses. The George Smith tablet was copied for the library of Assurbanipal from older Babylonian documents which very likely were a thousand or more years older.

Accompanying the Deluge tablet there were found, or have been found since, fragmentary tablets which told of the creation of the world by the gods, but nothing as definite and clear as the account in the Bible of the six days of creation with its seventh day of rest. We have ever since been looking with a great deal of hope for parallel accounts of the Genesis stories of the temptation and fall of man, and of the Tower of Babel; but nothing of the sort has turned up until this last announcement, so provokingly incomplete, by Prof. Stephen Langdon, of Oxford University, of an account of the temptation and fall of the first man. The tablet in which the story was found is one of fifty which, under the new rules since Dr. Hilprecht's withdrawal, were freely offered to Professor Langdon by the University of Pennsylvania for study and translation. The writing is in the older Sumerian language, and is said to be of a period more than 2000 B. C. The period of Moses was about 1400 B. C.

All we are as yet allowed to know of the tablet is that it contains a hymn to the great goddess Nimtud, or Nin-Kharshag, who created man, and was the wife of the Earth god Enlil, or Bel. In the hymn is the account of the Deluge, which varies somewhat from that found by George Smith, in that the name of the patriarch is, as read by Professor Langdon, Nuhu or Noah; but this is his translation into Babylonian of the Sumerian name "Tag-tog," or Rest. Noah is reputed to have been a gardener, as was Adam, and the Flood lasted nine months, as in Genesis. After the Flood, Nuhu was given his gift from the gods of immortality; but this we already know from the Gilgamesh epic which tells how Gilgamesh, who seems to correspond to the biblical Nimrod, visited him to learn how he, Gilgamesh, might gain the same blessing.

After the story of the Deluge, and an unfortunate break in the tablet, the hymn continues to tell the story of the fall of man and the loss of immortality because he ate of the fruit of a tree, as in Genesis; but the details, so far as preserved, seem to be reserved for full publication. Noah and Adam seem to be confounded.

Now, no theologians need to be excited or disturbed by this discovery. We already are assured that the biblical story of the temptation and fall of Adam and Eve is mythical in form, teaching not so much the entrance of sin into the world as the entrance of death and the loss of immortality. Adam had to be kept from the Tree of Life because he had disobeyed the command. These stories were current for two or three thousand years, in various forms, and were the basis of religion. The Hebrews received them, cleansed them of their coarseness and polytheism, and presented them in such a noble form as would be worthy of religious instruction and faith in an infantile state of human society. But we no longer need to hold to more than the kernel, and can reject the husk which has ceased to be useful or credible. Indeed, the two trees, the Tree of Life and the Tree of the Knowledge of Good and Evil, themselves indicate that they are not real trees, but are figurative. The new story illustrates rather than confirms the biblical story which we are in the habit of calling Mosaic, but which was current from the earliest ages all thru Babylonia and Syria and Asia Minor and Palestine, and which in its purest form was committed to writing in the Hebrew Scriptures and has given excellent teaching to all Christendom.

EFFECT OF THE NEW TARIFF

WITH the Congressional elections not far away, candidates for public office and others prominent in politics are making platforms in addresses to the people. Much is said about the new tariff. Representative Payne, whose name is associated with a tariff which the people emphatically condemned, draws a gloomy picture of reduced wages, mills closed by foreign com-

petition, and farmers injured by imports of grain and meat. Mr. Roosevelt points out that the cost of living has not been reduced. He asserts that the farmer's interests were sacrificed, that the wageworker has been "thrown out of employment," and that the employer has "sometimes been able to struggle on with the loss of profits" and "sometimes has had to close his shop." Tariff reduction, he also says, has chiefly benefited foreign rivals and competitors, while "injuring the business community and the farming community," and "causing suffering to the wageworkers." Judge Gary, of the Steel Corporation, finds the tariff rates not large enough to permit the payment of such wages as the employees ought to receive.

The effect of the recent revision of the tariff upon domestic manufactures and the products of agriculture has been almost imperceptible. And this is so because, as a rule, when a rate was reduced, the part shorn off was a part that was not needed or had become ineffective. Do the prices of grain and other farm products show that the farmer has suffered? It is true that the cost of living has not been reduced, but one cause of its failure to decline has been the persistent high prices of grain and meat. The removal of duties has promoted the importation of meat and corn, but the imports have not perceptibly affected prices here. How, then, has the farmer suffered?

Business is dull, and we have recently pointed to the causes of dullness. We cannot learn that there has been any noticeable closing of factories on account of tariff revision. Judge Gary knows that the main cause of dullness in the steel trade has been the failure of the railroads to buy, and that this failure has been due to inability to get a decision from the Interstate Commerce Commission in the rate case. When the officers of a great locomotive factory recently said that the number of their employees had fallen from 19,000 to 8200, they did not ascribe this to the tariff. The railroads were not buying locomotives, if they could help it. There is no large number of workmen idle because of the tariff. Many are out of work because the railroad companies are economizing by reducing their forces. And the course taken by the railroad companies has affected several manufacturing industries.

The official record of imports does not show that our markets have been "flooded" with foreign goods, altho duties have been cut down. They do not show that foreign rivals and competitors have gained considerable benefits from the revision. Judge Gary says that if imports are not large, this is so because prices here are low. But he will admit, we think, that prices in the steel industry are now low not because of foreign competition, but for the reason that demand for consumption, notably the railroad demand, has been reduced. There is no evidence in the official reports of any considerable displacement of domestic manufactures by the products of foreign mills. There may be some slight exceptions to the rule. The greatest proof of the strength of our manufactures is seen now, as it has been for some time past, in our enormous exports of manufactured goods. These are sold at a profit in what are called neutral markets, where they must overcome the competition of similar European goods. If they can overcome this competition in neutral markets, after transportation charges have been added to the original cost, can they not defy the same competition here at home—even with out protection—where the handicap of ocean freight charges is in their favor?

The new tariff is not an absolutely perfect one. We do not believe that the people of the United States will gain anything by the depression and the eventual destruction of the domestic cane and beet sugar industries. But the industries of the country, as a whole, are not suffering on account of the new law. If the Republican party, when it set out to make the Payne-Aldrich revision, had ordered the reduction shown by the present law, or only half of it, the popular revolt of 1910, and much that took place thereafter to the disadvantage of that party, would have been prevented.

TWO KINDS OF I. W. W.

CABINET troubles in France were but another of Europe's chronic convulsions at indigestible militarism. French socialists, who control the Chamber, revolted for a time at the program which the nationalists held necessary in order to counteract German advances. Following the Balkan wars and the consequent shifting of the balance of power has come a recurrence of the old nightmare, an adding to and tightening of the armor girths of the powers. In the Alliance and Entente alone, more than 3,770,000 men are withdrawn from industry and, under arms, stand in readiness for Armageddon. Between the I. W. W.'s and the unemployed we in America last winter thought we faced a problem. But what was it compared with this other I. W. W.—Idle Warriors of the World?

UNITED IRELAND

FROM the beginning of history all great countries have been made by the union of north and south—of the different temperaments largely due to climatic conditions. They have been graphically described by a well known writer as the impressionable gold of the south and the stiffening alloy of the north. Germany consists of a Protestant north and a Roman Catholic south—of stern Prussia and the Southern States which have made the Fatherland a great land of music and poetry. And when President Poincaré traveled thru the French provinces a year ago, he showed that Paris was not France, that *la Patrie* was the granary of thought and imagination because she had blended north and south and used them in one.

The traveler in Ireland finds himself among one of the kindliest of people, a people who have lost none of that spirit of nationality which, given free scope, is the great motive power of progress; but the unique and curious thing is that Irish nationality lacks the finish of complete union. Ireland has its north and south.

The strife surrounding the party conflict in Ireland has been so heated that it has been quite impossible for the casual observer to ascertain what was really taking place. By degrees a genuine and more comprehensive sense of nationality has been born, as a result of the intellectual reawakening which accompanied the literary renascence, now known as the Irish Literary Revival. The spread of a literature deriving its life and inspiration from all that is best and most truly national in Irish history has made "nationalism" mean a very great deal more than aggressive revolt against England. With the effacement of the purely political element of the

question of nationalism in the minds of the intelligent Irishmen there will come a broadening and mellowing influence in Irish life.

Home rule will break away the barrier preventing the mixing process of the ingredients of character leading to complete nationalism and unity. With a Parliament in Dublin the representatives of north and south will come together and will learn to know each other in the fulfillment of a common task—the making of a broader and freer nation. Their working together will dissipate ignorance—the ignorance of the north in the south, and of the south in the north. It is this ignorance which, founded on unbelief and fear, has kept Ireland stationary for generations.

Too long has Ireland been dependent on others, and dependency always saps strength. Home Rule will make her rely upon her energies which have been dormant so long. Therein lies Ireland's salvation. While the nation's attention was so overwhelmingly diverted from herself, while her energies were consumed beyond her borders, and not concentrated on herself, Ireland could make but slow progress. The new day has dawned. Her re-directed and encouraged energies will turn to the development of the country—her industries will grow; and the great tracts of land still denied to the tiller of soil will soon fall to him. The Irish peasant now has hope in his soul; he will cultivate more fully the land he loves; he will bind together the whole nation of all that live on Irish soil and create for all a common obligation and a common prosperity. "The natural union has been effected—the union of all her children that are born under the breadth of her skies, fed by the fatness of her fields, and nourished by the civilization of her dead."

ON BUYING A NECKTIE

THE successful man makes up his mind what he wants, goes after it, and gets it. But the successful man does not buy his neckties at the midsummer sales, so this editorial, in the interests of timeliness, ignores him and all his ways. And that is quite necessary in the purchase of necktie, scarf or cravat—according to one's financial and social status.

The one essential is not to know what one wants. One must be moved solely by the spontaneous reactions of his higher nature. It is the same way with poetry, and for many a man his neckties are his nearest approach to poetical expression, save for the brief season when

> the old, amazing tale
> Of youth and April weather

struggles within him for utterance. Who ever heard of a great lyric written by prearrangement? Poe claimed to invent his verse to his own order, but no one has quite believed him.

No, one must not expect to buy a tie except by inspiration. Go to the shops with a fixt purpose, and you are shackled by the inertia which is the penalty and aftermath of decision. You are cramped by the necessity of carrying out your program, and after a futile search for your ideal you take the poor approximation offered you by the salesman—a rank outsider, utterly ignorant of the delicate harmonies between you and your clothes that your choice must satisfy—stuff it discontentedly into your pocket, and carry it off with none of the joy your money should buy.

But be adventurous about it. Make no resolutions. Saunter past shop windows; take a flying glance at a showcase here and a counter there; make errands that give you a new angle on the displays; throw yourself unreservedly into the arms of fickle chance; keep a scientist's eye and a poet's sensibility keyed up to receive random impressions; and you will have your reward. Not, perhaps, on the day when you need a new scarf—that is a small matter—but in due season a bit of silk will flash upon your coy glance that strikes at once a response in that compound of memory and imagination, individualism and conventionality, that we call taste. The thing fits. It expresses you, and you complete the technicalities of acquisition with a satisfaction that is almost hymeneal.

THE PENDULUM SWINGS

THE newest of the modern dances is "the innovation." It is danced with the partners touching each other not by so much as a finger tip. It requires great skill and abundant space. These requirements will doubtless set narrow limitations upon its use. But its budding popularity affords interesting confirmation of the truth that most evils of excess and extravagance tend to correct themselves in this compensatory world. The turkey trot, the bunny hug and the grizzly bear are as dead as Chelsea. The new dance is as decorous as the minuet.

WE WIN THE HENLEY

NO athletic victory could have been more pleasantly timed than Harvard's capture of the Grand Challenge Cup at Henley on July 4. For Harvard it somewhat balanced defeat at New London; for American sportsmen generally it helped to even the account which the Oxford quartet of runners, the golfers and the polo team had rolled up against us. Not since a Columbia four took the Visitors' Cup in 1878 has an American college crew won there, and the greater trophy has never been brought here before, tho Cornell, Yale and Pennsylvania have all rowed for it. Meanwhile each recurring Henley, with its unique international prestige, throws into sharper relief the unfortunate split in our own rowing program which prevents the development of a similarly brilliant and important regatta in American waters.

CRIMINAL INCENTIVE

A HUMOROUSLY toned editorial of one of our comparatively dignified newspapers bemoans the falling off of the dime novel among boy readers. Far be it from us to throw cold water on anybody's sense of humor—we have a lingering one ourselves—but we must confess to being somewhat shocked by such outrageous sentiment. It is our opinion, in which we are not alone, that these "old masterpieces of the lurid" are, and always have been, in the hands of imaginative children whose ethical sense is, to say the least, subordinated, the most subtly dangerous influence it is possible to fancy. If the report is true (which we doubt) we may sincerely congratulate ourselves on the prospect of a decidedly less criminal future, and may add to our expression of elation the earnest hope that many of the current irresponsible "movies" may shortly follow in the exodus to the everlasting rubbish heap.

THE STORY OF THE WEEK

The End at Niagara Falls

After the three mediators or conciliators from South America had approved and signed the agreement between the United States and Huerta's Government, they waited for Carranza's reply to the note in which they had told him that Huerta's delegates were willing to meet his delegates in conference. He asked for delay, in order that he might consult his generals as to a modification of the "plan of Guadalupe," which requires him to hold the office of provisional president after the capture of the capital by the rebel forces. Several days later, no report having been received from Carranza, the mediators and delegates decided to leave Niagara Falls. Huerta's delegates still hoped that the proposed conference would be held, and the mediators (who were to remain in the United States) held themselves in readiness to assist, if they should be needed.

Several final notes marked the end of the conference, which began on May 20. In one of these the mediators referred to the agreement between the United States and Mexico, and said there had been left only the organization of a provisional Government, which, they hoped, would be accomplished by representatives of the two Mexican parties. In another, Huerta's delegates exprest their willingness to meet Carranza's men for an adjustment of differences. They had done all they could, they said, to promote the organization of a provisional Government, and they hoped Carranza would take a similar course. At the Mexican capital, Foreign Minister Ruiz in a public statement thanked the mediators and pointed out that peace with the United States had been established without any impairment of Mexico's dignity. The United States would ask neither for indemnity nor for satisfaction by salute or otherwise. The settlement, he added, indicated the solidarity of American Powers and marked an epoch in the history of international relations.

Villa's Quarrel with Carranza

After the fall of Zacatecas, Villa unexpectedly abandoned his movement southward and, with a part of his victorious army, returned to Torreon. General Gonzales was going southward on the east side, and General Obregon in western territory, but the central column seemed to have given up the fight. It soon became known that Carranza had refused to give Villa the ammunition he needed, and that there was a new quarrel between the two men. In addition, Carranza had so promoted Obregon and Gonzales that they were Villa's superiors in rank.

There had been indications of much bitter feeling in a statement given to the public at Washington, with Carranza's consent, by his private secretary, Alfredo Breceda, who asserted that Villa's "insubordination" had been caused by the insidious advice of General Felipe Angeles, the artillery expert whom Carranza had dismissed from his Cabinet. Breceda said that Angeles, to serve his own ambitious purposes, had induced Villa to disobey Carranza when the latter ordered him to assist Natera at Zacatecas, and that a similar influence had been exerted by George C. Carothers, formerly United States Consul at Torreon, and recently with Villa as an agent of Secretary Bryan.

Some expected that Villa and his troops would attack Carranza, but Villa's agent at Washington insisted that the soldier was loyal and recognized the First Chief's authority. Villa demanded ammunition and supplies of coal, with full control of his campaign. A group of generals, led by Gonzales, sat in conference at Torreon as conciliators. An agreement was reached, to the effect that Villa should be military Chief of the North and that he should have supplies, with control of the railroad to Tampico, the port of entry. It was understood that he would resume his

THE WEEK IN CONGRESS

The session will be prolonged until September, probably, by the decision of a Senate Democratic caucus that there shall be no adjournment until the Federal Trade Commission bill, the Clayton trust bill, and the bill for regulation of railroad securities are "disposed of." This action was suggested by the President.

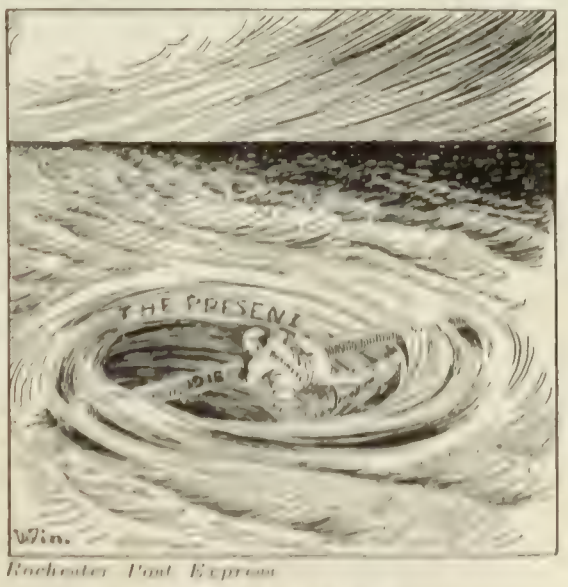
Leading subjects of debate were the appropriation bills and the condition of business. Senator Burton sharply criticized the River and Harbor bill. Representative Britten supported his bill forbidding Cabinet officers and members of Congress to deliver lectures for pay, and classed those who did so with certain vaudeville actresses who "capitalize a gift of the people or a stroke of good fortune in lieu of real ability."

The naval bill was past and signed. Greece will pay $12,000,000 for the battleships "Idaho" and "Mississippi," and probably will take them within ten days.

The House past a substitute for the Senate's bill to regulate the business of cotton exchanges, and an agreement is expected. The bill provides for standard grades and imposes on sales for future delivery a heavy tax which can be avoided only by observing many difficult requirements.

Favorable reports were ordered by the Senate Banking Committee on the nominations of A. C. Miller, Charles S. Hamlin and W. P. G. Harding for the Federal Reserve Board. Action concerning Paul M. Warburg and Thomas D. Jones was deferred.

An old statute, for the punishment of men who left West Point or the army to enter the Confederate service during the Civil War, was repealed by unanimous vote, upon the motion of Representative Graham, Republican, of Pennsylvania.



Among the subjects considered by committees were the treaty with Nicaragua, the railroad securities bill, and the misuse of Senate stationery by persons promoting the sale of stock in a gold mine.

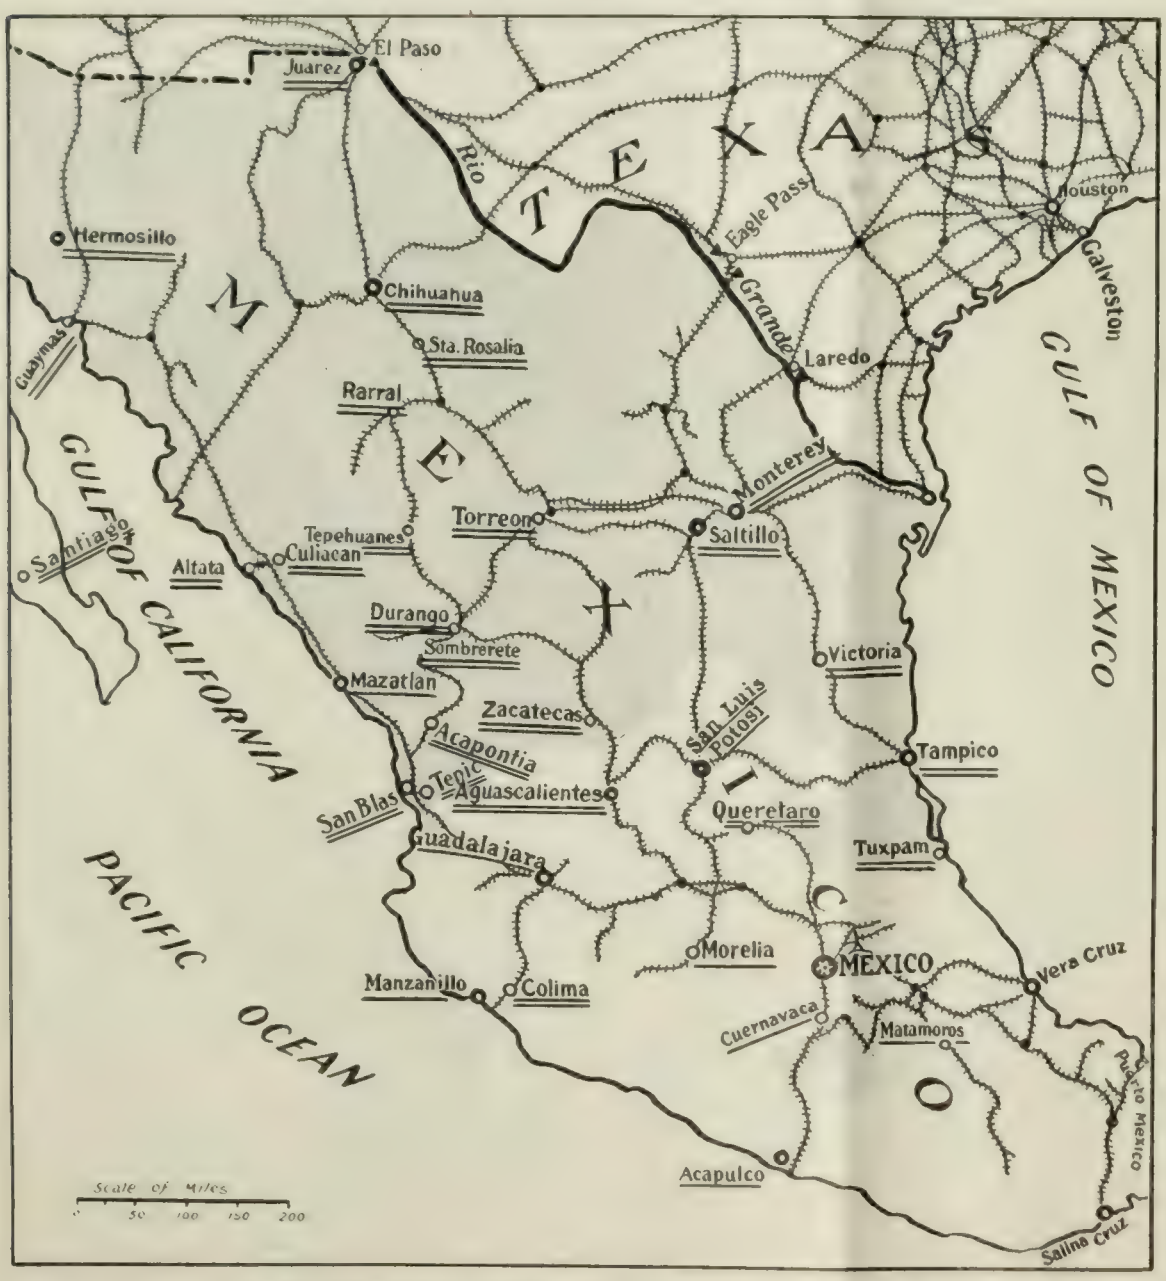
march southward, and that there would be changes in the Washington junta, to meet his wishes.

Re-election of Huerta

Few votes were cast at the Mexican election on the 5th. A large majority of them were for Huerta, who was elected President, with General Blanquet, his Minister of War, Vice-President. The constitutional requirement that a majority of the nation's polling places must take part could not be observed. The present members of Congress, who had just authorized a bond issue of $30,000,000, were re-elected. It is reported that Huerta said a few days ago: "Before I resign, half the people of Mexico City will die with me."

Alarmed by the threats of Zapata, who has promised to deprive the capital of water, light, and electric power, the foreign residents have been procuring arms and planning fortifications, believing that there could not fail to be an uprising if the light should be shut off. Sir Lionel Carden, the British Minister, has advised British residents to leave the city. Zapata refuses to acknowledge the authority of Carranza. Only two railways leading from the city, one to Vera Cruz and the other to Queretaro, are in operation. The line to Puerto Mexico has been cut.



The rebels at Zacatecas arrested Albert St. Clair Douglas, the British vice-consul, and held him for trial by court martial, asserting that he had given aid to the Federals. This he denied. He was in danger of being put to death when friends, exerting influence by way of Washington, procured delay. The publication of correspondence which tends to support charges that the revolutionists have been financed by Henry Clay Pierce, the oil capitalist, and others, who seek control of Mexican railways and natural resources, has brought out denials from Carranza and others.

Two Treaties Opposed

Some time ago Senator William Alden Smith introduced a resolution providing for an investigation concerning the treaty with Nicaragua, now pending in the Senate Committee on Foreign Relations. There was a long preamble in which it was asserted that New York bankers had robbed the people of Nicaragua, and had exercized their influence with the help of our Government. The resolution, shorn of its preamble, has now been adopted. It orders an investigation as to "any and all transactions affecting" the negotiation of the treaty, the ratification of which will thereby be greatly delayed, if not prevented.

The committee had already begun an investigation. Several witnesses have testified. As the proceedings were behind closed doors, the publication of substantially all that had been said was sharply disapproved, and a resolution was introduced for an inquiry to ascertain who was responsible for what was called the "leak." Reports continue to be published. One of them shows that Senator Smith's questions to witnesses were disapproved and regarded as personally offensive by Senator Root, who was Secretary of State at the time of certain events under review.

With respect to the treaty with Colombia, no progress is shown. It has recently been defended by James T. Dubois, formerly Minister to Colombia, who holds that Colombia is justly entitled to the $25,000,000, on account of losses due to the secession of Panama. He criticizes the action of President Roosevelt at the time of that secession. Mr. Roosevelt, who has repeatedly denounced the proposed payment as "blackmail," has been led by ex-Minister Dubois's statement to denounce the treaty again, saying that it is "an outrage on the honor, and a blow to the interests, of the American people," and that "an Administration which has made such a treaty, for the payment of blackmail to Colombia, has forfeited all right to the respect of the people of the United States." There are reports at Washington that Secretary Bryan, owing to the opposition shown, may decide not to ask for action upon either of the treaties at the present session.

THE RECEDING BOUNDARY OF HUERTA'S POWER

The shaded part of the map represents the area controlled by revolutionists. Cities once underlined are besieged or threatened by the Constitutionalist forces; those twice underlined have been lost to the Federals by capture or evacuation. Three rebel armies will converge on Mexico City: the Western Division, under Obregon, now operating around Guaymas and Mazatlan; the Northern, under Villa, now at Torreon; and the Southeastern, under Gonzales, now moving on San Luis Potosi

The Controversy with Japan

Negotiations for a new treaty with Japan, in progress for some time past, were recently discontinued by Japan, for the exprest reason that the proposed agreement would raise new difficulties. Japan's new Government, more radical than the preceding one, preferred to go back to the situation indicated by the correspondence with our Government in the controversy about California's alien land law, and at the Japanese Government's suggestion this correspondence has been published. It consists mainly of long ar-

guments in support of each Government's position, Japan holding that the law violates the commercial treaty of 1911, while the United States maintains that it does not. These are the leading contentions, but other points are considered and discussed. Our Government's suggestion that the question should be submitted to the United States courts was rejected. The tone on both sides was always that of friendship.

Some think that Japan's abandonment of the treaty negotiations and return to the position taken in the correspondence were designed to commend the new Government to the radical element in that country. A deadlock has been reached, and the serious nature of the problem is realized at Washington. It is said that a proposition from Japan for submission of the controversy to arbitration would be favorably considered.

Owing to reports that 400 Japanese are coming from California to Michigan, and intend to found an agricultural colony in that state, there is a movement for the enactment in Michigan of a law like the one in California. Prominent candidates for public office favor such legislation. The president of the Michigan Agricultural College says he regards such a colonization project "with grave apprehension," and the secretary of the college has asked the agricultural organizations of the state to oppose it. This is also the attitude of the labor union leaders.

Plague at New Orleans

There have been two fatal cases of bubonic plague in New Orleans. The victims were lodgers in the house of the Volunteers of America, which is in the heart of the city, and the district at first strictly quarantined included the City Hall. It was afterward ascertained, however, that the men had been handling goods in a storehouse in another part of the city and that in all probability they were infected in that storehouse. There is plague also in the Cuban city of Santiago. Dr. Rupert Blue, Surgeon-General of the United States Public Health Service, has gone to New Orleans and taken charge of the sanitary work. There will be a campaign for the extermination of rats, and twelve expert ratcatchers are on their way to New Orleans from San Francisco, coming in response to Dr. Blue's orders.

All of our port cities have been urged to take up the work of exterminating rats. Galveston offers five cents a head for rats, dead or alive. All ships arriving at northern or Gulf ports from New Orleans will be thoroly fumigated, and measures will be taken to prevent the passage of rats from them to the docks.

SALEM FIRE REFUGEES

The great fire in the Massachusetts seaport that is older than Boston left 18,000 people homeless and destroyed property worth twelve million dollars

The Fire in Salem

Much suffering has been caused by the great fire in the old city of Salem, Massachusetts, and President Wilson, in a special message, has urged Congress to appropriate $200,000 for the relief of the homeless and destitute, more than 10,000 of whom are living in tents. The flames swept over three square miles of territory, destroying nearly half of the city. More than 1000 dwellings were burned, 18,000 persons were deprived of their homes, and the loss was $12,000,000, with four lives. The fire began at two o'clock in the afternoon in a leather factory, and spread quickly, as the water pressure was inadequate and one of the mains was broken. In a very short time half a dozen factories were burning in the shadow of Gallows Hill, where witches were hanged in colonial days. The loss of the company owning the Naumkeag Cotton Mills is $3,500,000.

Nearly all the historic structures of the old town were saved. The flames spared Hawthorne's birthplace, the Custom House where he worked, and the House of the Seven Gables. It was reported that the Witches' House had been destroyed, but it is still standing. The hospital, the orphan asylum, the public library and a new church, are gone. A majority of the homeless are French Canadians, Poles, Italians or Greeks, who were employed in the factories, and as these were burned, they have no work. Contributions to the relief fund amount now to about $375,000.

Santo Domingo and Hayti

The condition of Santo Domingo and Hayti may compel intervention by the United States in both countries. In Santo Domingo, where the Bordas Government has sought in vain for six weeks past to dislodge the rebels at Puerto Plata, there are active revolutionists now in the southern part of the country, as well as in the north. Bordas had been emphatically warned by Captain Russell, commander of the United States naval forces, that he must not imperil the lives of foreign residents by his bombardment of Puerto Plata. He did not heed this warning, and on the 26th ultimo the gunboat "Machias" entered the inner harbor and with a few shots silenced his batteries. Several foreign residents have been killed by his guns.

Walker W. Vick, formerly secretary of the Wilson campaign committee, who was made Receiver-General of Customs under the fiscal agreement, after the peremptory removal of his predecessor, has now resigned. It appears that he disagreed with the new United States Minister, James M. Sullivan, about the selection of a banking house as a depository for the funds. Minister Sullivan has been ordered to Washington, and it is said that he will resign. His services have not been wholly satisfactory. The railroads are not in operation, foreign trade is paralyzed, and the Government recently raised some money by selling a large quantity of postage stamps at one-quarter of their face value.

In Hayti, Zamor's Government has won several battles with the rebels, whose leader, Davilmar Theodore, is reported to have been killed. Our Government has sent the new Minister, Arthur Bailey Blanchard, to a

Haytian port on a battleship; and there are now five United States warships in Haytian waters. France and Germany are still threatening to seize custom houses if their claims are not satisfied.

Peers Yield to Home Rule

Debate on the Home Rule bill in the House of Lords shows the peers in a panic lest the threatened conflict in Ulster cannot be averted. Realizing that the war threat has gone too far the Unionists are now distinctly conciliatory in tone. Lord Lansdowne said on Thursday that the opposition would not oppose the second reading of the amending bill, which is a decided step toward a compromise. He said that the bill is defective in four points—the method of exclusion of Ulster, the area to be free from home rule, the duration of the term of exclusion, and the conditions for the excluded areas fixt by the Government. At the same time Premier Asquith is reported as willing to grant Ulster exclusion by statute instead of by ballot, as provided by the Home Rule bill. Just what will be the exact terms of the final agreement will not be known until next week, when the amending bill reaches the committee stage in the Lords.

Meanwhile in Ireland events have been rapidly drifting toward an open breach. Following the organization of the Nationalist Volunteers, said to number between 115.000 and 300.000 men, as an offset to the Ulster forces, the Ulstermen, on the order of Lieut.-Gen. Sir George Richardson, have taken to carrying arms openly. The streets of Belfast are filled with men wearing the Ulster Volunteer uniform, and the city is said to have taken on the appearance of a garrison town. On all sides it is freely admitted that the slightest spark may set off the train before a compromise can be effected in Parliament.

Death of Joseph Chamberlain

Death last week removed from British politics one of its most forceful and picturesque figures in Joseph Chamberlain, long known for his advocacy of "tariff reform." Altho he had been in failing health since the stroke of apoplexy compelled his retirement from politics seven years ago, the death of the famous statesman came as a complete surprise.

Starting his political career in 1868 as a radical, first as a member of the town council and later as Mayor of Birmingham, his reforms, which made that city a model for the world, drew him into national life. Within four years after his entry into Parliament he was a member of Gladstone's cabinet, and remained one of the chief supporters of the Prime Minister until the latter's Home Rule policy forced his withdrawal from the Liberals. Chamberlain's brilliant advocacy of tariff reform with imperialist preferences drew him naturally to the landed party, the Conservatives, and until he was stricken he was the most able of the supporters of the aristocratic side. Today his son Austen is alone among British public men in upholding the tariff doctrines of his father. Mrs. Chamberlain, who was devoted to her husband during the years of his invalidship and rarely left his side, was an American, the daughter of Judge W. C. Endicott, of Massachusetts, who was Secretary of War in President Cleveland's cabinet.

Taking Vengeance on the Serbs

Following the assassination of the Austrian heir-apparent, Archduke Francis Ferdinand, and his wife, the Duchess of Hohenberg, by a Servian student at Sarayevo, on June 27, came anti-Serb outbreaks in various parts of the empire. Blinded by rage at the destruction of what had come to be looked upon as the guarantee of Austria's future—for only the archduke was felt capable of taking up Francis Joseph's task of holding together the antagonistic races of the empire—the populace has turned to take vengeance on the Serbs.

At Sarayevo, immediately following the assassination, martial law was declared, and later extended to the whole provinces of Bosnia and Herzegovina. At Mostar, the capital of the latter province, two hundred are reported killed by the Croats, who by blood are closely related to the Serbs. At Vienna, mobs of German students tore the flag from the Servian legation and burned it in the street. Later, another mob of more than a thousand persons tried to

storm the legation and were repulsed with the greatest difficulty by the police.

The Funeral of the Archduke

The bodies of the Archduke and the Duchess of Hohenberg were taken to Trieste on board the battleship "Viribus Unitus" and thence to Vienna by special train. They were met at the station by the new heir, the Archduke Charles Francis Joseph. The German Emperor, King Alfonso of Spain and some of the lesser German kings had announced their intention of attending the funeral. But at the last minute the Kaiser contracted a "cold" and could not go. Nor did any of the other royalties attend. On an intimation from Vienna either that the aged Emperor desired to be alone with his grief, or that on account of the anarchists he feared for the safety of his guests, the visits were canceled. Following a short ceremony at the Hofburg, attended only by members of the imperial family, the bodies were removed to Artstetten, in Lower Austria, where the archduke had exprest a wish to be buried, inasmuch as burial in the Hapsburg vaults under the Capuchin Church in Vienna was forbidden to his wife.

Evidence already shows that the assassination was a part of a widespread political plot, altho as yet no part in it has been traced to Belgrade. The Austrian council, however, has officially asked Servia to institute an inquiry to fix the responsibility for the murders. So well laid was the plot that there was little chance of escape. Had the pistol shots failed to take effect, another bomb was ready to be thrown in the next block, while under the table at which the archduke was to lunch two others were discovered. In the chimney of the Duchess of Hohenberg's apartments still another bomb was found, while the railway over which it was expected the imperial party would leave Sarayevo was literally mined with dynamite.

The Future of the Dual Monarchy

Uncertainty and gloom pervade the empire and Europe generally as to the fate of the dual monarchy, which was known to depend so much on the murdered archduke. The new heir is an unknown quantity, who up to this time has never been identified with political affairs. Francis Ferdinand had very pronounced views, and for the past five years his policies had very largely governed the empire. He had reorganized the army and navy, and as a close friend of the German Kaiser, he had been in accord with the Austro-German alliance. Whether Charles Francis Joseph will continue this policy is now causing no little anxiety in Berlin. Whether he will continue the plan of recognizing the Slav population on a basis of equality with the Germans and Magyars, thus virtually making a triple instead of a dual monarchy, is also one of the future's uncertainties.

To Germany the death of Francis Ferdinand comes as the greatest blow. As long as the old Emperor lives, matters are likely to proceed along normal lines, but changes of great importance will not long be postponed after his death. The gravest fear is that internal squabbles growing out of political and racial differences will seriously impair the efficiency of the army and thus add new burdens to Germany's already heavy load. Francis Ferdinand was an experienced soldier and only his iron personality welded an efficient machine out of the military forces of the empire. The Austrian policy toward Russia and in the Near East is also likely to suffer some modification in the change in management, and a realignment of the policies of the Triple Alliance is not at all improbable.

Free Speech in the Duma

After a struggle of varying success for what is fundamental in most parliamentary assemblages, the Russian Duma has past the Immunity Bill, granting free speech to Deputies on the floor of the Chamber. But the passage of the bill will not at once confirm the Duma in the security which it seeks. It must still come before the Council of the Empire, and in view of the reactionary character of that body, its rejection may be regarded as a foregone conclusion. This will be the signal for the renewal of the struggle between the Duma and the Government, which has been in abatement since 1907, when the Czar, on account of the radical tendencies of the first Duma, dissolved the Chamber and stript its successor of practically all power.

Free speech was guaranteed the Duma under Article 14 of the Constitution of 1906, but the right was an empty one, as the Government continued to censor the speeches of Deputies as tho they had been private citizens. Proceedings begun against Deputy Tchkheidze for a radical "republican" speech were the occasion for the present measure. It is thus a direct challenge to the Government.

Its real political significance, however, lies in the combination of all the liberal elements against the Government and the outvoting of the Rights. The radicals, the Octobrists and the Progressists, for the first time, were willing to compromise and join forces with the more moderate elements of the Chamber—a combination which the Government has zealously sought to avoid by fomenting dissensions among them. Leaders of the parties hope to make the coalition into a working alliance, and thus take the offensive in pressing the more moderate reforms on the Government.

WHY THE COLOMBIAN TREATY SHOULD BE RATIFIED

BY FRANCISCO ESCOBAR

Señor Escobar, who is Consul-General of Colombia to the United States, counts himself no less an American than a Colombian, having been educated here, a graduate of the Columbia School of Mines in the class of 1889. For two years he served as vice-president of the National School of Mines of Colombia, and was appointed to his present position in 1910.—THE EDITOR.

DURING the discussion of the Thompson-Urrutia treaty with Colombia at Washington, the charge has been freely made by those in opposition, and readily assumed by many of its supporters, that the treaty was being negotiated rather out of the magnanimity of the United States than as a recognition of any rights of Colombia in the controversy. This treaty provides for the payment of $25,000,000 to Colombia and for certain concessions in the Panama Canal. Its opponents claim that the payment of any such sum of money amounts to a gift, and that in return no substantial benefits accrue to the United States.

Such opposition, aside from any question of rights in the matter, is not only in ignorance of the facts, but overlooks entirely the great indirect benefits that are bound to result to American commerce in South America as a whole, in thus advancing the friendly interests of the two hemispheres. The prompt acceptance by the United States of the good offices of the A B C powers to mediate in Mexico has gone a long way in overcoming the suspicion against everything American, which unfortunately once existed thru all Spanish-speaking countries. The ratification of this treaty with Colombia will be another step in the same direction, besides being evidence of the justice and fairness of a great and powerful republic toward a smaller and weaker neighbor.

Since the Panama incident of 1903 the door has been shut in Colombia against everything American. Not only have all contracts for the development of this vast territory, as yet scarcely touched, gone to European firms, but it has been difficult for American capital even to find employment in the country. Along the Atrato River, the outlet for a vast interior territory, Americans are, by law, forbidden to own land. This law was enacted thru fear of the seizure of the river by the United States. One of the first results of the ratification of the present treaty would be the repeal of this act, and the disappearance of the prejudices with which it is consonant.

THE COLOMBIAN TREATY

- Provides for the payment of $25,000,000, to Colombia
- Gives Colombia free use of Panama Canal for vessels of war, and free transportation of troops, when necessary, over Panama Railroad
- Refers to manner in which the United States acquired Canal Zone in following terms: "expresa sincero sentimiento por cualquier cosa que haya ocurrido," for which there are two versions: one expressing regret *that anything should have occurred*, etc.; the other, regret *for anything that has occurred*
- Signed at Bogotá April 6 by U. S. Minister Thaddeus A. Thompson and Señor Francisco José Urrutia, Minister for Foreign Relations, and five Special Delegates representing all the political parties of Colombia
- Ratified by both houses of the Colombian Congress on June 9
- Now before Senate Committee on Foreign Relations, which is to undertake a full investigation of the Canal incident of 1903

Colombia is preparing to undertake important railway construction, harbor improvements, and other public utility works. In this country of over 500,000 square miles and 5,000,000 population, there are at the present time only seven hundred miles of railways! Practically all of the $25,000,000 would remain in the United States in the shape of orders for railway supplies and machinery. These railroads would open up to American enterprise the great mineral and agricultural resources of the republic.

Development of Colombia's resources has scarcely begun. Mining of gold, silver and other precious metals has been carried on since the time of the Spanish Conquest, but the methods are antiquated and the deposits barely touched. Altho platinum was discovered in the eighteenth century, no systematic exploration for it has been made, yet Colombia produces one-tenth of the world's product. Its emerald mines produce the finest stones in the world; its grazing lands and its forests are virgin still. Prejudices have locked all this away in the storehouses, awaiting only the restoration of friendly feeling to open to American development. Yet it is said that the treaty offers no advantages to America!

All this is irrespective of the rights on which Colombia insists as the basis of the treaty, but which its opponents in America refuse to recognize. Colombia has repeatedly asked that her claims be submitted to arbitration, but the request has constantly been ignored by the United States. A treaty similar to that now proposed Colombia declined even to consider in 1909, because it left out a recognition of those rights which she holds essential.

It is freely charged in the United States that Colombia obstructed the building of the Panama Canal, and thus stood as a barrier against advancing civilization. Nothing could be further from the truth. As far back as 1879 Colombia had granted the United States the privilege of building a canal, but the treaty failed in the American Senate because of the supposed influence of the transcontinental railroads. Three times it extended the grant to the French canal company, when by its terms the concession with all the property of the company was forfeited. Colonel Roosevelt has charged Colombia with attempted "blackmail" in transferring the canal concession from the French company to the United States. But the report of the committee in charge of the treaty is silent on any such attempted hold-up. There is nothing there about "demands" for larger sums of money That treaty was defeated by Colombia, not because of the money consideration, but because it proposed a virtual ceding of territory, which the Constitution forbade.

From the failure of that treaty came the Panama revolution. In November, 1903, a few conspirators in the City of Panama "rose as one man" and proclaimed the independence of the Isthmus from Colombia. The garrison at Panama had been bribed by the promoters of the revolution; the troops sent by Colombia to quell the revolt were denied transportation over the Panama Railroad; reinforcements, sent by sea, by order of Admiral Coghlan, acting under instructions from Washington, were forbidden to land within fifty miles of Panama. Seventy-eight hours after the outbreak the new republic was recognized at Washington. A few days later (November 18, 1903) Panama, represented by Phillippe Bunau-Varilla, a Frenchman, who had been appointed Minister by cable with full plenary powers, signed the treaty ceding the Canal Zone to the United States. This treaty was exactly the same as the Hay-Herrán convention, which had been defeated at Bogotá, with the exception that under it the United

States received still great advantages.

On those acts Colombia has based her grievances, and for ten years she has asked impartial consideration for them. That they had some foundation in justice has been recognized in substance by three Washington administrations, hence they cannot be said to be a party measure. President Roosevelt, under the Cortes-Root agreement, sought to settle them, but Colombia refused to accept the treaty. President Taft, thru Minister DuBois, asked if Colombia would accept the sum of $25,000,000 as a quitclaim for the loss of Panama. The answer was an emphatic negative. President Wilson has now sought to smooth the difficulties between the two countries in the pending Thompson-Urrutia treaty, which incorporates in substance the same terms as those proposed by President Taft.

The chief controversy in the present, as in former treaties, has been on the so-called "apology." Whether it is an apology or not depends on the point of view. The Colombian people have felt deeply aggrieved and humiliated over the loss of the Canal and the Isthmus. It is their firm belief that the then President of the United States helped the revolution at Panama and violated the treaty of 1846. For this reason they have been unanimous in the position that no settlement of the question could be made without an expression of regret on the part of the United States. President Taft, like President Wilson, was just enough to recognize this view. But opponents of this chivalrous measure see in it only humiliation; they see in this generous action of a powerful nation toward a weak nation only cowardice and fear. The strong can do no wrong, they argue.

No less just are the rights in the Canal granted to Colombian ships, products and citizens. They are a recognition of her rights of property in the Canal and the Panama Railroad. Says M. Gaston Brunet, the eminent French lawyer, on these claims:

But I find in the contracts just read unquestionable proof of Colombia's right of private ownership over the Canal; she has rights which traced to their origin are those proceeding from a public entity, but which have constituted rights of private property.

And then I refer to a great principle of international law that rules on this matter: in the case of dismemberment or the birth of a state, public property follows the fate of the part seceding; but private property is inalienable, untransferable. Such is the opinion of Calleyat.

Here is a quotation from Calvo, upholding the same proposition:

"Inversely, the yielding state does not lose ipso jure the ownership of the goods that constitute its private property. . . . The seceding state cannot contend that such property be acquired by it as a compensation for the new expenses to which it must attain. . . ."

Has Colombia any rights of private property over the Canal concession? There is no question about that. To begin with, she has the right of tolls, once the Canal be finished; then she has the 50,000 shares of stock which she owns in accord with the contracts which I have read, stock which belongs to Colombia, which she may transfer, which she may hypothecate and which is the price of services rendered. (Le Procés de Panama, Paris, 1904.)

The payment of $25,000,000 has been called excessive. I submit the memorandum presented to the Minister of Foreign Affairs at Bogotá by Minister James T. DuBois:

It is generally believed that the claim referring to the rights of Colombia in the Panama Railroad is perfectly legal and just. Under the contract of 1867 Colombia ceded the transisthmian railroad to the Panama Railroad Company for a period of ninety-nine years for an annual payment of $250,000. When these payments were stopped on account of the secession the contract still had sixty-four years to run; that is to say, there were still pending sixty-four annuities of $250,000, the total value of which amounted to $16,000,000. This claim might be submitted, with the previous consent of both parties, to arbitration. As Senator Bristow reported officially in 1906 that the Panama Railroad was worth $16,446,000, the total amount of the claim which might be submitted to arbitration would rise to $32,446,000. In addition to this sum there is the amount entailed by the Salgar-Wyse concession, which expires in 1984, and under it Colombia was to receive $250,000 a year, counting from the date of the opening of the Canal. If the Canal be opened to service in the coming year, we should have owing to Colombia seventy annuities—that is to say, $17,500,000. If the tribunal of arbitration considers this further claim, the total sum would amount to $49,946,000.

From these facts can it be said that Colombia is getting the better of the bargain?

Finally, it ought not be lost sight of that for ten years Colombia has been asking arbitration; that her people have refused to consent to negotiations without a recognition of her wrongs, only yielding after they had been convinced that they were knocking against the reality of accomplished facts. The hardest thing for her to forget has been the mutilation of her flag: one of the nine stars, as sacred to Colombians as any in the blue field of the Stars and Stripes, had to be taken from her emblem. Yet there are those who assert that Colombia deserves no reparation; that she needs no privileges in a Canal of which she had been despoiled.

The American people have been temporarily misled, but as Lincoln said, it is not possible to fool them all the time. In conclusion I can only repeat that Colombia leaves these questions—and leaves them confidently—to the conscience of the American people, believing that in the end they will be answered in the spirit of fairness and justice for which the Great Republic stands.

New York City

EXTENDING OUR FOREIGN COMMERCE

TAKING advantage of the provision of the Owen currency act permitting the establishment of foreign branches by American banking houses, the National City Bank of New York, the largest in the country, recently announced that it would open branches in Buenos Aires, Argentina, and at Rio Janeiro, Brazil. Later another agency is to be established at Valparaiso, Chile.

For years American manufacturers seeking foreign markets have been at a disadvantage in competing with their English, French or German rivals. Thruout all South America, in China, and in other foreign markets the foreign branch banks have been aggressive agents for their own nationals. At Rio, for example, important harbor works were recently undertaken. They were in charge of American engineers, but the French bankers, who furnished the money, insisted that French materials and French machinery be used as a condition to the loan.

The banks also serve to discount the commercial paper of local purchasers of foreign manufactures. American transactions up to this time have had to pass thru the hands of foreign bankers. Trade terms and other private details of business were thus opened to rivals who were none too scrupulous in making use of them.

The southern half of South America was chosen not arbitrarily, but because it was found that American merchants and manufacturers were more interested in that field than any other. It is looked upon as a vast and but little developed market. Moreover, the coming opening of the Panama Canal has largely increased interest in the trade opportunities of Latin America.

Embraced in the plan is not only the establishment of branches in trade centers abroad, but also a thoro system of credit and commercial information, including the making of reports on trade opportunities, which are to be at the disposal of all.

FOUR LEADERS OF WOMEN AT CHAUTAUQUA

Harris & Ewing

MRS. WILLIAM CUMMING STORY

Who will speak on D. A. R. Day, July 22. She is president-general of the Daughters of the American Revolution

Paul Thompson

MRS. MAUD BALLINGTON BOOTH

To speak on August 15. Mrs. Booth has been in charge of the prison work of the Volunteers of America since 1896

W. Burden Stage

MRS. CARRIE CHAPMAN CATT

President of the International Woman Suffrage Alliance and a lecturer of wide experience. She will speak on August 29

Paul Thompson

MRS. PERCY V. PENNYPACKER

Reëlected president of the General Federation of Women's Clubs at the recent meeting in Chicago. To speak August 8

THE VALLEY—AFTER NEW YORK

BY CORRA HARRIS

AUTHOR OF "A CIRCUIT RIDER'S WIFE," "EVE'S SECOND HUSBAND," "IN SEARCH OF A HUSBAND"

When Mrs. Harris wrote for The Independent last winter her series of papers on "New York as Seen from a Georgia Valley," it was always by the Valley standards of simplicity and peace and wholesomeness that she judged the people and problems of the great city. And so our readers will not be surprized that in the enthusiasm of her homecoming to the Valley she could not refrain from setting forth again her faith in the manner of life which she finds there and which she describes with so much sympathy.—THE EDITOR.

WHEN I left New York in March the winter season was at its hight. That is to say, all the theaters and opera houses were filled in the afternoons and evenings, the tango tea cafés were in full blast. Society was working overtime to keep its engagements, and everybody else was working overtime except those who had no work at all. Thirty thousand men were shoveling snow night and day. The I. W. W. had invaded the churches and taken such a shrewd advantage of the preachers and the gospel they were preaching that they had to be arrested. And the last thing I saw was groups of forlorn men standing before employment agencies in Sixth avenue. Nobody knew what to do with the I. W. W. nor the rest of them. And everybody was talking about what ought to be done with them. Meanwhile the East Side and all the lower edges of New York were bringing forth little I. W. W. babies and prospective gunmen, and feeding as best they could the children already born to this fate. This, as near as I can tell it without putting in the spider legs of statistics, is a fairly accurate report of New York the first week in March. Of course, that part of capital which is devoted to charity was being used to meet the abuses for which capital, and wrong ideals of life and education, are responsible.

WHEN I reached the Valley the first week in April, Nature was beginning her social season. The red buds came out first to make sure it was safe for the dogwood to bloom. Next week the dogwood did bloom, and all the ground in the forests was covered with a purple mist of violets.

Nobody was willing to put on their green leaves yet. I say nobody, for the great majority of the people here are not human people. They are the trees, the willows, the hawthorns. But literal folk were beginning to take off some of their clothes. The men were plowing with their coats off. The women had unpinned their little winter capes, blue calico-clad figures to be seen everywhere, bending low in their gardens as mothers bend above cradles. They were all nursing their young children of the soil, tender plants pushing up thru the sod with their little green heads still folded as if they came up with a prayer—as indeed they do; they pray for light, and rain, and dew, to be delivered from weeds, and grass, and bugs, and all evil things. Nothing, I believe, is so sweetly the emblem of the right aspiration to live innocently and well as these myriad little good green things that rise at our bidding and planting, and trusting us, from the gentle giving earth.

ONE day, the last of April, when I came into the cabin at evening, there was scarcely a leaf to be seen. The next morning every tree and bush in sight had leaves upon it, so small, so faintly, timidly green that the whole Valley seemed to wear a misty emerald veil. But it was enough. All the birds who had been courting married that day, and began to build their nests. They are good mathematicians in computing the growth of hiding leaves, for before the nests were finished not one of them could be seen, except by searching. The wren who was my nearest neighbor last fall has at last made up her mind that I am a decent, respectable human wren myself, and she moved her belongings to a place under the eaves of my cabin. I have reason to believe that her husband neglects her. He spent most of his time fighting his own image in a broken mirror which we put in the woodshed. Two red birds built in the hawthorn bush which the wrens deserted. One oriole swung her stocking from the lowest boughs of my wild cherry tree, filled it with four eggs, hatched them into four fledglings so much too large for the stocking that they were obliged to get out of it and hop for their living before they were a week old, and two bluebirds have their nest in a hole between the branches of an oak. These are the only nests in sight of my cabin door, but there are hundreds in the woods beyond.

The school in the Valley closed the first of May. all the children came home with little A B C knowledges in their heads to get real and sterner knowledge of life in the fields. They all go back to school in July. In short, we manage according to nature the industrial features of education, which in the schools of cities are accomplished artificially and with so much expense. There is not a child in this valley who has not a profession by which he or she can earn a livelihood before sixteen years of age. And they have the physical strength and the moral fortitude to practise it, which is more than so-called industrial education imparts. Their ignorance is of the world, not of life, nor of the way they must go in life. I will not claim that they are erudite in the matter of cleanliness, but I challenge any "social worker" to find a single unhealthy one among them. And their manners are—well, they have not as many manners as youngsters of the world have, but what sweetness of heart, what belief in man and God, what passionate admirers they are of Joseph and his brethren. They never saw the "funny page" of a Sunday newspaper. They do not understand the malice of humor, but they have a sense of humor which is so keen that all the days are merry with shouts of their laughter—when a grasshopper saws a tune in his hind legs, or an old owl ogles them with his droll eye—that is enough to arouse any child in this Valley.

THIS, I say, is the situation in the Valley. Everybody has work and everybody is doing it. No one is earning as much as a dollar a day. But every one is earning what he can from that oldest paymaster, the earth, who never pays in dollars and cents. These people do not hope much, and they do not despair at all. They simply *live*. Some of the greatest philosophers believe this is the most profound wisdom.

We have one trouble—that is the lack of labor. We do our best, but the average husband and wife in this Valley do not bring up more than eight children. And so we do not get enough men and women to do all the work that is needed to produce the crops. For the children have a way of remaining too small to hoe and plow until after they are twelve years of age. But they seem never to be too small to eat. This makes the burden of providing for them terrific. In New York they would be paupers. Here they are the funniest, happiest little creatures alive, sun

burnt, hungry, hearty and diligent by the time they are old enough to "carry water."

In March, when there were tens of thousands of men in New York begging for work, the men in this valley were begging for plowmen to "break" and prepare the land. A carload of I. W. W.'s could have found all the work they were praying for in this little community alone. But would they have taken it? Certainly not. Nature provides no "soft jobs." She requires muscles in a man's back, strength in his arms and legs, courage and patience in his heart. They had none of these qualities. They wanted jobs at folding circulars or stamping envelopes at two dollars a day—something they could do without getting their hands chapped or their feet cold! One day when I was with a tender-hearted New York woman we past a thousand men moving the snow, holding their shovels with bare hands.

"Poor, poor fellows!" she grieved. "We must get together and provide them with gloves!"

I made no reply. It was not worth while to tell her that I have seen old men in this valley who never wear gloves from year's end to year's end, doing the hardest kind of work in freezing weather, and rougher work all the year around than the "poor fellows" will ever do. But I recalled a certain comment I heard here last winter when a young man applied to me for a job.

"Don't take him," a neighbor advised.

"Why?" I asked.

"He always wears gloves when he works," he answered.

"Why should I refuse him for that?" I asked.

"Because it's a habit with him. He won't do nothing he can't do with gloves on his hands," was the reply.

I did try him for one day. Then I understood and dismissed him. He had finicky I. W. W. notions of labor. The gloves were merely a symptom of his quality, which was slazy. I have my doubts whether men should ever wear gloves, or clothes that are entirely comfortable. It reduces them that much to the feminine standard of softness. I would not deny them soles for their feet, but one knows by the near-nakedness of women's ankles and feet in New York during the coldest winter weather that men ought to go them one better and wear only soles upon their naked feet. It is pusillanimous, the way men dress, as it is foolish the way women clothe themselves. But there is some excuse for the women. They are designed by nature to be "attractive." In the present state of public opinion that is the same as requiring them to be foolish.

We have our problems here in the Valley, and they are no less problems because we do not make them ourselves. They are forced upon us by the financial powers of the world beyond these hills, by the brokers who buy cotton for eleven cents per pound, and sell goods made of the same cotton for from one dollar to two dollars per pound.

With us it is a question of corn, not cotton. For this is a grain producing section. The land is what I call "dope fiend" soil. The farmers here were persuaded years ago that, instead of hauling muck and manure to fertilize their land, they should buy "guano." That was a part of the game. For now the soil will not produce without this artificial stimulation. The acids have killed the bacteria fertilizing life in it. So now they buy guano, for which they must pay an exorbitant credit price with the *first* corn gathered. Thus, they are forced to sell this first and best part of their harvest when prices are *artificially* low, in order to meet their obligations.

If it is a bad year, if there has been too much rain, or not enough, the farmer does not have enough grain left to support his family and feed his stock. This is a part of the game, too, because he must go back then and pay one dollar per bushel for corn which he sold for sixty-five cents per bushel to pay for his guano.

I am no pessimist, but I doubt if the regional banks will meet this emergency. I am fearful that they will only encourage these farmers to buy even more guano on a credit, because they can borrow money at a lower rate of interest.

NOW, my belief is that the more we are able to eliminate money the better we shall be, for money is undoubtedly an artificial and devilish standard of values, one of the most frightful instruments of abuse men have invented for the oppression of men.

So I have a sort of inverted Dives plan for meeting the emergencies in this valley at least. It is a very small plan, so ridiculously small and so little profitable to the author that I know the "social workers" would scorn it. Still, it is working here like a charm.

I have left over from last year's harvest one hundred bushels of corn which I do not need. I am *lending* this corn to my neighbors, to be paid back in corn when they gather in the fall. Corn is now one dollar per bushel, but when it is time to repay what they have borrowed it will be not more than seventy-five cents per bushel. So by borrowing instead of buying corn, they are saving twenty-five cents on the dollar.

"But," says some really intelligent person, "my dear madam, *you* are losing."

No, I am not losing. I shall have exactly the same amount of corn in November which I have now. The only thing I lose is a chance to profit from the misfortune of my neighbors. This is bad business, of course, but it is good, honest living. And I have always longed above everything to discover if I really am honest. If I can carry this little experiment thru, if in the course of time I am able to build yet greater barns to fill for this purpose, I shall feel that I have contributed decently and without cost to myself to the solving of one of the most difficult problems of our times. I say without cost, and I admit without gain. Which of course is the flaw in my plan. For there is something suspicious and unnatural in not taking advantage of a situation. Charity is becoming one of the lucrative businesses of this country; it pays good dividends in the Morris banks, for example. Doubtless I shall be no better than the rest of the philanthropists. Doubtless within two years I shall require the man who borrowed twelve bushels of corn in April to return fifteen in November. But until I really am guilty of this, permit me to enjoy the sentimentality of at least feeling virtuous!

The truth is I have got this far with the temptation already: This Dives plan could be carried out profitably and successfully in every community, if, say twenty farmers contributed every year a certain per cent of their crops to the Dives barn, this stuff to be *loaned*, not sold, and to be paid back in kind, with a slight addition, say half a bushel for every ten bushels borrowed, or one pound of meat to every ten pounds borrowed, or one peck of potatoes for every five bushels borrowed—enough, in short, added to pay the expense of Dives to measure and weigh and collect again the stuff. In this valley at least farmers would save hundreds of dollars, be able to hold their harvests for better prices, and escape the most cruel oppression of money mongerers.

THIS is a partial report of the Valley for the early summer of nineteen hundred and fourteen. But it is only partial. Thru my cabin window I can see forty acres of wheat waving in the summer air, and nearly fifty acres of corn.

We do not know what the yield of either the corn or wheat will be. But your brokers in New York know, and what they miss in their estimate will be the "futures" which must reduce the price next autumn. The crop of honey dew is short this year owing to four weeks drought. This, I suppose, will affect the price of honey, for the bees were put to it to earn a decent profit in sweetness during the month of May. Fortunately we have had enough larkspur blooming on the hills to compensate in part for the lack of honey dew on the leaves of the trees.

But we are fortunate in having enough very young babies this year to entirely control the domestic life of the valley. A baby may not be so intelligent as a "representative" or social economist, but his influence, nine times out of ten, is stronger, as far as it goes and more to the point, and in my opinion it is more uplifting, less revolutionary. The younger children show marked progress in the number and sizes of their playhouses. Whereas last year there was only one house built of moss and bark on the valley road below my cabin, this year there are five, all elegantly furnished with bits of bright glass, broken crockery, polished sardine cans and pine cones.

We do not know yet how many sinners will be converted from the error of their ways, for the "revival season" does not begin until all of the crops are "laid by." But it is safe to predict that all the sinners we have will be converted as usual this year. They always are. No man is allowed to remain dead in his trespasses and sins later than the end of August. And for me, I always wonder what their sins are. The men do not drink, they are moral, industrious, walking in a kind of double fear—before the Lord and more particularly before one another. The women are beyond all criticism either in this world or the next. Their Heavenly Father must wonder at their patience, their diligence, their loving kindness, their everlasting faithfulness. Certainly mere nature never produced beings so blameless.

I SUPPOSE a report of progress in New York would make a splendid showing in increased wealth, increased charities, fresh air funds, labor bureau statistics, and so forth and so on. But I am glad I do not know the horror of collecting the details that would not appear in the report. I recall with submission what a certain distinguished editor there said to me of my papers in New York last winter. He asked me why I got my material from the "garbage cans"; why I did not tell about the good things I saw and heard there. I did my best, which is not good. But the trouble with New York is that it is all in a garbage can; the good, bad and indifferent are working there together, after the manner of things that do work in such places. I can't help that. I tried to be as lenient as possible. But no sensible person can look on the bright side of a garbage can unless he looks on the outside of it. I came daily into contact with the best people in New York for nearly three months. They would be called the best people anywhere, And the thing which most imprest me about them was the utter futility of them and all their goodness in that place.

Here nothing is futile, not even death. That fertilizes the ground, and we require as much of it as we can get. Still, I suppose if that same indignant defender of sweetness and light in New York should visit this valley, the first thing he did would be to observe that the people are not clean. Well, they are not neurasthenically neat. But dirt here is just dirt, it is not filth. We get it out of the fields. Sometimes it is cleaner than anything else. Certainly it is not malignant with all the germs of all the nations of the earth, as the very air is in New York. And he would go snooping around suspecting us of hookworms. He would not find them. When a man gets hookworm in this valley he leaves, goes to New York or some other sediment center, and joins the I. W. W.'s. The only kind of worms we have in this valley are long, brown, fat ones that we dig out of the earth and with which we fish for rainbow trout, of which there are so many here that I have had to have them coaxed out of my spring when the water "backs" up in a flood and carries them out of the brook in the valley.

The Valley, Georgia

HORSELESS ARTILLERY

FOR several years the military authorities in Great Britain have been experimenting with an oil-fuel traction engine designed for hauling artillery of the heaviest type over all kinds of roads and across rough country and up hills. The engine weighs eight tons and is of seventy horse power, with a maximum speed of eight miles an hour.

What appears to be quite a new principle in locomotion is applied in this engine, which, instead of traveling in the ordinary way, rolls along on an endless track that it lays for itself. This track is something like a great chain of steel links, the outside of each being shod with blocks of wood, which act like the ties or sleepers of a permanent way. This track enables the engine to pass with great ease and little propulsive power over any kind of rough ground, rocky area, soft sand and bog, safely negotiating the very stiffest gradients and crossing ditches and gullies.

It has been tested across the soft sand of one locality, drawing a six-ton field gun, and succeeded in getting up and down the hillsides about Aldershot, over deep water-courses, the banks of which are very steep. Then it was taken across a wide stretch of boggy ground, which was by far the severest test of all, the gun at times sinking in up to its axles.

EGGS AND THRIFT

PERSONS who economize in eggs by buying "fresh" instead of "strictly fresh" will be amused to find that many of the so called "fresh" variety have spent three or more days in the incubator. The whole situation depends on the thrift of the farmer. After he has left his eggs in the incubator long enough for the fertile ones to develop, he "candles" all the eggs, and throws out all those which, when held before the light of a candle, show no signs of growth within. Frequently a large number of eggs are found by this test to be incapable of hatching. It hurts the farmer's natural sense of shrewdness to destroy them, and his sense of delicacy to eat them. He therefore mingles them with other "fresh" eggs and sells them to the market. Incubator eggs begin to decay almost immediately and cannot be kept in storage even by freezing.

Incubator eggs of this sort may be avoided by the consumer who buys what are known as "sterile" eggs; i. e., eggs known from the start to have no fertility and which therefore run no risk of getting into the incubator.

VULCANIZING WITH THE INVISIBLE

ONE by one the curiosities of the laboratory find employment in the shops. The layman has hardly got over his surprise at learning that light has rays beyond the violet which can be photographed altho they cannot be seen, before he hears that they already have a commercial value. These invisible rays are used in a variety of ways, in the sorting of zinc ore, in the treatment of cancer, in the purification of water, and now it has been

discovered by French chemists that they will effect the vulcanization of rubber.

The story of Goodyear is always cited with that of Palissy the potter as an example of the inventor's perseverance and the day, seventy-five years ago, when he dropt his mixture of sticky caoutchouc and sulfur on the hot stove and found it converted into solid india rubber, is an anniversary better worth celebrating than many a patriotic holiday. The process of vulcanization then hit upon by accident has been since perfected by science, but it is still a delicate operation requiring the heating of the mixture to 140° Centigrade.

Now the ultra-violet rays have the peculiar power of accelerating chemical reactions. Like the efficiency expert, scientific manager or the natural born boss, they speed up the process in some mysterious way without doing much work themselves. When a solution of caoutchouc and sulfur is exposed to these rays, the two combine without heating and a jelly is produced which on evaporation leaves a thin sheet of rubber, pure and insoluble. Thus the invisible rays may serve to speed the wheels of the automobile.

A KANSAS WOMAN RUNS FOR CONGRESS

THE PROGRESSIVE PARTY CANDIDATE WHO MAY BE A PIONEER AT WASHINGTON

SOME one will have to be the first woman member of Congress. One woman in Kansas proposes to create that rôle if the voters of the Sixth District will give her the opportunity.

Mrs. Eva Morley Murphy, of Goodland, is a grandmother, a W. C. T. U. and Federation of Women's Clubs officer, an active churchwoman, an author, and an expert cook. More than all these, she has political sense, and it was a report she wrote to William Allen White during her husband's absence (he is a state committeeman of the Progressive party) that led to her candidacy, for Mr. White was so much imprest with her ability that he suggested her making the campaign. She was unopposed for the Progressive nomination. Her church and club work has proved her capacity for leadership, and with her help as district secretary the Progressive party captured 400 of the 500 Republican votes in her county at the last Presidential election. She is famous as an organizer, and took a generous part in the campaign for equal suffrage which swung Kansas into the white list.

"My campaign will be conducted according to my own idea of what a dignified, self-respecting woman may properly do in a political campaign," writes Mrs. Murphy. "I shall buy no newspaper plant and subsidize none. I shall not spend one cent in cigars or candy to bribe voters. I shall spend no time nor breath in detraction of other candidates. I shall go about over my district, which is a large one, embracing twenty-two counties, speaking on the issues of the day in an endeavor to convince a majority of the voters that my party, the Progressive, is the party of the loftiest ideals of government, composed of practical men and women who, unhampered by tradition, are fighting for new and better conditions of living for the whole people of this nation.

"I am quite aware that it is looked upon as unwomanly, in some quarters, to do what I am doing, but as long as I can help forward such a good cause, what ill-informed people may say or think troubles me not at all."

MRS. EVA MORLEY MURPHY
Grandmother, clubwoman, unrivaled cook, and candidate for Congress

The women's vote is yet a most uncertain element in the political situation. The district vote in the 1912 election was as follows: Democratic, 18,541; Progressive, 13,893; Republican, 8,369; Socialist, 2,376. "I am thoroly convinced," declares the candidate, "that the Progressive party offers the best promise of practical betterment for the whole people of this nation and that its leaders are men and women of strong moral caliber and high ideals, therefore I am ready to say with Lincoln, 'I am not bound to win, but I am bound to be true; I am not bound to succeed, but I am bound to live up to what I have."

Mrs. Murphy stands for the Progressive platform, the prohibition laws, and beneficial changes in the laws for women. But above and beyond all that she stands for the entry of mature women, capable of leadership, who have brought up children and served their communities in traditionally feminine ways, into the larger political responsibilities of the nation.

The elections next November will for the first time decide whether a woman shall become a national legislator in this country, but there are a number of women holding office in state assemblies and one, Mrs. Helen Ring Robinson, of Colorado, with whose work Independent readers have recently been made acquainted, is a state senator. In her state, Mrs. Agnes Riddle and Mrs. Frances G. Lee are members of the lower house; in Washington, Mrs. Frances Axtell and Dr. Nena J. Crooke, in Wyoming, Mrs. Anna B. Miller and Miss Nettie Truax.

Finland has most notably recognized the value of women's parliamentary services. The *Seim* (Parliament) was opened to them in 1906; they took prompt advantage of the opportunity and sixty stood for election in the following year. In 1913 twenty-one women were elected for a term of three years. There has been a good record of bills introduced and past thru the efforts of woman members, but owing to the anomalous position of the Finnish Diet under Russian rule few laws are actually promulgated. Women have served, however, on all the committees of the *Seim*.

SARAYEVO, WHERE THE HEIR TO THE AUSTRIAN THRONE WAS ASSASSINATED

The old town, capital of Bosnia, is built on both sides of the Milyatska or Miljacka River. Into this stream Gabrinovics, who threw the bomb that failed to kill the Archduke, plunged in an attempt to escape. He was dragged out and almost lynched by the mob

SERB AND AUSTRIAN

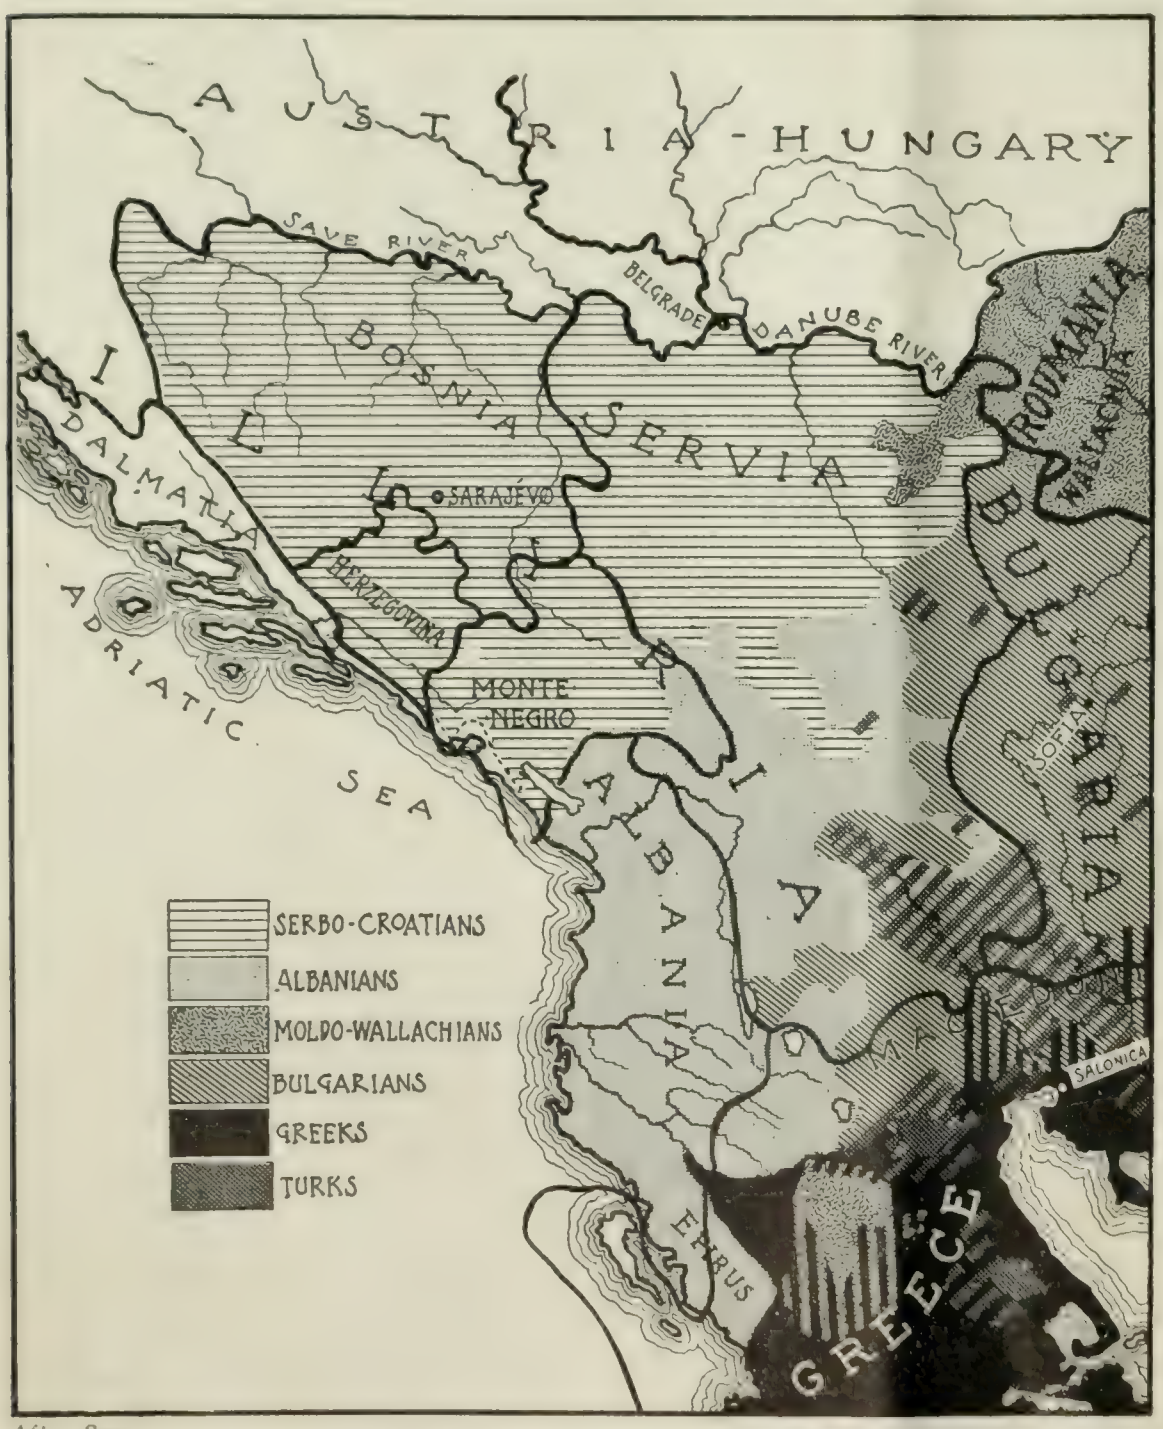
BY MICHAEL I. PUPIN

The tragedy of June 28 at Sarayevo was not merely another link in the chain of bereavements which Francis Joseph has been fated to suffer, nor an ordinary anarchist demonstration. Behind the plot was a nation's anger. Professor Pupin, of Columbia University, a Serb and a native of Hungary, is well equipped to set forth this racial undercurrent. His constant identification with Servian interests in this country has been no less notable than his scientific achievements. It is by his discoveries that long distance and particularly submarine telephony have been made possible.—THE EDITOR.

THE tragedy of Sarayevo, in Bosnia, forces on the attention of the civilized world a startling political and social condition in southeastern Europe, which so far has escaped the notice of many thoughtful men and women who love justice, peace, progress and happiness. Who can be indifferent to the drama which is now before the world? The heir to the ruler of a proud empire falls a victim of an assassin's hand. The assassin is a youth of eighteen, a student and a poet. He is a subject of the fallen monarch, a Serb by race, and a native of Grahovo in rocky Herzegovina. Hatred of Austria for the wrongs inflicted upon his race he pleads as justification of his crime, and the display of the Serb flag by the inhabitants of Sarayevo as a greeting to the arrival of the assassinated monarch shows that his bitterness is widespread among the inhabitants of sunny Sarayevo.

The tragic scene is the last one in the drama which commenced in 1908, when Austria annexed Bosnia and Herzegovina in arrogant defiance of the treaty of Berlin of 1878. This treaty authorized Austria to occupy those two provinces of the Ottoman Empire for the purpose of restoring peace and order in them. The population, which belongs to the Serbo-Croatian branch of the Slavonic family, protested violently against the edict of the Berlin conference; fierce and long-continued fighting followed, and finally fair Bosnia and proud Herzegovina fell exhausted victims, bleeding from many wounds inflicted by the merciless talons of the double-headed black eagle of the Austrian Empire.

Let us glance at the events preceding this occupation. The Serbs of Bosnia and Herzegovina rebelled in 1875 against Ottoman tyranny; this rebellion led to the declaration of war by the Serbs in Servia and Montenegro against Turkey, and this war in turn dragged in Russia. When the war was over and the vanquished Turk begged for peace everybody got some share in the spoils of victory; nay, even the Bulgarians, who did no fighting at all, but who got a lot of sympathy from the world thru Gladstone, because they allowed themselves to be massacred by the Turks, had an autonomous principality established for them. Only the Serbs of Bosnia and Herzegovina received no share in the spoils; they were, moreover, delivered by the Berlin conference to the tender mercies of the Austrian Empire, an empire which they detested even more heartily than they detested the unspeakable Turk.



And yet, from the beginning of the Bosnian-Herzegovinian rebellion in 1875 to the end of the Russo-Turkish war in 1878, the Serbs of Bosnia and Herzegovina did just as good, if not even better, fighting than anybody else; they always fought well in many a rebellion which they kindled up against Ottoman tyranny. These Serb Highlanders have always been considered the flower of the Serb race, not only as regards the arts of war, but also as regards the arts of peace. Those wonderful Serb ballads which at their first publication, in the beginning of the nineteenth century, sent a magic thrill thru the literary world of Europe, trace their origin to the somber highlands of proud Herzegovina, and the rhapsodic melodies of the matchless south's Slavonic Sefdalinka songs were born in the golden valleys of fair and fertile Bosnia.

The gallant struggle of the Serbs of Servia, Montenegro, Bosnia and Herzegovina from 1875 to 1878 was crowned with many victories and ended in a complete undoing of the hated Turk, but its main object was not attained. They fought for the liberation and reunion of the Balkan Serbs and the restoration of the

crown of Stephan Doushan, the mighty Czar of the Serbs in the fourteenth century. The battle was won, but the crown was not restored; Bosnia and Herzegovina, its two most precious pearls, were snatched away by Prince Bismarck of Germany and Count Andrassy of Austria-Hungary. By the Austrian annexation, in 1908, these pearls were inserted in the crown of the House of Hapsburg. Those fond hopes for national reunion which the Balkan Serbs had cherished for five hundred years and which, in 1878, seemed so near their realization, when Osman Pasha capitulated at Plevna, suddenly vanished by the decree of 1878, issued in Berlin by Bismarck and Andrassy. In place of national reunion the Balkan Serbs saw the double-headed Austrian black eagle hovering over the somber mountains of Herzegovina, the plateaus of the Sanjak of Novi-Bazar, and the rich valleys of fair Bosnia. The Austrian flag was planted there and Austrian armies covered every vantage point; they were there to stay and to separate forever the Serbs in Servia from the Serbs in Montenegro by an impenetrable barrier which Austria was raising in Bosnia and Herzegovina. This barrier could never be raised until the national spirit of the Serbs in these two provinces was completely destroyed, and hence the cruel policy which Austria pursued there during the last thirty-six years.

I quote now from a book published by an English diplomat who traveled all over the Balkans on a secret mission entrusted to him by the British Government:

> With religion persecuted, education at a standstill, and the press either gagged or suborned, Austria is slowly carrying out her policy of crushing the Serbs. . . . Should it be permitted in this twentieth century to one European people to crush another European people under the false pretext of civilization? (*The Near East*, pp. 112, 113.)

After Sax

SERBS WITHIN AND WITHOUT SERVIA

No map can do justice to the ethnological complexity of this region. The Serbs, Croats and Montenegrins are of the same blood, tho divided by religion and nationality. The annexation by Austria in 1908 of Bosnia and Herzegovina, both racially united to Servia rather than Hungary, destroyed their hopes of joining in one great Servian empire, and this disappointment gave rise to the bitter resentment against the Austrian crown which is now displayed

I quote now from Seton Watson, the highest English authority on Slavonic matters:

> I hope to prove that in matters of education, administration of justice, of association and assembly, of the franchise and the press, the non-Magyar nationalities are the victims of a policy of repression which is without any parallel in civilized Europe. (*Racial Problems in Hungary*, p. 204.)

In this last quotation reference is made to Serbs not only in Bosnia and Herzegovina, but also in Dalmatia, Croatia, Slavonia, and the southern provinces of Hungary, that is, to about five million Serbo-Croats, which includes the Croatians who differ from the Serbs in religion only, the Serbs being Greek Orthodox and the Croatians being Roman Catholic.

In face of these conditions is it surprizing then that these people show a burning desire to tear themselves away from hated Austria and join their brothers in the kingdoms of Servia and Montenegro? It would be a wonder if this desire did not exist. This desire is the so-called Pan-Serb propaganda which Austria parades on every occasion and expects the world to understand that it is a political conspiracy fraught with grave dangers for the Austrian Empire. The Pan-Serb propaganda does exist, I admit it frankly, and I ought to know whereof I speak, because I am a Serb and a former subject of the Austrian Empire. But this Pan-Serb propaganda is not a political conspiracy, born and bred at Belgrade or at any other place in the kingdom of Servia. It is a natural heritage of every true Serb, who is ever ready to obey the voice of the Serb minstrel, the gouslar, which commands him and has always commanded him for five hundred years to struggle for the "honored cross and golden liberty." This voice was always the supreme commander in all Serb struggles against the Turkish oppressor, and it is today the supreme commander in the Serb struggles against Austrian tyranny. The causes of the Pan-Serb propaganda are in Vienna and not in Belgrade. The tragedy in Sarayevo on the 28th of June was being prepared in Vienna during the last thirty-six years; it was enacted on the very day—Vidov Dan—when every true Serb celebrates the anniversary of the battle of the field of Kossovo, in 1389, when the Serb Empire fell. Its memory always served as a reminder to the Serbs that they must avenge the wrongs perpetrated upon their race, and that by united effort only can they regain the glories of their ancient empire which vanished at Kossovo.

New York City

NATURE'S PREPARATION FOR MAN

WHAT I BELIEVE AND WHY—TENTH PAPER

BY WILLIAM HAYES WARD

IN a previous chapter I have spoken of the qualities of inorganic substances, such as air, water, carbonic acid, etc., which fit them to support the forms of life which were to appear upon the earth. There is much that may be said as to these vegetable and animal forms of life which anticipate, and prepare the way for, the appearance of man, who is the crown of creation, and especially of civilized man, man worth while, man more than a beast.

That there is this adaptation between man and the world of life every moment proves. But we may call this mere good luck, if there be luck, or we may say that the human race has been evolved so as to fit his environment, rather than that an environment has been prepared for him. Beyond question man does adapt himself to his environment, improves wild grains and sows and reaps them with harrows and harvesters. Man is adapted to his world, but it may also be that the world of life has been pre-adapted to his needs. One cannot but ask this question, whether we have evolved to fit the product of natural law in its necessary evolution, or whether under some sort of guidance Nature has anticipated our needs and made preparation for them. Whether the latter alternative shall seem reasonable will depend mainly on whether the human race appears to be worth the foresight. This is a question of large and momentous import, and the very raising of it may seem both pretentious and absurd. That the earth, so great, so diverse, so multiple in all its grandeur of ocean and continent, with its prolificness of life, animal and vegetable, with the sun and moon that attend and serve and rule it, were so made to serve man, its true ruler, man who is so feeble, who lives so brief a day, who then passes to his dust just as does the gnat that teases him and the tiger that eats him, may seem a monstrous claim.

SUPREME MAN

But think again. Man *is* the very crown of all known visible existence. No physical force in nature is to be compared with man. Bulk does not measure perfection. Life, no matter how low, is superior to any mass of inert matter. The lichen on the cliff is greater than the cliff. And far above the life of the tree, or the life of the highest animal, is man, who is ruler of all, as reason is more than mere vitalism. As Zeus challenged against his supremacy the total pow-

er of all the gods when he could hang from a chain over the parapet of heaven, so, and more than so, for man is of another and superior class, man matches the genius of his wisdom and might against all hurricanes and billows and thunderbolts, rides the waves, drives the winds, forces the lightning to do his slightest task, the infinite ether to strain with his messages, even enslaves the earth and the mighty sun to till his fields and feed him with corn and wine, rebukes savage nature and supplants its jungles and forests, covering the earth with cities and towns and fields of populous plenty. The earth, all its grass and herbs and trees, all its insects, fishes, birds and beasts, is ruled by man, submits to his will, and only his; and may it not be that by some higher prevision this was all designed and directed, which not only supplies all his ruder wants, but equally meets all the higher requirements of his advanced civilization? Most certainly so, unless science refuses to consider the hypothesis of God.

THE FOOD-GRASSES

No one else has so definitely presented the evidence that the world of life has been prearranged by a higher intelligence for the uses of man as has Alfred Russel Wallace, in his *The World of Life*. Have not, he asks, thru the whole geologic history, the vegetable growths been preadapted for the coming human and animal life? The bulk of the seed of maize, wheat, rye, barley and rice is not needed for its own propagation, but is needed for the support of human life particularly, and in a less measure of lower animal life. A multitude of other grasses have small, inconspicuous seeds. They can grow just as well without a superabundant supply of starch and gluten. Man needs them, for he can cook his food, which cattle cannot do. Yet the seeds of these cereal grains are so large that they attract animals to eat them, and they would be likely to become extinct but for the fact that man cultivates and develops them. In fact most of them have become extinct, or nearly so, in a wild state. As man depends on them, so they depend on man, as if predestined, foreordained for man. Man could hardly have reached civilization without them. It is true that in cultivation these grains have increased in size, but even in their wild state, like our American wild rice or the wild wheat lately found in Palestine, they attracted human attention for food. A similar phenomenon we observe when we consider other vegetable productions which have become the staple food of man, such as the date, and the coconut, the apple, pear and peach, and a hundred other fruits, melons and roots. They are made to fit higher life. Their delicious sugary pulp or their mass of starchy consistence is of no essential use to these plants and trees themselves, but rather an injury. They are too attractive; they would be likely to perish off the face of the earth, as in the animal world have the dodo and the passenger pigeon, if they were not cultivated and conserved under the conditions of progressive civilization.

NATURE PROVIDES

There is a species of plant, the *Psoralea Esculenta*, growing on dry ridges in the Dakotas, which produces a hard, compact root about the size of a walnut, solid with starch. The Sioux Indians search far abroad for it and tie it in strings for winter food. Of course the plant takes some advantage of the stored starch or its rapid growth in the spring. But most other plants live and grow equally well in other ways. It is of great advantage to the migrating Indians, but its quality is of injury to it so far as survival goes. It is for man's sake chiefly that it stores food. It seems provided for human use. The same is true of the grape, the huckleberry, the raspberry, the blackberry, the currant, the gooseberry, and other plants that produce delicious fruits whose main purpose is evidently not for themselves. They grow wild, uncultivated. Nature provides these berries for human and animal consumption, while therein assuring their own dispersion. There appears to be in their provision some sort of design which has its end in man.

Yet not for man only. All animal life feeds on vegetable life. The plant, the tree, has not its end in itself, but in that which it feeds. Have you ever watched two or three yellow-birds tearing to pieces the round ball of a dandelion-head? You will see that the dandelion lives not for itself alone, but that it may supply the wants of a higher and nobler kind of life. It would seem as if the plant were made in anticipation of the animal, and equally that the animal appeared on the earth when its own time was ripe for it. I do not find it easy to believe that the giraffe,

with its elongated neck, was the slow evolution of nature until it could reach the branches of the trees. Some directive force or intelligence seems to have produced it to reach its special food.

FUEL THAT AWAITED MAN

In various ways Nature seems to have anticipated man, and, not least, man as civilized, full-orbed, as if Nature were working definitely for a higher end not yet in sight. When man began to feel the need of light in the night-time beyond that of the torch he found oil in nuts, and animal fats, and soon hunted the northern seas for the blubber of the whale. Then when that source was exhausted, we burned the essence of the sap of the pine till that began to fail with the destruction of the forests. Then the earth opened its supply of oil laid up many thousands of years ago for just this necessity. No doubt Nature in her own processes had laid up this great treasure of mineral oil as a by-product of superabundant vegetable life of a geologic age, just as she had laid up and had previously opened to us her store of coal to fit a stage in our civilization. Yet there appears to be an extraordinary congruousness in the antecedent provision of just what we should need. It looks very much like what we should call a good providence in our behalf. Equally the stored masses of coal in the earth were a requisite for a stage in human civilization. Our cities could not have been built or our factories run on wood for fuel; the forests could not have sufficed. The carboniferous period was the prophecy of the human industry of modern life, ready to be fulfilled when the time was ripe. There was preadaptation, which was marvelously lucky, if it were not purposive.

OTHER HUMAN NEEDS ANTICIPATED

At a primitive stage, when hardly superior to the higher apes, we can conceive of man as taking for his uses a club from a fallen tree, or a convenient stone. On the famous Phenician bowl of Præneste such a cave-man is represented with a stone in his hand pursuing a hunter in his chariot. He looks no better than an ape, and Clermont-Ganneau called him an ape. Stones are necessarily abundant, and handy, and here is no evidence of preadaptation of the stone for the uses of man reaching for civilization by the use of a tool. But the next stage is to supply himself with a better weapon, a bow. That requires a peculiar, elastic sort of wood, not like the pine, or cedar, or oak, but an ash, or some other sort of elastic wood. It is ready for him as soon as he wants it. It was not necessary in the order of nature that the special quality of elasticity should be supplied by the ash, but it was necessary for man's upward progress that the ash should antecedently be provided for his use when he should need it. Dr. Wallace adduces this as a preadaptation. I would not definitely assert it, but it is a plausible if not quite palpable conclusion that some directive purpose provided the elastic wood for the primitive bow. To be sure we may insist that Nature thru her superabundant vitality quite unconsciously reaches out in every direction for every possible quality, and so blindly hits on elasticity in the ash, as it does on pith in the alder or pliability in the osier; and yet the multitude of similar happy adaptations in plant and animal life for the uses of civilization forces us to consider whether some purposive and directive force has not anticipated the human need and provided for it. I do not mean to argue that flint was made just for man's use as a tool, or that the reed was made hollow that man might use is at a blow-gun, for the reed's own need of strength is explanation enough of its evolution. I only instance the case of the few as illustrating how the preadaptation of a quality not necessary for the tree was imperative for the use of man in his early stage of progressive culture, as if prearranged for his needs.

WOODS INDISPENSABLE FOR SHIPS

Dr. Wallace instances a similar adaptation to man's uses in the matter of navigation, introducing it with this general statement:

> Taking first the innumerable different kinds of wood, whose qualities of strength, lightness, ease of cutting and planing, smoothness of surface, beauty and durability, are so exactly suited to the needs of civilized man that it is almost doubtful if he could have reached civilization without them. The considerable range in their hardness, in their durability when exposed to the action of water or of the soil, in their weight and their elasticity, render them serviceable to him in a thousand ways which are totally removed from any use made of them by the lower animals. (A. R. Wallace, *The World of Life*, p. 350.)

Dr. Wallace shows that but for the existence of wood having just the qualities necessary for the building of boats and ships the whole course of history would have been different, and perhaps civilization could not have been developed. The Mediterranean would have been as impassable as the Atlantic, and, later, America could not have been discovered, and Australia and probably South Africa would have been unknown. All this knowledge and civilization depend on certain qualities in vegetable growth not needed by the lower animals, and no more by the trees themselves, which could equally have performed without them all their chemical functions in the absorption of carbon and the transpiration of oxygen, as they did in the geologic period of the acrogens when the Carboniferous measures were laid, and could have satisfied all the needs of the unintelligent animal world. These qualities are useful to man, to man only, and they came into plant history, as it would seem, in anticipation of the time when man should make them useful; acquired late in the process of the ages, just when needed, quite as they would appear if some directive purpose and impulse had prearranged their occurrence.

MAN'S NEEDS DOMINATE NATURE

Again, Wallace calls attention to the countless list of the minor by-products of vegetable life which are of such immense advantage to man in his advance in civilization and comfort, enjoyment and health. Such are the multitude of drugs and medicines, of which opium and quinine are examples. The milky juice of the poppy may be of use to it in resisting drouth, but why should it also deposit morphine useful only to men? The cinchona bark might be as serviceable to the tree without the quinine in it, but it is needed for man. What is true of these and many other vegetable drugs is true also of thousands of other by-products of vegetable life, balsams, gums, resins, dyes, spices, perfumes, which if in any measure and degree of advantage to the plant, are only subsidiarily so and not necessary; but which are of great advantage to man, and particularly to civilized man, and will be for a million years to come. Can we believe that the fragrance of the rose or the violet was essential to the plant itself? Its color was enough to attract insects without its odor which seems added for our delectation. A multitude of plants have for their own advantage developed a thick sap, which is enough for their protection; but a few have added to it something which allows it to harden into the extraordinary qualities of india-rubber, of advantage not to the tree but to man. Without that peculiar combination of qualities man could neither have created the submarine telegraph-cable nor ridden the automobile. He finds the rubber as it were foreordained for his own use rather than for the use of the rubber tree.

Take as an example the trees and

plants that supply us with sugar, a very important element in our comfort. We find it in one variety of maple. Other maples do not have it, do not need it. But it has been of importance to man, as if put there for his advantage. All the more is this true of the sugar-cane and the sugar-beet. Other reeds and other plants of the beet family have a juice that is not sweet. Here is a special provision useful, almost necessary, for man, supplied to him when he comes to need it. Because it is not essential to the plant or tree but is essential to man, it appears as if it were the result of some directive evolution in his behalf. I do not say that this evidence is conclusive, but it is of the same sort and value as much other probable evidence on which we must depend in life.

In the matter of clothing the realms of life seem to have united in anticipating the wants of man as he advances into civilization. The rude man emerging from the brute needed in warm countries no clothing, and in a colder climate was satisfied with the lion's skin of Hercules or the pelts of his sheep and goats. But growing nicety demanded other garments, and the sheep supplied wool, the bolls of a plant offered the fibers of cotton, and the silkworm spun for man its cocoon. The silkworm might have been protected equally, like other grubs, with a hard case; the seeds of the cotton did not need so soft a bed, for a multitude of congeneric plants are without it; and the sheep might have resisted the cold with such a covering as other animals of its sort find adequate. But these specialties of growth not necessary for them are needed for man; and they are provided as man needs them, not the sheep, the worm or the plant. Is it too much to see in these and in a multitude of similar cases some directive provision and plan?

Yet it will easily be replied that Nature is not all our kind mother. The argument can be turned the other way, for Nature produces not only valuable drugs, spices, gums, essences, oils, etc., but also poisons that endanger his life, while a multitude of weeds, innocuous in a state of savagery, appear to pester his agriculture as he rises in the scale of civilization. This is true, and in its measure it favors the conclusion that Nature works indiscriminately, and in every direction, to produce anything and everything, good or bad that may arise; but they are comparatively few, and have their protective uses as do spines and thorns; and if beasts that graze are able to discover and avoid them, the same is true of intelligent man, not to speak of their value as drugs. Equally it is not the careful farmer that allows himself to be much troubled by weeds.

Yet Dr. Wallace's argument, it appears to me, must not be prest too far. The starch of the potato is valuable for man, but the deadly nightshade belongs to the same family and is so specialized as to be dangerous to man. In the same family and the the same field we find foods and poisons, fragrances and stenches, the flower and the thorn. If we can, as Dr. Wallace has done, gather the delights of sight, taste and smell found in the vegetable world into one "bundle of myrrh," to strengthen our faith in the Creator who foresaw the needs of his creature man, it would also be easy to gather under the shadow of the upas tree the disagreeable, the pernicious and the fatal. The spicy and the sweet are matched in fair measure with the acrid and the fetid.

GOOD THINGS IN THE MAJORITY

This is all true. Nature does not coddle us with a satiety of sweets. The rose is beset with thorns. We would not have it otherwise. Yet common experience testifies that the useful vastly outweighs and outnumbers the harmful. Every green field and every wooded hill testifies to this. The immense preponderance of good does not seem quite fortuitous. If such preponderance there is, may we not presume that there was purpose in it? If man is the very crown of all Nature's aspirations, and if provision was made for him in physical nature, in the composition of the oceans of sea and sky, may we not also presume that the abundant supply of the organic products of Nature, and their qualities absolutely essential for man's life and progress, give a presumption that they too anticipated man? The bulk of them and the nicety of their adaptations support such a view. They fit into our wants with the exactitude of the junctions of a dissected map. While there is no question of the miscellaneousness of the productions of Nature, yet they are not indiscriminate. The useful animals and plants that come into existence with man vastly exceed those that are pernicious; there is a place in the scheme of things for the tiger's tooth and the spines of the cactus. While too much must not be made of Dr. Wallace's argument in *The World of Life*, yet its cumulative bearing appears to me to have weight as indicating that there was a control in nature which guided the operations of its laws for the benefit of man.

RHODE ISLAND

BY AMOS R. WELLS

The state of country by-ways, quaintly lined
  With bush and brake and fragrances thick-set;
  Above their streets the arching elms have met
The state of ancient villages refined:
For many generations, till they seem
The corridors of some long-brooding dream.

Grim granite elbows thru the shallow soil,
  The fields are fenced with gray and massive stone;
The little farms will answer sturdy toil
  And careful thought, but answer those alone;
No region this of generous-giving leas,
Of ready harvesting and languid ease.

Yet many berries glimmer in the wood,
  The wild grape hangs in many a fruited bower,
The gnarled apple orchards bend with food,
  The waysides gleam with many a splendid flower,
The hills are delicate with laurel blooms,
And rhododendron lights the forest glooms.

This land is loved by ocean; far and deep
  The long bays reach among the sloping fields,
And tenderly the shining waters creep
  Where waiting marsh a silent welcome yields,
And slow brown currents in the shadows run,
And thick-ranked sedges glitter in the sun.

How strangely to this realm of ancient peace
  The factory folk, swart faces, foreign tongue,
Caught in their clattering tasks that never cease,
  The curse of Cain, so old, yet always young.
Here, to these groping, restless, fiery men,
Spirit of Roger Williams, come again!

THE NEW BOOKS

SCIENTIFIC MANHANDLING

THE urge of the day is to apply science as fast as it is hatched, or a little faster even. The more recently emerging branches of science seem to develop more rapidly than the older branches—probably because they profit from the experiences of those that have gone before. At any rate, the mental and social sciences are for the moment threatening to monopolize the public's attention. Here is the applied psychology, for example. But a few short years ago the only kinds of applied psychology we knew anything about were pedagogy, the writing of ads and the making of accused men incriminate themselves without knowing it. Now we have psychology applied to laying bricks, selling dry-goods, planning factories and hiring engineers or mill hands.

It is especially in the industrial applications that psychology promises to yield the greatest returns during the next ten or fifteen years. Some time ago Professor Thorndike attempted a crude classification of human capacities and divided men into four main groups according to the kind of experiences they most easily managed. There are thus the idea-thinkers, the abstract minded people; there are the symbol and word thinkers; there are the thing or concrete minded people, those who can manage materials and forces; and finally there are those who excel in the handling of other human beings — the natural-born managers and leaders. It is not clear just what psychological elements enter into each of these types of mind, but it is certain that some such classification can be turned to great practical benefit.

For the purpose of showing how the various physical and mental qualities are related to efficient adjustment to various kinds of work, Dr. Blackford and Mr. Newcomb have written a book that should be helpful to employers. In this book emphasis is laid upon the great range of individual differences and on the various requirements of the jobs found in industrial establishments. The waste involved in placing good enough men in jobs that they do not fit is sufficient reason for attempting a systematic analysis of the jobs and of the men, with a view to securing a better adjustment. The authors of the plan here described have had many years' experience in the hiring and redistribution of workers in industrial establishments, as well as in installing employment systems. The analysis of jobs has become familiar to us in the growing literature on scientific management, motion study, etc.; it is the analysis of the man that will arouse doubts as well as interest. The system offered claims to be based on biology, anthropology and psychology, and it is doubtless a great improvement on the empirical system of hire-and-fire. But the authors do not give us the original data upon which they base their generalizations. People of experience with men, or people of quick observation, will have noticed certain correlations between head form and facial expression and shapes of features, etc., on the one hand, and certain qualities of mind and temper on the other. It is doubtful, however, whether the classification of human types given in this book is any more than a formulation of personal experiences, unchecked by systematic quantitative studies. At the same time the book is full of practical suggestions not only for the employer, but also for the worker, for the publicist and for the educator.

Scientific management has raised many questions and has aroused resistance and resentment. It would seem to be the purpose of Mr. Gilbreth's book to meet some of the objections and to answer some of the questions, altho the work takes the form of a treatise on "the function of the mind in determining, teaching and installing methods of least waste." Every thoughtful person must be in sympathy with the general principle that waste should be reduced to the very last irreducible minimum—especially waste of human effort and human talents. It is not so clear, however, that scientific management developed in conjunction with a mechanism calculated to produce a profit will consider the interests of the workers apart from their relations to the work. Mr. Gilbreth tries to show that under scientific management the individual worker is necessarily better off—as a human being, that is—than under traditional management. Undoubtedly great improvements have already been brought about, and many more are to come. But we have still to be convinced that the reduction of the individual's movements to the fewest and the simplest possible can go hand in hand with maximum growth and interest and mental health of the individual worker. We are convinced that in so far as standardized conditions will remove from the worker's mind all fear of losing his job or his limbs, he will be a happier man; but in so far as the removal of these fears depends upon reducing him to a machine, we cannot see that there has been a positive gain. Scientific management will undoubtedly arouse the confidence of workers and managers because it appeals to the sense of order, because its predictions command admiration, because its results so far exceed past expectations. Mr. Gilbreth has analyzed the problem in an admirable way; but his answer

THE NEWEST BOOKS

Canadian Nights, by the Earl of Dunraven. Reminiscences and sketches of a famous British sportsman of life and sports in the Rockies, on the prairies and in the woods, reprinted from the "Nineteenth Century."

Scribners $2

No. 13 Washington Square, by Leroy Scott. Financial difficulties keep Mrs. DePeyster at home after having pretended to sail for Europe, and the ensuing complications furnish one of the best of summer farces.

Houghton Mifflin $1.35

When Love Flies Out o' the Window, by Leonard Merrick. How pride and poverty become contenders against the love of a happy young couple in Paris, and how it is the man's selfish pride, not poverty, that drives their love away.

Kennerley $1.20

The Cost of Wings, by Richard Dehan. A collection of short stories vivid and very, very English, but by that not devoid of humor.

Stokes $1.25

The Mob, by John Galsworthy, a play. Ranks with *Strife* as a masterful portrayal of mob psychology, pillorying the man who braves it, in order that later it may erect a monument to him.

Scribners 60 cents

The Victim, by Thomas Dixon. Another romance of the Civil War, with Jefferson Davis as the central character, meant to stand as the counterpart to *The Southerner* and dealt with in the same vigorous style.

Appleton $1.35

Sasva, and *The Life of Man, by Leonid Andreyev,* translated from the Russian by Thomas Seltzer. Plays of the revolution, done with all the mysticism, vivid realism and fatalistic pessimism that puts this author in the foremost rank of the younger Russian school.

Kennerley $1

does not answer the really important questions about the effect of standardized work upon the worker.

The Job, the Man, the Boss, by Katherine M. H. Blackford, M.D., and Arthur Newcomb. New York: Doubleday, Page & Co. $1.50.
The Psychology of Management, by L. M. Gilbreth, M.L. New York:

A TALE OF SIN AND SUFFERING

Amélie Rives's latest novel, *World's End*, is long, laborious and somewhat disappointing when we recall the brilliant promise of *The Quick or the Dead*. One or two of the characters are drawn with skill, especially the villain—"a boy of twenty-six who looks upon the Universe as a vast studio" and makes whatever use he pleases of its art treasures, breaking them when he chooses; and Cousin Mary, who is like a fine "rousing major-chord struck full across the dreamy minor meanderings of a chanson by Debussy." As a child Mary prayed: "Oh, Lord, please increase my happiness in little things," and her reward was a joyous, daylight nature, in strong contrast to that of the more complex but not half so attractive heroine, poor, unhappy Phoebe. There is a sort of lesson in the story of Phoebe; that cruelty suffered makes even a gentle-hearted woman cruel and, at that, to the man she loves. Phoebe is a coward, but the alternative of disgrace is in her case so frightful that we pity rather than blame her desperate clutching at the means of escape offered her—honorable marriage—altho it implies dishonorable silence on her part and long pain for herself and her husband. As always, falsehood bears its bitter fruit. A bit of philosophy from Eucken foreshadows the conclusion: "We cannot explain evil, but we can overcome it."

World's End, by Amélie Rives. Stokes. $1.30

FORTUNATE READERS, TOO

One of the novels for the summer vacation is *The Fortunate Youth*, by William J. Locke. The cloud of neglect over the hero's childhood soon lifts, and the rest of the journey is in sunshine with soft airs blowing and the pleasantest of comrades along the way. There is no hint of the deeper tragedy of life as in *Stella Maris* and *Septimus*; it is a happy book, and to be read in a happy hour.

Lane. $1.25.

A TRAGEDY OF ROME

John Masefield has written a tragedy, *Pompey the Great*, in prose, unlike the poetical dramas he has hitherto affected. The style is curious—short, jerky sentences give an effect of breathlessness, as tho the speaker had been running a race. It is well suited to a hasty messenger who brings bad tidings, but not in character in the case of Pompey, whose vacillating tem

Formerly with Hotel Imperial

permanent calls for a more involved and discursive mode of speech. Cæsar does not appear on the stage; he is only a vague, huge shadow looming against Rome to the north. The end of the tragedy might have been made dramatic by showing Cæsar's grief over the dead Pompey, one of the most thrilling scenes in history, but Masefield misses this effective close and ends with a chanty, beautiful enough but weak:

And the conqueror's prize is dust and lost endeavor.
And the beaten man becomes a story forever.
For the gods employ strange means to bring their will to be,
We are in the wise god's hands and more we cannot see.
A Voice. All clear to seaward.
The Captain. Pipe down.

Macmillan. $1.25.

THE MOODS OF THE COUNTRY

The essays of Mr. Walter Prichard Eaton collected in *Barn Doors and Byways* are almost as varied as the conditions of our country and its climate, but one gladly follows the genial and entertaining writer from the abandoned farms of New England to scenes beneath southern skies, ever catching some new phase of life or nature as it is revealed by the author or his illustrator.

Small, Maynard & Co. $2.50.

PLEASANT RECOLLECTIONS

The call for new editions of Dean Hodges' volumes entitled *Christianity Between Sundays, The Year of Grace* and *The Battles of Peace* indicates the high esteem in which his religious messages are held by the reading public. The vitality of his utterances makes the sermons of more than twenty years ago, with but little revision, still fresh and stimulating.

Macmillan. $1.25 each.

FROM BRET HARTE'S COUNTRY

In *The Vanguard,* Edgar Beecher Bronson has written another tale of the Far West depicting many stirring scenes. This book is in the same style as the author's *Reminiscences of a Ranchman, The Red-Blooded* and others. It also shows a marked advance over his other works in characterization.

Doran. $1.25.

COUNTY LIBRARIES

How a library can make itself useful to a whole county is shown in the history of the Brumback Library of Van Wert County, Ohio, by Saida Brumback Antrim and Ernest Irving Antrim. The volume also deals with the county library system as it is established in twelve states.

Pioneer Press. Van Wert, Ohio. $1.50.

"INTO ALL THE WORLD"

The part that missionaries have played in the social uplift of foreign peoples is ably presented in *Sociological Progress in Mission Lands,* by Edward Warren Capen. Other influences are not minimized in this survey of causes that are operating upon the world of men toward a higher type of civilization, but the missionary is given his just credit for the changes in progress.

Fleming H. Revell. $1.50.

RELIGIOUS LIFE IN AMERICA

Twenty-five years ago the Methodist Episcopal Church instituted the deaconess movement. Now the Deaconess' Boards of the Church hold property valued at $6,000,000, and more than a thousand deaconesses are employed.

An interesting feature of the International Sunday School Convention held in Chicago the last of June was a historical pageant delineating the various methods that have been employed in teaching the Scriptures from the time of the Patriarchs down to the present.

The new president of Princeton Seminary is to be Rev. J. Ross Stevenson, formerly pastor of the Fifth Avenue Presbyterian Church in New York City, now of the Brown Memorial Church of Baltimore. He succeeds the Rev. Dr. Francis L. Patton, who resigned last year.

The Rev. Dr. John Fox has again protested against the action of the New York Presbytery in licensing certain candidates for the ministry from Union Theological Seminary. This year the young men seem to be "unsound" on the doctrines of inspiration and the "absolute historic truth" of the Virgin birth.

Two companies have recently been formed for the purpose of furnishing churches with motion pictures suitable for their use. Wholesome amusement and instruction in social and religious subjects are the ends sought. Several hundred churches have already become interested in the matter and have assured the companies of their support.

The Roman Catholic attacks on ex-Mayor Nathan of Rome and the threatened boycott of the Panama Exposition have failed to discredit him as Italy's delegate or force the Exposition authorities to interfere, but they have stirred up among the non-Catholics a sharp criticism of the methods and purposes of the leaders in the Roman communion.

The new arrangement between the Cambridge (Episcopal) Divinity School and the Harvard Overseers will make a strong federation of theological faculties centering in the university; Andover representing the Congregationalists and Harvard Divinity Schools the Unitarians. All students with the approval of their respective faculties may share in the courses of the university.

The Church Peace Union, thru its secretary, Rev. Frederick Lynch, announces to the churches of the United States an offer of five thousand dollars to be distributed in prizes for the best essays on international peace. The amount is divided into five parts, each part to be devoted to rewards among the competitors in each of the following groups: clergymen, theological students, church members between the ages of twenty and thirty years, Sunday school pupils between fifteen and twenty years of age, and those between ten and fifteen. All essays must be presented before January 1, 1915.

There's "An Ocean Of Comfort" In B.V.D.

You wear a *coat* and a *smile* with B. V. D. On land or sea, in city or country, outdoors or in the office, B. V. D. takes the bite out of the "dog-days". *It keeps you cool.* Being loose-fitting in drape, it lets invigorating air at your pores. Being light-woven in fabrics, you hardly feel that you have it on. If you dance, B. V. D. leaves you always arm, leg and body-free.

For your own welfare, fix the B. V. D. Red Woven Label in your mind and make the salesman *show* it to you. That positively safeguards you. On every B. V. D. garment is sewed.

THE MARKET PLACE

A REVIEW OF FINANCE AND TRADE

LESSONS OF THE CLAFLIN CRASH

BY EDWARD D. PAGE

Mr. Page brings to the consideration of this subject long experience in drygoods merchandising, as president of the Merchants' Protective Association, a director and chairman of the Committee on Commercial Law of the Merchants' Association of New York, and as a member of the Chamber of Commerce of the State of New York.—THE EDITOR.

BY a singular coincidence the last two out of the some hundred general drygoods jobbing houses once existing in New York City are in line of descent from one parent firm. Buckley & Claflin, the original house, was founded in 1843. Out of it sprang, on the one side, Buckley, Welling & Co., which, in the seventies, was consolidated with the house of George Bliss & Co. in the firm of Dunham, Buckley & Co., which later became James H. Dunham & Co., and under this title it still continues as a corporation. The other branch of the family tree, Claflin, Mellen & Co., which in 1863 became H. B. Claflin & Co., was succeeded in 1890 by the corporation whose misfortunes we now have to deplore.

That the Claflin business should grow and prosper at a much more rapid pace than the Buckley business was due to the energy, ability, courage and speculative spirit of the elder Claflin. Mr. Claflin was always ready to take a chance, and in the early days before the war soon made himself widely known as the one man who was willing to extend larger lines of credit than any other merchant, as well as to purchase goods in larger volume whenever he could get them at an attractive price and upon time payment. These qualities soon made his house the resort of two classes of buyers: those who were strong in pluck and ability but weak in capital and needed credit; and those who had the cash to buy the bargains which the Claflin house was continually offering. By special concessions moneyed concerns were induced to purchase on a cash basis, and so each transaction was made to supply a large part of the means required for the liquidation of those that had preceded it.

As the clearing house of the New England mills the house of Claflin received many favors; not only was it first sought whenever an accumulation of merchandise had to be sold or a price lowered, but it was the recipient of constant favors in the way of prices and terms, even on regular merchandise in normal times, which supplied the house both with added capital arising from the use of long time credit and with the power always to hit the bottom of the market to cash buyers in naming its selling price. Such advantages could but result in a volume of business, in those days unprecedented; so that its only real competitor was the great wholesale business built up by A. T. Stewart, whose large capital was derived from the profits of the "one price to all" principle which Mr. Stewart introduced into the New York retail trade in the early forties. Claflin's credits, however, enabled him to attract much business which Stewart's greater conservatism past by, and especially in times of rapid expansion were a fruitful means of attaining an unsurpassed volume of sales at a liberal margin of profit.

Horace B. Claflin, like so many others who have been successful in the wholesale branches of the drygoods trade, was a graduate of the country retail store, which in his time was conducted mainly on credit, both in selling and buying. In this way he became a past master in the use of the promise to pay.

In the buying policy of his house Mr. Claflin was equally resourceful and skilful. In those days it was often possible for a concern with large purchasing ability to effect a corner in the drygoods market; by buying up supplies of certain desirable products for long periods in advance; and so controlling the sale of them from all sources of supply. Of course the exclusive possession of such desirable articles further increased the prestige of the Claflin house and brought—nay, almost forced—all customers to its doors. Later, when it attempted to further this process by controlling mills as well as traders, it was less successful, and the connections thus formed ended unfortunately for both parties to the transaction.

The chances which Mr. Claflin was taking in the extension of credits became notorious. He, however, had the cleverness to protect himself under the existing insolvency practise of the time. Being the principal creditor of most of his debtors he retained a close hold and kept a sharp watch on their businesses; often compelling them to buy goods from him at his own prices; and so, in case they came to mishap, his agents would control the situation, replevining or attaching their entire assets so that the Claflin debt should be paid before any other creditors could share in the proceeds. Unethical as this process now sounds, it was not condemned by current commercial law and custom, and it was defended as being the only way in which the large credits necessary for the development of the western country could be extended. For a short period from 1867 to 1878 the United States bankruptcy law, which represented aspiration rather than efficiency, somewhat interfered with this process; the law of 1898 finally put an end to it.

With the great development of the western country came the rise of great western jobbing houses handling completer lines of merchandise in the rapidly growing western cities. Not only was competition on the increase, but with the adoption of better merchandising methods on the part of manufacturers and commission houses it became increasingly difficult to keep up the prestige of the Claflin concern as a clearing house for bulk lots or as a leader in price movements. In the eighties manufacturers learned the advantage of selling by sample on the road, and by their traveling salesmen solicited the custom of the whole country. Goods were manufactured in increasingly greater quantities, and when an accumulation occurred, it was apt to be larger than any one market or any one house could dispose of. The western jobber came to resent the distribution of such blocks of merchandise unless he was given an opportunity to secure his quota. The westerners, too, had made so much money that they were willing to pay on short terms, and their cash looked good to the needy manufacturer as against the four to eight months' credit demanded by the Claflin buyers; for the house still adhered firmly to its old-time policy of carrying the transaction with a long credit from the seller instead of buying as cheaply as possible on the shortest terms. And so ended forever the series of great clearing sales that had made the Claflin outlet famous to its friends on both sides of the ledger.

A great many of the Claflin customers originally supported by his credit made enough money to withdraw from his tutelage, and thenceforth bought their goods only when it suited them to do so and from their local jobber rather than from a market so distant as New York. It must be remembered that in the eighties the western cities were separated by freight distances of from twenty to forty days from New York; whereas from their local centers they were maybe only three or five. In the period of depression following the panic of 1884 this became a point of great consequence for, at that time, as at present, a wave of hand to mouth purchasing had set in, when merchants would not be persuaded to stock up with large quantities of goods, and thus the western wholesale drygoods business prospered at the expense of the New York jobber. At the beginning of the quarter century that followed the panic of 1873 there were some forty concerns doing a general drygoods jobbing business in the city of New York. At its end there were only five of them left. Since then the Tweedy concern has retired, the Sweetsers have failed, and the Tefft's have

liquidated, leaving only Claflin and Dunham in the field.

This change has been wrought by equally significant changes in the methods of doing business at retail. Small and compact special businesses have been replaced by large department stores whose sales are spread over an immense variety of products.

These department stores no longer need to patronize the jobber. They buy very large quantities of goods. Hearn, for instance, will buy as large a line of blankets at one clip as any of the leading jobbers, with possibly six or seven exceptions. Macy will buy as large a bill of wash goods as the average wholesaler. The aggregate volume of sales in any one of the large department stores is larger than that of any jobbing house outside of the cities of New York, Chicago and St. Louis. Mills and commission houses have been keen to see the advantage of selling direct to these great retailers. Many of them have even come to break packages and sell by the piece, and as a consequence, in the main, the department stores are quite independent of the jobber. To him is left only the lesser retail stores, which, of course, are quite numerous, and which are still obliged to buy their goods in less than package lots. Of late years these have learned the advantage of coöperative buying, and trade largely with first hands.

The eventual outcome of the Claflin methods of extending credits was, in every recurring period of depression, to enforce upon the firm a policy of ownership and control of retail businesses. With the growth of department stores the only way for Claflin to collect bad debts from them was to reorganize and take them over. A small store may be sold out and the debt collected from the sale of its stock in trade, but if you try to do this with a large one the shrinkage is manyfold multiplied. While there is always a ready market for a small stock of goods, on a bulk sale, there is but a rare and difficult opportunity to realize on the merchandise of a department store located elsewhere than in the very largest cities; and the problem is generally complicated with a store property especially adapted to the business, and often with a valuable good-will. And so the Claflin corporation gradually became the owner of a number of limping and lame department stores which it organized as best it could.

In great businesses, as in nations, there is often fortune in matrimonial alliances, and in Louis Stewart, who became allied with the Claflin concern in the nineties, the firm is said to have found a retail manager of great ability, without whom the fabric of the retail chain might long since have fallen to pieces. A number of sound and profitable businesses were added to the retail combination, and the general average of its efficiency raised thereby, altho I believe it is true that some even of these were probably over-capitalized, and had proved burdensome to their former owners.

St. Louis, Mo., July 1, 1914.

The Transfer Books of the Registered 5 per cent Bonds of Liggett & Myers Tobacco Company will close at 3 o'clock p. m., July 15th, 1914, for the payment of Interest on said bonds due August 1st 1914, and will reopen at 10 o'clock a. m., August 3d, 1914.

The net result of these processes, nevertheless, was unfavorable to this great jobbing business, which under other conditions had prospered by the pursuance of its traditional policies. In the first place, such independent department stores and those retailers as were not in the Claflin chain suspected, perhaps unjustly, that the chain stores were favored in their purchases, and also that information as to the class and scope of any operations conducted by independents might be divulged to their chain competitors, and so they abstained from buying from the Claflin jobbing house whenever they could buy on equal terms elsewhere. Nextly, its decline as an instrument for exclusive clearing, or for breaking prices, made it increasingly less essential to the retail trade as a source of supplies. And lastly the financial plan, by which the notes of the Claflin chain stores were taken in settlement of their obligations to the parent house, and rediscounted with its endorsement as a resource for settling its own liabilities, continually tended toward feebler dilutions of financial responsibility. For the proportions which the notes of the weaker retailers bear to the total mass of these obligations must necessarily tend to increase, as the earning capacity of the stronger houses in the chain enables them to pay their debts on short time or in cash. In the end outside collections from some of the weaker department stores in the chain began to be slow, and this resulted in a series of inquiries and questions, that even in an easy money market seriously interfered with the sale of the Claflin receivables, and precipitated the suspension of the parent house.

It will be seen from this analysis that the roots of the present difficulty penetrate to a time long anterior to the present; that with the best of intentions no struggle on the part of John Claflin and his associates, whose integrity and fairness are unquestioned, and no assistance from the banks could have saved a situation based upon business methods, however well adapted to the formative period of the drygoods trade, by that very token badly adjusted to the conditions of the present day. However sympathetic we may be with the character and ability that has been wasted on this great enterprise, it will not do to overlook the fact that the outcome is the inevitable result of these conditions and of these methods, which cannot be pursued with any hope of success in the future. We are at the beginning of an epoch when the type of uncouth bigness which seems to have been the ideal of American business will have to pass away, and efficiency, personality, manageableness and service will take its place. How the services of the trade in drygoods between the producer and the consumer will be performed we cannot tell; but that its units will be better proportioned to the capacity of a man to care for them, there can be no reasonable doubt.

New York City

DIVIDENDS

BROADWAY SAVINGS INSTITUTION

5 & 7 Park Place, N. Y.

125th Semi-Annual Dividend

The Trustees have directed that interest be credited to depositors entitled thereto at the rate of

T. W. MOFFAT, Secretary.

IN THE INSURANCE WORLD

BY W. E. UNDERWOOD

NOTES AND ANSWERS

E. W. Cox, president of the Canada Life Assurance Company of Toronto, died June 27 at Folkstone, England.

H. J. H., Baldwin, Kansas—Investments in local organizations are doubtless safe and in most cases profitable. Have no statistics; perhaps they could be procured from the Secretary of State of any state in which such associations operate.

A. D. W., Agricultural College, North Dakota—If you refer to indemnities against damage to property, think there is no such policy. Injuries to persons from that cause are covered in residence liability policies of leading casualty companies.

Rev. H. E. H., Park City, Utah—It is probable that the business was declined solely because the company was unrepresented by an agent. That is a hard and fast rule in some offices. There certainly were no reasons of a personal character.

The National Surety Company has reinsured all the fidelity and surety business of the Citizens' Trust and Guaranty Company of Parkersburg, West Virginia. The latter will continue to transact a trust business and for surety and fidelity lines will act as agent of the National in West Virginia.

H. P. B., Hancock, New York—Write the Superintendent of Insurance, Albany, New York, for a copy of report of examination recently made of the Order you mention. Why not select a long-term endowment—twenty-five or thirty years—or a twenty-payment life in some well-established old line, legal reserve company with a good dividend record?

C. O. R., Hiram, Ohio—Assessment insurance is inherently weak; it is not capable of standing the strains which adversity puts on it. Under the contract you have, you get from month to month what you pay for; no more. No, it is not of superior advantage over that offered by strong stock companies; it is inferior. In the latter you pay more, get larger benefits and a greater number of them.

The following dividends are announced:

Associated Gas and Electric Company, preferred, quarterly, 1½ per cent, payable July 15.

Broadway Savings Institution, semi-annual, 4 per cent, payable on and after July 20.

Citizens' Savings Bank, semi-annual, 3½ per cent per annum, payable on and after July 20.

Franklin Savings Bank, semi-annual, 3½ per cent per annum, payable on and after July 20.

German Savings Bank, 3½ per cent per annum, payable after July 20.

Hanover Fire Insurance Company, quarterly, 2 per cent, payable July 6.

Wells Fargo & Co., semi-annual, 3 per cent, payable July 15.

SAVING WILD LIFE

California has "Associated Societies for the Conservation of Wild Life" containing 10,000 members, all pledged to preach the doctrine they profess, and to show their faith by their works.

A powerful "committee," in which the government has an interest, has been formed in London to arrange for the protection, by international agreement, of whales, now fast lessening toward extinction.

The prairie-chickens, nearly extinct in Iowa, have decidedly increased there under the recent energetic enforcement of protective laws; moreover they are now nesting in cultivated lands, as they never used to do.

The canals of electric power companies on the Pacific slope are causing the death, by drowning or crippling, of many deer, which enter or fall into them, and often cannot get out because of the steep and slippery banks.

That there must be many sanctuaries —one in each county would not be too many—is the mature opinion of the persons who are trying to preserve the wild life of this country. Iowa, Illinois, and California are foremost in working out plans to this end.

There has been a great demand this summer upon the Audubon societies for nesting-boxes, and for directions as to their use. Several firms are now making artificial nests and finding a large sale for them, not to speak of whole cities of martin-houses erected annually.

The Game Commission of Illinois is adopting the policy of leasing from farmers the shooting-rights over extensive tracts of land which are then forbidden to trespassers, and form safe breeding-places for game and other birds. Excellent results are already observed.

Morris County, New Jersey, formerly a favorite resting and breeding place for ducks, but nearly depopulated of these birds, has seen the good effect of the Federal prohibition of spring shooting in a surprizing increase of ducks on Troy Meadows this first season of safety for the birds.

The Game and Fish Commission of Kentucky reports that the nets they have taken from a single stream show that fishermen had been taking and selling fish illegally from that one river worth $50,000 a year. This river is 200 miles long; and Kentucky has more than 12,000 miles of waters which, if properly stocked, would yield equally well.

Among the valuable fishes of this country, once regarded as inexhaustible in numbers, but now distressingly rare, is the sturgeon. A mature female sturgeon is now worth to the fisherman lucky enough to get it about $150. The sturgeon cannot be restored by fish-culture, and can be saved only by absolute prohibition of catching for a long period.

AMERICAN TELEPHONE & TELEGRAPH CO — LONG DISTANCE TELEPHONE — BELL SYSTEM — AND ASSOCIATED COMPANIES

The Telephone Emergency

THE stoutest telephone line cannot stand against such a storm as that which swept the Middle Atlantic coast early in the year. Poles were broken off like wooden toothpicks, and wires were left useless in a tangled skein.

It cost the telephone company over a million dollars to repair that damage, an item to be remembered when we talk about how cheaply telephone service may be given.

More than half of the wire mileage of the Bell System is underground out of the way of storms. The expense of underground conduits and cables is warranted for the important trunk lines with numerous wires and for the lines in the congested districts which serve a large number of people.

But for the suburban and rural lines reaching a scattered population and doing a small business in a large area, it is impracticable to dig trenches, build conduits and lay cables in order that each individual wire may be underground.

More important is the problem of service. Overhead wires are necessary for talking a very long distance. It is impossible to talk more than a limited distance underground, although Bell engineers are making a world's record for underground communication.

Parallel to the underground there must also be overhead wires for the long haul, in order that the Bell System may give service universally between distant parts of the country.

File your Letters, Clippings, Notes, etc. VERTICALLY—in the Weis Letter File

Quick reference to classified contents makes it indispensable in office or study. Built of Solid Seasoned Oak. Each of the 4 frame parts are interlocked, glued and screwed together. We recommend it not only because its cost is low, but because it is a serviceable, practical file.

Drawers on Roller Bearings and fitted with auto locking follow blocks. These hold contents on edge—marshalled in orderly array—classified so any paper may be quickly filed or found. Holds 3500 letter size papers in each drawer. You get all the advantages of a higher priced cabinet and we guarantee satisfaction.

$13.25 Freight Paid See Note

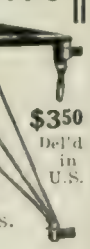
Handsomely finished Golden, Natural or Weathered Oak.
Also in three drawer height—$11.25; two drawer height—$8.00.

No. 421

Weis Filing Desk Keeps Your Records at Your Finger Tips

You need not leave your chair to refer to index cards, letters, notes, clippings, etc., filed in your choice of the 10 kinds of drawers we can furnish. Extensive choice to meet almost all requirements. All Solid Seasoned Oak, neely finished. Drawers roll on roller bearings. Top 28x52. Has Side Shelves and center drawer. You will be interested in this desk when you see the details in Catalogue "F."

$23.



"Gentlemen—That desk I bought of you last July is a **splendid servant.** *Its built-in-the-purpose filing drawers are much better than the stack-and-hind old-tyle storage drawers that were part of the desk I used previously. My mail and advertising work is sixty per cent heavier than when I bought the desk and yet it gives me such assistance that I attend to all this with much less effort.*

Although I am ordering additional filing equipment from you, the system will have its headquarters at this desk."

Cordially, L. V. E. (Name on request)

A SERVANT AT YOUR ELBOW!

Weis SWINGING DESK STAND

$3.50 Del'd in U.S.

Swings your Typewriter, Adding Machine, Reference Books, etc., into instant use. Never in your way. Attachable to either side of any style desk. Adds one-third to your desk space. *Locking Device* sets or releases the stand by a twist of hanging lever. Does not vibrate or collapse. Strong Black Enamelled metal frame supports, Oak top, 14x18 inches. We pay Parcel Post charges.

"Gentlemen:

"I am more than satisfied,—am delighted with the six file cases just received from your establishment. Their beautiful Golden Oak finish and general style entitle them to rank with the most expensive office furniture manufactured. I congratulate you on your success in making substantial and handsome office goods at moderate prices." (Name on request)

Weis Expansible Bookcases

combine service and economy. The sections are independent of each other, so a section at a time full of books may be moved in any emergency. Made so they may be packed for K. D. shipment.

$12.80 for this handsome bookcase in Solid Oak, Golden, Fumed or Weathered finish.

Omission of superfluous parts—not "cheapness" in material or manufacture—makes the prices low.

$12.80 Freight Paid See Note

Metal Framed Glass Doors *slide* horizontally in steel-lined grooves. Dust is excluded. Binding, sticking and noise are elided.

NOTE: Freight paid on $10.00 orders to Ry. stations in Eastern and Central States. Consistently low prices in West and South.

Helpful Booklet "Filing Suggestions" sent free with Catalog "F"—90 pages Commercial and Professional Office Devices. Catalog "H" shows two complete lines Sectional Bookcases—both kinds in Standard and Mission Designs.

PEBBLES

Brooks—Why aren't you wearing your patent leathers?

Franklin—The patent expired.—*Penn Punch Bowl.*

"By the way," said Mrs. De Style.

"Yes?"

"Do you know of any poor person who would care for a discarded lorgnette?"—*Puck.*

First Jew—Dwenty years ago Goldstein sold shoestrings on the corner und today he owns the corner on which he stood!

Second Jew (excitedly)—Und if he had valked up und down he might have owned the whole block."—*Life.*

"I don't care much for Lonelyville."

"Why don't you move then?"

"Too many ties. One neighbor has my card-table, another my wheelbarrow and a third my lawn mower."—*Kansas City Journal.*

She—And your father gave five hundred pounds for that picture. Just to show how much you care for art, I suppose?

The Son and Heir—No; just to show how much we don't care for five hundred pounds.

Irate Virginia Colonel (to his daughter)—Elizabeth, how could you be so inhospitable to that young man who called last night?

Bess—Inhospitable! Why, dad—

Pater—You should by no means have let him go without asking him to breakfast.—*Columbia Jester.*

He was cutting an item from a newspaper.

"It tells how a house was robbed, and I want to show it to my wife," he explained.

"What good will that do?" a friend inquired.

"A whole lot," was the reply. "You see, this house was robbed while the man was at church with his wife."

"Say," exclaimed the friend excitedly, "you haven't got a duplicate copy of that paper, have you?"—*Pittsburgh Dispatch.*

Sally, from the slums, was a guest of a great lady who interested herself in "the poor." Sally, perfectly self-possest, sipped her tea, and proceeded to engage in small talk.

"Does your 'usband drink?" she queried politely.

"My dear child—no!"

" 'Ow much does 'e make a week?"

"He—er—does not do any work."

Her ladyship was beginning to feel slightly annoyed.

"Well," continued Sally, "I 'ope yer keep out of debt."

"Why, of course, child! Don't ask such ridiculous questions. Don't you know, you are being very rude?"

Sally was amazed.

"Rude, is it? Well, mother says to me, 'Now, be sure and be'ave like a little lady,' she says. And when ladies comes to our 'ouse they always begins by asking those questions."

CALENDAR

The American Peace Centenary Committee will hold a conference at Mackinac Island, Michigan, on *July 21* and *22*, to which the governors of the border states and provinces will send delegates. The share of these governments in the celebration of the Hundred Years of Peace will be the special subject of consideration.

The problem of city housing will be one of the chief subjects of discussion at the twenty-second annual meeting of the United States League of Local Building and Loan Associations to be held in Washington, D. C., *July 27* to *29*.

The Forty-first Assembly at Chautauqua is now in progress. Music Festival Week is *July 27-August 1*. The fortieth anniversary will be celebrated on Old First Night, *August 4*. Recognition Day falls on *August 19*. The assembly closes on *August 30*.

Wagner performances at Bayreuth this summer are scheduled as follows: "The Flying Dutchman," *July 22* and *31*; *August 5, 11* and *19*; "Parsifal," *July 23, August 1, 4, 7, 8, 10* and *20*; the "Ring," *July 25, 26, 27* and *29*, and *August 13, 15, 17* and *19*.

The Gold Cup races for the Challenge Cup of the American Power Boat Association will be held on Lake George *July 29-31*.

The tenth International Esperantist Congress will be held at Paris *August 2-10*.

The annual art exhibition of the Royal Academy is open in London until *August 3*.

A Colonial Exhibition will be held at Samarang, Java, from *August* to *November, 1914*. It is to "give a comprehensive picture of the Dutch Indies in their present prosperous condition attained since the restoration of Dutch rule in 1814."

The British Association for the Advancement of Science will hold its next meeting in the antipodes. The Commonwealth of Australia will pay the expenses of 150 members, who will be taken on a tour of the principal cities from *August 8* to *September 1*.

The Interparliamentary Union will meet in conference at Stockholm on *August 19*.

An open-air flower exhibition will be held in Boston from *August 18* to *21*.

The National Negro Business League is to hold its fifteenth annual session at Muskogee, Oklahoma, *August 19, 20* and *21*. This organization is composed of negro men and women who have achieved success along business lines.

There will be an eclipse of the sun on *August 21*—total in parts of Europe and Asia, and partial in northeastern America. The full effect will be seen in Persia, Russia and Scandinavia. At sunrise, a partial eclipse will be observed in Canada and in our northern states.

From *August 23* to *28* the ninth International Socialist Conference will be in session at Vienna.

The Biennial Conference of Friends (Liberal) will be held at Saratoga Springs, New York, from *Ninth Month, 2d*, to *Ninth Month, 8th*.

The National Star-Spangled Banner Centennial, commemorating the successful defense of Baltimore at North Point and Fort McHenry, and the writing of the national anthem, will be held at Baltimore, *September 6* to *13*.

September 6 has been designated as Labor Sunday by the Federal Council Commission on the Church and Social Service.

The annual conference of the International Law Association will be held at The Hague in the Palace of Peace from *September 7* to *12*.

At Denver, Colorado, from *September 8* and *9*, will be held the eighth annual conference on taxation, in charge of the National Tax Association.

The races for the America's Cup are to be held at New York on *September 10, 12* and *15*.

The twenty-first World's Peace Congress will occur in Vienna *September 15-19*.

The Baltic Exhibition at Malmö, Sweden, to which Swedish, German, Danish and Russian exhibits have been sent, is open on *September 15*.

An Anglo-American exposition to celebrate the centenary of peace and progress in arts, sciences and industries is open at Shepherd's Bush, London, till *October*.

At Leipzig an International Exhibition for the Book Industry and the Graphic Arts will remain open until *October, 1914*.

The United Typothetæ and Franklin Clubs of America will hold their twenty-eighth annual convention in New York *October 6, 7* and *8*.

On May 17, 1814, Norway adopted a Constitution as a free and independent kingdom, having just been released from Danish control. To commemorate this event a Centennial Exposition is being held at Christiania until *October 15*.

The annual convention of the National Suffrage Association will be held at Nashville, *November 12* to *17*.

The Independent

VOLUME 79 | MONDAY, JULY 20, 1914 | NUMBER 3423

A BASIS FOR A LEAGUE OF PEACE

A MEAGER cable dispatch from Rio de Janeiro was published on July 7th stating that a treaty had been presented to the Brazilian Chamber of Deputies proposing that Brazil should begin negotiations with Argentina and Chile for an offensive and defensive alliance. The treaty would guarantee the territorial integrity and political independence of the countries concerned. It would provide for the obligatory arbitration of all disputes between them. It would devise a scheme for the reduction of armies and navies and thereafter their limitation. Argentina and Chile were understood to approve it.

This is startling news, if true. The chances are, however, that the project has not the backing of the governments of the three South American powers, but is simply the inspiration of some enthusiast exhilarated by the prestige gained by the mediating nations at Niagara Falls.

Nevertheless the plan is worth serious discussion, for it raises again the question of a League of Peace—the next great step in the Peace Movement.

The idea of a League of Peace is not novel. All federal governments and confederations of governments, both ancient and modern, are essentially Leagues of Peace, even tho they may have functions to perform which often lead directly to war.

The ancient Achæan League of Greece, the Confederation of Swiss Cantons, the United Provinces of the Netherlands and the United States of America are the most perfect systems of federated governments known to history. Less perfect, but none the less interesting to students of government, are the ancient Latin League of Thirty Cities, the Hanseatic League, the Holy Alliance and in modern times the German Confederation. Even the Dual and Triple Alliances and the Concert of Europe might be called more or less inchoate Leagues of Peace.

Perhaps the most interesting recent suggestions for federating the nations into a League of Peace aside from the proposed Latin American alliance are those of Mr. Richard Bartholdt at the Thirteenth Interparliamentary Conference at Brussels in 1905; Uruguay's proposal introduced by ex-President Ordonez at the Second Hague Conference on July 4, 1907; Theodore Roosevelt's Nobel peace address delivered May 5, 1910, at Christiania, Norway; and Andrew Carnegie's address, entitled "A League of Peace," given before the University of St. Andrews on October 17, 1905.

Mr. Bartholdt's suggestions contemplate a World Federation with a World Congress based on the following five fundamental guarantees:

1. The territory and sovereignty of each nation represented to be respected by all.

2. Each nation to have the right to arm itself according to its own judgment.

3. Each nation to have the right to withdraw at any time.

4. War to remain a lawful mode of action among the members in settling disputes, except as they severally agree to refer questions to arbitration.

5. The armed forces of all the nations to be at the service of the Congress for the enforcement of any decrees rendered by the Hague Court according to treaties of arbitration.

The proposals of ex-President Ordonez are as follows:

1. From the moment when ten nations (of whom half have at least 25,000,000 inhabitants each) shall agree to submit to arbitration the differences which may arise between them, they shall have the right to form an alliance for the purpose of inquiring into the disagreements and disputes which shall arise between the other nations and to intervene when they shall judge it advantageous in the interest of a just solution.

2. These allied nations shall have the power to establish a tribunal of obligatory arbitration at The Hague (if the kingdom of Holland is a party to the alliance) or at some other city which may be designated for the same purpose.

3. This alliance in favor of obligatory arbitration will only intervene in cases of international disagreements, and never will have the right to interfere in the internal affairs of any nation.

4. All the nations which subscribe to the principle of obligatory arbitration will have the right to become parties to the Alliance destined to suppress the evils of war.

Mr. Roosevelt's proposals contained in his Christiania address are in brief:

1. Mutual guarantees to respect national territory and sovereignty and to arbitrate all other questions.

2. The development of the Hague Court and Conferences.

3. The limitation of national armaments by international agreement.

4. A League of Peace, of enlightened powers, "not only to keep the peace themselves, but to prevent by force, if necessary, its being broken by others."

Mr. Carnegie's suggestions are embodied in the following quotation from his Rectorial address:

> Five nations coöperated in quelling the recent Chinese disorders and rescuing their representatives in Pekin. It is perfectly clear that these five nations could banish war. Suppose even three of them formed a League of Peace—inviting all other nations to join—and agreed that since war in any part of the civilized world affects all nations, and often seriously, no nation shall go to war, but shall refer international disputes to the Hague Conference or other arbitral body for peaceful settlement, the League agreeing to declare non-intercourse with any nation refusing compliance. Imagine a nation cut off today from the world. The League also might reserve to itself the right, where non-intercourse is likely to fail or has failed to prevent war, to use the necessary force to maintain the peace, each member of the League agreeing to provide the needed forces or money in lieu thereof, in proportion to her population or wealth. Being experimental and upon trial, it might be deemed advisable, if necessary, at first to agree that any member could withdraw after giving five years' notice, and that the League should dissolve five years after a majority vote of all the members. Further provisions and perhaps some adaptations would be found requisite, but the main idea is here.

It will be noticed that all these foregoing leagues, alliances and confederations are largely unions of de-

fense and offense. Even the modern suggestions, including the latest Latin American project, involve the use of a common force to compel outside states to obey the will of the League.

But force, except as exercized under law, is always arbitrary and usually oppressive or tyrannous. Any League constituted at this moment with an international force at its disposal would instantly beget suspicion if not alarm on the part of outside nations. They might consider it an alliance against themselves and proceed forthwith to start a counter alliance to preserve the balace of power.

Is there no way, therefore, of constituting a League of Peace at the present stage of the world development without running the risk of doing more harm than good? We think there is. Let the League be constituted without any reference to the employment of a common army and navy to carry out its will.

Suppose the alphabetical powers of South America, or any other group of nations in the world, should establish a League of Peace on the following basis:

1. The nations in the League shall refer all the disputes among themselves, of whatsoever a nature, to arbitration.

2. The League shall provide a periodical convention or assembly to make all rules for the League, such rules to become law unless vetoed by a nation within a stated period.

3. Any member of the League shall have the right to withdraw on due notice.

4. Each member of the League shall have the right to arm itself according to its own judgment.

The advantages that nations would gain in becoming members of such a league are manifest. The risk of war would be eliminated between them and a method would be devised whereby they could develop their common intercourse and interests as far and as fast as they could unanimously agree on ways and means. Indeed, the possibilities of such a league are almost infinite, even tho it attempts to employ no force whatsoever to compel obedience to its will.

If our Latin American neighbors, therefore, will abandon the idea of an offensive and defensive alliance and establish a League of Peace based on some such specific proposals as above enumerated, they will have taken the most advanced step ever attempted toward that eventual world-government—which, as the historian Freeman has said, will be "the most finished and the most artificial production of political ingenuity."

THE RESERVE BOARD NOMINATIONS

IT was a difficult task for the President to select the five men who are to be associated with Secretary McAdoo and Comptroller Williams in the Federal Reserve Board. It was especially difficult to find bankers well qualified who were willing to withdraw from all the partnerships or banking institutions with which they were connected, and to "devote their entire time to the business of the board," for salaries of $12,000. The President was fortunate in inducing Mr. Warburg, a scientific banker of exceptional attainments and experience, to enter the board. The three gentlemen whose nominations have been confirmed are properly qualified for the work, but the peculiar fitness and ideal excellence of the Warburg nomination had been clearly shown.

In Mr. Jones, the President believed he had found a man admirably equipped for the consideration of questions coming before the board which would not be purely financial. Altho he had known Mr. Jones many years, he was misinformed as to this gentleman's attitude toward certain business undertakings and problems in which the people are deeply interested. There is no evidence that he was misled as to Mr. Warburg.

Mr. Wilson, in his letter to members of the Senate committee, assured them that Mr. Jones had entered the board of the International Harvester Company, or Harvester Trust, to reform that company's methods, and that he had accomplished something in that direction. His words were:

> He went into the board of the Harvester Company for the purpose of assisting to withdraw it from the control which had led it into the acts and practises which have brought it under the criticism of the law officers of the Government, and he has been very effective in that capacity. His connection with these acts and practises is absolutely nil. His connection with the company was a public service, not a private interest, and he has won additional credit and admiration for his courage in that matter."

Mr. Jones' testimony before the committee—in complete agreement with a statement previously made by Mr. George W. Perkins, a prominent director of the Harvester Company—proves that the President, as we have said, was misinformed. He entered the board, he testified, at the request of the company's president, his life-long friend. He had been a director for five years, and he "heartily approved" the company's acts and policy. He had found in those acts and that policy nothing "in contravention of law or good morals." There had been no difference of opinion among the directors.

The company is a defendant in a suit brought by the Government, and, for violation of the Anti-Trust law of Missouri, it has been forbidden to do business in that state.

But what did the Supreme Court of Missouri say in its decision against the company? That a slight increase of prices had been preceded by a greater increase of the prices of material and labor; that the price increase was not in proportion to the increased cost of construction and the improvement of the machines; that this improvement had been accompanied by a reduction of the cost of repair material to the farmer; that "farmers generally" had "profited by" the company's competition with other manufacturers; that independent manufacturers had "not suffered by reason of the combination"; that many retailers had testified that the company used no unfair methods in the treatment of competitors; and that "on the whole, the evidence shows that the company has not used it power to oppress or injure the farmers, who are its customers."

Why, then, was the company found guilty and condemned? Because, as the court explained, under the requirements of the statute (for which, we presume, the court entertained no profound feeling of respect), if men acquired power to control the market and limit competition, it was no defense for them to say that the power had not been used to injure any one.

These were the words of Missouri's highest court, and if they correctly described and characterized the company's methods and policy, we do not see that approval of those methods and that policy is discreditable to Mr. Jones. Even if he must revise his opinion as to the purpose with which Mr. Jones became a director, and about

the latter's efficiency and courage as a reformer in the board, we think the President may justly insist upon the nomination and ask the Senate to reverse its committee's adverse judgment, shown in a vote of 7 to 4.

Mr. Warburg, who had not sought the office, asked that his name be withdrawn because the committee, after accepting three men, had deferred action in his case and called upon him to appear and submit to an examination. At the President's request, he permits the nomination to remain, but does not consent to be cross-examined. He has already answered a list of questions which the committee sent to him. It is an unusual proceeding for a Senate committee to summon men nominated for high and important offices, and to subject them to sharp and, possibly, hostile inquiry, as to their private business affairs. Mr. Warburg was preparing to lay aside highly profitable and agreeable financial associations, and this, he thought, should be regarded as a sufficient sacrifice.

If he does not become a member of the board, the people of the United States will be deprived of the services of a man whose qualifications for the office and the work are not only unsurpassed, but, we think, unequaled in this country. A practical banker of broad experience, he has also been a diligent student of banking, local and international, in several European capitals as well as in New York. He may fairly be regarded as an authority concerning the principles and problems involved in this new banking system, with the promotion of which he was connected. We cannot think that the Senate will fail to improve the opportunity to gain the services of so competent a man in the office for which he has been nominated.

PANKHURST AND CARSON

THE two preëminently notorious British nullifiers are Mrs. Emmeline Pankhurst and Sir Edward Carson. We allow precedence to the lady, not because she is a lady, for she does not act like one, but because her cause has more justice than that of her titled fellow-conspirator against law and public order. It is only just that women should have the same right as men to choose those who shall rule over them. It is not just that a minority of Irishmen should refuse to submit to the will of the majority as to the government of the island.

Mrs. Pankhurst and Sir Edward Carson differ in the method of their nullification. Mrs. Pankhurst and her two daughters and her followers make individual and direct war. They take their personal chance with all violence, and smash things and go to prison and then on hunger strikes. Not so Sir Edward Carson. He eggs on others. He advises others to create an army, and threatens civil war. And such civil war—that of four of the counties in Ulster against Great Britain; and his hope is that there will be no war, because the British army will refuse to fight the Ulstermen, or the threat of war will frighten the Cabinet and Parliament, and he will get his way. The honors of courage are with the woman.

And of tactics also, perhaps. Did Sir Edward imagine that Ulster might raise its army, and the rest of Ireland, the great majority, would fold their hands? Now the Nationalists are raising their army, and a much bigger army it is likely to be. Waterford and Tipperary have fighting men. Why did not the doughty Sir Edward think of that? If the Orangemen will to fight Great Britain tens of thousands of Irishmen would be very glad to mix in the fray.

But there will be no fighting. Premier Asquith has offered his amendments, which will allow Ulster to vote county by county whether it will stay out for six years. That seems fair, for next year there will be a new Parliament which may overturn everything done by this, if the people so approve. The Unionists declare they will not accept the amendments and that there will be civil war in Ireland if Asquith does not show the white feather. It is impossible; war is too ludicrous to be true. Mrs. Pankhurst will be carrying on her genuine campaign long after events have silenced the Carsonite braggadocio.

THE BANNING OF BERGSON

THE works of Henri Bergson have followed the works of Maurice Maeterlinck to the purgatory of the Index Librorum Prohibitorum and *Creative Evolution* and *The Blue Bird* are now together upon the list of books which no good Catholic may own or read without the express permission of his spiritual adviser. This action on the part of the Vatican was naturally to be expected. All books by heretical authors touching on doctrinal matters fall within the scope of the Index. Now Bergson is a Jew, and altho he carefully avoids any references to theological questions it is easy to see that his philosophy has an important bearing on such matters. Maeterlinck was duly educated in the Jesuit school of Ghent, but he looks back upon that period of his life with a peculiar abhorrence, and altho he received a blessing from the Pope when he rescued the Abbey of St. Wandrille from the desecration of being sold by the Government for a chemical manufactory, he offended Catholic sentiment even worse by using it as the stage of his plays. Maeterlinck received the Nobel prize for idealism in literature and his faith in immortality has vastly strengthened in recent years, but it still undeniably falls short of Catholic requirements; in fact it stands on a level with George Eliot's "Oh may I join that choir invisible" which was Lincoln's favorite poem.

Maeterlinck's sturdy optimism has inspired many readers to a saner view of the world and Bergson's conception of a universe dominated by a determination to achieve a more abounding and enduring life has shown that science does not necessarily teach that evolution is a matter of chance. But the Congregation of the Index has declared their books dangerous to the Catholic faith and we are willing to accept their expert opinion on this point, altho we do not bow to their authority. The Congregation never gives reasons for its decision—a wise precaution—but it is assumed that the principal objection to Bergson, beside the general one of meddling with sacred subjects, is that his philosophy savors too much of the heresy of divine immanence.

Bergson's philosophy was seized upon with immense enthusiasm by young Catholics in France because it seemed to afford them a way by which they could reconcile their loyalty to the Church with the acceptance of modern science. His most devoted disciple is a Catholic,

Edouard Le Roy, whose recent book on the ethical import of Bergsonism has received the emphatic endorsement of Bergson himself. The whole Modernist movement was in fact based upon a trend of thought of which Bergson has become the chief exponent. But the Vatican was determined to crush Modernism and it has, so far at least as its outward manifestations are concerned, tho at a cost of great sacrifice and suffering. Some of the most promising and earnest priests have been forced out of the Catholic Church. Others believing that their duty lay within the Church have submitted to its dictation and compromised with their consciences in subscribing to the oath against Modernism. By putting Bergson's works on the list of prohibited literature the Vatican intends to strike at the head of the heresy, but altho the Catholic laity are thus prevented from finding out for themselves what Bergsonism is by reading it in its original form, they nevertheless cannot escape its influence, for it is in the air nowadays and they cannot be sheltered from it if they read at all.

WASTING MISSIONARY MONEY

SOME of the Presbyterian leaders who assembled not long ago in Chicago are emphasizing not only the advantage of the internal reorganization of their Home Missions Board but also the need of a change of policy in the distribution of the missionary gifts. It is alleged that so much overlapping and duplication exist that a good half of the money that ought to be used in forward work is spent in maintaining inefficient endeavors in overchurched communities. We are loth to take this estimate at its face value, but if it rests on any considerable foundation, it indicates a condition that calls for immediate remedy. It is simply shameful in this day of enlightenment and coöperation to squander the gifts of self-denying people in perpetuating ecclesiastical whims and community divisions. There are plenty of urgent calls for missionary endeavor from the shepherdless multitudes of immigrants and the religious wastes of our great cities. Let the gifts go where the needs are real and pressing and the demand concerns the future rather than the past.

THE ADVANTAGES OF A COLLEGE EDUCATION

NEW YORK UNIVERSITY needs a new building. The alumni of the School of Commerce—for whose use it is designed—have committed themselves to a strikingly simple campaign for their share of the required funds.

Professor Jenks is the author of the device, which is no more nor less than the saving of six and two-thirds cents per luncheon by 250 alumni and three and one-third cents by 150 more, all for ten years. The lump proceeds are to be $100,000.

This returns to mite-box methods. The expansion of organized education and philanthropy and religion and propaganda of uncounted varieties has led to an amazing multiplication of money-raising schemes. We victimize ourselves with tag-days, clock campaigns, yards of pennies, thermometers, buy-a-brick-for-the-building-funds, shares of stock bearing spiritual dividends exclusively, and a thousand more schemes for tricking the fancy into minimizing the self-denial of giving. But the older methods are sterner. Who knows how many sticks of candy and glass alleys and glasses of soda water heroic youngsters have eschewed in order to fill the missionary mite-box? Here are four hundred college graduates enthusiastically pledging themselves to just this sort of unpurfled self-deprivation.

Our heartiest admiration and most cordial wishes to them. A body of men who can unfalteringly promise to curb the natural longings of the flesh once a day for 3650 successive days—and have sufficiently mastered the metropolitan bill of fare to negotiate a saving of precisely six and two-thirds cents at each of 3650 luncheons—such a band of hero-mathematicians must warm the cockles of Alma Mater's heart.

ON TIDYING UP

WE have made a discovery of some importance. It relates fundamentally to efficiency, immediately to flat-top desks; and as both are ubiquitous under the present dispensation we hesitate to suppress it.

Cleaning up one's desk at night is grossly inefficient, and therefore immoral.

Consider the process so long demanded by office ethics: one dives into a delirious tangle of papers, scatters them deftly—this to the waste-basket, that to a drawer, these to a waiting tray. Out of chaos comes—geometrically speaking—order. Things are still unfinished, it may be; affairs are less easily disciplined than papers. One wonders whether incomplete business in the form of neat little heaps is any more ethical than the same business in frank disarray. But the tidying must be done, in the name of efficiency.

Now in the doing of it there is great reward. Piling papers together foursquare to the world and the assaults of conscience is a mightily satisfying performance. The self-approval that results may be quite specious: it may represent merely a cocky temporizing with responsibility; but it is none the less hearty.

There's the rub. Self-approval begets energy: it breeds an appetite for work. But the impulse is wasted when the day's tasks are done and only the *dolce far niente* of the evening remains. Force is recklessly squandered; efficiency is outraged.

But in the morning—that is different. We let a sweet disorder in the desk greet us. The mess is a challenge; we sort and arrange with tremendous vigor. The completion of the task leaves us tingling with the consciousness of efficiency, and we plunge into the new day with the ardor of a militant and the self-confidence of a sophomore.

To be honest, however, there are other considerations. It is roundly satisfying to slip away quietly from an overfull desk, to snub the insinuating flat-top and all its traditions. And it is inherently decent. There is a sort of bravado, a showy virtuousness, in the hasty tidying-up at night. It is far more modest to leave matters just where the end of the day finds them. There are some who require, temperamentally, such a smart finale to their work, like the abrupt couplet that ends an Elizabethan sonnet. For ourselves, we prefer to let the day's tasks follow the easy decrescendo of a Petrarch sestet, and merge into the leisure hours without pause or ostentation.

THE STORY OF THE WEEK

Advance of the Mexican Rebels

Only one of the three rebel columns moving southward in Mexico was notably successful last week. Villa's army, in the center, was idle, owing to its commander's quarrel with Carranza. In fact, it had turned back after the capture of Zacatecas. Part of it was at Torreon, and the artillery had been carried to Chihuahua, "for repairs," it was said. On the east side, General Gonzales was preparing to attack San Luis Potosi. But on the west side, General Obregon, at the end of a three days' battle, captured Guadalajara, Mexico's second city, routing 12,000 Federal soldiers and taking 5,000 prisoners. Guadalajara, noted for its textile manufactures, costly cathedral, convents, old Spanish families, and hatred of Americans, was the key to railway communication between the capital and the west coast ports. The distance to the capital is 275 miles. Obregon sent General Blanco in pursuit of the fleeing Federals, and reported to Carranza, sending his dispatches from the palace of the Governor of the State of Jalisco.

The Federals evacuated the western port of Guayamas, which had been besieged by the rebels for fourteen months. At the suggestion of foreign consuls and the captains of American warships, an armistice was ordered, and the 2700 soldiers of Huerta were permitted to depart on transports, which were to carry them to Salina Cruz, the Pacific terminus of the Tehuantepec isthmus railway. Acapulco also was evacuated. In the south, Emiliano Zapata was inactive. He recently declared that he would never acknowledge the authority of Carranza. But he sent his brother Eufemio to Carranza, by way of the west coast and Los Angeles, last week, to say that he would support the Constitutionalist cause if Carranza would promise to distribute among his followers the landed estates which are now in their possession. Outrages ascribed to Zapata's men were reported in two or three of the southern states. In Puebla they demanded a ransom of $500,000 for the life of Juan Velasco, a wealthy Spanish manufacturer, and put him to death because payment was delayed. In other places they attacked priests and looted churches.

There were reports of a menacing revolt of Federal soldiers near Vera Cruz. The number of the mutineers was only forty, however, and fifteen of them were promptly killed. Their associates ran away. General Funston would not give passes to revolutionists who desired to assist them. There is to be an official inquiry as to the charge, published by an American newspaper correspondent, that our marines or sailors put Mexican prisoners to death when we took possession of Vera Cruz. The evidence thus far does not support the correspondent, whose expulsion was recently ordered.

THE WEEK IN CONGRESS

Leading subjects of debate were the appropriation bills and politics. Before passing the sundry civil bill, the Senate refused to eliminate the labor exemption, with respect to the use of money in prosecuting violators of the anti-trust law. The exemption is like the one on account of which Mr. Taft vetoed a similar bill. For the destitute at Salem $200,000 was appropriated, altho the House committee had made an adverse report.

In the Senate and also in the House the Administration was attacked by Republicans and defended by Democrats. Republicans asserted that the majority submitted to Mr. Wilson's domination.

Representative Good, of Iowa, said that Secretary McAdoo violated the law by using revenue cutters for week-end pleasure voyages and should be removed from office. The Secretary's defenders said that he paid for the trips.

Under the authority recently granted, the battleships "Idaho" and "Mississippi" have been sold to Greece, and $12,535,275 has been received in payment.

Representative Bowdle, of Cincinnati, introduced a bill to impose a tax of twenty-five per cent on the incomes of Americans who marry titled foreigners. His own city, he said, had two princesses and one duchess. He criticized the "rush for the ducal bargain counter."

Representative Roberts introduced a resolution giving the chamber of the House every Friday to Chautauqua orators—Cabinet officers and others—in order that they might not find it necessary to leave the capital. The resolution provides for admission to the galleries "at popular prices."

Among the subjects considered by committees were the misuse of Senate stationery to promote a North Carolina gold mine, in which four senators are stockholders; the Clayton trust bill, which has been modified, at Mr. Wilson's suggestion; and the nominations for the Federal Reserve Board, three of which were approved. The vote against Thomas D. Jones was seven to four, and action concerning Mr. Warburg was deferred.

Huerta and His Plans

After a series of reports that Huerta was about to leave the country, he surprized many both in Mexico and in the United States, on the 10th, by appointing Chief Justice Francisco Carbajal Minister of Foreign Affairs. Under the constitution, upon the resignation of the President (if there be no Vice-President) this member of the cabinet automatically becomes his successor. This appointment was regarded by some as the first step toward the organization of a provisional government that Carranza and his men would accept, for it was said that Carbajal was in sympathy with the rebels. But this theory was not supported by the comments of rebel agents at Washington and elsewhere, who said that Carbajal was a reactionary and a "Cientifico."

There were persistent rumors that Huerta would soon resign and go to Europe, where, it was said, he had deposited in bank a private fortune of $3,000,000. Members of his family were at Puerto Mexico, and a train could quickly carry him to that port, where British and German ships were lying. Esteva Ruiz, recently Acting Minister of Foreign Affairs, when about to depart for Europe, said that Carbajal might, after becoming President, appoint Carranza Minister of Foreign Affairs and then resign. Senor Rabasa, one of Huerta's delegates at Niagara Falls, asserted that the recent reelection of Huerta was unconstitutional, and that Congress undoubtedly would pronounce it null and void.

There were several Mexican statesmen at Vera Cruz, last week, on their way to Europe. One of these, Querido Moheno, not long ago Minister of Foreign Affairs, bitterly attacked President Wilson and our Government, declaring that the President was responsible for Mexico's difficulties, and that Mexicans would hate Americans for years to come. He excited some amusement in the United States by asserting that Mr. Wilson and the leaders of the Progressive Party were united in support of a "secret platform" calling for the disruption of Mexico and the acquisition of her territory. The fall of Huerta, he said, was inevitable.

Villa and Carranza

The conference of generals who undertook to settle the controversy between Carranza and Villa has finished its work. It was agreed that Carranza should be supreme chief; that Villa should be chief of the Division of the North, and that he should release the Carranza men whom he had imprisoned in Chihuahua. Those representing Villa offered a resolution which would prevent any military leader, Carranza included, from being a candidate for the presidency. It was rejected.

Altho an agreement was reached, and Carranza gave orders that Villa should have the coal he needed, the course of Villa excited suspicion. His troops had been brought northward from Zacatecas, and his artillery had been sent to Chihuahua. There were rumors that he was planning a republic of his own, to be composed of the northern states, and that neither he nor his army would resume the march to the national capital. On the other hand, it was said that he would soon be fighting again in the south. The conference at Torreon decided that after the fall of the capital there should be a convention of delegates representing the army to arrange for an election. Carranza gave notice that when the three columns should converge, probably in the vicinity of Queretaro, he would take command.

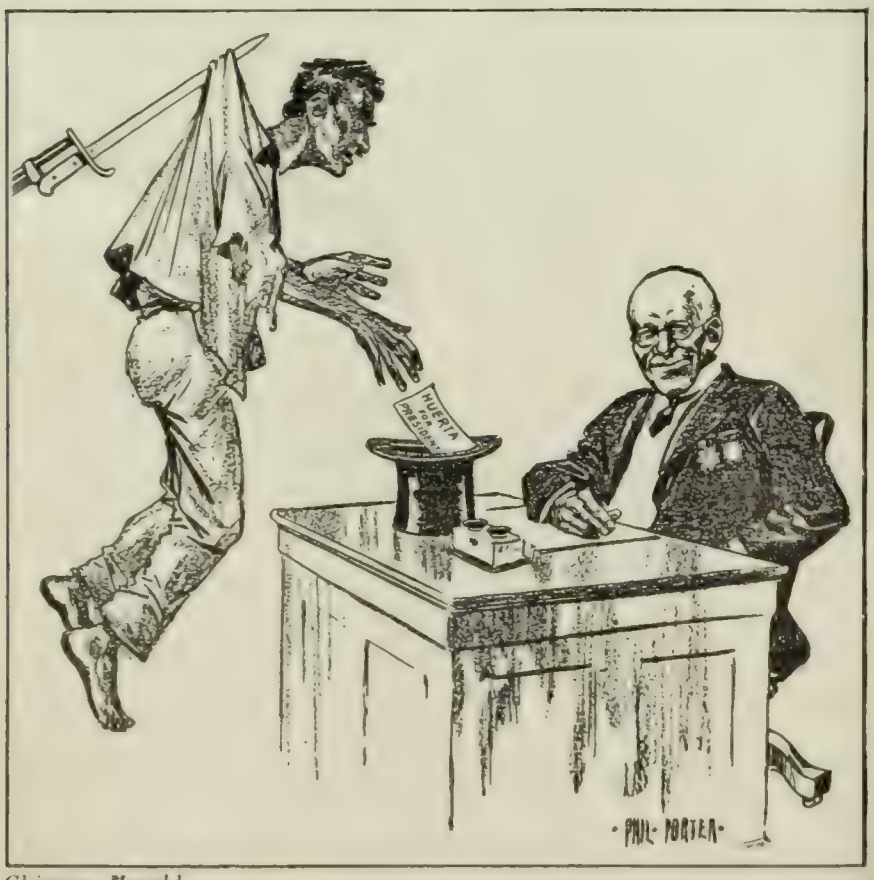
All of Carranza's generals voted against any conference with Huerta's Niagara Falls delegates, and he sent to the mediators a report to that effect. They were still hoping that the invitation would be accepted and that a conference would take place.

Opening the Cape Cod Canal

The Cape Cod Canal will be opened formally on the 29th, when motor cars will be banked along the shores of it, a procession of tugs and yachts will pass thru, and addresses will be made by the Governor of Massachusetts and others at the western entrance. For several weeks the canal has been ready for use.

It is eight miles long, and the distance from water thirty feet deep in one bay to water of the same depth in the other is thirteen miles. Its minimum depth at low water is 25 feet, and no part of it is less than 100 feet wide at the bottom. It provides for about 25,000 sea craft annually a route safer and shorter than the one around Cape Cod. Ships coming from the south and bound for Boston will save seventy miles by using it. Every year about 11,000,000 tons of coal and lumber are carried around the Cape, and by avoiding the delay, it is said, there will be a saving of several cents per ton. Rates range from $3 for a motor boat to $100 for trade vessels. The cost of construction was about $12,000,000.

Alaska's Volcanoes Active



The volcanoes along the Alaskan peninsula west of Seward, and on the Aleutian Islands, are in violent eruption. Mt. Katmai, on the mainland, across from Kadiak Island, has been throwing out great volumes of sulphur-laden smoke, with ashes, and the sea is discolored for a hundred miles. This is the volcano that, two years ago, covered Kadiak Island and the adjacent mainland with a deep layer of volcanic ash. Those living in the vicinity were rescued by revenue cutters.

A new crater has been formed on Mt. Shishaldin, which is on Unimak Island and had been quiet for two years. The lava has cut a wide path thru the snow for several miles. Mt. Pavlof, another volcano on one of the islands, is throwing out black ashes. Some think this volcanic activity in the far north is related to the recent eruptions at Mt. Lassen, in California.

Santo Domingo

There are now four distinct revolutionary movements in Santo Domingo, and the country is in a deplorable condition. At Puerto Plata, two weeks ago, the batteries of the Bordas Government were silenced by shots from an American gunboat, because the Government troops were ignoring the warning that they must not imperil the lives of foreign residents. The city was then held by the rebels, and they have not been dislodged. Last week, shots from the rebel guns struck the American gunboat, which silenced the rebel batteries by a few shots in reply. The Government has protested against the interference, but the rebels, making no protest, have promised to be more careful.

Exporters in the United States and others who own plantations in Santo Domingo have been urging our Government to intervene, saying that anarchy can be prevented in no

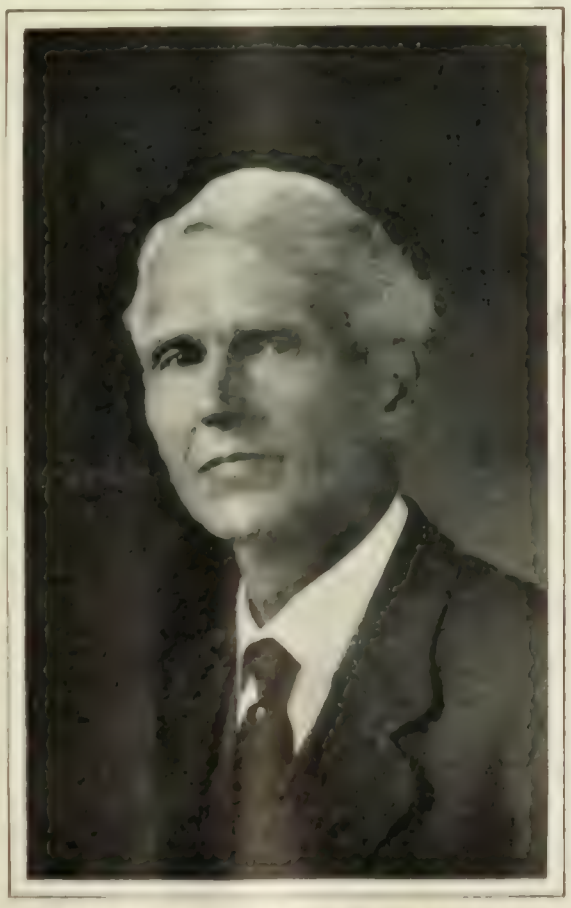
Harris & Ewing



CHICAGO BUSINESS MEN WHO CONFERRED WITH THE PRESIDENT

Ten members of the Chicago Association of Commerce went to the White House on July 8 to urge modifications in the Administration's trust legislation program. President Wilson found the conference "mutually instructive and helpful." The delegation was followed during the week by a group of Illinois bankers and by Mr. Henry Ford. In this group, from the left, are A. W. Shaw, publisher of *System Magazine;* Cornelius Lynde, lawyer; L. A. Goddard, of the State Bank of Chicago; Joseph H. de Frees, lawyer; J. T. Pirie, Jr., of Carson, Pirie, Scott & Co.; Thomas Creigh, of the Cudahy Packing Company; W. E. Clow, hardware merchant; Ezra Werner, Sr., wholesale grocer, and John V. Farwell, of the large dry goods concern of that name

other way. The action of the American Minister, James M. Sullivan, is sharply criticized. He has been called back to Washington. It is asserted that the original revolutionary movement was encouraged by the Bordas Government in order that the recent elections might be confined to places in which the Government could control the voting, and that the election was a farce, nearly all the votes having been cast by soldiers and Government employees. In this way Bordas and the members of Congress were re-elected. At present our Government is not inclined to intervene, but as a precautionary measure nearly 700 marines have been sent to Guantanamo, Cuba, where they will be held in readiness for emergencies in either Santo Domingo or Hayti. Guantanamo is only one day's sail from the island and the presence of the force, it is hoped, will have a quieting effect even without intervention. The "Sacramento" has been ordered from Mexican waters to Port au Prince.

The Administration's Philippine Bill

Representative Jones, of Virginia, chairman of the House Committee on Insular Affairs, has introduced a bill for the government of the Philippine Islands which has been the subject of many conferences at the White House and now has the approval of President Wilson. It fixes no date for the independence of the Islands, but the preamble says that at the beginning of the war with Spain it was not the intention of the people of the United States to make the war one of conquest or territorial aggrandizement, and that it always has been their purpose to recognize the independence of the islands "as soon as a stable Government could be established therein." The bill provides for the abolition of the present Philippine Commission, for which is substituted a Senate, the members of which, representing the Christian provinces, are to be elected by popular vote. The non-Christian tribes are to be represented by two senators and nine representatives appointed by the Governor-General. He is also to appoint the heads of the executive departments. The only officers to be appointed by the President are the Governor-General and the judges of the Supreme Court. The Legislature is empowered to legislate as to all the affairs of the islands, except that it cannot pass any law affecting trade relations with the United States, or any tariff or currency law, or any law disposing of public lands, timber or mining rights, without securing the approval of the President. The right of Congress to annul any act of the Legislature is expressly reserved.

GOVERNOR WOODBRIDGE N. FERRIS OF MICHIGAN

Officially host to the Mackinac Conference of the Border States and Provinces, under the auspices of the American Peace Centenary Committee, to meet at Mackinac Island, Michigan, on July 21 and 22. The program for the celebration by these states and provinces of the Hundred Years of Peace will be formulated

General supervision over the non-Christian tribes is given to a permanent bureau. The right to vote is confined to citizens of the islands, and the present educational qualification is so broadened that it admits those who can read and write a native language, instead of English or Spanish. The two Commissioners at Washington, now elected by the Legislature, are to be chosen by popular vote. The Legislature is empowered to admit resident Americans to citizenship.

COSMOPOLITANISM AT CONSTANTINOPLE

While Albania has been torn by racial hostilities twenty-four girls, representing five races, have been completing their course at the American College for Girls in Constantinople. A third of the graduates of 1914 are Bulgarians, and this group represented the ancient royal court of Bulgaria in a Pageant of Nations on Commencement Day. Other national groups were costumed as Bulgarian peasants, Turkish and Armenian women, and classic Greeks

While the bill has the approval of Mr. Wilson, he will not insist upon the passage of it at the present session. But it will be prest to enactment next winter. It is said to have the support of the committee and of a majority in the House. Commissioner Quezon, an advocate of Philippine independence, expresses his approval of the measure, as a step in the right direction.

Japanese Immigrants

Supporters of the Raker and Hayes bills relating to the exclusion of Asiatic immigrants will attempt to obtain committee reports on these measures, and action in the House, before the end of the present session. The Raker bill provides for the exclusion of all Asiatic laborers, and for registration of those who are now in the United States. Action upon these bills was deferred in committee some months ago, at the request of Secretary Bryan, and it is understood that the influence of President Wilson was exerted in the same direction. Very few Japanese laborers have entered the country in recent years, owing to the agreement, by the terms of which the Government of Japan withholds passports from Japanese of this class. While the Government of Japan is willing that the agreement shall continue in force, it objects to exclusion by legislation.

Therefore it has informally submitted to our Government a protest against the bills in question, holding that if they should be enacted, they would be at variance with the commercial treaty. This is also Japan's contention with respect to California's alien land law. It is reported that Mr. Wilson and Mr. Bryan are again exerting their influence to prevent action upon the bills.

Immigration in the British Empire

Administering an empire on which the sun never sets has its difficulties, and not the least of these at the present time in the British dominions is the reconciling of its numerous races to a ground of common understanding of each other. Australia, Canada and New Zealand are now struggling with the problem which attends the emigration of subjects from one part of the empire to another.

At Victoria, British Columbia, a Hindu has brought habeas corpus proceedings to prevent his deportation by the immigration authorities. As a British subject he claims the privileges of Magna Charta, and the right of residence in any part of the Empire, while the Canadian immigration law excludes all Asiatics, whether or not they are British subjects. The Asiatic problem is also the cause of alarm in New Zealand and Australia. New Zealand is now considering a bill to exclude them on the basis of a stringent language test.

The anxiety of these western commonwealths is how to get white and preferably British immigrants. Last year the net immigration figures for New South Wales, Victoria and South Australia were only half those of 1912. Of these, only 41 per cent were agriculturalists, which is the class particularly desired. The chief difficulty is admitted to have been the immigration policy of the past, dictated largely thru fear of the Asiatics, which provided first for the assistance by limited passage money of immigrants chosen by state officials, or nominated by relatives or prospective employers, and second, the entire absence of reception houses or other accommodations for those not so chosen.

Preferences for British immigrants in the colonies, on the other hand, has created no less of a problem in Great Britain. England herself, under Lloyd George, is trying to institute a back-to-the-land movement, and the class to which she appeals is that most desired in the colonies. The agriculturalists who emigrated last year, according to Mr. Jesse Collings's statement, exceeded in number the entire population of the counties of Bedfordshire, Buckinghamshire and Shropshire.

Armed Truce in Ulster

Altho Parliament is making as rapid strides as possible toward a compromise on Home Rule, the situation in Ulster, due to the arming of both sides, is admitted to have gotten almost beyond control. On Sunday, July 12, which was Boyne Day, a holiday when all Orangemen remember the famous battle of two hundred and twenty-four years ago, excesses were looked for which might precipitate the conflict, but the day past off with but few incidents. Owing to the arrangements of the Belfast police, the Ulster celebration was held on Monday instead of Sunday, in a field five miles from the city, and the Orangemen left and returned at hours when the Nationalists were at work.

Publication of the Ulster Constitution was made simultaneously with the call for the first meeting of the Provisional Government, to be held in Ulster Hall, Belfast, on the 10th. Captain Craig declared that it was their purpose "simply to hold the Province of Ulster in trust for the United Kingdom," and that the Provisional Government would administer all common and statute law as before, with the single exception of the Home Rule bill. Five hundred Ulster Unionists, including Sir Edward Carson, Lord Londonderry, and most of the "die-hards" from Westminster, are said to have sat in the secret council. While the conference was on a great cordon of Volunteers, fully armed, was thrown around the building. The Liberals jeer and call the meeting a fiasco, while the Tories say that the Liberal newspapers are suppressing the real facts from Ulster and attempting to misrepresent the Covenanters as engaged in a great game of bluff.

In Parliament, compromise is

making rapid progress. The amending bill has already past thru the committee stage, and reaches the House this week. The Cabinet has already discussed the substitute bill of the Lords, and the Government intention is to delay action upon it as long as possible. The backward state of the budget is held out as the excuse for this move. The Unionists expect that the Nationalists, with their demands for immediate action, will thus be brought into conflict with the Cabinet, a situation from which they hope to extract the profit.

Nicholas Visits Rumania

The steady decline of the influence of the Triple Alliance in Balkan politics continues to be marked in the recent visit of Czar Nicholas to King Charles of Rumania at Constanza. When the traditional enmity of the Rumanians toward everything Russian, arising out of the years of oppression suffered before freeing themselves from the yoke, is recalled, this meeting has a greater significance.

Both powers have common interests in the Black Sea, in the Dardanelles, and along the Danube, while the threatened war between Greece and Turkey would be against the interests of both countries.

Rumania, like Bulgaria and the other Balkan states, is very much alarmed at the immense fortifications Austria-Hungary is building along the Danube. They have been compelled to follow her example in building powerful river monitors and forts. Rumania also, on account of the advantages contained in the treaty of Bucharest for herself, is loth to see the treaty torn up in a new war between Turkey and Greece, a result which would not be displeasing to Austria-Hungary. Russia, on the other hand, with the rising sea power of the Dual Monarchy in the Mediterranean and Adriatic, has been compelled to add greatly to her Black Sea fleet. The opening of the Dardanelles is thus of increasing importance to her, and the alliance of other powers interested in the same end is another step toward its accomplishment. Thus these ancient enemies have been forced to a common alliance against a common foe. It is probable also that Rumania will not be slow to utilize this alliance, if such results, as an opportunity of driving a good bargain for the return of a part of the province of Bessarabia, alienated from her by the treaty of Berlin, to the loss of which she has never been reconciled.

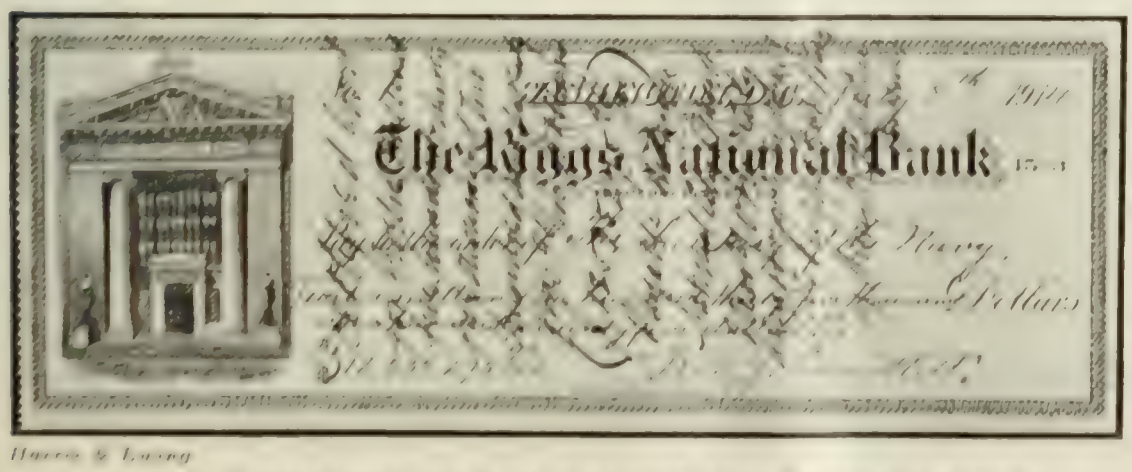
RACE WAR IN ALBANIA



Insurgents placing guns in position on the hights to shell the city of Durazzo, capital of the luckless Mpret William

Wilson Cashiers Minister Williams

The career of George Fred Williams, of Massachusetts, as Minister to Greece and Montenegro, has come to an untimely end. Following the publication of a second statement, concerning which, like the first, the State Department had no information, President Wilson cabled for his resignation. As evidence of the sincerity of regret of the United States the President directed the Secretary of State to apologize to the European powers for the outbursts of the Minister.

Following the acceptance of his resignation, Minister Williams sent a long cablegram to the New York *American* defending his position. After reviewing the history of the establishment of the Albanian state and the events of the last six months, he asserts that Austria and Italy are trying to outwit each other in a game to grab the whole country. "A defenseless nation," he says, "is being attacked by a lot of ravenous monarchical wolves," and then he adds, "But I am a good wolf hunter." His heart was sickened at the sight of the shedding of the blood of Albanians in order that a silly dog fancier might wear a crown. For these reasons he determined to wreck the usurpation. In conclusion Williams says: "We gloried in the support from the United States when Greece and Poland were struggling for liberty. Is this to be a Greece or a Poland? We shall see."

Meanwhile the revolution among the Epirotes has somewhat subsided, their demands having been granted and the crops requiring their attention. Unless the harvest, long overripe, is cared for, there will be ruin in this agricultural country, and the northern insurgents have practically disbanded until the fall. The Mussulmen, however, still continue to beset Prince William, whose standard has been joined by many Austrian volunteers. With the Austro-Italian differences again adjusted, the international force may still be able to save the Mpret's throne.

TO TWO BATTLESHIPS TWELVE MILLIONS AND NINETY-SIX CENTS

The check for $12,000,000.96 that was handed to Secretary Daniels by the Newport News Shipbuilding and Dry Dock Company agents for the Government of Greece in payment for the battleships Idaho and Mississippi. They are now the "Lemnos" and "Kilkis" and they check twelve Turkey's naval threat. Two new dreadnoughts will take over the names temporarily lost to the navy

WHAT'S AHEAD FOR BUSINESS?

A SERIES OF INTERVIEWS WITH LEADERS IN THE BUSINESS WORLD BY HENRY FARRAND GRIFFIN

MONOPOLY IN THE PUBLIC INTEREST

AN INTERVIEW WITH

THEODORE N. VAIL

PRESIDENT OF THE AMERICAN TELEPHONE AND TELEGRAPH COMPANY

AT a big glass-topped mahogany desk on the fifteenth floor of a busy office building in lower New York there sits a man who has been formulating in the laboratory of practical operating experience a new economic theory.

Briefly stated, this theory is that the most efficient and economical administration of public utilities is obtained thru private monopoly, controlled and regulated by permanent, quasi-judicial governmental commissions.

This man at his desk in New York has supreme authority over one of the greatest of all public utilities, a veritable empire of wires, millions of miles of copper filament, covering like a network practically the entire United States. He administers a property representing an investment of three-quarters of a billion dollars. He directs an army of 150,000 employees.

This man is Theodore N. Vail, president of the American Telephone and Telegraph Company, better known, perhaps, as the Bell Telephone System.

A comfortingly big man, physically as well as intellectually; amazingly swift and alert in thought; deliberate, incisive, decisive in speech. Farsighted, forward-looking, he is gifted, too, with breadth of vision that led him early to realize the significance of the fundamental changes in public opinion which have in recent years worked a revolution in political and business ethics. Long ago he set about putting his house in order. From the first he has recognized the value of frank publicity and of fair and open dealing with the people's governmental representatives. He was among the first, too, of public service corporation heads wholeheartedly to accept the principle of governmental regulation and control. For many years now he has sought by voice and influence to cooperate in the building up of the standards and prestige of Public Service Commissions. Within the past year the frank and fair attitude of the Bell Telephone interests in their negotiations with the Federal Government ending without litigation in an amicable adjustment of all existing differences, drew from both the President and Attorney General friendly expressions of commendation.

The net result of this far-sighted policy has been to place the American Telephone and Telegraph Company in an enviable position among public service corporations today. It has enabled Mr. Vail within the past few weeks to say in addressing his stockholders:

"The recognition of the good faith of the company in its efforts to cooperate with city, state and national regulatory bodies in the solution of questions as to rates and service is confidently growing and broadening, with a marked tendency, as a result, to better and more stable public relations.

"There is not a single suit pending in any state or federal court claiming any violation of any anti-trust law, state or federal."

Fresh from reading the telephone company's latest annual report to its stockholders (a remarkable document, incidentally, well worth the careful study of any one interested in the economic tendencies of the day) I had come to seek an opportunity of discussing with Mr. Vail the present condition and probable future development of public utilities in the United States. In reading this report I had been struck in particular by the frank acceptance of the principle of private monopoly as the most efficient and economical means of administering public utilities. Thus:

"The policy of the Bell System—one telephone system—under one control—has been appropriated as their policy by the advocates of government ownership. They assert the desirability of monopoly as their fundamental premise. They say that the Government should attempt to do what the world concedes the Bell System has done."

With this statement in view, I was much interested in Mr. Vail's reply to the following question:

"Is it not true, Mr. Vail, that the whole trend of Anglo-Saxon economic development, as exprest in laws and public opinion, has been antagonistic to the principle of private monopoly?"

"Yes," he replied without hesitation, "that is on the whole true. But for a fair consideration of such a question you must define what you mean by monopoly.

"Let us go back a few hundred years. In the old days a monopoly was a grant from the crown of the exclusive right to sell some commodity. The king would grant a favorite a monopoly of the sale of some necessity, like salt, for instance. This was done, not because the favored person had any better knowledge of the business than others, nor any better facilities for the production and sale of salt. It was done simply to permit the monopolist to pocket a profit, usually extortionate, from all purchasers. The result of this is that even now after many centuries the very word monopoly is almost invariably associated in our minds with the idea of extortion.

"Monopolies of this kind still exist in a modified form in certain European countries. The manufacture and sale of tobacco, for example, is a government monopoly in France.

"A very different thing is the industrial monopoly, so-called, which appeared toward the close of the past century. This was a logical outcome of the age of machinery, a natural result of the modern inventions and machinery that have changed the whole manner and method of industry. Take, for example, the manufacture of boots and shoes. In the old days a man who wished to become a shoemaker had to spend years, as an apprentice, learning his trade. After he had served this long apprenticeship he knew the whole of his trade, he could make any part of a boot or shoe.

"What do we find now in a modern

shoe manufactory? A man at one machine is making soles—and nothing else. Another man at another machine is making uppers. Another man is making button holes; another fastening in buttons; others assembling and sewing the parts that make the finished shoe. Each of these men can learn in a few days or weeks to run the machine that does his allotted part of the work.

"If this is true of ordinary manufacturing, with how much greater force does it apply to public utilities, such as railroads, power and light and telephone and telegraph systems, which may be said to be natural monopolies. Here there are the same advantages of economy and efficiency in operation on a large scale, and, moreover, the value of a utility system to the public is almost invariably in direct proportion to the universality of its service and the uniformity of the rates it charges for that service. The people of any city, for instance, may be much more conveniently served by one transit system than by two. When you take a street car you do not wish to be compelled to change cars and pay two fares to reach your destination. Similarly you may do your telephoning most conveniently if you are able to reach every other person thru the same exchange or system of exchanges. This holds true in a greater or less degree of most other public utilities.

© Harris & Ewing

THEODORE N. VAIL

"This man at his desk in New York has supreme authority over one of the greatest of all public utilities, a veritable empire of wires covering like a network practically the entire United States"

"Wealth is created not by driving labor and getting more work out of the individual, but by getting from the same or less amount of labor a greater production—and by utilizing or eliminating waste.

"You can readily see that to make 'operation' most efficient and economical it must be done on a big and comprehensive scale. Hence we have *bigger* and *bigger* industrial combinations of more or less monopolistic character, and in public utilities virtual monopoly, local or national, more or less complete.

"Another important point is the question of uniform rates, which can only be had thru a system covering a large and diversified territory. No utility can produce and deliver the same unit of service at the same cost in all parts of its territory. Uniform rates are based on average costs and this necessarily means that under some conditions these rates will appear excessive, just as under other conditions they will be really inadequate. A trunk line of railroad with its heavier traffic can transport freight at a cost that would be utterly out of the question on its branches. Yet the advantage of uniform rates to shippers is apparent.

"The utility, moreover, to give uniform rates must be protected from unfair competition. If a competitor, so called, is permitted to supply its service only in the more favorable and profitable parts of a territory a manifest injustice is worked upon the utility which is giving uniform rates over all parts of that territory, profitable and unprofitable alike. If the competitor, on the other hand, is compelled to give the same service at the same rates over the entire territory, you will have unnecessary duplication of plant and equipment for which the public must ultimately pay either in higher rates or loss to investors.

"I think, therefore, we are justified in saying that if any utility system is to give the public uniform rates and the most satisfactory, efficient and economical service, that utility must inevitably tend to combination and to a single system, or—if you wish to call it that—monopoly.

"It is hardly necessary, however, to say that this kind of monopoly, either industrial or in the field of public service, is a very different thing from the old extortionate monopoly granted by the king to his favorite. In the one case we have a logical eocnomic development from modern inventions and machinery, in the other a manifest abuse of power, an arbitrary interference with the natural laws of trade and commerce."

"But even so," I asked, "are not both kinds of monopoly, the old and the new, either potentially or in effect the same, since they give to a relatively small group of individuals control over the prices of public necessities or conveniences?"

"That would be true of unregulated monopoly," Mr. Vail promptly agreed, "but I may answer your question indirectly by saying that all monopolies should be regulated. Government regulation can effectually curb 'monopoly' and 'selfish exploitation' and make them useful without destroying them by subordinating them to the public for the public advantage.

"The companies comprizing the Bell Telephone system were among the first of public service corporations to advocate state or government control and regulation of public utilities. We believe that this control or regulation should be by permanent quasi-judicial bodies, acting after thoro investigation and governed by the equities of each case; and that this control or regulation beyond requiring the greatest efficiency and economy, should not interfere with management or operation.

"We believe that these bodies, if they are to be permanent, effective and of public benefit, should be thoroly representative; they should be of such character and should so conduct their investigations and deliberations as to command such respect from both the public and the corporations that both will without question accept their conclusions.

"We believe that the public would in this way get all the advantages and avoid all the manifest dis-

advantages characteristic of public ownership I cannot make too emphatic my belief in the necessity of the highest possible standards for these Public Service Commissions. The work that they must do becomes of increasing importance each year. The men appointed to them should be the biggest and the ablest that can be induced to serve. I believe that the members of the Interstate Commerce Commission, for instance, are called upon to render decisions as vitally important to the people of this country as those of the United States Supreme Court and that the standard of appointments to the commission should be as high as to the Supreme Court.

"We of the Bell Telephone system are doing everything in our power to make a campaign for increased respect in the attitude of the public toward the Public Service Commissions. The greater respect in which these bodies are held by the public, the abler will be the men who will serve, and the greater the benefit they can be to the public, and the greater protection they can be to the public service corporations. No man is too large, no standard too high, for these commissions.

"Until the time comes when the decision of these bodies can be fully accepted by all—even tho they are not fully acceptable to all—they will fall short of the purpose of their being."

"What you have been saying, Mr. Vail," I suggested, "about the economic tendency of the times toward combination and monopoly and the consequent necessity of governmental regulation and control makes me think of a conversation I had last summer with one of the country's foremost electrical engineers—Dr. Steinmetz. His argument was very similar—that modern inventions and machinery made inevitable the organization of industry on a large scale, resulting in combinations, and in time monopoly with the necessity of governmental regulation and control. But his conclusion was that regulation and control would in time lead to government operation and ownership and in the end to Socialism in some form or other."

Mr. Vail smiled. "Who knows?" he said. "Perhaps at some future time it may lead to that. But I do not think that you or I will see it—or a good many generations to come.

"I regard government ownership, or even Socialism, which is really only another name for the same thing, as a beautiful ideal. But the trouble is that under present conditions it would prove a little too ideal for this world. Given ideal conditions, ideal people and in theory there is nothing so beautiful as government ownership or Socialism. But in this workaday world we must deal with actual conditions, not theories, and with people as we find them, not as they ought to be.

"I am not arguing from theory either, for I know what government operation means from actual experience in government service. You will find our position in regard to government ownership very fully explained in our last annual report to stockholders. As stated there, theoretically there may be no reason why government operation should not be as economical and efficient as private operation, but actual constructive performance runs up against actual conditions and tangible difficulties which only experience shows how, and responsibility develops the ability, to deal with.

"Departmental officers taken from walks of life affording neither experience nor knowledge of the duties and responsibilites they are to assume, are expected to perform the various duties of their departments and also incidentally to look after their political obligations. As a rule their training better fits them for advocates than for executives, for judicial positions or as commissioners of regulation than as directors of operation.

"Every new head of a department is of necessity a reformer; his average incumbency is less than four years; there is seldom any continuity of departmental policy, and never any continuity of departmental staff. The important assistants come and go with the head. A review of the operations of his department shows much that could be changed to advantage; to eliminate all that is unsatisfactory and bring about effective results under the conditions and in the time available is impossible for the ablest. He starts in finding an incomplete attempt at accomplishment along a certain line of policy, and goes out leaving an uncompleted attempt along a different line of policy. The inevitable tendency is towards promise, not performance.

"Government administration is more or less a game of politics; and while with government operation it may sometimes be possible to have efficiency, it will always be impossible to have economy."

AT SAMARIA

BY CLINTON SCOLLARD

We climbed the hill wherefrom Samaria's crown
  In marble majesty once looked away
  Toward Hermon, white beneath the Syrian day;
And lo, no vestige of the old renown,
Save a long colonnade bescarred and brown,
  Remained to tell of Herod's regal sway,—
  The gold, the gauds, the imperial display,
He heaped on Judah's erewhile princely town.

Ruin was riotous; decay was king;
  An olive root engripped the topmost stone
    As tho it clutched and crushed the thing called fame;
Seemed as a fragile wind-flower petal, blown
  Into the void, the past's vain glorying,
    And Herod but the shadow of a name!

THE CHAUTAUQUAN

MERGED WITH THE INDEPENDENT, JUNE 1, 1914

Official Publication of Chautauqua Institution, a System of Popular Education, Founded in 1874, by Lewis Miller and John H. Vincent.

JOHN H. VINCENT - - Chancellor
GEORGE E. VINCENT - - President
ARTHUR E. BESTOR - - - Director

FRANK CHAPIN BRAY - - - - Chautauqua Editor

CHAUTAUQUA'S social service as a laboratory for educational experiment can hardly be ovestimated. An Elbert Hubbard bemoans Chautauqua's lost opportunity to capitalize itself for commercial profit, and points to fortunes made from commercial development of educational ideas, like correspondence courses, tried out by Chautauqua. But the Institution preferably points to its pioneering in unconventional methods of education which become standard means of educating the leading democracy of the modern world. Witness the *use* instead of the *waste* of vacation in a continuous process of education for life, now reflected in the popular summer schools quarter of the college year and the current demand for commonsense summer use of public school and church plants by adults as well as their children.

Shall Congress be turned into a Chautauqua every Friday? Forty members of the two houses were reported as speakers at Chautauquas in previous seasons. In view of confinement to the capital this summer Representative E. E. Roberts, of Nevada, has submitted a resolution (referred to the Committee on Rules and ordered printed) to amend the House rules as follows:

Sec. —. That on Friday of each week, after the disposal of such business on the Speaker's table as requires reference only, it shall be in order to entertain a motion for the House to resolve itself into Committee of the Whole House to listen to lectures by members of the House and Senate as well as members of the Cabinet, and to admit the general public to the galleries at the prevailing popular prices in order to encourage and foster a home industry and to obviate the necessity of its own members and those of the Senate and Cabinet leaving the District of Columbia on lecture trips during the sessions of Congress, and for the further purpose of providing revenue for campaign purposes in close congressional districts.

Boston affords a striking example of cooperation in university extension work by Harvard University, Tufts College, Massachusetts Institute of Technology, Boston College (Roman Catholic), Boston University (Methodist), Wellesley and Simmons Colleges for Women, and the Museum of Fine Arts. Sixteen courses are offered. The largest classes are in English literature and composition and in the analysis and appreciation of music. In coöperation with the City School Department three new courses are to be given in public school houses, on the supervision of teaching, educational psychology and the geography of Boston. About forty per cent of those who register complete all the work and pass the examinations. One man and one woman have received the degree of Associate in Arts, equal to A.B. in the amount of work required and accepted by the School Committee of Boston as the equivalent of it. Registrations for the fourth year number 1100, over one-quarter of them men. Nearly one-third are women teachers; clerks, bookkeepers and stenographers furnish the next largest contingents.

"Our poultry school is the first which has been conducted by any Chautauqua," claims the Valley City, North Dakota, Chautauqua Association. This independent Chautauqua, with 200 camping parties, conducts a three-weeks program, a dairy school, domestic science school, Bible study school, farm boys' encampment, girls' camp, a playground, and has a new steel auditorium seating 3000 people. Much was made this year of "Equity Day" by representatives of the American Society of Equity, a farmers' coöperative movement in work and marketing of products. Among the speakers the sales manager of the Equity Coöperative Exchange was described by the *Daily Chautauquan* (published during the season) as "a fiery orator with a message which he delivers with a punch."

The Jewish Chautauqua Society holds an annual intercolonial meeting of Jewish farmers and their families in south New Jersey. During the past four years more than 500 children of the colonists have been receiving instruction in English regarding Judaism, in afternoon classes after school hours or in evening classes for those employed on the farm or in the factories. The fourth Western Assembly was held at Los Angeles, California, this month.

W. Frank McClure, publicity man for the Redpath Bureau, is sponsor for these figures concerning Chautauqua business: Number of Chautauquas this year, 2930 (an increase of 800 over 1913), 2200 of them held in tents; 1700 employees; 1600 persons engaged as "talent"; estimated attendance, four to five millions.

Chautauqua, the popular, has already broken into *The Unpopular Review*, thru the experience of "lecturing at Chautauqua" described by a clever pagan university teacher of literature and dramatic critic, unnamed, but easily identified as Clayton Hamilton. The joke of it is he professes conversion to Chautauqua.

The Chautauqua Salute—waving of handkerchiefs instead of handclapping—was devised on the spur of the moment at Chautauqua in honor of a deaf-mute who had spoken to the audience in sign-language and could not hear ordinary applause.

A new vocation for women as platform superintendents of Circuit Chautauquas has been successfully opened up by Miss Meddie O. Hamilton, of Kansas City, and Mrs. Ida B. Cole, of St. Louis, field secretaries of the Chautauqua Reading Circle.

The Chautauqua Library School now in session is the oldest continuous training school for librarians as well as the largest in the United States.

Time was when the drama was tabooed at Chautauqua, but two performances each of "The Passing of the Third Floor Back," Bernard Shaw's "You Never Can Tell" and Stephen Phillips' "Ulysses" will be given during this fortieth anniversary season. For this dramatic work "The Chautauqua Players" an experienced company of six men and six women has been organized by M. Benedict Papot of the Drama League of America. A supplemental series of one act plays will interest special students of the drama.

THE TRAINED MOTHER

BY MARION HARLAND

AUTHOR OF "WHERE GHOSTS WALK," "LITERARY HEARTHSTONES," "THE DISTRACTIONS OF MARTHA"

SHE has never ceased out of the land. That she seems to be more in evidence now than she was sixty years agone may be but one more exhibition of Feminism.

Boarding-schools and women's colleges may have something to do with the queer reversal of relative positions in mother and daughter. In every well-appointed household the mother's is the controlling influence. In a large percentage of homes, her acknowledged sovereignty is a dictatorship. If she be a woman of intelligence and refinement, she virtually supervises her girl's education and molds her views of life, morals and manners. The father is, at most, Prince Consort, playing an insignificant part in the selection of associates and instructors, and no part at all in the regulation of deportment, speech and dress.

"My mother thinks," and "My mother says," are cast-iron formulas that make an end of all controversy while the girl is in short skirts and wears her unshorn locks between her shoulders. With the lengthened skirts and trussed hair come the entrance upon the school or college world, and the beginning of individual life.

There is more than a dash of bitterness in the oft-quoted saying of a cynical essayist that "we bring our children into the world and spend our best days and energies in teaching them to live without us."

The truth pierces many a mother-heart like a poisoned rapier. As an abstract truth she confesses it to be as wise as it is inevitable. She confesses furthermore that she would not have it otherwise. Her darlings must live their own lives and be prepared to do their part in the world's broad battlefield when she has past out of their sight. School and college, and tuition under other influflences than hers are stages in the curriculum. She is an exceptional mother in this progressive age who is not aware of the defects in an education which was the best to be had in her girlhood. She is unaffectedly and unselfishly desirous that her girl shall excel her in all that goes to the mental furnishing of the up-to-date woman. She is at the point of death with heart-hunger thruout the "term" that robs her daily living of its chief joy.

I never read the catalog of a girl's college without thinking of the unheeded sacrifices, the heroism of self-devotion represented by scores of names. I know homes in which the strictest economy is practised for the four years required to bring the daughters to commencement-day. I could tell you of mothers who never buy a new gown for themselves, or take so much as a week's outing in all that time. The "terms" that are teaching their girls to live without them! Never, in the depths of their loyal hearts do they allow themselves to think of this as "a lame and impotent conclusion" to the stress and strain, the loneliness and longing that are their portion in the old home of which, in seventy-five out of a hundred cases, the finished product of educational advantages is secretly or openly ashamed when she returns to it "for good." If the father can afford it, the house is refurnished, perhaps remodeled, the times of meals are changed; the "hired girls" are "maids" and trained to say that "breakfast is on," "luncheon is ready" and "dinner is served." I know of one daughter who left her father's house and persuaded him to allow her a stated sum for her support in a separate establishment, because the old man would not consent to a seven-o'clock dinner.

THIS preamble leads directly to the subject of my paper. Since the mother is, by custom and the prejudice of ages, the pivot upon which the household revolves, Our Graduate Girl would stultify herself if she did not recognize the imminent necessity of training her maternal parent into conformity to the approved standards of modern life.

"Imminent" and "necessity" are none too strong to be used in this connection. If Our Girl have social tastes and aspirations, a chaperon is as indispensable to her success as practical acquaintance with the new dances. And in the opinion of just-minded folk, there is a sort of distinction in being chaperoned by one's mother, instead of depending upon the good graces of neighbor or acquaintance. It implies that the family-tree has a root, and is not a grafted branch. In any case, it is not easy to dissociate the New Girl from her immediate forbears. Now and then the pupil is, as her would-be trainer would express it—"quite impossible." Fifty years of domestic life have dulled her perceptions and vitiated her higher tastes. Her speech is that of her youth, and her appearance is beyond the reach of "style." She is willing enough—poor soul! to take any imprint the dear child may wish to set upon her, but the surface is already hopelessly indurated.

If the girl be sensible she recognizes the deplorable fact, and devotes her ingenuity to the business of keeping "Mamma" out of sight as much as may be. The fiction of "delicate health" comes in aptly here, and is worked adroitly oftener than the outer world supposes.

Usually, be it said to the credit of the average American middle-class matron, she is not immune to the contagion of modernizing. She sang Rory O'More to her own "one, two, three, four" accompaniment when she was a girl. She quoted a line to me once, in a moment of confidence:

> He wished in his heart, pretty Kathleen to please.

"I am singing it over to myself all the time," she said, more wistfully than merrily. "That is the chief end of my life, nowadays. I can't bear the thought that *my* Kathleen should ever be ashamed of her mother! But it's late in the day for me to go to school again, and I often fall short of pleasing the dear child."

And another—whose daughter had just informed her in what she intended should be an "aside," that she "would better not say anything more. It was evident she didn't know what she was talking of!"——

"I think there should be a law like that I read of in a book called *The Fixed Age*, by which mothers over fifty whose children are grown and educated, should be chloroformed. I feel like a milch cow that has gone hopelessly dry."

My indignant remonstrance was thrown away. Her Kathleen had weighed her in the balance and found her wanting in the catchwords and polish of her "set." The discomfited pupil was figuratively in the corner with the dunce-cap on her head.

IT was my lot to sit near two pleasant-looking, well-dressed matrons in a quiet tea-room not many moons ago. Their intonations were refined; their manners bespoke ladyhood. Being blest (or curst) with exceptionally quick ears, I caught bits of talk.

"Now that Margaret is not by, I can sip my tea from the spoon, until I can drink it comfortably from the cup," said the elder of the two. "I learn something new every day. Last week it was that well-bred people do not take tea and coffee by the spoonful any more. No! my dear! you may just taste it once to see if it is all right, then wait until it cools to the right temperature for you to take

it from the cup. Then"—mildly sarcastic—"be very careful not to make the least bit of noise in drinking it! The same rule holds good with chocolate. And it *does* hold heat so long!"

Her crony had her plaint:

"It is astonishing how far behind the age we old people can slip, and when we have done our best to keep in the line! Now, I dearly love to eat crisp fried potatoes with my fingers —Saratoga chips, you know? Emily cannot bear to see me do it. So I fish them up with my fork.

"And I forgot when we were lunching with a friend last week, that I ought not to roll up my napkin when I was taking only one meal, and in another person's house. I was interested in something I was saying, and rolled up the napkin, instead of laying it loosely by my plate. I saw in a minute that I had mortified the poor child. When we got home she told me what it was. And don't you find it hard not to speak of 'a piece in the paper' instead of 'an article'? And never to say 'ma'am,' or 'sir,' as we were taught to do when we were young?"

"My hair is my great drawback!" replied the other with a little laugh. "Poor dear Margaret does her prettiest to teach me how to dress it properly. I am terribly stupid, and just tuck it up in the old way, without thinking once of the new until I come down to breakfast and see her look sorrowfully at my head. I wish I were quicker-witted!"

Her friend sighed sympathetically: "I suppose the mental muscles stiffen as we get old. And we are apt to forget that our obsolete ways of acting and talking must annoy those who are better educated than we."

Neither of the speakers suspected that I was within earshot, and their talk might have been overheard by a dozen people, and done no harm.

Yet I got myself away quietly with the feeling that I had intermeddled with the heart's bitterness of two sufferers from one and the same cause. On the way home, like Bunyan, "I fell a-musing."

I RECKONED up the years of tender service rendered by the mothers to their respective daughters; the prayers and tears their youthful errors had cost them; their pride in the accomplishments which brought admiration, and the graces that won love for the pair. And one mother was rebuked as a virago might scold a naughty child, because she forgot the latest fad of table etiquet, and the other dare not quaff her tea contentedly when her mentor was by! It is said—and with reason—that women as a rule are lacking in a sense of proportion. I reflected hotly that the dialog I had overheard proved this beyond a doubt. Life-long devotion and sterling virtues went for nothing if the mother picked up Saratoga chips with her fingers, or let slip the "ma'am" or "sir" she was taught in youth to consider the one and only proper address when speaking to a comparative stranger, or to her senior in age.

A sadly significant circumstance was that both women accepted the position assigned them under the new régime as a thing of course. Abdication of the throne—deposition from the dictatorship—was what might be expected. Their only anxiety was lest banishment from the court might be their ultimate fate. The mother who does not take kindly to training sinks to the level of an upper servant, beloved still, but no more her daughter's equal mentally and in behavior than Margaret or Emily was the parent's peer in infancy.

COINCIDENCE—which often assumes the rank of a natural and universal law—ordained that I should encounter that same day at an afternoon tea two women who were "tired to death" after a day of shopping and dressmakers. Both, it appeared—to perfect the coincidence—had spent most of their time looking after their mothers' wardrobes. And each affirmed despairingly that the old ladies "would never look decent if their daughters did not take them in hand." One recusant "would persist in wearing a widow's bonnet and veil."

"Altho dear father past away four years ago," the daughter plained—"and, as we tell her over and over, nobody wears weeds longer than a couple of years at most. She is one of the gentlest women living, yet she is obstinate there. She says *her* mother never laid off her veil, altho she outlived her husband twenty years. I have hopes of getting the horror off her head yet, for I brought her to confess this morning that 'times had changed in dress as in most other things.' That was a step gained."

In a most unregenerate frame of mind, I poured out my indignant protest that evening to a cherished friend who is herself a widow and the mother of grown children. She listened in silence that was not unsympathetic until I had expended my vituperations.

Then she said quietly: "And yet there is another side to the question. The old mother, at heart, resents the idea of being a back-number in the circulating library of life. Who is to keep her from falling out of step with the age, if her daughters do not attempt it? She has given them the advantages which made them what they are. Why shouldn't she, too, get the benefit of them? I grant that the 'training' you deprecate seems unnatural and the manner of it unkind at times. Isn't love the motive, after all? Have we mothers the *right* to make our children ashamed of us? Isn't adapting ourselves to prevailing modes of manner and speech, to some extent, a duty we owe to them and to ourselves? The question of sipping one's tea with a spoon is a minor detail of table-etiquet. I suppose my grandmother would have said the same of drinking her coffee from the saucer after the manner of her youth. I recollect that it used to mortify us intensely. I recollect, too, that our mother would never allow us to speak to the old lady on the subject. She had 'notions' as to reverence for the hoary head that are out of vogue now. We cannot stem the tide with our feeble hands. Why not try to prove that we are not too old to learn, and end heartache and carping and ridicule by letting training have its perfect work in and upon us? It is a self-evident fact that we cannot do without our children. May it not be possible to make them as proud of us as we are of them? If we admit our inability to keep abreast of them, do we not justify their criticism of us?

"I grant that it is humiliating to be corrected and schooled and, at the best, affectionately patronized by those who, it seems, were but yesterday in pupilage to us. Let us be honest with ourselves and with one another.

"If, as one of your witnesses says, our mental muscles are stiff, it is for want of exercize. We put our children in the way of bringing out all their minds can do, and let our own become flaccid or non-elastic.

"This whole matter of Trained Mothers is a simple case of cause and effect. A mother once said to me that, in thinking of the responsibility of bringing up her family, she 'felt like an engineer who had set in motion machinery he could not control.' I submit that he had no right to call himself an engineer if he took a position in which such ignorant meddling was possible. The mother has laid upon her the sacred duty of aligning her child with herself so long as they both do live. The queen who is born to the throne cannot lay by her high office.

"'A hard task,' you say? The believer in *Feminism* should not shirk it."

Pompton Lakes, New Jersey

AN AMERICAN VESUVIUS IN 1915?

RECENT eruptions of Lassen Peak in California have caused geologists to wonder if old Vulcan is preparing an American Vesuvius for the visitors to the Panama-Pacific Exposition next year. Lassen Peak is in a region which is girdled by volcanoes and is situated at the southern end of the Cascade Range between the Sierra Nevada on the southeast and the Klamath Mountains on the northwest.

The eruptions began on the evening of May 30 with an outburst of steam which continued for ten minutes. It formed a crater in the snow-covered summit of Lassen about twenty-five by forty feet in extent and covered the encircling snow for a distance of 300 feet with a mantle of dark, wet dust. Since then there have been twelve eruptions, the most violent occurring on June 14, when several overventuresome persons were injured by falling or rolling stones. The eruption was visible from the Sacramento valley forty miles away and the rolling column of dense black smoke rose to a hight of more than 2500 feet. With each eruption the new crater is enlarging and on June 20 it was 400 by 100 feet.

No molten products have been found in connection with the recent eruptions, but geologists declare that the outbursts have been of a volcanic character. The rise of temperature is local, as the other hot places about the mountain are not perceptibly hotter.

The lavas of Lassen Peak which were thrown out in past ages reach the Sacramento valley on one side and on the other form a part of the vast volcanic field which stretches across California, Oregon, Washington and Idaho to the Yellowstone National Park.

Only time will tell what Lassen is going to do and it may subside to its former quiescence. It must not be forgotten that it was only the top of old Vesuvius that was blown off to make Monte Somma and the Vesuvius of today. Eruptions as a rule break out suddenly and sightseers should approach the crater of Lassen with caution and on the windward side. Now that the movies have shown volcanic eruptions risk is superfluous.

THE SUPREMACY OF THE COURTS: A REPLY TO SENATOR CUMMINS

BY GEORGE W. WICKERSHAM

FORMER UNITED STATES ATTORNEY-GENERAL

IN his article published in The Independent of June 1st, Senator Cummins, of Iowa, makes the statement that

> Ours is the only great country in the world in which a court can and does overthrow an act of the legislative branch of the Government because the act is without constitutional authority or in violation of a constitutional command.

This is a surprizing statement coming from a lawyer and legislator of Senator Cummins' recognized experience and ability, but none the less is it inaccurate. The fact is that in nearly every one of the English colonies whose governments are embodied in written constitutions by which a separation is effected between the executive, legislative and judicial functions, the courts exercize power to pass upon the constitutionality of acts of the legislature, precisely as courts in the United States have done from an early day. Such is the case in Australia, New Zealand and British North America, and the reports of the decisions of the Privy Council in England abound in instances where it has past upon appeals from the highest courts of the colonies, mentioned in review of their decisions upon the constitutionality of acts of the colonial legislatures.

In Australia, the constitution of the commonwealth, adopted in 1900, not only recognizes the ordinary power of the judiciary to pass upon the constitutionality of acts of Parliament, but also provides that under certain conditions the executive or the legislature may require the opinion of the justices of the high court upon constitutional questions, and declares that no appeal shall be permitted to the Queen in council upon the decision of the high court upon any question arising as to the limits, *inter se*, of the constitutional powers of the commonwealth, or those of any state or states, or as to the limits *inter se* as to the constitutional powers of any two or more states, unless the high court shall certify that the question is one which ought to be determined by Her Majesty in Council. (See *Moore's Constitution of the Commonwealth*, Melbourne, 1910, p. 360; *Edgerton's Federations and Unions within the British Empire*, Oxford, 1911, pp. 58, 66, 212, 214. As to Canada, see *Todd's Parliamentary Government in the Colonies*, pp. 220, 363, 366.)

It is rather significant also that the first concrete suggestion of what Colonel Roosevelt afterward adopted as a feature of his new political faith, under the name of the "Recall of Judicial Decisions," was originally proposed in the convention which framed the constitution of the Australian commonwealth in 1900, but was voted down by a large majority, and instead, provisions adopted expressly conferring upon the judiciary power to decide whether or not legislative enactments fell within the constitutional power conferred upon the legislature. An interesting account of this will be found in Moore's *Constitution of the Commonwealth*, above referred to.

The fact is, that in no other way can the respective branches of the Government be kept within their constitutional orbits. As Chief Justice Marshall queried in Marbury vs. Madison, 1 Cranch's U. S. 137, 176:

> To what purpose are powers limited, and to what purpose is that limitation committed to writing, if these limits may, at any time be past by those intended to be restrained?

It would be well if some of the critics of the workings of our institutions were to study those of other countries more carefully before condemning them or dismissing them as singular innovations upon general powers of government.

New York City

THE PRESIDENT

BY ROBERT UNDERWOOD JOHNSON

He plead for honor and the country's good,
  And craved "ungrudging measure" of support.
The Sages gave approval as they could,
  But left to History the ungrudging sort.

HINDU DRAMA ON A CALIFORNIA MOUNTAIN-SIDE

The old Sanskrit play of "Shakuntala," in a special translation by Dr. Arthur W. Ryder, of the University of California, was given in this picturesque setting

THE MOUNTAIN PLAY OF CALIFORNIA

SHAKUNTALA, a Hindu play written more than 1500 years ago by Kalidasa, was produced outdoors on May 17, for the first time in America, in a natural amphitheater at Rock Springs, on top of Mount Tamalpais, California.

The story, which is laid in one of the pious groves occupied by a band of hermits, on the slopes of the high Himalayas, could have had no finer setting than was furnished by Nature in this open-air theater. As rounded and symmetrical as tho built by man, the Rock Springs amphitheater afforded a soft, grassy seat for the thousands of spectators who witnessed the performance. At the foot of the slope, a level, flower-strewn plot of ground served as a stage, with here and there a leafy thicket that furnished the required stage setting. On the sides and rear of the amphitheater towered fragrant pines and stately redwoods, while directly in front was spread a panorama of green-clad hills, sail-spotted bay, and the distant city by the Golden Gate. Above, in an atmosphere of limpid purity, shone a dazzling sun that was undimmed by the banks of fog that rolled in from the broad Pacific and spread out over the valley two thousand feet below.

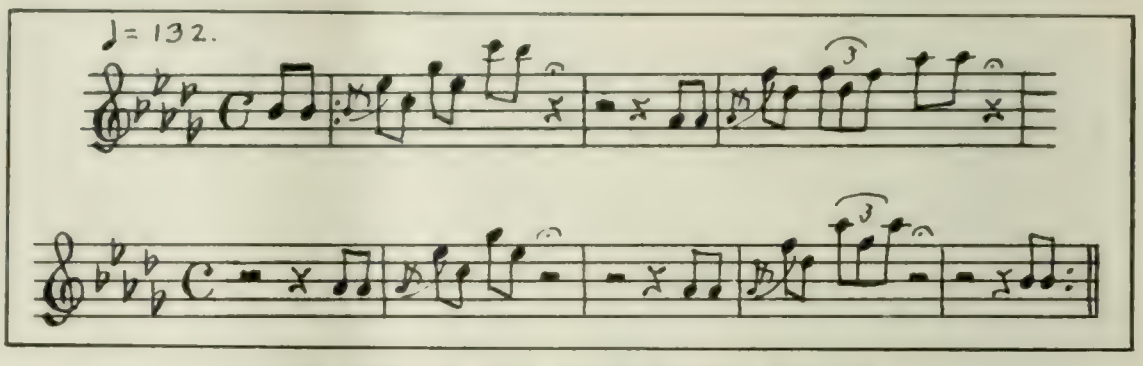
The play, with its hunting scenes of galloping horses; its spectacle depicting the pomp and grandeur of a king's court, and the transition to the quiet precincts of a sacred grove, offered opportunities for pageantry that were fully utilized. A touch of realism was furnished by several native Hindus who chanted the songs of the play in the original Sanskrit. The production was under the management of the Mountain Play Association, an organization designed to stimulate interest in the beauties of the Mount Tamalpais region. So successful was the play this year that it is the intention of the Association to produce one annually.

THE WORK OF THE BUREAU OF THE CENSUS

FEW departments of the Government have developed as wide or as important a field of work as the Bureau of the Census at Washington. Originally established to furnish the basis for a just apportionment of the representation of the different states in Congress, it has gradually broadened its field until it takes in very nearly every department of national life. Its chief reports, on population, agriculture and manufactures, cover every phase of those subjects, including for population: age, sex, race, color, nativity, literacy, etc.; for agriculture: farms, their number, size, tenure, crops, live stock, mortgage indebtedness, irrigation, etc.; for manufactures: the leading industries, food, textiles, iron and steel, chemicals, clay, glass, stone, vehicles, etc., the number and type of establishments, etc. To these were formerly appended certain minor investigations as to mortality, social statistics, churches, etc., but no one of these could be developed under the law which restricted the time and appropriations to a period of about three years. Whatever could be done under those conditions was done, the rest was left undone. This "rest undone" assumed constantly larger proportions both in regard to the statistics themselves, and especially the proper presentation and interpretation of the statistics, until the time limit was strained to the breaking point. Moreover it became increasingly apparent that it was impracticable to do thoroly what was done with the haphazard force available for such an intermittent enterprise.

As early as 1880 agitation commenced for a permanent bureau which should be able both to cover the wider field, and present more completely and accurately the facts gathered. In 1902 this was established, and the permanent bureau has had a dozen years to show what could be accomplished. It has had a most serious handicap in that the man who organized it was removed from office just as the organization was becoming effective, but still the record is an interesting one. The regular reports were presented in far more complete and satisfactory form, several reports hitherto treated in meager manner were given in much better degree. And several entirely new investigations were inaugurated and carried thru. The complete list would cover a page of The Independent in fine type, and would make very clear to the most careless observer the importance of the problem that faces the director and his staff. The problem is made more serious by the fact that the Thirteenth Census work is more than a year behind its schedule time. To make up for this delay and present results in the coming decade which will equal —they ought to surpass—those of the last decade, will be a severe tax on the energies and administrative wisdom of those in charge.

THE MUSIC OF THE SOLITUDES



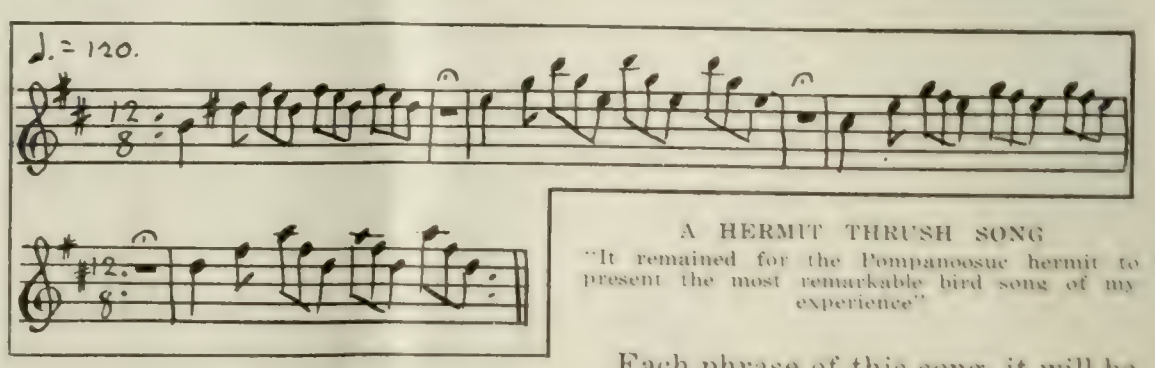
BY HENRY OLDYS

The reaction of the ordinary pedestrian to the bird songs which he hears varies all the way from indifferent or disgruntled ignorance to careful and expert observation like that of Mr. Oldys. But all those who fare forth when the leaves are green will find a keener relish in the woods by noting the snatches of song here transcribed.—THE EDITOR.

CROSS country walking, with its tangled woods, weedy or marshy meadows, ravines, fences, and other obstacles to be overcome, exercises more muscles and develops a more durable vigor than perhaps any other form of recreation. But the walker must have an engrossing object in view to prevent the walk from degenerating into a purely formal occupation, and one whose interest in music is more than merely receptive will find an ideal spur in the study of bird songs—a pursuit that will draw him into the open in all seasons and weathers, will fully occupy his mind, will carry him into and thru the wildest and most difficult places, and will cause him to exert his muscular forces so unconsciously that fatigue will steal upon him before he is aware. As a hint to those who have not given the occupation any thought, and as an added contribution to the information of students of birds, let me exhibit a few of the results yielded by my leisure moments of last year.

One of the most interesting songs I heard was obtained on the 8th of July from an olive-backed thrush on Mackinac Island. I was spending a day or two on that interesting little isle at the junction of the waters of Lake Michigan and Lake Huron, where John Jacob Astor established his station for the fur trade which formed the foundation of the Astor wealth; where lilacs grow to trees sometimes three or four feet in circumference and overtopping two-storied houses; where in midsummer one may find goldenrod, buttercups, yarrow, St. Johnswort and ripe cherries in incongruous association; and lastly, where hermit and olive-backed thrushes and veeries mingle their songs with those of winter wrens, white-throated sparrows, Canadian warblers, and other birds that choose homes well to the north.

Here, in an interesting patch of northern woods, with its wealth of mosses and evergreens, I found an olive-backed thrush to which I listened with great interest, for it was a singer of preëminence among its kind. The olive-back, while lacking the clear liquid tones of the wood and hermit thrushes and the rich overtones that give to the voice of the veery that vibrant tang that is at once unique and entrancing, still furnishes abundant vocal evidence of its membership in the gifted thrush family. But its singing is not so impressive as that of the others mentioned. There is in it a comical suggestion of tentative threats in ascending pitch—"I'll lame Aurelia, really. I'll ruin her features," and so on—dire promises of harm if occasion is furnished; just as a little schoolgirl, in order to head off a threatened attack on person or property, would say, with significant nods of the head, "I'll tell your mother." The Mackinac olive-back, while lacking none of this comedy element in its singing, yet commanded respect on account of the very rhythmical arrangement of the four phrases composing the song:

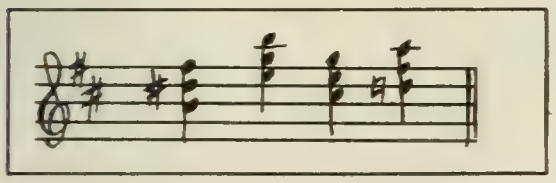


THE SONG OF THE OLIVE-BACKED THRUSH

While I listened this song was repeated fifty to one hundred times and always without variation in the order of the phrases, excepting that the singer would sometimes stop its singing midway on changing its perch. Such regularity of phrasing as this I have met with in no other thrush. It will be observed that the song consists of a modulation that is both melodious and harmonious and that could be used by any human composer without discredit.

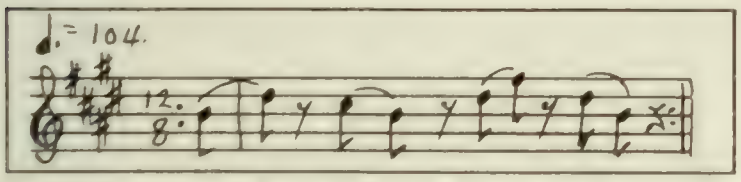
Still more remarkable was the harmonious modulation involved in the song of a hermit thrush I heard at Pompanoosuc, Vermont, on the 6th of May. The singing of the hermit thrush contains no suggestion of comicality; on the contrary it is marked by an ethereal beauty that is not attained by any other bird of my acquaintance. Nor do I know of any musical instrument that can produce tones of such exquisite charm. They seem to embody the most delicate refinement of sound. Even the wood thrush, delightful vocalist that it is, seems beside the hermit thrush like a carnation beside a Cattleya orchid.

I had been studying and enjoying the singing of hermit thrushes at Hebron, Maine, only a few days before, having been especially interested in noting how one singer echoed with some regularity the phrases uttered by another across a little valley; but it remained for the Pompanoosuc hermit to present to my hearing the most remarkable bird song of my experience. In a most acceptable spirit of accommodation this wonderful avian interpreter of human harmony perched in plain sight about forty or fifty feet from the mossy seat I was occupying and for a full half hour delivered his musical message to the deep wood, and indirectly to me. There was a ventriloquial effect to his tones, which sounded as tho coming from some point far back in the woods and thus seemed perpetually to belie his actual presence so near at hand. He varied the order of his phrases, but I soon discovered that there was a normal sequence to which other arrangements were but variations—a form of arrangement followed ten or fifteen times as often as any other. His phrases (there were but four) in their normal order constituted the following entire song—



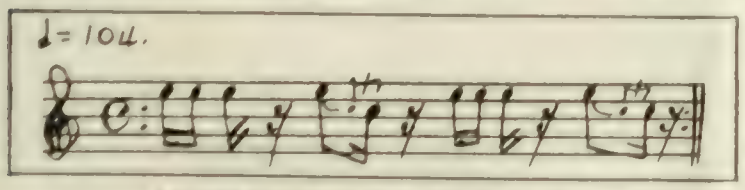
A HERMIT THRUSH SONG

"It remained for the Pompanoosuc hermit to present the most remarkable bird song of my experience"



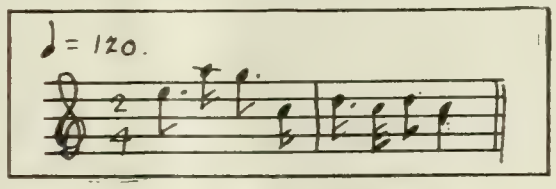
Each phrase of this song, it will be noticed, is composed of a basal note and succeeding arpeggios, the basal

note furnishing the foundation tone of the chord formed by the arpeggio (the passing tones in two of the phrases do not disturb this arrangement). The four chords involved are—



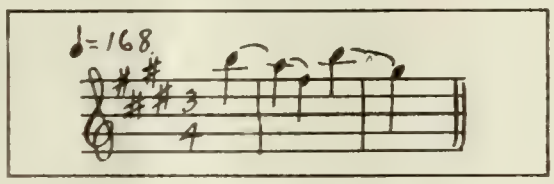
which constitute a very satisfactory harmonic modulation, passing naturally from a minor key [E] to a closely related major key [D]—a modulation often occurring in human composition.

The robin, altho a member of the thrush family, is not the musician that some of its relatives are. Indeed, it is much the inferior in this regard of its very close relative, the European blackbird. Attractive as may be its clear ringing carol in early spring, as heralding the imminence of the approaching change of season, judged from a purely musical standpoint, it is usually distinctly lacking in coherence and melodic charm. But I occasionally hear robin songs that are both coherent and melodious. One of the exponents of this higher musical standard sang over and over outside my window at Lake Mohonk, New York, early in the morning on the 14th of July, this simple yet creditable little lay—



A ROBIN SONG, BETTER THAN USUAL

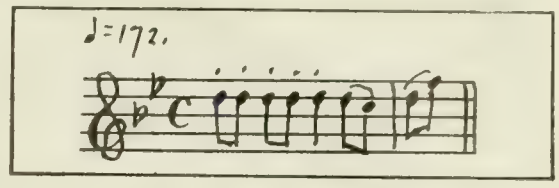
And another, which I heard three days previously at Richfield Springs, New York, less advanced in melodic training but with a good ear for rhythm, had constructed this promising, if somewhat monotonous, song—



ANOTHER PROMISING ROBIN SONG

Meadowlarks are excellent melodists, especially those of the western form (*Sturnella neglecta*), which has a rich voice with certain very thrush like notes and an extremely varied repertoire, and is abundantly distributed over the large region from Omaha to the Pacific Coast. The western meadowlark has a very penetrating voice: I once heard the song of one in western Nebraska above the roar and rattle of the rapidly moving train in which I was seated and thru the closed (double) windows. Its song is usually spirited and often decidedly human in its melody, as plainly appears in the following theme I noted near Salt Lake City on the 16th of May, 1911, which was given with great precision of time and pitch:

THE WESTERN MEADOWLARK

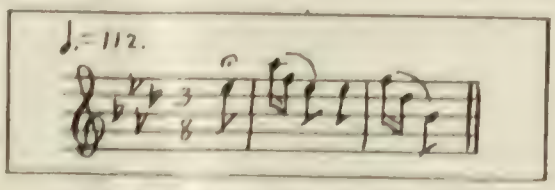


The eastern meadowlark (*Sturnella magna*) sings in very different style. Its varied songs are made up of high, thin, clear, silvery tones which slide into each other with a most pronounced *portamento*. The following is a typical example:

ITS EASTERN COUSIN

The meadowlarks of the Mississippi Valley, tho belonging to the same species as those east of the Alleghanies (*magna*), have apparently taken a leaf out of the music book of the western species; for while their songs are delivered in the *magna* quality of voice they have the *neglecta* vivacity, entirely lacking any suggestion of slur. The following song, which I heard near Mount Vernon, Illinois, on the 1st of last November, was composed of tones that were distinctly separated and was delivered with a speed that made it contrast strongly with the lazy swinging themes of the birds of the East (see notation below).

An example of great individual variation in song is furnished by Baltimore orioles, which go thru the land flaunting the colors of Lord Baltimore and filling the treetops with an almost infinite variety of rollicking songs. They display much variation, also, in the extent of their musical attainments. Often it is impossible to write the song of an oriole on the staff; again one will be heard that can be readily written down and that complies fairly well with the usual musical requirements, such as I noted near Setauket, Long Island, on the 7th of June:



WHAT THE ORIOLE SINGS

These songs—a few of the many gathered during spare moments—indicate how often bird music is cast in the same mold as human music. Thrush songs are especially worthy of careful investigation, because of their advanced character. Those of superior olive-backed, hermit, and wood thrushes disclose a rhythmical arrangement very satisfying to the human ear; and from incomplete study of the singing of the veery, I am inclined to believe that the oboe phrases of this member of the thrush family will, in some instances, be found on close attention to show a similar arrangement.

But there is no bird song that is without its charm to the musician; and while, of course, bright even-tempered days of spring and summer yield the richest musical returns, in no season or phase of weather is a walk unrewarded.

Silver Spring, Maryland

THE MISSISSIPPI MEADOWLARK

GRANTING PENSIONS TO MOTHERS

GRADUALLY the state's interest in the welfare of its children is coming to be recognized in the United States. The Federal Government recognized it first in the establishment of the Children's Bureau, and now the bureau is helping the states to recognize it in Mothers' Pension or Compensation Laws.

Twenty-one states since 1911, according to the report of Miss Julia Lathrop, head of the Children's Bureau, have taken out insurance on their future citizens in the form of mothers' pensions. Missouri was the first state to ease the burden, by granting an allowance to mothers "whose husbands are dead or prisoners, when such mothers are poor and have a child or children under fourteen years." Illinois followed and then Colorado, but recognizing the power of environment they modified the Missouri law by granting aid to children at home "if it is for the welfare of the child to remain at home." Rapidly the other states fell in line, and in only six (Arizona, Connecticut, Indiana, Kansas, North Dakota and Tennessee) did the proposed laws fail of passage.

THE NEW BOOKS

THE YELLOW PERIL AND THE WHITE

IN giving the world a fair-minded, closely reasoned survey of *The American Japanese Problem* Professor Gulick has performed a service of inestimable value. It is based upon the largest collation of facts yet available and includes a careful study of the biological, social, economic, political and ethical elements involved. That a serious problem exists no one can doubt who is acquainted with the course of history, the rapid development of race consciousness in both the Orient and Occident during recent years, and the present uneasiness of the governments of the United States and Japan over the California situation.

Complicated by ignorance and its natural children—inappreciation and superstition—the question has suffered thru misrepresentation and contempt. Professor Gulick analyzes many of the misunderstandings, exaggerations and unreasoned antipathies which have contributed to an over-sensitive attitude on the part of both Americans and Japanese: how the superficial has been too often taken for the fundamental; suspicion and prejudice past for reality and calm judgment. Even the virtues of the Oriental have by misconstruction been turned to his discredit.

That there is a "yellow peril" Professor Gulick does not deny, but he sees just as clearly that the orient also has its "white peril." His long residence in Japan has given him a view of the other side of the picture and an appreciation of the whole that is rare. The just causes of concern on the part of California and British Columbia he acknowledges, but the plight of the peoples on the opposite side of the Pacific deserves just as careful consideration.

During the past three thousand years two great streams of civilization have developed under different skies and natural surroundings. One has been marching east, the other west. They bear on their bosoms the most advanced races of mankind. By the recent mastery of nature's resources the ancient geographical and commercial barriers have been broken down, and now these two civilizations with their dissimilar and discordant elements are meeting around the Pacific to fight for supremacy and the leadership of the world, or, let us hope, to contribute to a richer, fuller civilization that shall include humanity.

When the advance guards of the aggressive white races crost the Pacific the eastern nations tried to turn them back by a policy of exclusion, but the attempt failed. Then the leaders determined to learn the white man's educational, industrial and political secrets and meet the invader with his own weapons. The outcome is seen in the Russian-Japanese war which heartened the whole East, the stirring of new economic and political life in the orient, and the anti-Japanese agitation in California over the influx of Japanese laborers and small merchants.

The plain truth is that after centuries of triumphant advance toward the ultimate control and exploitation of the world's resources, the white races have received a check from the ancient but newly-awakened civilizations of China, India and Japan.

Already the leaders of Japanese political life have begun serious study of the whole matter by the sending of eminent publicists to California to make careful investigations and take counsel with their fellow countrymen who live under the American flag. This attitude may well be taken as an object lesson.

A new oriental policy and a revision of our immigration laws which will do away with discrimination against the yellow race Professor Gulick asserts is our greatest need. He ingeniously suggests that the number of immigrants from any nation be regulated according to the number of their race or nationality who have become naturalized in America. But our greatest duty lies in ridding our people of the uncalled for hostility, suspicion and illusions which have led to an agitation unjust and humiliating to Japan and disgraceful to the United States. A reasonable appreciation of Japanese character and civilization on our part will go a good way in solving this not far distant problem.

The American Japanese Problem, by Sidney L. Gulick. New York: Charles Scribner's Sons. $1.75.

NEW FADS IN ART AND ETHICS

Oliver Onions writes in *Gray Youth* of a group of Old Young People in London, art students for the most part, and all of them bitten with the acid of cynical estheticism, etching upon their minds the out-

THE INN

223 SECOND STREET, NIAGARA FALLS, N. Y.

THE INN is pleasantly located, half a block south of the Union Station and directly opposite St. Peter's Episcopal Church. The quiet home-like surroundings and pleasant verandas appeal to the tired traveler, while our close proximity to all car lines (half a block) and only three blocks to the Falls, make it an ideal spot for the tourist visiting the Falls. All rooms are Outside Rooms, have Electric Light, Steam Heat, and are supplied with Hot and Cold Running Water from our own Deep Rock Wells. Single, $1.00 per day. Double, $1.50 per day. Rooms with Bath, $2.00 and $2.50.

F. P. HOTCHKISS, Proprietor.

lines of new and dangerous moral codes. The sub-title, "The Story of a Very Modern Courtship, and a Very Modern Marriage," indicates the theme, which is handled with humor and restraint. The New Moralists talk too much, but so they do in life, and the horrible boredom and emptiness of a society in which every experience has been analyzed to death is not exaggerated because the reality is worse than the picture of it given by this clever artist of social life among English art students. "There's too much paper in their lives," cries the Professor of Painting in the McGrath School. "They read too much: Myers says this, and Galton that, and Tolstoi the other: and they make up a sort of world out of all that, and think it's the real one, and they live in it and never get out of it. Paper, paper, paper—I've had twenty-three years of it." There is sordid tragedy in the gradual deterioration of a promising girl-artist under these perverse theories. Ardent and attractive at first with a real talent for painting, she grows selfish, bored and decadent. Her friend, in a humbler walk of art, that of a designer of fashions, develops in a more cheerful way into an unconventionally conventional happy wife and mother, and the two types of woman with their respective coteries, give Mr. Onions' satirical and humorous talent full play. The conversations at "The Witan" are especially amusing—the superficial patter of any "Cause" or "Movement" speedily grows into cant, and the cant of Protest is no fresher than any other variety of patent parrotry.

Gray Youth, by Oliver Onions. George H. Doran Co. $1.50.

A BIBLIOGRAPHY OF MEXICO

No pamphlet could be more timely than *The War with Mexico, 1846-1848*, the first of the Bibliographical Bulletins to be issued from Washington for the use of army and navy officers. Under appropriate headings are grouped the works bearing on the different phases of that war, together with specimen campaigns and battles, personal narratives and regimental histories. More important, however, are the divisions bearing on modern Mexico, its natural resources, economic conditions, its railroads, roads and trails. As a source-book it is indispensable to students of the Mexican problem.

Washington Barracks. 50 cents.

MORE FOLK OF THE FIVE TOWNS

The Five Towns are still full of interesting people, and Arnold Bennett, apparently, might spend several lifetimes in writing stories about them. The newest of these is *The Price of Love*. The characters are not attractive, but they live; the hero is a shabby one, selfish and dishonest; it remains a mystery why the honest and beautiful

Rachel should love him; but love him she does, with a devotion at first blind to his faults, but growing clear-sighted, yet unfaltering, to the end. Mr. Bennett manages to make thoroly convincing the sort of well-mannered scamp a nice girl is able to love, and the self-excusing, volatile nature is not without charm even to the reader, who is most certainly not in love with him.

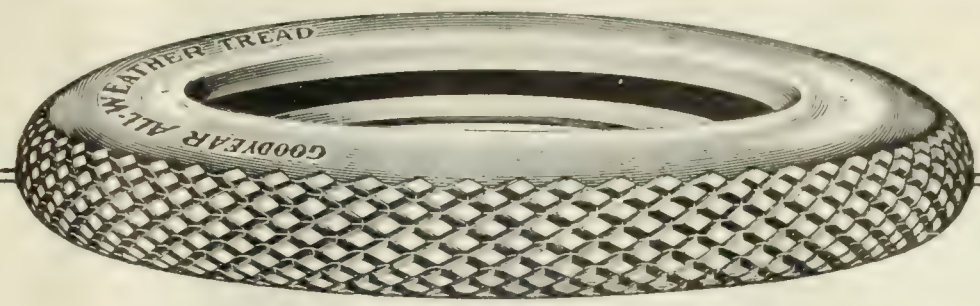
Harper's. $1.35.

NEW EVERYMAN ADDITIONS

Few works now being carried on in literature have the importance to the general reader that marks the publication of the successive volumes of the *Everyman's Library* series. In the selection of titles for republication from the vast accumulations of the past, no task could be more difficult, or better done, and those announced for the summer depart in no way from the standards of the past. Particularly happy is the choice of *Pioneer Work for Women*, by Dr. Elizabeth Blackwell and the autobiography of *Colley Cibber* in the Biography Series and Miss Edwards' *Anthology of English Prose*. The life of Dr. Blackwell, first published more than twenty years ago, has new interest thru her struggle as one of the band of women who first sought entry into the professions, then almost hermetically sealed against them. Other volumes include Froude's *Life of Benjamin Disraeli*, Seebohm's *Oxford Reformers*, and *Essays in the Study of Folk Song*.

Dutton. 35 cents each.

CHRIST'S TEACHINGS TO A SOCIALIST



Mr. Bouck White is fully as spectacular in his writings as in his attempts to discuss industrial issues with his fellow clergymen which resulted in his being sent to jail. His exposition of selected parables and incidents in the life of Jesus is given the arresting title, *The Carpenter and the Rich Man*. "The Immorality of Being Rich" is the fundamental postulate of the book and, he assumes, of Jesus' teaching. This naturally leads to a consideration of "The Imbecility of Being a Millionaire." It suggests an answer to the question, "Why did Jesus commend confiscation?" When one overlooks his socialistic phraseology and gets the man at his best, unhampered by attempts at impossible exegesis, he finds his message full of vigor and moral passion directed toward lofty ends. Such chapters as these on "The Middle Class," "Fellowship" and "The Grandeur of Man" are burning utterances of social protest and ethical inspiration.

Doubleday, Page & Co. $1.25

THE HISTORY OF SCIENCE

Natural science may be said to have declared its independence as a distinct form of thought, for it now has a quarterly, *Isis*, devoted solely to the history, organization and philosophy of science. It is edited by George Sarton with the assistance of a large board of distinguished men of science of Europe and America. Besides a review of all the current literature of the field it contains original studies in French, German and English.

Published at Zoerdeigen'ler Gand, Belgium.

Added Tire Cost

Five Ways in Which Some Men Get It

Way One is by paying too much for a tire. Sixteen makes now sell at more than Goodyear prices—some at one-third more.

Yet Goodyears lead in Tiredom. They offer costly features found in no other tire. Their under-price is due to matchless output. And that is due to matchless popularity.

Way Two is by buying tires that rim-cut. In such tires, this one trouble ruins one in three. No-Rim-Cut tires can't rim-cut. That we guarantee.

Way Three is through blow-outs due to wrinkled fabric. Our "On-Air" cure prevents this, but the process is expensive. So No-Rim-Cut tires are the only tires which get it.

Way Four is through loose treads. In No-Rim-Cut tires, through a patent method we reduce this risk 60 per cent. No other maker does this.

Way Five is through wasteful anti-skids. The All-Weather tread—used on Goodyears alone—is tough and double-thick. It is flat and smooth, like a plain tread. It doesn't center the strains on small parts of the fabric.

Mark the Reasons

You know that Goodyears outsell any other tire. You know that men are flocking to them, for you see them everywhere.

Mark the five great reasons. Look back at your tire troubles and think what these things save.

Then in fairness, try the Goodyears. Learn why they hold top place. Any dealer will supply you if you ask for Goodyears.

THE MARKET PLACE

GREAT CROPS

The Government's crop reports attract and deserve much attention, because they continue to show great yields, and also because it is expected that the agricultural abundance will put an end to the prevailing dulness and hesitation in business. In the July report we have a statement even more remarkable than that of the preceding month. The June report pointed to a wheat crop of 900,000,000 bushels, but now the Government says that 930,000,000 will be harvested. There have been gains for both winter and spring wheat, and the winter crop, now safe, is 655,000,000 bushels. A wheat crop of 930,000,000 bushels is the largest ever grown in any country. Last year's crop of 763,380,000 broke the record for the United States, but we are now to have a crop surpassing it by 167,000,000.

In this report the corn crop, whose value is about three times the value of the wheat, is estimated for the first time. A yield of 2,868,000,000 bushels is indicated, against 2,446,988,000 harvested last year, and a five years' average of 2,450,000,000. There is, therefore, to be a great crop of corn. The conditions promise a yield of 1,201,000,000 bushels of oats. Last year's crop was 1,121,768,000. Other crops, those of tobacco and rice excepted, will exceed those of 1913. Barley rises from 178,000,000 bushels to 211,000,000; potatoes from 332,000,000 to 356,000,000, and rye, with 46,000,000, will make a new high record. At current prices, the four crops of wheat, corn, oats and barley (for the first time exceeding 5,000,000,000 bushels) are worth about $200,000,000 more than the similar crops in 1913.

It is estimated that about 250,000,000 bushels of wheat will be exported, because it will not be needed at home. Already 50,000,000 bushels have been engaged for shipment. Foreign wheat supplies are lower than they have been for four years. The crop in France is deficient, and 60,000,000 bushels may be needed there.

The stimulating influence of the crops upon business begins to be felt. Railroads, foreseeing a very large grain tonnage, are buying cars, and the number of idle cars is rapidly decreasing.

DISTRIBUTION OF THE INCOME TAX

The income tax collected from individuals amounted to $28,306,336. Residents of New York, New Jersey and Pennsylvania paid more than half of it, or $16,420,757, which was nearly fifty-eight per cent of the total. Payments made by residents of the state of New York (which has about ten per cent of the country's population) were $12,523,247, or forty-four per cent of the entire sum, and in one internal revenue district of New York City the Government collected $7,950,070, or twenty-eight per cent.

Twelve southern states paid only $993,511, or three and a half per cent of the tax. In only five of these twelve states the tax exceeded $100,000. In South Carolina $25,816 was collected; in North Carolina $46,555, and Alabama and Mississippi (the report places them in one and the same revenue district) were represented by $102,586. The contribution of Tennessee (one of whose representatives was the author of the tax bill) was $98,277. Montana, Utah and Idaho, taken together, yielded $80,357, Oregon $90,082, Oklahoma $93,082, and Nebraska $76,857.

STATE BANKING IN ILLINOIS

Official investigation and inquiries made by the press in Chicago concerning the eight Lorimer banks which were recently closed have brought to light facts which are discreditable to the state authorities and a federal court. They are not wholly favorable to a man who was recently a senator from Kentucky. It will be recalled that these banks sought the savings of the poor; loaned the money so obtained to Lorimer and Munday, the controlling owners, for various enterprises, and were favored with a deposit of more than $1,000,000 of Chicago city funds. They held this deposit when they were closed for insolvency.

It now appears that the banks were in a dangerous condition six months ago; that their condition was hopeless in April last, and known to be hopeless by a State Bank Examiner, who recommended that they be closed; and that their insolvency was admitted then by Lorimer and Munday. But they were permitted to go on, and thus some time was given for a reduction of such assets as were held by the institutions, a reduction not wholly to the disadvantage of those in control. It also appears that the state banks of Illinois are subject to the authority and supervision of the State Auditor of Accounts, whose name is Brady, and that Lorimer (according to testimony taken in a suit at law) had contributed $3000 to his campaign fund. An examiner made an unfavorable report some months ago concerning the La Salle Street Trust and Savings Bank, the head of the chain of banks. That report cannot now be found. The examiner who submitted it is now the secretary of the La Salle Street Trust and Savings Bank. It is also interesting to observe that a man who was recently chief clerk of the State Auditor is now vice-president of the same bank.

Among the loans were two or three, amounting to about $47,000, granted to Thomas H. Paynter, then a senator of the United States from Kentucky, and

a member of the committee which was considering the charges against Senator William Lorimer. The loans were reduced, but on July 1, 1912, and two weeks later, when Lorimer was excluded from the Senate, they amounted to $29,150. Mr. Paynter voted to keep Lorimer in his seat. The debt at present is but a few thousand dollars.

The leader of the chain of banks was designated by a federal judge to be a depository for trust funds in bankruptcy cases, the bond required being $50,000. It is asserted by the Chicago press that more than $200,000 of such trust funds was on deposit when the bank was closed.

It is evident that these banks had political support. It is also evident that there is need of some changes in the Government at the capital of Illinois. There is now a demand in Chicago that bank supervision be divorced from politics, and it is suggested that a commission be appointed to select a Superintendent of Banking. It is quite clear that supervision should not continue to be made in the office of the state's Auditor of Accounts.

THE PRICE OF MEAT

Imports of meat have been growing in the last few months, but they do not reduce retail prices. Since January 1 there have been shipped to this country from Argentina 464,000 quarters of beef and 144,000 quarters of mutton or lamb, but they have not affected prices in the market. And now these prices, the Chicago packers say, are about to rise sharply. An increase of from two to four cents a pound at retail is predicted. This increase will not be due to trust manipulation. We are not producing meat enough for our population, and the small additions from abroad have very little weight, so far as our great domestic market is concerned. Government officers at Washington say that this year's abundant crops will not, in all probability, cause any perceptible reduction of prices.

Those who are asserting in political speeches that our farmers' interests were sacrificed by the tariff revision, and that the farmers are suffering on account of that revision, should look at the facts. They should also promote the appointment of an international commission to inquire as to the causes of the increase of the cost of living.

In the first ten months of the current fiscal year, 1,038,956 immigrants arrived at ports of the United States, and it is expected that the number for the entire year will make a new high record.

According to the estimate of Mr. Seamon, prepared for a representative of the State Department, the amount of British capital invested in Mexico is $321,302,800. The London *Statist* says, however, that it is £99,019,000, or nearly $500,000,000.

The following dividend is announced:

J. G. White & Co., Inc., preferred, quarterly, 1½ per cent, payable August 1.

A Bridge Between Hope and Accomplished Results

OUR new policy which provides for monthly payments to dependents in event of death of the insured. It is ideal protection. Its rates are low, but its benefits are many.

BERKSHIRE Life Insurance Co.

Pittsfield, Mass.

W. D. WYMAN, President
W. S. WELD, Supt. of Agencies

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,219,045,826.00
Received premiums thereon to the extent of	282,298,429.80
Paid losses during that period	141,567,550.30
Issued certificates of profits to dealers	89,740,400.00
Of which there have been redeemed	82,497,340.00
Leaving outstanding at present time	7,243,060.00
Interest paid on certificates amounts to	22,585,640.25
On December 31, 1913, the assets of the company amounted to	13,259,024.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

MUTUAL FIRE INSURANCE

The conflagration at Salem, Massachusetts, illustrates the weakness of the mutual principle when applied in practise to the hazards of fire. They defy analysis; their operations are irregular, erratic, inconstant. Here was a mill building; constructed under the most rigid specifications; of fireproof material; equipped within and without for preventing and fighting fire. But it is in ashes, and the mutual companies protecting it are severely crippled. The reports of twenty-three, at hand, show an aggregate loss of $3,567,147. Mutual policyholders want dividends that should remain in their companies' surplus fund. There is the main weakness. Surplus is the only salvation against conflagrations.

COMPENSATION RATES TOO HIGH

After working for months collating the actual experience of several states in which workmen's compensation laws have been in operation, the actuarial force of the New York Insurance Department announced about June 15 that the rates under the New York law, which was to become effective on July 1, would be equal to 324 per cent of the "pure premium" charged in Massachusetts. This included loading for expenses and a margin for contingent experience undeveloped under the Massachusetts law. The explanation for a so much higher rate in New York than in Massachusetts comes from the greater number and amount of benefits provided under the New York law.

It now develops that the actuaries have made a mistake in their calculations, and that the rates as fixed are from fifteen per cent to twenty-three per cent too high. This will cause no trouble, for the overplus, when exactly determined, will be refunded by insurers.

In addition to the State Fund, there are, as insurers, transacting this class of business, fifty-two stock companies and fifteen mutuals.

A GENEROUS PROVISION

The Metropolitan Life Insurance Company has completed arrangements thru which such of its home office employees not over sixty years old and receiving less than $2500 a year, as are not covered by the workmen's compensation act, will be entitled to a weekly income for disabilities due to sickness or accident and life insurance to an amount equal to one year's salary in event of death, at a nominal monthly premium. The employees will pay one-half the regular rates for the disability benefits and nothing at all for the death benefits.

An example of the practical working of the scheme is furnished in the company's announcement, using the case of a clerk receiving $15 a week as an illustration: The amount of life insurance would be $780 (in case of death, payable to the beneficiary in twelve monthly instalments of $65); the disability benefit would be $10 a week, payable for 26 weeks; $5 a week, payable for the succeeding 234 weeks; then $2.50 a week up to age 65. The entire cost to the employee (ages 16 to 30) for this protection will be 35 cents a month.

The management of the company assert that so far as they are aware, this is the most liberal proposition of its kind ever offered by any corporation to its employees. In view of the fact that under the compensation law the company is not called upon to do anything at all in this line for such of its employees as are not engaged in hazardous occupations, we should say that the provision thus made is a generous one.

THE SALEM CONFLAGRATION

There need be no apprehension respecting the effect which the Salem conflagration of June 25 will have on the surpluses of the fire insurance companies involved in that loss. A preliminary survey of the matter with that object in view has been made and upon the figures reported by upward of 150 companies, we estimate that the approximate net loss will not reach an average of $50,000 per company.

One stock company with a net surplus exceeding $4,000,000 is the severest loser, with about $400,000. Seven stock companies writing a direct business (in contradistinction to those writing re-insurance only), appear to have from $100,000 to $200,000 each, the aggregate apparent loss of that group being $1,015,000; against which they hold a net surplus amounting to $31,922,000. Of ten stock companies classed as small in point of resources, selected at random, we find a probable loss of $303,000 and net surplus of $5,810,000. The mutual companies involved in the fire seem to have heavier losses in proportion to their net cash surpluses and are seriously affected. The figures of ten, available at this time, show a combined loss of $430,600 and a combined surplus of $2,738,897. But the reader will observe, as we have noted, that the mutuals are not as well prepared with surplus funds—as it is surplus that counts in conflagration losses—as are the stock companies.

As nearly as we can estimate from the incomplete figures at hand when this is written, the insurance loss will aggregate close to $10,000,000; of which about $7,000,000 will fall on the stock companies and about $3,000,000 on the mutuals. One of the latter, the

HOME LIFE INSURANCE COMPANY

Geo. E. Ide, President

256 BROADWAY NEW YORK

American Telephone and Telegraph Company

Four Per Cent. Collateral Trust Bonds

Coupons from these bonds payable by their terms on July 1, 1914, at the office of the Treasurer in New York, will be paid by the Bankers Trust Company, 16 Wall Street. G. D. Milne, Treasurer.

Salem Mutual with less than $50,000 surplus, has a probable loss of $100,000 and, if this estimate is realized, will be compelled to assess its policyholders an additional full year's premium to meet it.

From an economic viewpoint, the loss is a serious one, graphically illustrating as it does the ease and facility with which unfavorable circumstances combine in our cities to wipe out of existence, in the space of a summer's day, millions of dollars of value. The destroyed section of Salem was ripe for destruction; the buildings were old and unresisting; the city's water supply was inadequate; its fire-fighting facilities defective. All these synchronized with a fire starting in a dangerous place stimulated by a northwest wind of unusual velocity in midsummer. The stock fire insurance companies were not unprepared, for the reports of the inspectors of the National Board of Fire Underwriters have for some time indicated trouble at Salem at any time.

The Supreme Court of Kansas has recently declared that the reduction of fire insurance rates ordered in 1909 and 1910 by Insurance Superintendent Barnes is both excessive and illegal.

The National Board of Fire Underwriters after an inspection of Lowell, Massachusetts, by its engineers, pronounces the physical situation unsatisfactory and the conflagration hazard high.

The Midland Casualty Company of Chicago has decreased its capital stock $50,000 as a means of increasing its surplus. On December 31 last that company had $6,869 net surplus. The capital is now $200,000.

The State Mutual Life Insurance Company of Rome, Georgia, assets, $3,686,149; surplus, $325,843 (December 31, 1913), has been placed in the hands of a receiver and there is probability that its business will be reinsured.

It is significant that when the National Travelers' Benefit Association of Des Moines reorganized the other day with a capital of $200,000, it did not retain the name it had been operating under, but dropt the word National, calling itself Travelers' Insurance Company, the exact legal title of the big Hartford institution which was founded by James G. Batterson in 1864. The Iowa authorities should not permit this sort of thing.

In the two-year period from December 31, 1911, to December 31, 1913, there was a total decrease of members between the ages of eighteen and fifty-four in the Modern Woodmen of America of 297,991, and an increase of those between fifty-five and eighty of 22,600. During the same period those between eighteen and forty-nine paid into the order $2,132,495 more than the death losses for those ages cost, while the members between fifty and eighty paid in $2,100,000 less than their death losses. The younger members are getting out because they are carrying the risks of their elder brethren.

American Telephone and Telegraph Company

A Dividend of Two Dollars per share will be paid on Wednesday, July 15, 1914, to stockholders of record at the close of business on Tuesday, June 30, 1914.

G. D. Milne, Treasurer.

J. G. WHITE & COMPANY, INCORPORATED.

43 Exchange Place, New York.

The regular quarterly dividend (forty-fifth quarter) of one and one half per cent. has been declared on the preferred stock of this company, payable August 1, 1914, to stockholders of record July 22, 1914.

H. S. COLLETTE, Secretary.

Change of Address

We will gladly change the mailing address of our subscribers as often as requested, but it is necessary for you to give the old address as well as the new. The request for a change should, if possible, be received by us two weeks before it is to take effect.

THE BROOKFIELD SCHOOL

A New Open-air School for a Small Family of Girls

DIRECTORS: Miss Helen Fairman Cooke, A.B., Wellesley
Miss Marion F. E. Cooke, A.B., Wellesley

School Year—September 24, 1914—June 17, 1915

No girl is really educated who cannot perform with some degree of skill the simple daily household duties. The girls are taught to take care of their own rooms, to cook and to do plain sewing. They are taught how to save time and labor in both domestic and academic work, and are encouraged to work out for themselves ideas which make for economy and efficiency in every line of activity.

No scheme of education is complete which fails to provide for the training of the affections. Each girl is made to feel that she is a daughter in the house rather than a pupil. Frequent visits of little children to the school are provided for as a means of joy and of developing a sense of responsibility. The girl is taught how to make her own will a strong and useful servant.

Address MISS HELEN FAIRMAN COOKE

The Brookfield School North Brookfield, Mass.

PEBBLES

THE CHILD THAT CHEWED

She sat behind me in the train,
A gentle creature, passing sweet,
And when the train stopped now and again,
She leaned her chin on the back of my seat
And, in an ecstasy subdued,
Right by my ear she chewed and chewed.

She sat behind me in the train,
And in my mind the wonder grew
That any gum could stand the strain
Of such an unrelenting chew;
In fact I think I never saw
Or heard a more astounding jaw.

She sat behind me in the train,
I sat in front and longed for death,
While, with a glorious disdain,
She chewed and chewed and gasped for breath
Until I asked her with a smile
To try the other ear awhile.

She sat behind me in the train,
A little thing of nine or ten,
And hence I failed to make it plain.
So when the train stopped now and then,
And other noises were subdued,
She gently chewed and chewed and chewed.

So now before I take a train,
I watch the people getting on,
Lest I should happen once again
By such to be imposed upon.
I stand and watch and I often lose
My train if I see a child that chews.

W. R. B.

Helois—Were I a knight of old I would battle for your fair hand.

Helle—Good knight!—*Judge.*

Doctor—Have you any request to make before I operate?

Patient (feebly)—Send for a preacher, I wish to be opened with prayer.—*Ohio Sun-Dial.*

"I hear they pinched that workman who lost the beam from the Rothsberg Building."

"What was the charge?"

"Eavesdropping."—*Cornell Widow.*

Doctor—I consider the medical profession very badly treated. See how few monuments there are to famous doctors or surgeons.

Patient—Oh, doctor! Look at our cemetery!

Our co-ed friend in Europe (to British bobby)—What is that strap under your chin for?

Bobby—That's to rest our jaws when they get tired answering foolish questions.—*Columbia Jester.*

In the report that Senator Dominguez of Mexico was very indignant when his tongue was cut out by Huerta's orders, we have something that appears rather probable. But Senator Dominguez's indignation probably reached its climax later when he was shot.—*Pittsburgh Dispatch.*

JUST A WORD

Why Does a Rich Man Work? W. F. Dix has given us the most sensible answer we have ever heard. It will be published in the fall.

Outdoor schools are among the latest developments in education, and one of the most remarkable of them, conducted by the poet Tagore, at Bolpur, India, is described by Bassanta Koomar Roy in our August Educational Number.

Dr. Slosson, our literary editor, does not believe in vacations. But he takes them, every other year at least. By way of recreation Dr. Slosson is teaching Descriptive Sociology at the Columbia University summer session during July and August.

Somebody said that life was a futility. We have never been willing to admit that, but Inez Milholland nearly convinced us of the futility of trying to suppress the suffragets, the I. W. W.'s, free speech and all the daring styles in women's clothes, in an article subject to early release.

One of the most significant indications of appreciation of The Independent, as exprest thru circulation figures, is its increasing use in schools as a text-book for contemporary history. Next winter, our circulation manager tells us, more than 25,000 copies will be used in the schools and colleges. A just recognition between friends.

CALENDAR

The Forty-first Assembly at Chautauqua is now in progress. Music Festival Week is *July 27 August 1*. The fortieth anniversary will be celebrated on Old First Night, *August 4*. Recognition Day falls on *August 19*. The assembly closes on *August 30*.

The problem of city housing will be one of the chief subjects of discussion at the twenty-second annual meeting of the United States League of Local Building and Loan Associations to be held in Washington, D. C., *July 27* to *29*.

The Gold Cup races for the Challenge Cup of the American Power Boat Association will be held on Lake George *July 29-31*.

The National Association of Teachers in Colored Schools will meet in Savannah, Georgia, from *July 30* to *August 3*.

Matches for the Davis Cup are now in progress. On *July 30*, *31* and *August 1*, at the Allegheny Country Club, Sewickley, Pennsylvania, the German team plays the winner of the Canada-Australasia match. The winners then will meet the British team at the Longwood Cricket Club, Boston, on *August 6*, *7* and *8* in the finals. The challenge round will be played at the West Side Tennis Club, Forest Hills, Long Island, on *August 13*, *14* and *15*.

The tenth International Esperantist Congress will be held at Paris *August 2-10*.

The annual meeting of the American Osteopathic Association will be held in Philadelphia from *August 3* to *8*.

The annual art exhibition of the Royal Academy is open in London until *August 3*.

The British Association for the Advancement of Science will hold its next meeting in the antipodes. The Commonwealth of Australia will pay the expenses of 150 members, who will be taken on a tour of the principal cities from *August 8* to *September 1*.

A Colonial Exhibition will be held at Samarang, Java, from *August* to *November, 1914*. It is to "give a comprehensive picture of the Dutch Indies in their present prosperous condition attained since the restoration of Dutch rule in 1814."

An open-air flower exhibition will be held in Boston from *August 18* to *21*.

The National Negro Business League is to hold its fifteenth annual session at Muskogee, Oklahoma, *August 19*, *20* and *21*. This organization is composed of negro men and women who have achieved success along business lines.

The Interparliamentary Union will meet in conference at Stockholm on *August 19*.

An international congress of women socialists will be held in Vienna on *August 21* and *22*. More than twenty countries are expected to participate.

There will be an eclipse of the sun on *August 21*—total in parts of Europe and Asia, and partial in northeastern America. The full effect will be seen in Persia, Russia and Scandinavia. At sunrise, a partial eclipse will be observed in Canada and in our northern states.

From *August 23* to *28* the ninth International Socialist Conference will be in session at Vienna.

The National Star-Spangled Banner Centennial, commemorating the successful defense of Baltimore at North Point and Fort McHenry, and the writing of the national anthem, will be held at Baltimore, *September 6* to *13*.

The races for the America's Cup are to be held at New York on *September 10*, *12* and *15*.

The twenty first World's Peace Congress will occur in Vienna *September 15 19*.

LOUIS D. BRANDEIS

WHOSE PROPHECIES OF DISASTER TO THE NEW HAVEN RAILROAD HAVE BEEN FULLY JUSTIFIED.
AN ACCOUNT OF MR. BRANDEIS' CAREER WILL BE FOUND ON ANOTHER PAGE

The Independent

VOLUME 79 MONDAY, JULY 27, 1914 NUMBER 3424

A SCIENTIFIC BORDER

IN a well-considered article on other pages Mr. Arthur R. Hinton calls attention to the fact that the western line of demarkation between the United States and Mexico gives us a far from scientific border. There is no such thing as a scientific border except it be an ocean coast, a chain of mountains, or a pathless desert. A wide river and a chain of lakes, such as separate the eastern United States from Canada, offer a passable boundary and may be accepted as a makeshift between two friendly peoples, but Brazil has the greatest river in the world, and the United States the next greatest, and those rivers are the very heart of their country. Who would think of the Nile or the Euphrates or Ganges or Yangtse or Hoangho as possible borders dividing rival nations? On the contrary, they are bonds of union, as are the Mississippi and Amazon; and as would be the St. Lawrence and the Rio Grande if historical conditions had not unfortunately made them to separate instead of cement the peoples on either side.

The complaint which Mr. Hinton makes against our unscientific border has to do with a river. The Colorado River is within the limits of the United States, but the absurd boundary line chops off the last fifty miles of it, so that it empties on Mexican soil into the Gulf of California. Of course we might have possest it thru its whole length to the Gulf of California if we had insisted upon it when after the war with Mexico in 1848 and by the Gadsden Purchase we secured possession from Mexico of an immense territory which then seemed worthless enough, but now embraces the wealthy states of California, Arizona, Colorado, Utah, Nevada and New Mexico. But in those days our commissioners did not anticipate future possibilities, and paid no consideration to scientific borders. Let it be remembered how absurd it seemed to many two decades later that Seward should have bought Alaskan glaciers from Russia, or, earlier, how Josiah Quincy ridiculed the Louisiana Purchase by Jefferson as worthless, and how Daniel Webster expresst the same opinion of the pathless territory "where flows the Oregon, and hears no sound save its own dashing."

Of course it is important for Arizona that it should have an outlet thru the Colorado River to the Gulf and tidewater. It is a pity that the need was not foreseen. It is very desirable that the United States should have possession of Lower California and this would be a special advantage after the opening of the Panama Canal. Is it too late to correct the old blunder?

Certainly it cannot be done by war; Mr. Hinton himself would not think of such a thing. To be sure, in Europe access thru the Elbe and the Rhine and the Danube has been the occasion of wars and rumors of wars, but peace is now more valued than it was. What Mr. Hinton suggests, and we heartily approve, is the effort by peaceful negotiation to gain possession of a needed small portion, comparatively, of Mexican territory by purchase, as we have previously purchased from France and Spain and Russia and Mexico.

Very likely Mexico would not consent. It might be a matter of pride to her; and to her pride is more than money. Then we can do without it, as we have done, until some more favorable occasion may arise.

BUT this comparatively small matter opens a much larger one, that of the general desirability of further accession of territory. This proposed annexation is not at present desirable in itself from any particular richness of soil or quality of the inhabitants. They would give us no special strength. All that is in the future; but so it was when we took from France or from Mexico later all that is west of the Mississippi, now the most promising if not yet the richest part of the country. The opportunity may come to us not many years hence to receive the northern states of Mexico into our Union; and who knows but that all the continent south to the Panama Canal may yet wish to be joined with our nation? What should be our policy on this subject? This is a very grave question and should be in the minds of statesmen. No student of American history can fail to see that the inevitable tendency of our country is to enlarge and still enlarge. What has happened in the past will happen further. There will be opportunities for other accessions, and that without aggression. Think of Cuba. Twice we have held back our hand, as Cæsar refused to take a kingly crown. We wanted Cuba; we knew it would be better for her and for us, but we did not think it would be quite fair to Cuba; or more likely, we wished to avoid the charge of greed of territory, and to prove our disinterestedness. The next time—and it will come—we shall stay when compelled to intervene to secure order. We may very likely be compelled to intervene in Mexico before many years. The Mexican people have not a large enough outlook to love their country as a whole. They have their local ambitions, and they do not consider the total interests of their nation which depend on peace. An election is at any time likely to involve civil war, and we have been very patient in the present civil war, when extensive armed intervention, involving ultimate annexation of all northern Mexico, would have been justified by the approval of Europe if not by Latin America. The action we have already been obliged to take in Santo Domingo and Nicaragua indicates what a succeeding step is likely to be

When we recall the accessions of the past, and observe the indications of the future, we are compelled to recur to the question: What ought now to be our attitude toward future possible enlargement of our national domain? Is it safe for us to enlarge? Can we annex other territories and their peoples without endangering our institutions and lowering our national character?

PREVIOUS enlargements and accessions have not lessened our patriotic fervor or lowered our moral standards, or in any way endangered our institutions. Of this we are fully assured. If there has been any danger, which we deny, it has come not from annexation of territory with its inhabitants, but from the people who have come to us by immigration across the water. We are not worse, but better, for having taken the splendid states west of the Mississippi. They were French, or Spanish, or Indian, and now they are fully American. Our schools, our churches, our political institutions have unified and Americanized them. Who dare say a word against Kansas and Nebraska and Louisiana and Texas and Missouri and Colorado and California as splendid and worthy American states? What we have done hitherto we can do still better in the future.

Nor has the moral stamina of our people been lowered, if we can judge by the advance in political morality. More than ever before, except as the slavery question overtopped everything for a while till it was settled by war, moral questions, the rights of men and women, the obligations of fairness to all classes of the community are those that interest our people. What means the Prohibition party, what the Socialist parties, what the Progressive party, what the platforms of the older parties as well, but that justice, righteousness, honesty and truth are what more than ever concern our people? Why, the very questions of annexation are not those of policy and profit, but of justice. Is it right to take Cuba? is it right to take Lower California? is it right to take Santo Domingo? These are the questions the people ask.

Even if we were not too good, we are too strong to need to do a wrong to a neighboring weaker nation. This has been conspicuously evident in the conduct by President Wilson of the Mexican difficulty, now, we hope, to be settled by the withdrawal of Huerta from his claim to the Presidency of Mexico. Our Government has been very, very patient. If we have erred at all it has been on the safer side of caution and forbearance. We have done our best to secure peace. We have done our best not to give us occasion to repeat the aggressions and subsequent annexations of 1848. The Independent has held with the people of the country in supporting President Wilson in this policy. It has been a right one in that it has not been provocative. We have not played the vulture. We have not been robbers. To be sure if the necessity had arisen for us to annex more or less of the northern states of Mexico it would have been of advantage to the people of those states and to us; but to have done it violently would have been doing evil that good might come, and we are told of those who do thus that "their condemnation is just." We have held our hand; but the time is likely to come when it would be wrong to hold our hand; and it is the duty of statesmen to hold ever in their minds the principle that a great country is better than a small one, and a yet larger one is better still, controlled by high ideals and just administration, and that to refuse to take responsibilities for the extension of righteous and free government is cowardice.

A VIGILANCE COMMITTEE

THE remarkable report laid before the Senate by the Interstate Commerce Commission emphasizes and denounces those acts of maladministration in the financial affairs of the New Haven railroad which had been brought to public knowledge by much testimony, and which have repeatedly been the subjects of comment in our pages. We think the leading and influential men in the railroad industry scarcely realize how great has been the effect of this report, this official confirmation of much that may have been obscured by examination and cross-examination, with respect to the reputation of that industry both at home and abroad. They may not clearly see how all the American railroads suffer in public opinion on account of such disclosures.

We suggest once more to these gentlemen the expediency of creating an efficient vigilance committee. An organization known as the Bureau of Railway Economics (if we recall the name correctly) is supported by the railroad companies of the country, in order that reports and statistics which they can regard with satisfaction may be given to the public. Some time ago the companies should have organized another bureau, or a committee, to defend the great industry against such crooks as these who have made the name of the New Haven road a byword and a reproach all over the world.

Some time ago there should have been such a vigilance committee to detect the beginnings of such rottenness and to check the foul development of it. An efficient committee of this kind would have been worth a thousand times its cost to the railroad companies of the United States.

THE CHANGING MIDDLE CLASS

A SPIRITED paper by Mr. Seymour Deming in the current number of the *Atlantic Monthly* urges the middle class to see clearly the coming revolution and—as its only refuge—to cast in its lot with the worker in frank opposition to the capitalist.

What of this middle class?

In the evolution of human societies the constitution of the state and the methods of government have been secondary rather than major factors determining class distinction. Whatever has armed one part of a population with power, whatever has disarmed another part or bound it to conditions of weakness, has established class distinctions. Military prowess, the pretense of divine recognition, assumed knowledge of supernatural things, the possession of relatively productive lands, command of commercial opportunities, loanable funds, industrial capital, each of these has at one time or another, in one place or another, divided the body of the people into superior and inferior classes.

Always, too, there has been either a "middle class" or a subdivision of the superior and the inferior classes into two classes each. In France before the revolution the inferior orders were called the third estate because the superior orders were two estates, namely, the secular nobles and the clergy, by tradition and in fact

rivals for supreme power. The third estate also was made up actually of two classes, not legally recognized as such, namely the merchants, shopkeepers, money lenders and employing manufacturers above, the laborers, artizans and other wagelings below, destined to become respectively the bourgeoisie and the proletariat of today.

This tendency of social classes to subdivide as society itself differentiates has made the so-called "middle class" a more or less vague and shifting aggregation, and made the phrase a term to juggle with in political and economic discussion. Thus, in England and in Germany, where the institutions of monarchy and aristocracy have survived, the entire body of the people between the wage earners and the lords is comprehended in the middle class, which, however, is divided on economic lines into an "upper" and a "lower" middle class. In France and in the United States, where aristocracy and monarchy no longer exist for political purposes, the upper middle class has become a practically dominant class, the original lower middle class has become the group that is meant when the phrase "middle class" is used without adjectives, and it is already divided on economic lines into a new upper and lower middle class.

These shifting relations must be held in mind when we attempt to pass judgment upon the socialistic contention that the middle class tends inevitably to disappear in the "class struggle," or listen to emotional appeals from social reformers calling upon the middle class to cast its lot with the proletariat and so precipitate a "social revolution." It is easy to prove anything you please in respect of these contentions and demands if you have a fair degree of intellectual facility in playing fast and loose with the terms of your syllogism.

When Marx "demonstrated" that the concentration of industry under capitalism and machine production by crushing out the lesser manufacturers would necessarily destroy the middle class, he obviously did not mean the middle class in the original sense of the word—which is still descriptively true for a country like England—since it is the group that was originally the upper middle class which has become in the United States and in France the capitalist class. The relatively powerful capitalist group nowhere includes the professional classes or any considerable proportion of the authors, the artists, or the scientific investigators. These, with the clergy, belong in the United States in the middle class, but in England the higher ecclesiastics still have place in the aristocracy.

The recognition of facts like these should warn any writer that the attempt to prove by statistical or other evidences that Marx was right or was wrong in his contention is a ticklish proceeding. Actually, every one who has made this attempt has fallen into such absurdities of fallacy that his conclusions are worthless. It is questionable whether at the present time a committee of the most cautious statistical experts of the world could certainly determine whether a middle class, in whatever way the term might be defined, is disappearing or not. Two or three things only are clear. In the United States and in the more highly developed industrial countries of Europe, an increasing proportion of the entire industrial output is produced by the "large" and "very large" establishments, and these are employing an increasing proportion of the total number of wage earners. Also the independent "small" manufacturers who employ more than three or four workmen each are becoming a proportionally diminishing element in society, to whatever class this element may be assigned. On the other hand, as the socialists themselves admit, the professional classes, the highly educated experts, the scientific managers working for salaries, and the scientific investigators, are rapidly becoming an increasingly large social element, and it is already "good form" in socialistic circles to admit that this element will continue to be, in despite of Marx, a middle class discharging exceedingly important social functions.

The cautious observer, therefore, and especially the man who, as writer or teacher, assumes the responsibility of trying to mold public opinion, will go slow in making predictions about the future of the middle class, and he will not be disposed to urge it to abdicate, at present. Many of the most important social habits, a great part of the stock which breeds the leaders of intellectual and practical life, and to a great extent that sound habit of mind which leads men to devote themselves to excellent work rather than to sacrifice all other considerations for money rewards, are identified with the middle class. But the middle class of today is by no means the middle class of yesterday, and what the middle class of tomorrow will be the man who values his intellectual integrity will wait to see.

SECRETARY BRYAN ON WOMAN SUFFRAGE

PRESIDENT WILSON refuses to express himself on woman suffrage, because it is a state and not a national issue. So it is a state issue, and it is well that it should make its steady and stately progress eastward as a state issue. Secretary Bryan accepts it as a state issue in Nebraska, and promises his vote and support in favor of equal suffrage in Nebraska, and he would put it into the constitution of the state. Perhaps by a state issue in New Jersey President Wilson may find it necessary to take his stand on one side or the other of this most important question.

There is nothing new in what Mr. Bryan says, for all that can be said has been said over and over again. But it is all worth saying over and over, for only thus is dull and deaf conservatism awakened to hearing and life. The three old objections to woman's suffrage which he recounts are, that women cannot fight in war, that they have too much to do, and that they would lose respect by mingling in the divisions of politics. These objections are so flimsy that those who offer them can hardly take them seriously. Their presentation has made many converts because it has shown how lacking in reason is the opposition to the reform.

Mr. Bryan waxes eloquent in arguing for the mother's right to have a voice in deciding what shall be the environment in which her sons and daughters shall grow up. This is a conclusive argument, but it is part of the larger argument which sees women equally with men affected by every condition which concerns society. Rights of life, rights of property, rights of education and culture, rights of labor and rest belong equally to both sexes, and both sexes suffer when they are infringed. It is not just to give all rights and all power to one sex, and trust to it for allowing the natural rights of the other sex. Yet Mr. Bryan excellently pre-

sents the clear fact that women, even more than men, mothers more than fathers, are concerned with the advantages and disadvantages, the encouragements and the temptations which may surround their children. In some conditions and points of view men need the ballot more than women; for their children's sake women are more concerned than men. It ought not to be so, but so it is, and for this reason we should be earnest to give them the power to protect their young. They will use it, as surely as does a mother bird. The she-bear will not be robbed of her whelps. All the forces of vice oppose woman's suffrage, and they know the reason.

SPORTING INTELLIGENCE

SO the London *Times* heads its news of athletics. The intelligence is unquestionable—deliberate analysis, logical arrangement, assured generalizations—but nowhere in the profusion of Misters and sober adjectives is there a trace of anything sportive.

Nor could our own "sporting pages" claim such a caption. Here is a plethora of gaiety, and the pungency of raw onions in metaphor, but in all the gossip and twaddle the intelligence is sadly diluted.

The American "fan" does perhaps combine sport and intelligence. He trails his favorite team thru a jungle of gaudy verbiage, but he uses language with an exactness that a lexicographer might envy. He damns statesmen with loose epithets, but he is scientific enough in discussing errors and misplays on the diamond, and this scholarly precision is an undeniable gain to any mind.

But why seek in the realm of mere athletics a justification for our headline? Sporting intelligence? Preeminently the term defines G. K. Chesterton, and its use in any other connotation is a journalistic crime.

WIRELESS POETRY

LONDON, erstwhile deemed the citadel of conservatism, now not only casts a favorable eye upon all the freaks of post-impressionistic art but also lends a willing ear to post-impressionistic poetry. Signor Marinetti, the first of the Futurists, lecturing in the Doré Galleries, has achieved at least a certain success of curiosity and the newspapers and reviews discuss his theories with their usual seriousness. We, too, have been interested in his theories ever since the publication of the manifesto of Futurism in *Poesia*, but we have looked in vain for fruit to come of the new movement commensurate with its claims. We do not object in the least to his developing a literary style "polychromatic, polymorphous and polyphonic, that may not only animalize, vegetablize, mineralize, electrify and liquefy itself but penetrate and express the essence and the atomic life of matter." In order to do all this Signor Marinetti says it is necessary to cut the connecting wires of syntax, chuck punctuation overboard, use mathematical and musical signs, alter spelling to suit the mood, and employ four kinds of ink and twenty different fonts of type. All right, let him. We also learn that in Futurist lyrics adjectives will be employed chiefly "as semaphores to regulate the speed of the race of analogies" and that the infinitive is indispensable "because it prevents the style from stopping and sitting down at a fixt spot. While the infinitive mood is round and true as a wheel, the other moods and tenses are either triangular, square or oval." This being incomprehensible sounds promising; our only complaint is that Signor Marinetti fails to fulfil his promises. Take for example this poem:

BATTLE OF ADRIANOPLE
Weight + Odor

Noon ¾ fifes squeaking uproar tumtum alarum Gargaresh cracking crepitation march Cliquetis knapsacks fusils shoes nails cannon cockades caissons wheels bayonets oilcakes song stale smoke iridescence stench clove nausea flux reflux pepper row rabble whirlwind orange-flower filigree misery chess cards jasmin + nutmeg + rose arabesque mosaic carrion bristling + boxing mitrailleuses Cliquetis knapsacks fusils cannon scrap-iron atmosphere = lead + lava + three hundred stinks + fifty perfumes brickbats mattress debris carrion flicflac tohubohu

Now Signor Marinetti went to the siege of Adrianople; at least, like the other war correspondents, he got within sound and smell of it. We were not there, so we cannot say he is wrong, tho we did not suppose it was as bad as he makes out. Doubtless in this incomplete translation we have failed to convey all of the onomatopœia and the ego vibrations on which the author prides himself; perhaps also missed something of the meaning. The reader should also make allowance for the fact that the poem lacks the typographic display which the author has used in his volume of Balkan verse, *Zang Tumb Tunum*, as well as the Futurist music of various squawking, squeaking, banging and buzzing instruments which he uses as an accompaniment for the declamation of his poetry. This may account for its being so unsatisfactory. At any rate, until we have an opportunity of hearing it properly rendered we will, when we want Futurist poetry, turn to the past and get it from Walt Whitman.

RESTORING THE FAMILY BUDGET

NOT a small element in the high cost of living problem is the diffusion of authority in the home. High living comes from free spending. There are too many spenders in the home. Every member of the family insists on his or her right to direct the expenditure for everything to which they are directly related—and some to which they are no kin at all. Willie and Susan not only must select their own clothes, but they must have an allowance as well; mother has a check account, while cook charges all the food supplies at the grocery. Everything that possibly can, goes "on the bill," and when on the 1st prox. "the butcher, the baker, and the confectionery maker"—not to mention the garage man *et al.*—get thru, father's income has almost reached the vanishing point.

Time was when the mother was the general disbursing officer of the household. To her on pay-day was turned over the proceeds of the sustaining members of the family, or at least such of it as went toward the expenses of the household; she did all the buying and paid all the bills; at all points her decision was final. The chief difficulty in the average family today is that there is no relation between income and outgo. But when a thrifty mother held the purse-strings the debit seldom got ahead of the credit side of her rude budget, nor was there any question but what every dollar did overtime duty. As the "household economy" courses at Chautauquas and summer schools spread their influence, women are finding that the first requisite is the restoration of the family budget.

THE STORY OF THE WEEK

The Resignation of Huerta

After Huerta had made Judge Carbajal Minister of Foreign Affairs he remained in the capital for two or three days, altho his wife and children, with other relatives and several friends, started for the coast at Puerto Mexico, in a strongly guarded special train. On the 16th, he presented his resignation to the Chamber of Deputies, with an address, or a message, in which he spoke of the difficulties which had confronted him and asserted that the rebels had been assisted and protected by the United States. We publish the address elsewhere. In the course of a brief debate several friends of Huerta opposed acceptance of the resignation. One said that acceptance would be entering into a compact with Mexico's enemies in the United States. Another called Americans "blond beasts," and denounced the "thieves of Wall Street" and the "banditti of the White House." The resignation was accepted by a vote of 121 to 17, and Carbajal at once took the oath of office. In the meantime Huerta and General Blanquet had started for Puerto Mexico in a special train preceded and followed by other trains carrying 800 soldiers. At the end of the week they were still at the port, but were about to sail for Jamaica on the German cruiser "Dresden" or the British cruiser "Bristol."

Immediately after the accession of Carbajal he sent to Carranza three Maderist congressmen who had been in hiding for months, to arrange for a peaceful transfer of power under certain conditions. Carranza was not inclined to recognize Carbajal's authority. The "plan of Guadalupe," he said, required a military capture and occupation of the capital, and he could consider nothing but unconditional surrender. Carbajal's intention to transfer the power to the rebel leader had been made known at Washington by Huerta's representative there, José Castellot. The three emissaries were delayed, and President Wilson, by the agency of his friend, John R. Silliman, was urging Carranza to accept Carbajal's propositions, so far as they provided for general amnesty and the protection of lives and property. European powers urged that Huerta's financial obligations should be honored. Carranza had repeatedly promised to repudiate them. Moreover, he proposed as to the method of transfer of power that 5000 men from each of his three armies should enter the capital in triumph.

When our Government asked that none of the Federal leaders or officers should be put to death, the rebel officers protested, pointing to the execution of many of their associates by Huerta and his generals. At the capital many members of the old Maderist Congress, dissolved by Huerta, desired to take their seats and to order an investigation of the events of nearly two years ago. From this purpose they were dissuaded by Carbajal. President Wilson pointed out to Carranza that his Government would need recognition, which it could obtain from the United States or Europe only by taking a decent course.

THE WEEK IN CONGRESS

Among the subjects of debate were the River and Harbor bill, proposed anti-trust legislation, the condition of business, and the pending nominations for the Federal Reserve Board. By resolution the old appropriation laws were continued in force until enactment of the new ones.

Much opposition to the nomination of Thomas D. Jones for the Reserve Board was shown. There were long debates in executive session. The Senate voted to publish the testimony given by him before the committee concerning his connection with the Harvester Company and two or three zinc companies.

The Senate insisted upon the old mileage allowance of twenty cents a mile, and the House yielded, by a vote of 132 to 122.

Mr. Bryan gave notice that he was about to send to the Senate, for ratification, twenty of his new peace treaties, seventeen of which had been signed.

It became known that Representative Witherspoon, of Mississippi, had returned to the Government $82.20, his pay for four days during which he was absent and engaged in private business.

The naval committees will make an investigation as to the work of the so-called plucking board, which compels the retirement of officers. Its recent action is sharply disapproved. Both committees have reported in favor of the restoration of Captain Potts, retired some time ago. A bill to abolish the board has been introduced.

There was a favorable report in the Senate on a bill permitting the construction of a bridge across the Mississippi at Muscatine, Iowa, and one in the House on the bill to limit and regulate the diversion of water at Niagara Falls for power purposes. The bill relating to leases of water power sites was considered in the House.

The woman suffragists could not induce the Rules Committee to take up their constitutional amendment. Among the subjects considered by committees were the treaty with Nicaragua and two of the trust bills. A Senate committee report exonerates the senators who were asked to explain the use of the official stationery of their committees for the promotion of a gold mine.

Course of the War

It had not been decided at the beginning of the present week whether the Federals should continue to resist the rebel advance. Many desired to make a final stand at Queretaro. But Carbajal ordered the evacuation of several towns, in order that fighting might be avoided. Zapata and his men appeared to have in mind no attack upon the capital. Carranza had warned Zapata that he must not precede the armies of the north in entering the city. In the north, the Federals completed the evacuation of Guaymas, leaving that port in six steamships and intending to land at Salina Cruz. At Acapulco three factions were fighting for control—the Federals, Zapata's men and Carranza's soldiers. San Luis Potosi, which Carranza's east side army was about to attack, was unexpectedly abandoned by a large body of Federal troops.

Further north, Pascual Orozco, formerly the leading general of Madero's army, but recently commander of irregular forces fighting for Huerta, took to the mountains with 4000 followers. He had been at San Luis Potosi. Carranza and all of his generals hate Orozco because he turned against Madero. Whenever the Constitutionalists have captured soldiers of Orozco's forces, they have promptly put these men to death. Orozco fled because he knew that this would be his fate if he and his men should be compelled to surrender. In Palomas (Chihuahua), near the boundary, a rebel garrison of forty-eight men was overcome and put to death by 400 Federals of the so-called irregular forces.

It appeared that the reconciliation of Villa and Carranza was not complete. Villa explained that he had turned back after the capture of Zacatecas, and had taken his men to Chihuahua in order to have the rest they needed. He would soon, he said, resume his march to the capital. But he remained inactive. He was willing,

he said, that Carranza should be President, but he insisted that Gen. Felipe Angeles, whom Carranza dislikes, should be made Minister of War, and that he himself should be commander in chief of the army. On the 19th it became known that he was levying taxes in northern Mexico, and that he had made Major Fierro a brigadier general. Fierro is the man who, according to the report of a commission appointed by Carranza, murdered the English ranchman, William S. Benton, after he had been directed by Villa to take Benton from Juarez to a prison in Chihuahua. Villa also gave similar promotion to one Dominguez, known to be a foe of Carranza. These acts, and the hostile attitude which they indicated, led some to expect serious dissension in the rebel camp at a time when harmony was greatly to be desired.

The New Haven Railroad

In response to a Senate resolution, the Interstate Commerce Commission submitted, last week, a long report concerning the recent history of the New Haven Railroad Company. This report is based upon the testimony recently taken and upon the commission's inquiries. It denounces in scathing terms the offenses with which the public is already familiar and to which attention has been directed in our pages. The conduct of the road's financial operations is characterized as "one of the most glaring instances of maladministration in all the history of American railroading." This maladministration, the report asserts, caused a loss of more than $60,000,000. The directors were guilty of gross neglect of duty and

NOWHERE TO GO BUT OUT

breach of trust; the Billard operations in Boston & Maine stock were fraudulent transactions; the acquisition of the Westchester road was a profligate waste of funds; and many of the other acts by which the trolley roads and other properties were brought under the company's control are sharply condemned. The commission recommends civil and criminal prosecution of the responsible directors; the prosecution of John L. Billard and his associates, and the prosecution of others who profited by the Westchester operations.

While the commission and its counsel would have the prosecutions undertaken without delay, it is understood that the Department of Justice prefers to proceed first in a dissolution suit, if a disintegration of the associated properties is not accomplished without such pressure. Minority stockholders in Massachusetts have brought suit, asking that a receiver be appointed to prosecute claims for $306,000,000 against living directors and the estates of directors who are dead.

The Country's Population

A bulletin prepared under the supervision of the Geographer of the Department of Commerce and issued with the approval of the Census Bureau, estimates the population of the country on July 1. On that date, according to this bulletin, the population of the forty-eight states and the District of Columbia was 98,781,324; in 1910 it was 91,972,266. The gain, therefore, in four years has been nearly 7,000,000.

More than one-third of the total is assigned to the five most populous states, as follows: New York, 9,899,761; Pennsylvania, 8,245,967; Illinois, 5,986,781; Ohio, 5,026,898; Texas, 4,257,854. One-ninth of it is found in five cities—New York, 5,333,537; Chicago, 2,393,325: Philadelphia, 1,657,810; St. Louis, 734,667; Boston, 733,802.

Mr. Bryan's Peace Agreements

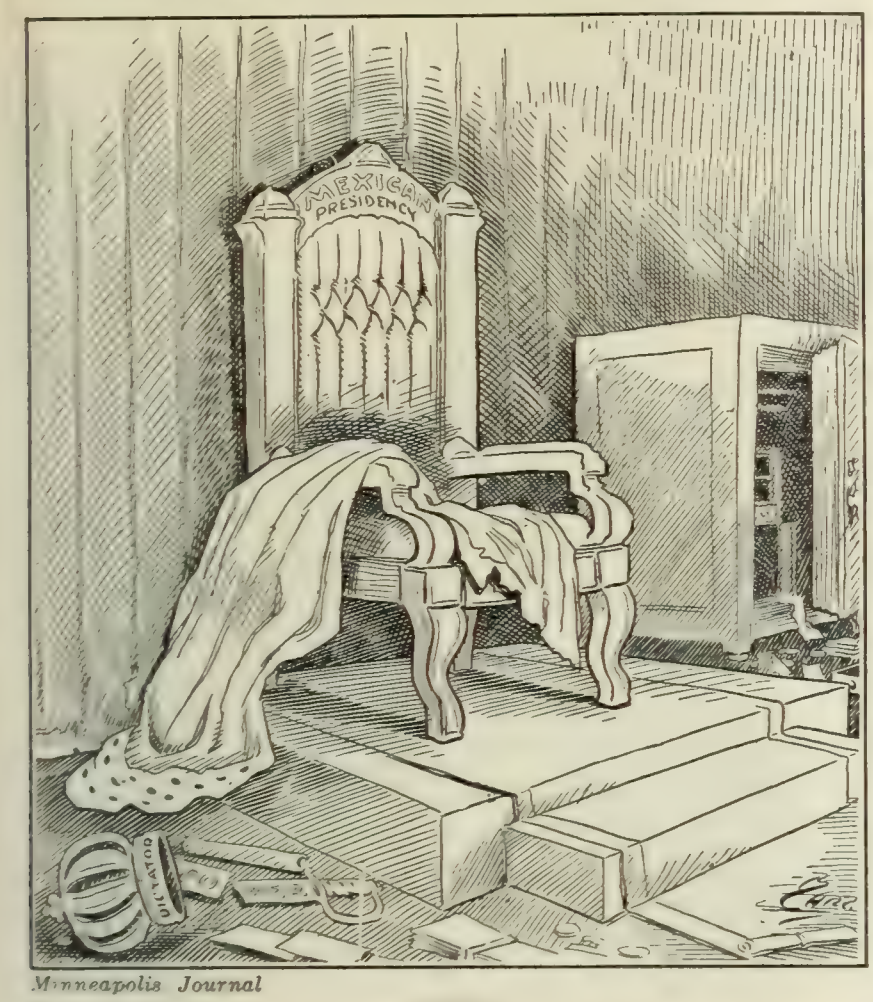
An agreement was reached at Washington on the 14th concerning a peace treaty with Chile, and on the same day a similar treaty with Peru was signed at Lima. On the following day Secretary Bryan said he was about to sign a similar agreement with Uruguay, and that signatures would be attached to agreements with Argentina and Brazil within a few days. Seventeen, he added, had already been signed. These agreements are with Salvador, Guatemala, Panama, Honduras, Nicaragua, Netherlands, Bolivia, Portugal, Persia, Denmark, Switzerland, Costa Rica, Santo Do-

HUERTA'S FINAL MESSAGE TO THE MEXICAN CONGRESS

Deputies and Senators: Public necessity, admitted by the Chamber of Deputies, by the Senate, and the Supreme Court, called me to the supreme Magistracy of the Republic. Later, when in this same hall I had the honor of addressing you in compliance with the constitutional precept, I promised at all costs to bring about peace.

Seventeen months have past and in that brief period of time I have formed an army with which to carry out that solemn promise. You all know the immense difficulties which my Government has encountered owing to a scarcity of funds, as well as to the manifest and decided protection which a great power of this continent has afforded to the rebels, so much so that when the revolution had been broken up, seeing that its chief leaders were and continue to be divided, the power in question sought a pretext to intervene directly in the conflict, and the result of this was the outrage committed at Vera Cruz by the American fleet.

Success was had, as you know, in adjusting honorably thru our delegates at Niagara Falls the petty Tampico incident, but the revolution continued, with the support of whom we all know.



Yet after the highly patriotic work achieved by our delegates at Niagara Falls, there are still some who say that I, come what may, seek my personal interest and not that of the Republic. And as I need to rebut this allegation with facts I tender my formal resignation of the Presidency of the Republic.

The national Congress must know that the Republic, thru its Government, has labored in entire good faith and with the fullest energy, having succeeded in doing away with the party which in the United States calls itself democratic and having shown how the right should be defended.

To be more explicit, I shall say that the action of the Government of the Republic during its short life has dealt deathblows to an unjust power. Later on stronger workers will come, using implements that undoubtedly will end that power, which has done so much harm and committed so many injuries on this continent.

In conclusion I will say that I abandon the Presidency of the Republic, carrying with me the highest sum of human wealth, for I declare I have arraigned at the bar of universal conscience the honor of a Puritan, whom I, as a gentleman, challenge to wrest from me that possession.

May God bless you and me.

The safe, close to the throne, shows signs of hasty departure

Newark Evening News

DAYBREAK

It finds Mexico destitute and in the wilderness

mingo, Venezuela, Italy, Norway and Peru. The terms of similar conventions with Great Britain and France have been agreed upon, but Great Britain waits for the approval of all her self-governing colonies.

All these treaties are substantially identical, providing that differences arising between the signatory powers that cannot be adjusted diplomatically shall be submitted for investigation and report to an international commission of five members; that the investigation shall consume one year, and that during this time there shall be no hostilities. There are some slight variations as to details. Mr. Bryan says that the President desires ratification before adjournment, if possible, but some of the Senators do not expect that action will be taken at the present session.

Nicaragua and Colombia Treaties

The treaties with Nicaragua and Colombia are still under consideration in the Senate Committee on Foreign Relations, where an investigation of all transactions relating to the agreement with Nicaragua is being made by direction of the Senate. One of the witnesses last week was the representative in Nicaragua of the New York bankers who undertook a reorganization of Nicaragua's customs service and currency system. When asked to say how long the present Government would stand after withdrawal of the United States marines from Managua, he replied: "Just long enough to catch the first train from the capital." Costa Rica recently filed a protest, because her interest in part of the canal route had not been considered, and Salvador opposed the treaty, alleging that the proposed grant of a naval base in the Bay of Fonseca would encroach upon her territory. Both republics have since enlarged their protests by adding objections to parts of the agreement which, they assert, would virtually establish a protectorate and impair the autonomy of other Central American republics. It is reported that, owing to the attitude of a majority of the committee, Mr. Bryan has given up all hope of ratification.

THE MAN WHO FOLLOWS HUERTA

Francisco Carbajal, who succeeded the dictator as a stop-gap until the Constitutionalists should come, is a distinguished lawyer, forty-one years old, of excellent birth and social charm. He has been President of the Court of Justice and is regarded as a non-partizan

The inquiry about Nicaragua has prevented consideration of the treaty with Colombia. It was proposed at first that Mr. Roosevelt should be asked to testify, but it is now said that he will not be invited and that other persons will not be heard. Mr. Bryan has published a long defense of the agreement. After an estrangement of nearly thirteen years, he says, it is desirable that differences shall be adjusted and cordial relations resumed. It is not necessary, he continues, to discuss the events which gave rise to the estrangement, "because it does not matter which party was at fault." Colombia has insisted upon arbitration. Having opposed arbitration, we should do justice to Colombia. In case of doubt as to what is just we should resolve the doubt against ourselves and in her favor. Colombia suffered great financial loss when she was deprived of Panama. Mr. Bryan estimates at $17,500,000 the value of the offer made by us before the separation, and says the actual loss afterward exceeded $25,000,000. The offer made by Minister Dubois after secession was equivalent, he says, to more than $25,000,000. The expression of

regret, he asserts, is identical in meaning and almost identical in words with the expression in the Root's memorandum. We should satisfy Colombia's sense of justice. We can afford to be just and even to be generous, when generosity will "increase the friendliness of the many millions of Central and South America, with whom our relations become daily more intimate."

Hayti and Santo Domingo

The condition of Santo Domingo and Hayti continues to cause some anxiety at Washington, because the persistent complaints of European powers may compel intervention and the establishment of protectorates. It is said, however, that if our Government should propose for Hayti a fiscal protectorate like the one in Santo Domingo, Great Britain, Germany and France would insist upon participation in it, and that to this our Government would not consent. Hayti is bankrupt and Santo Domingo cannot continue to make the debt payments required by the agreement, which is now seven years old. Both are in a state of anarchy. Reports from Santo Domingo indicate that a respectable and permanent government cannot be formed by native leaders.

Our Government has sent 700 marines to Guantanamo, in order that they may be available for use to protect American citizens and their property. There are now six American warships at or near the ports of the two so-called republics. In Santo Domingo, altho the Government is gaining in its battles with the rebels in the north, it is in danger of losing the capital. Rebels captured two towns within a few miles of the capital, last week, and were restrained from attacking the city only by the arguments of the United States chargé d'affaires, arguments that were supported by two warships. An armistice was agreed upon, and the rebels transmitted their terms by the ships' wireless outfit to the President in the north.

Hindus in British Columbia

The efforts of the Canadian Government to deport 350 Hindus who arrived at Vancouver three months ago are being forcibly resisted by the Hindus. In order to test the status and rights of British citizenship as applied to Indians, and to secure laborers for his large lumbering projects, a wealthy Hindu merchant, Gurdit Singh, chartered a Japanese steamer to transport the Hindus to Canada. The Canadian immigration officials refused them admission on the ground that they were undesirable persons. The courts sustained the position of the Government and the Japanese captain of the steamer was ordered to sail for India before six o'clock on the afternoon of July 18.

The Hindus prevented the captain from getting up steam, and early Sunday morning, July 19, he asked for assistance. Policemen and immigration officials to the number of 160 went out to the vessel in the largest tug available, but were unable to gain the deck because from all parts of the ship the Hindus hurled coal, iron bars, clubs, etc., injuring many of the police, who refrained from the use of their firearms. Premier Borden telegraphed his thanks to the police for not shooting and pledged the support of Government forces to bring about the legal deportation of the Hindus.

It is feared that lives may be lost before the Hindus are subdued. They are desperate from three months' imprisonment and have declared a hunger strike. Another shipload of Hindus is reported to be on the way from Calcutta.

King Calls Ulster Conference

After a week of marking time, due largely to the dread lest a step by either side precipitate a conflict, the Ulster question has again assumed menacing proportions. This is brought about by the deadlock which seems to have been reached after last week's progress toward a compromise.

The stumbling block in the way of accepting Lord Lansdowne's compromise is admitted to have been the Irish Nationalists and John Redmond. Redmond refuses to accede to any further delay, he is against accepting the amending bill of the Lords, and insists on the Home Rule bill exactly as it past the Commons. The Liberals are powerless without the support of the Nationalists, and the Unionists, of course, will not accept the present provisions regarding Ulster. Thus deadlocked, events again took a drift toward settling the question by arms.

International News

LIEUTENANT JOHN CYRIL PORTE

Who will pilot the "America," Rodman Wanamaker's airboat, in her transatlantic flight if the ship proves capable of rising from the water with the necessary load. Experiments have been unfavorable

Then King George stepped in. For the second time in the Ulster question he has taken the initiative in acting as a mediator betwen the factions. Postponing his trip to Spithead—an action without precedent—where he was to review the general mobilization of the greatest fleet ever gathered under the English flag, he called Premier Asquith into hurried conference on Saturday and Sunday, and on Monday Mr. Asquith announced in the Commons the calling of a conference by the King in which all parties would be represented.

Rumor of a split in the Cabinet has stiffened the opposition of the Unionists. A powerful minority, which is said to include Winston Churchill, First Lord of the Admiralty; Sir Edward Grey, the Secretary for Foreign Affairs; Lewis Harcourt, Secretary for the Colonies, and the Marquis of Crewe, the Lord Privy Seal, is said to be in favor of coming out boldly with a definite offer of concessions, substantial enough to receive the considerations of the Ulster leaders. Their counsel may be sufficient to prevail at the conference called by the King.

Opposition to Persian Oil

While the Lords have been occupied with Home Rule the Commons have been discussing the budget and the question of providing oil for the navy, where opposition has developed to the Persian agreement. Following the failure of the Colombian concession and the uncertainty of the Mexican supply, the Admiralty has practically searched the earth for oil which has not been monopolized. An agreement had been made with the Anglo-Persian Oil Company by the First Lord, Winston Churchill, where for £2,000,000 the Admiralty acquires controlling interest in the company's wells in the provinces of Arabistan and Luristan, Persia.

This agreement has been attacked in the House of Commons as a menace to the empire's eastern foreign policy. The oil wells are 150 miles from the coast, and the oil must be conveyed to tidewater by pipe lines

Brown Brothers

AN INVENTOR WHO WRECKED TRADITION

H. J. Gaisman, whose device for writing a caption on a photographic film at the time the picture is taken was bought by a large camera corporation, received $300,000 for his patent rights. This is said to be the largest sum ever paid outright for an invention and belies familiar generalizations

Edwin Levick

PREPARING FOR THE DAVIS CUP MATCHES

Candidates for the American team to defend the cup have been hard at it in the Westchester, Seabright and Longwood tournaments. R. Lindley Murray, here shown, was overcome by the heat at Seabright. Just graduated from Stanford and with only three years of tennis back of him, he has been the sensation of the season

running thru wild and uninhabited country. To protect the pipe lines in case of necessity, it is said, would be to subject the Indian military establishment to a burden greater than it could bear, besides breaking the agreement with Russia that neither country was to maintain troops in Persia. It is also pointed out that the Government should endeavor to develop the oil fields of Burma, which is British territory, rather than hazard the navy's resources in foreign territory.

French Chamber Adjourns

After having four times failed to adopt a budget, the Chamber of Deputies and the Senate at last agreed on the fifth, and following its hurried passage, adjourned the session, which has been stormy and hazardous, even from French standards.

Around the income tax clause of the budget arose the chief contention between the two houses. It was over this same provision, which Caillaux opposed, that the quarrel arose between the Finance Minister and Calmette, the editor of *Figaro*, which culminated in the murder of the latter by Mme. Caillaux. As adopted, the law directs that if, on an owner's death, fraudulent returns have been made on his estate, the Government is to collect back taxes for the years when no returns were made. It provides also for a tax of five per cent on foreign incomes. These provisions were made necessary by the deficit of $60,000,000 which the Government faced at the beginning of the year.

Opposition to President Poincaré and his policies, and the determination of the Socialists, following their electoral victory of May, when they gained thirty-eight seats in the Chamber, to defeat the new militarist policy of the republic, are largely responsible for the session's vicissitudes. President Poincaré was obliged to postpone until the adjournment his visits to the Czar and to the kings of Denmark, Sweden and Norway, which are the most ambitious ever undertaken by a French President. From the Russian visit plans for defensive and offensive military coöperation between the two powers are expected to develop.

Prosecuting Beilis Sympathizers

Altho on account of the outraged sentiment of the world the Russian Government failed in its attempt to convict Mendel Beilis of the crime of "ritual murder," a libel persistently circulated against the Jewish race, it has been hounding zealously ever since all sympathizers in its own territory of the accused man. On November 5, during the Beilis trial, the Bar of the St. Petersburg District, in the name of Russian justice, unanimously past a resolution condemning the prosecution. More than one hundred lawyers subscribed to the resolution, and the Government immediately ordered their prosecution. The list was later reduced to twenty-five, all of whom have just been convicted and sentenced to from six to eight months' imprisonment and the loss of their political rights.

Indignation is running high in St. Petersburg at what is known as the "vendetta" tactics of the Government. Immediately following the conviction of the barristers, a great banquet was given in their honor in the capital, attended by over two hundred public men. Strikes at a number of factories and at the great Putiloff shipyard, employing more than 35,000 men, took place as a protest against the barristers' condemnation. When two of the convicted men appeared in the Duma, of which they were members, they were greeted with tremendous ovations. These events, coupled with the growing assertions of its independence by the Duma, point toward a rapid drift to the temper of 1904, and outbreaks of the smoldering flames can be expected almost momentarily.

SHALL WE ANNEX NORTHERN MEXICO?

BY ARTHUR RICHARD HINTON

WHEN our war with Mexico closed in the forties with the treaty of Guadalupe Hidalgo, and we acquired the States of California, northern Arizona, Colorado, Utah and Nevada, and confirmed our possession of Texas, our peace commissioners allowed themselves to be outgeneraled diplomatically in several important particulars. Our expansion stopped just at the point where, having gone so far, it should have gone farther. The cardinal error of the commissioners and the Polk Administration was the failure to appreciate the great importance of access to the sea. They overlooked American access to and rights of navigation upon the Gulf of California, the arm of the Pacific that extends up the Mexican coast between the Mexican State of Sonora and the Mexican Territory of Lower California. Had our commissioners foreseen the future greatness of the territory they were acquiring, they could not have made such a mistake. As it was, they consented to an international boundary line that cuts off southeastern California and Arizona from water traffic as completely as tho they were located a thousand miles inland, notwithstanding that the headwaters of the Gulf of California are within less than fifty miles of their boundary.

From the failure of our treaty makers to appreciate waterways to the ocean grew the two large mistakes of detail. We should have taken Lower California, whose possession would have assured us full navigation rights upon the adjacent waters. We blundered next in not enforcing the surrender of all that territory for which we paid so well in the Gadsden Purchase of a few years later, forming the present southern part of Arizona and the southwestern part of New Mexico, together with what was much more important, and which we have never obtained, all that part of the Mexican State of Sonora extending south from Yuma and the present boundary line, and lying about the headwaters of the gulf. This mistake was largely a logical sequence of the first —the failure to get Lower California.

During the war with Mexico our troops occupied Guaymas and Mazatlan, the principal cities on the Mexican coast on the Gulf of California. Guaymas is the leading port of the State of Sonora and far the best harbor on the Mexican west coast. It is about one hundred miles south of the Arizona line and two hundred and fifty miles northeast from La Paz, the southern capital of Lower California. That at the close of the war we did not insist upon the surrender of this port, and most or all of Sonora, and even of Mazatlan and most of the State of Sinaloa is strange, as the Polk Administration desired more territory to the south in the interest of pro-slavery politics. But the treaty that closed the war restored Guaymas and all Sonora and Mazatlan to Mexico.

American possession of Guaymas and the west coast of Sonora would have rendered the transfer of Lower California to our sovereignty inevitable. Holding this fine harbor and the immediately surrounding territory to the south, the United States would be today in absolute command of the gulf on both shores. All the cities and towns of southern Arizona are nearer Guaymas by two or three hundred miles, even by the present roundabout route of the Southern Pacific Railroad, than they are to Los Angeles, now the nearest American point where they can reach tidewater. With Guaymas in American hands, Arizona would receive an immense impetus to her progress. As it is, so far as concerns advantage to Americans in that state, the fine harbor might as well not exist.

American possession of Guaymas is now practically certain not to come unless thru the fortunes of some future war, a thing no right-minded American can propose as a means to the end in view. But there is nothing in ethics or in international codes of honor to prevent us from using every possible influence thru diplomatic channels to bring about the annexation of the northwest corner of Sonora—an almost wholly uninhabited region, without railroads or industries, and of no value to its owners. The only reason for keeping it was that it afforded an overland route to Lower California, but that has proved to be impracticable and is not used, all communication between the peninsula and the Mexican mainland being by sea or thru California, New Mexico and Arizona by rail. Whatever might be paid for this corner of territory would be clear gain to Mexico.

By the annexation of a very small strip of the northwest corner of Sonora, and by the expenditure of some labor and money by the Federal Government, San Jorge Bay, near the head of the gulf, could be made an important American port. Such a port, when connected by railroad with the Southern Pacific line in Arizona, would give direct and easy access to tidewater. Federal improvement of navigation at the mouth of the Colorado, certain to come with annexation, would enable all boats to come up the river to Yuma, a route occasionally traveled even at present by flat-bottomed river boats, and one that has been used since very early times. If annexation of the strip essential to these objects becomes possible, the international line from Nogales, Arizona, instead of being deflected unnaturally to the north as it is, should be made to run southwest by west to the gulf, the annexed territory becoming a part of Arizona.

Of our two blunders, the failure to require the surrender of Lower California was probably the worse. Mexico's insistence upon possession of the territory was due to fear of the military and naval advantages which its occupation would afford the United States in the event of another war. Theoretically, possession of the peninsula would place the United States in a position to threaten the entire Pacific coast of Mexico; practically considered, the possibility is of no importance, as the discrepancy between the military strength of the two nations is too great for this factor to be of any consequence.

From the time when the war was in progress up to the present, the annexation of Lower California has been periodically agitated. During the war American troops occupied the territory. The inhabitants, isolated almost completely from Mexico, like those of New Mexico and southern Colorado, knew little and cared nothing about the political affairs of the country which had nominally ruled them for the twenty-six years elapsing since the Spanish evacuation in 1820. They offered no resistance. On the contrary, they welcomed the Americans, and being assured by the military commander that annexation would follow the war, a number took the oath of allegiance to the United States. When this promise was not kept by the Polk Administration, many of these abandoned their property and moved to American soil. The United States never compensated them for their losses, nor was there at the time of the treaty of Guadalupe Hidalgo any suggestion that a clause be inserted therein guaranteeing them protection in Mexico. They were simply abandoned to their fate.

Early in the fifties, William Walker, the daring Tennessee adventurer, famous for his subsequent invasion and seizure of Nicaragua, attempted to rectify the mistake of our Government. With a few follow-

ers he sailed from San Francisco, and in a midnight attack seized La Paz, the capital of the southern district of Lower California, proclaiming independence of Mexico and annexation to the United States. The movement failed, and Walker barely escaped with his life. Since then the proposal to annex the peninsula has been agitated in newspaper articles in a half-hearted way from time to time, but no move has been made to carry it into effect.

The peninsula today is little changed from the sleepy days before our war with Mexico. Isolated from the mainland of Mexico, it has been almost completely neglected by the government at Mexico City, by which it is still governed as a territory without even the shadowy form of local self-government nominally allowed to the twenty-eight states of the Mexican Union. Except La Paz, none of its settlements rises above the level of villages.

Imperial County, California, lies in the southeasternmost corner of that state. It comprizes the great Imperial Valley, settled within the last few years by some twenty-five American ranchers, typical American pioneers, who have changed an arid wilderness into a thriving garden spot. The magic wand was irrigation from the Colorado River There has been constructed an elaborate system of dams and intakes, a large and essential part of which, tho owned and used by Americans living in the United States, is necessarily located on Mexican soil. It is thus subject to Mexican law, and in time of revolutionary troubles is entirely dependent upon such protection as the nominal government of Mexico City, or whatever band of revolutionists or banditti that comes along, may see fit to afford. During the present political disturbances, the people of the valley have several times called upon Washington to secure proper protection for their property in Mexico. Annexation is the only remedy for the conditions.

Today all goods coming to the Imperial Valley or to any part of Arizona by sea must be hauled from Los Angeles by rail. The distance from Los Angeles to the Imperial Valley is three hundred odd miles; to the various cities and towns of Arizona, from three to seven hundred miles. With Lower California under American rule, and the improvements to navigation certain to be made by the American Government under such conditions, goods would come by sea and be landed at the very door of the valley. But American possession of the peninsula would also be a commercial advantage to Mexico. The presence of American ports of entry on the gulf would mean increased trade between the United States and Guaymas, Mazatlan, and all ports on the Mexican Pacific coast. Also, a larger proportion of the vessels coming thru the Panama Canal would call at these ports, if there were American ports of call on the opposite shore of the gulf.

At present the resources of the peninsula are almost wholly undeveloped. The territory gives some indications of oil, silver mines have been worked in a slovenly way, and large copper mines are operated by a French company. Just across the line from the Imperial Valley of California there are a number of large ranches owned by Americans, both individuals and corporations. Cattle are raised here and sold in California. All the crops of the Imperial Valley, including cotton, are grown also on the Mexican side of the line, water from the Colorado River being used for irrigation. While farming is now confined to limited areas, very little of the soil of the peninsula is unproductive, given water, it being similar in this respect to a large part of New Mexico, Arizona, Nevada and southern California. That artesian water can be had, as is the case in most similar territory in the southwestern United States, seems likely. With a climate quite as favorable for health and productiveness as that of southern California, one can imagine the possibilities of this neglected strip, if ever it comes under irrigation. Altho yet in their infancy, the fisheries are one of the resources of Lower California most developed at present. The pearl fisheries of La Paz have long been famous. Oysters and other fish from the Lower California coast are sold today in all the principal American cities of the Pacific coast.

In addition to the advantages suggested, there would be the great benefit to be derived from having American ports for commerce five hundred miles nearer the mouth of the Panama Canal than any we now possess on the Pacific Coast. Magdalena Bay, with a harbor equal to every demand, is closer to the Canal by this distance than San Diego, now the first American port on the Pacific reached by vessels coming thru the Canal. San Jose del Cabo, at the southern tip of the peninsula, is still nearer the Canal by two hundred miles than Magdalena Bay. The military and naval advantages of ownership of the bay in case of war with some strong naval power—a contingency possibly remote, but still one worth mentioning in connection with the subject—are obvious.

Mexico does not need undeveloped territory. Her crying need is conditions of peace and means to develop a tenth part of her more populated districts. Mexico has no need of Lower California or northwestern Sonora, and has given them no development. They have not served her and cannot serve in the purposes for which she valued them. We need them, could develop them, would develop them.

If armed intervention does not come, and Mexico is unwilling at present to surrender through diplomatic negotiation the territory needed by us, then we should push the matter of a joint protectorate over the mouth of the Colorado River, including that portion of Sonora and Lower California which surrounds the mouth of the river and the headwaters of the Gulf of California, with ports under joint control on both the Lower California and Sonora shores of the gulf open to the free transit of American imports and exports. Such joint protectorate should provide for the improvement of navigation under such international supervision that Americans can be assured of results. It should also make full provision for American control over that portion of the Imperial Valley irrigation works located in Mexico.

Between Tucson, Arizona, and San Jorge Bay, on the Gulf of California, a distance of one hundred and sixty miles, a railroad can be built over what is almost an air line. Under annexation or a joint protectorate such a line would be practically sure to be built, and it would be of great benefit to Arizona. Even as it is now, such a line, possessing the privilege of carrying goods to and from the United States through Mexican territory in bond, might help the situation somewhat. Before the present outbreak in Mexico an American company was formed to build such a railroad, but the project died an untimely death, killed, presumably, by the oncoming revolution.

The legislatures of California and Arizona should awake the Federal Government by continued resolutions; their governors should take the question to the annual conference of state executives, and their senators and representatives should bring the matter before Congress. Strong as are the reasons for annexation in benefits to the contiguous localities, the Government should be reminded that the question is more than local, is one of national concern, and bound up with what may easily become in the near future issues of international importance.

Bakersfield, California.

REASON AND SOUL

WHAT I BELIEVE AND WHY—ELEVENTH PAPER

BY WILLIAM HAYES WARD

WE know the world of existences and forces under three forms, that of matter, that of life, and that of thought. In preceding articles I have indicated how the world of matter and the world of life appear to me to bear witness to a superior Intelligence which has created or guided them. I now come to consider whether the world of thought has a similar origin, or has merely grown, in an evolutionary way, out of the worlds of matter and life.

The forces of matter, life and thought are totally diverse from each other. Life is a phenomenon of tremendous significance. It marks an absolutely different stage in the operation of nature. Physical forces can give us rocks, mountains, continents, rivers, oceans, winds, lightning and rain, and their continued operation would reduce the earth to a degradation of morass and sea. But life brings a new force which fights physical forces, produces forms vegetable and animal, which operate and direct to their own ends all physical forces and exercize a dominance over them. But there is a third stage in the operations of nature. As organic life is of a different order from inert matter, so mind is of yet another order from either, and vastly higher than they. With the animal kingdom there came in mind, not possest by the physical elements, and no more by the vegetable kingdom. It is, in some degree, a characteristic of all animal life. The lowest forms have intelligence enough to feel for their food. As higher forms appear they learn to avoid danger, to search abroad for their sustenance, to swim, to fly, to run, till conscious reason appears in man and is supreme over the course of nature.

WHAT THINKS?

As I have found it hard to believe that the activities of life can be fully explained by the laws of physics, altho life constantly uses the laws of physics, so I am not easily persuaded that mentality, with its crowning power of will, is explained under the laws of life. Such is the teaching of those who hold that thinking is nothing more than brain action. Beyond all question the brain is active in all mental processes; and one can make the hypothesis that the brain is all there is to it, that its province is to produce, secrete thought, feeling, will, consciousness, just as the liver secretes bile; or one can take another hypothesis that the brain is an instrument which is used in the production of mental activities by some separate, outside, immaterial power somewhat as a harp, inactive and silent itself, is the instrument of music, responsive to the fingering of the musician. In the latter view one could think of the brain either as responsive to the influence of some universal force, as the wind plays on an Aeolian harp, or as affected by the action of an individual mind attached to itself alone. That would be the man's soul, and this view has held the field the world over, and in all ages. This is mainly because the phenomenon of will is evidently the action of individual and not general consciousness. We know, if we know anything, that we feel, we think and we will, each for himself. We may then dismiss the supposition of some universal force blowing upon the brain, or, to use the figure of the ocean, bubbling up into it as producing all its activities, whether we call that force God or anything else. Under the hypothesis of some external power using the brain as instrument our consciousness puts it under the control of each individual's own mind, but may leave the question open whether other minds can also use it. We have then two alternatives left to consider, one that thought is entirely a function of the brain; the other that each brain has its own ruling mind, separate from matter, which uses the brain as its implement.

BRAIN AND SOUL

The physiologist cannot decide which of these two hypotheses is true. His business is to study the activities of the brain, and he may see nothing but the brain acting, while the psychologist may see something else.

The knife and the microscope can investigate only the material brain and discern how it works. If there is mind it is as invisible as the wind which we know blows on a harp. It might seem a hopeful method of further research to inquire whether the law of conservation of energy applies to mental action. Here we find that every thought or feeling or volition is accompanied by a certain action of the brain cells, and flow of blood, so that the brain is affected by every mental activity. Yet this is not conclusive; there may be something else. Even so the harp is affected in the movement of its strings and the vibration of its frame by the finger of the player, so that the amount of force in the finger is exactly matched by the energy of these vibrations. But it is the player that plays the tune, not the harp. In the case of the brain, however, it is impossible to prove that any Joule's law is applicable to the transformation of brain matter or brain force into an equivalent amount of thought-force. In his Presidential Address before the British Association in its physiology section, 1911, Prof. J. S. Macdonald says:

> There is no one at the present time who is in a position to discuss the energy transformation of the central nervous system. Further, there is certainly no one capable of dealing with such peculiarities as might arise in the energy transformation of that part of the brain which is associated with the mind.

He further says:

> There is no scientific evidence to support or to rebut the statement that the brain is possibly affected by influences other than those that reach it by the definite paths proceeding from the sense organs and from the different receptive surfaces of the body. It is still possible that the brain is an instrument traversed freely, as the ear by sound, by an unknown influence which finds resonance within it. Possibly, indeed, that the mind is a complex of such resonances, music for which the brain is no more than the instrument, individual because the music of a single harp, rational because of the orderly structure of the harp. Consider such a possibility . . . inasmuch as an instrument shaped in the embryo of a certain set of conditions may in due course of time become the play of some new influence which has taken no immediate part in fashioning it. I will not dwell upon the point beyond this statement that I find it difficult to refrain from using the word *soul*.

Professor Macdonald's illustration appears to me to have argument in it. The ear is a delicate organ inactive and useless until mysteriously excited by a vibration from without. Just so the eye more delicately constructed must wait for the access of light before it can see; and even so it may be that the yet more delicate organism of the brain which is torpid in sleep or under anesthesia is an instrument which is traversed as freely as is the ear or the eye, by an exterior influence which finds resonance within it. That influence would be the soul.

THINKING IS NOT MATERIAL

We see; but we do not see what it is that makes us see. We have sight and the organ of sight; but because we cannot see the cause of sight which affects the eye we assume and believe in an invisible ether and its invisible waves. We cannot see the cause which affects the brain and

gives us thought, but we are quite within our rights when we assume that something works on and thru the brain, and we call it, invisible as it is, mind or soul. We have the right to believe that it is something more and other than brain because the brain is purely material, matter that has life in it, and its products must be material, as all products of living matter are, seeds, fruits, muscles, organs. Thinking is not material. It is very hard to conceive of thought as a function of matter, even of the brain, for we see in it nothing akin to material forces. Thought belongs to a different plane. It is immaterial, spiritual, not physical. What is a thought? Can you put it in balances and weigh it? Can you measure its bulk? Has it dimensions? By what yard-stick can we measure love and hate? By what micrometer can we compare the relative values of ideas? Conscience has no relation to weight or bulk. No physiologist can tell us that Shakespeare exhausted more brain-tissue in writing "The Tempest" than Walt Whitman in composing "Leaves of Grass," or that Virgil's brain was more worn away than that of Mævius.

Yet it is for another reason chiefly that the boor or the philosopher believes he has a soul, a proof that depends on consciousness. He feels that there is something in him that is lord of his body. He originates purpose, will, and his body serves and obeys him. He cannot think of the body as himself. He is its master; it is his slave. The master must be something other than the slave. He does not see it, and he thinks of it as something spiritual. It is then easy for the savage to imagine that in dreams his soul leaves the body and wanders off to visit other souls. The philosopher regards the dreams as mere fancies of imagination, but he knows that something in him, or, rather, the real self has initiative, originates thought, exercizes will, and using the reservoir of the brain sends messages by way of the nerves, which are but the extensions of the brain to all the body. To him the whole nervous system, brain as well as the spinal cord and the nerves, seems all to be but his instruments, the brain like the boiler of a locomotive from which power goes thru steam pipes and cylinders to move the pistons and wheels, while the engineer's will controls it. So I look at the operation of the mind and the body. The brain is the steam chest, the blood is the furnace which supplies its force, the steam pipes are the nerves which carry the force where needed, and the remaining machinery corresponds to the parts of the body which obey the message of the nerves. But back of all is that which gives orders, which we call the soul, the engineer of the great human machine, which knows, thinks, wills, while brain and cord and nerves are its obedient servants. Man wills; he cannot think that matter wills. There is something of the same intangible order as is the will itself that he feels is ruler, originator, initiator, something more than the material body. If there is nothing beyond the working of the cerebro-spinal nervous system, then, as it appears to me, there can be no free-will; all must go on mechanistically. But it does not go on mechanistically. "No physics, no mathematics," says Sir Oliver Lodge, "can calculate the orbit of a house-fly."

Such seems to me to be the reason why all except some philosophers have come to believe in the existence of a soul within, or related to, the body. It carries conviction to my mind, and I do not think it is because I and all other people wish to believe. I do not yet put any serious weight in the so-called psychic revelations. The evidence for them have not convinced me of their genuineness, and my incredulity is supported by their worthlessness.

What relation does belief in the immateriality of the human soul have with belief in God? Just this, that the existence of many millions of human souls, all immaterial, all invisible, does away with any presumption against the existence of a superior, or supreme, immaterial, invisible Being related to the universe which he may control, even as the human soul controls its body. The argument is not absolute and final; one can yet disbelieve. The step is easy, however, from the human soul to the existence of a Soul of the Universe, which yet is not the universe, but which rules over it as the human soul rules the body.

BLOOD WILL TELL

THE chief impediment in the way of medical treatment is now as it always has been, difficulty of diagnosis, particularly in the case of obscure diseases of the internal organs where the visible symptoms are vague and similar. But recent experiments on animals, chiefly carried on by Professor Abderhalden, of Halle, point the way to a new and more accurate method of diagnosis for such diseases by the analysis of the blood, similar to the methods worked out by Koch and Behring in the case of infectious diseases. They discovered that when bacteria of any kind invaded the human organism a protective ferment was formed and appeared in the blood which destroyed the foreign matter, xenogenes, produced by these particular bacteria. Now it appears that the body adopts the same means of protection against the excretions and products of decomposition of diseased organs (haemoxenes). This gives an opportunity of ascertaining the existence and location of a malady in its early stages when the chances of cure are more favorable than when it becomes chronic. For instance, a patient complains of strong and continuous headaches accompanied by insomnia. The examination reveals no symptom permitting a definite diagnosis. The doctor takes a small quantity of blood from the patient and distributes it in a number of test tubes. Into each test-tube is then put a piece from a different organ of the animal used for the control, a piece of brain matter, a piece of liver, of the lung, of the kidneys, of the heart, of the thymus and of the thyroid gland. Examining the test-tubes twenty-four hours later it is found that lung, liver, kidneys and heart have not been altered by the serum but that the brain and the thyroid gland show signs of being decomposed. This proves that the blood of the patient contains ferments from the brain and from the thyroid gland, and that indicates that the functions of these two organs are disturbed, thus introducing into the blood cells insufficiently decomposed. The secretion of the thyroid gland being of extreme importance for the proper function of the brain, the positive reaction of this part of the experiment shows that the disturbances of the brain cells are caused by the thyroid gland supplying the brain insufficiently with this necessary secretion. Thus the doctor knows exactly where his treatment has to begin.

This method of diagnosis has been found useful in determining whether an operation for cancer has been successful or not. If it has the cancer ferments disappear from the blood in about a fortnight after the cancer has been removed. If not, a test of the blood a month or two later will show that the cancer has not been completely eradicated.

The importance of the discovery lies in the fact that it is likely to lead to methods of treatment for organic diseases such as have been so successful in infectious diseases like diphtheria and typhoid.

BY LIVY S. RICHARD

Interesting to recall at this time Mr. Brandeis's predictions for the New Haven Railroad. As far back as 1910, and before, he began to preach against the consequences that must attend the "banker management" of great railroad and industrial properties, at that time looked upon and commended as extremely advantageous. The New Haven was the last word in such control, and upon its board sat the ablest and most powerful financiers in America. How they served their trust has been well brought out by the Interstate Commerce Commission, and the direst of Mr. Brandeis's predictions were only too well justified in the wrecking of this prosperous railroad. The steps by which Mr. Brandeis reached the position he holds are here set forth by Mr. Richard, formerly the editor of the Boston "Common" and now on the staff of the Cleveland "Press."—THE EDITOR.

LOUIS D. BRANDEIS, of Boston, is easily the most liked and the most hated man at the Bar in America. It is agreed that his remarkable talents placed the most alluring rewards of professional success within his grasp. How and why he came to put aside wealth and power and social prominence to enroll himself as the People's Attorney has puzzled many, and not until his career is studied as a whole is this understood.

Brandeis' ancestors were well-to-do Jews in Bohemia, his father, a small manufacturer, living in Prague until the revolutionary movement of 1848 led Louis' parents to come to America. They located in Louisville, where, in 1856, Louis was born. The family lived in comfort; were interested in literature, music, art—and looked upon money as a means rather than an end. The Brandeises were stanch Abolitionists, for they had an instinctive hatred of oppression.

In 1872 the Brandeis family—Louis was the youngest of four children—were taken to Europe. Louis entered a realschule in Dresden, trained with German thoroness, and left it an honor pupil. He never had a college education; but he had its equivalent, perhaps its superior, in this intensive training, broadened by travel and by contact with cultured people.

The reconstruction following the Civil War had played havoc with the Brandeis fortunes. Hence, when the family returned to America in 1875, and Louis decided to become a lawyer, he faced the necessity of earning his way. He entered Harvard Law School at the age of eighteen, completed the course in two years, took first honors in his class, remained a year longer for a post graduate course, paid all his bills and had $1000 remaining, earned by tutoring.

Brandeis' elder sister had married Charles Nagel, afterward Secretary of Commerce and Labor under President Taft and then prominent at the St. Louis bar. St. Louis, a center of rapid growth, appealed to young Brandeis and he formed, in the fall of 1878, a desirable connection with the law office of James Taussig, uncle of the Harvard economist, and then a leader in the corporate practise of the Southwest.

A career of especial promise seemed open to him in St. Louis. Most of the lawyers of that town and time were self-trained; rare at the bar were incisive minds like that of the brilliant young Jew, trained at an eminent law college, and the facility with which Brandeis got to the core of a matter in controversy and to the authorities necessary to buttress a professional opinion marked him. The practise of Mr. Taussig consisted largely of railroad work. It is a picturesque turn of fortune that the most formidable opponent of "Big Business" had it within his power in his youth to become a railroad attorney.

But to the traveled young Kentuckian the St. Louis of that day seemed crude. After a few months, longing for the more artistic environment of Boston drew him East. One of his closest friends at Harvard had been Samuel D. Warren, son of the great paper manufacturer. Warren wrote inviting Brandeis to return to Boston and join him in a law partnership. This, helped by the memory of his unusual career at Harvard, launched Brandeis, at the age of twenty-two, among the elect of the American Athens. There followed years in which he became, one might almost say, a darling of the privileged. About the bright youth who had so dramatically won front rank in Harvard Law there was the tinge of romance; he had within him ability and culture; and partnership with Warren helped to supply the endorsement of respectability, if any was needed. Long is the list of homes of highest status in which he became a guest much sought after—homes in which, were you to mention his name now, kindly faces would fill with scorn and actual hatred show. Yet it was not until he began to look into the causes of poverty and to question the claims of privilege, that his social acceptability waned.

"I think it was the affair at Homestead," Mr. Brandeis told me, "which first set me to thinking seriously about the labor problem. It took the shock of that battle, where organized capital hired a private army to shoot at organized labor for resisting an arbitrary cut in wages, to turn my mind definitely toward a searching study of the relations of labor to industry.

"I had been asked to give a course on Business Law at the Massachusetts Institute of Technology, and had gone to some pains to prepare my lectures tracing the evolution of the common law in its relation to industry and commerce, when one morning the newspaper carried the story of the pitched battle between the Pinkertons on the barge and barricaded steel workers on the bank. I saw at once that the common law, built up under simpler conditions of living, gave an inadequate basis for the adjustment of the complex relations of the modern factory system. I threw away my notes and approached my theme from new angles. Those talks at Tech marked an epoch in my own career."

It would be instructive if a report of them were now available. The significant thing about them, however, is that Brandeis twenty years ago took not the narrow legalist view then common (and yet not uncommon) among men of his profession, but the broad, humanistic view which has come to be nowadays the accepted one, so far as legislation is concerned.

Much of Brandeis' strength came from the fact that he always regarded his practise as an opportunity for mental development. The late W. H. McElwain built up a wonderful business in shoe manufacturing. He was a pioneer in applying the principles now known as "scientific management." Brandeis was his counsel and business adviser, as he had been of many of New England's successful manufacturers. It was in this connection that Brandeis laid the foundation of his successful argument in the first railway rate case, summarized in his dramatic contention that if the railway executives would correct wastes in operating practise they could save a million dollars a day. He had seen what efficiency methods could accomplish.

The beginning of Brandeis' useful career in labor arbitration was characteristic. A client—a leading shoe manufacturer—mentioned to him casually a labor incident in one of his factories. Brandeis replied promptly: "Your superintendent did

exactly the wrong thing; it is like courting a strike." Before the error could be corrected the strike came and Brandeis was asked to advise.

He suggested a conference with the president of the international union. The conference was opened by Brandeis asking the president to state what the trouble was. When the latter had finished his story, client and union president were alike dumbfounded by Brandeis saying: "My client is entirely in the wrong. What are you going to do to help us out?" Such frankness was irresistible; the union's president at once set to work and a satisfactory adjustment was soon found.

So long as Brandeis confined his public activities to serving as free counsel for charity and welfare organizations as a municipal reformer or as mediator in industrial disputes, he received practically unanimous praise from Boston's "best citizens." But as early as 1883 he had come to the opinion that public franchise corporations should not be allowed to have valuable rights in the streets without paying for them; and about ten years later he made his first public appearance to protest against the gift of a franchise—in the case of the West End Street Railway, ancestor of the present Boston Elevated.

It was at a legislative hearing at the State House and he argued long and forcefully for public compensation. The promoters and stockholders of West End were eminent citizens, the cream of Back Bay respectability. The Legislature had not then been tainted by the presence of "progressives." Hence, Brandeis' protest fell on deaf ears. More than that—the newspapers gave columns to the arguments for the franchise; some never mentioned Brandeis at all, others merely noted that he had appeared in opposition. It was his first, but not his last, experience with a closed press.

Later in a gas hearing, of which more hereafter, Brandeis had a similar experience. The arguments for the company were reported in full; the argument of Brandeis, for the people, epoch-marking in that it guided the subsequent settlement, was barely mentioned. This time a leading editor in Boston replied to a citizen who asked why his paper had given such relatively small space to the Brandeis argument: "We couldn't very well have nothing but gas in the paper. Besides, the gas people paid us a dollar a line."

Brandeis' serious fight to protect the public's street franchises began in 1896, when the Boston Elevated attempted to grab the remaining streets of Boston. Then he was practically alone. Later, in 1900, 1901 and 1902, with scarcely a handful of citizens organized as the Public Franchise League, Brandeis led the fight to preserve municipal ownership of the subways and secure proper terms for the people and efficient public control.

These steps marked a definite parting of the ways. The darling of the rich remained their darling no more. In clubs, some eyebrows were lifted and some former intimacies grew cold. Various vague stories floated about, attributing his course to this or that selfish motive. His enemies grew in number and daring when, later, he undertook his monumental battle with the house of Morgan over the pyramided New Haven. Then clients withdrew; and there began to be whisperings among colleagues at the bar that Brandeis was "unprofessional."

Among the leaders of Boston's financial, professional and intellectual life, Brandeis soon had to pursue a lonely way. But he never wavered. Nor did he allow any of these incidents to irritate or embitter him. He just fought on, taking the consequences calmly. Now, when the lofty structure of New England transportation monopoly has toppled over and lies in ruins, a complete vindication of all his prophecies, I asked him how he felt about it.

"No, I have no exultation. There are too many victims whom I tried to warn but who would not listen."

Brandeis first gained national renown in connection with his settlement of the Boston gas controversy. For a score of years the gas business in the Hub had been a football of private speculators. Two quarreling companies wanted to merge and the question of terms arose.

Brandeis brought in a plan which eventually was adopted and which has since been recognized as creating almost ideal conditions of private ownership. Its principle was profit sharing between utility corporation and consumers; a mutual bonus for efficiency. The company was allowed a seven per cent return upon a fixed capitalization so long as it sold gas as low as ninety cents a thousand feet. But each time it would, by increased efficiency, lower the price five cents a thousand, it might raise its dividend rate one per cent. Boston now has eighty-cent gas, the company nine per cent dividends and the public a contented feeling.

How Brandeis won the fight for an eight hour law for women factory workers, first in Oregon, later in Illinois—won it by so masterly a showing of the social damage from over fatigue that the courts had no escape from declaring the statute constitutional; how he helped to bring order and justice out of the tangle of the cloak makers' strike in New York; how he battled with Ballinger, fought the railroad rate case, cleared the fog away from the problem of trust regulation and laid bare the sources and correction of money concentration are later services so fresh in mind that they do not need review. In none of these engagements did he receive a fee except as counsel in the Ballinger investigations.

The Brandeis law firm has long been among the leaders in Boston; one in which many partners and a large staff of workers coöperate. It is really a department store of legal counsel and service. Brandeis himself has always lived simply, his one dissipation being a dinner table around which he loves to group men and women who have thought or done things and to get them to telling what they know—his continuous university. Otherwise, the Brandeis home is run as economically as the home of the average man on small salary. The excess of his large income he returns in public service.

I asked him how he found time to supervise so varied a law business and also do so many big public tasks seemingly without hurry or fatigue.

"I have learned how to work with others," he replied. "As a beginner, I took any honorable business that offered. I have walked miles to collect a $10 collection account. But I have never wanted to continue in any line of legal work longer than I found it instructive. When the development it afforded ceased, I withdrew, turning the job over to some junior, over whom I merely kept sympathetic watch. In this way, tho I know what is going on in my office, I am able to save my strength for other and larger tasks."

It is his knack of being able to concentrate on a big task and to find the right help which marks his genius.

"Have you a complete philosophy of life?" I asked.

"I have many opinions," he replied; "but I am not a doctrinaire. My habit of mind has been to move from one problem to another, giving to each, while it is before me, my undivided study. I am a Democrat, but I have laid most stress on the little 'd.' Give men a free field. Provide equality of opportunity—and we attain the New Freedom."

In a way Brandeis looks like Lincoln. It is a resemblance less of physiognomy than of soul; but in the countenance of each there is an expression of pity for the unfortunate, of sympathy for the oppressed. Bran

deis also has much of Lincoln's keen appreciation of humor. Perhaps this is why he also shares Lincoln's intuitiveness. You would scarcely suppose, from reading a Brandeis brief, so crushing in its logic, so irresistible in its cumulative citement of precedents and facts, that the man who wrote it had distinctly a feminine mind, a mind which leaps to conclusions with the rapidity of the lightning's flash, a mind that works by "hunches." But so he has.

"The right or wrong in a case is evident to me at a glance, as soon as I have the facts," he said. "Then it is only a task of arranging the facts and digging out the law."

There is also a certain fineness of conscience in Brandeis which is more suggestive of the Jewish prophet of old than of the twentieth century Big Business lawyer. And with just one more example of it I think we may close this story.

Years ago, in Boston, when still a young man, Brandeis had been engaged to appear at the State House as attorney for a sectarian charity which was seeking a state subsidy. A neighbor one evening argued with him the impolicy of such a use of state funds. Brandeis listened and said little, but when the hearing came off he did not appear for his client. Later he confest that he had been moved by the neighbor's argument to review his own premises, had seen the error in his position and had then made a resolution—afterward unbroken—never again to appear before a legislative body to represent any private interest for a fee. Not that private interests were necessarily in the wrong or that they were not entitled to a full hearing, but that it would be unfair for him to act as an attorney for a private interest when there was no certainty that there would be any one to represent the people's side. Such was the real beginning of his dedication as the People's Lawyer.

Cleveland, Ohio

NINETY IN THE SHADE

BY E. P. POWELL

A LADY writes us, about her home, that it is "very comfortable, altho the hottest spot in the United States." Our opinion is that the thermometer at ninety means something very different in different localities. Indeed we are sure of this. Like this happy madam we would much rather see it ninety than zero; but when a breeze comes from the Atlantic and another from the Gulf of Mexico, at the same time, to play over your head, it is nothing at all like being in an oven in the mountains. Every morning our neighbor as he passes at about eight o'clock says, "Considerable air stirring this morning."

That is about what we want; we want the air stirred. Houses are seldom built right. Their purpose apparently is to keep the air from being stirred at all. Some one ought to patent for us a house that has the opposite condition as a definite end. Verandas are almost always too narrow and they generally butt out on the hot side of the house. If the air stirs at all, where your hammock is swung, it is first heated. Be sure to have your veranda ten or twelve feet wide and part of it on the sunless side of the house. Why, in other words, should not about one-half of a good-sized house be veranda? A summer kitchen can be at one end of the north side, only don't block up the east end. Let the good housewife have the "air stirring" when she cooks your dinner. For sleeping, swing your beds on the south or west side; and have it so that you can draw them up to the ceiling, out of the way, in the daytime.

But why should one have all outdoors around him and creep under cover or board himself in at night? The fascinating part of *Swiss Family Robinson* is that they slept in the trees. Chickens do this when they are allowed to choose their sleeping place. There is no reason why we may not utilize some of our trees by night as well as by day. Mosquitoes? The time has come when they should be abolished. A little kerosene in the sink holes will generally do this. Double the number of your hammocks and take afternoon naps, at least, where the air stirs freely.

Some one sent us last summer an electric fan. This mitigates the horror of airless rooms, only that you must have some way of running it. And this means that electric power ought to be used in every country house of any quality, not only to run the water and light the house at night, but to fan the folk when it is ninety in the shade. We hitched ours at once to the power house; and have enjoyed it ever since while thinking that every home and even every barn might easily be supplied with something like it. What will the animals say to that?

Have you got a brook about your house or within a hundred rods? Is it on ground high enough to make it possible that it should run into the house itself. Yes, we mean *into* the house, and right thru the cellar, in as tortuous a stream as possible. Let it do this to cool the house, or one room in it at least, before it goes on into the garden to irrigate the strawberries and potatoes. Always stirring, jumping, singing, it should make a pool for a night bath in the garden, and help to fan any one who enjoys an orchard hammock. Let it be ninety degrees in the shade while you are reading the last novel, or possibly drowsing over the latest poem. The Independent will be a thoroly good salad for your retreat.

Of course a cool well, bored into the rock, is essential to any decent home in the country. What a fool a man is who slaves twenty or thirty years for food, and all this while is bringing up a family on water that is supplied by a shallow fifteen or twenty-foot well. It is not a well at all—but likely to be wholly ill. If we were born over again, and had our way about it, we would get at once into more water contact. We knew at one time a shapely little fellow of eleven, and we never knew the time when that boy did not have his pants rolled up as high as he could get them, while he paddled and puddled in every bit of water he could find. It was a comely habit, and we have often wished that all of the boys could get out of the streets and into a creek. If you have your choice about it, build by a river or a good-sized brook, and do not by any means forget to run the brook thru the house.

We have a little lake that covers half our acres. That lake cools the air, furnishes fish, is a mirror of the stars and the trees, and an everlasting joy. Find one if you can, just big enough to let your farm swallow it. A boat is just as much a tool as a wagon, and a home tool at that. We shall lay down our pen at this moment to demonstrate the fact. We shall come back soon with a string of bass or perch, and eating our dinner out-of-doors, under a huge water oak, we shall not care whether the thermometer is eighty or ninety, for we have built a house and we have adjusted ourselves, so that we need not be victims of climate. For one may, if he will, run away not only from twenty below zero, but from one hundred above.

Sorrento, Florida

THE CHAUTAUQUAN

MERGED WITH THE INDEPENDENT, JUNE 1, 1914

Official Publication of Chautauqua Institution, a System of Popular Education, Founded in 1874, by Lewis Miller and John H. Vincent.

JOHN H. VINCENT - - Chancellor
GEORGE E. VINCENT - - President
ARTHUR E. BESTOR - - - Director

FRANK CHAPIN BRAY - - - - - Chautauqua Editor

TO express the spirit and influence of Chautauqua can anybody coin a better single word than "Chautauquanism"? This is a constructive "ism," less of a creed than an attitude toward education and life. In a twentieth century industrial nation, possest of the desire to achieve real democracy, the chief industry must be education. It is one thing to organize an industry, it is another thing to socialize it. Chautauquanism is helping to socialize American education for the good of the greatest number.

Chautauqua asserts that education is not a thing apart from everyday life. Conventional schooling takes up a comparatively small part of the lifetime of most people. In ways of making life out-of-school educational, utilizing the intellectual discipline which the experience of living guarantees to thoughtful people, Chautauqua's unconventional contributions to American educational methods have been unique and permanent.

Chautauqua successfully attacked the superstition that one is ever too old to learn, decades before the modern psychologists declared that one of the greatest dangers to the race was mental arrest or stagnation after school age has been past. Research specialists now assure us that the cells of the brain most concerned with mental life keep on growing until at least the age of sixty-three and probably to the very end of life. They tabulate data showing that sixty-four per cent of the greatest work of 400 of the world's greatest men was done after their sixtieth year.

Chautauqua supplies educational facilities, long neglected by conventional systems, for father and mother at home, because the family is still most important among our educational institutions. Public library service is prepared for by teaching people how to use books to advantage.

Chautauqua circles, in city, town and country, have had years of experience in so-called social center activities and continuation school work for adults, the results of which are serviceable to conventional school authorities today. Must the school be "a place in which all the people shall bathe, read, dance, bake and vote?" The line is not easy to draw between what may be advantageously incorporated in the school system and what may be better handled by other educational agencies. Certain it is that an increasing measure of guidance or supervision of adult education from the state university down to the public school is the educational trend of the times, even at the sacrifice of some academic conventionalism.

Chautauquanism continues to stand for the educational ideal of balance between the cultural and the practical, in the belief that "it is poor training which fits a man for his job, but not for life."

A few of the phases of the very modern problem of The Education of the American Girl are indicated by these titles of Earl Barnes' Chautauqua lectures: Academic Training as an End in Itself; Catering to a Girl's Fancies; Domesticity as an Impending Probability; The Necessity for Vocational Training; The Cultivation of Social Charm and Religious Feeling; The Impending Obligations of Women.

A School of Mothercraft is new at Chautauqua. You may take the babies to a "Children's Cottage" and also take the courses in physical care, hygiene and feeding of them yourself, or you may leave them to be cared for by members of classes of mother's helpers who are in training for that vocation. This baby laboratory school coöperates with other summer schools courses in child psychology, kindergarten, playground, eugenics, sociology of the home and family, and the religious training of children.

Competition between Chautauqua talent bureaus must be rather keen when one of them announces: "In selecting talent, the —— is, as far as known, the only lyceum bureau that demands a definite moral and spiritual standard in engaging talent."

A MORNING RESOLVE

I will this day try to live a simple, sincere, and serene life; repelling promptly every thought of discontent, anxiety, discouragement, impurity, and self-seeking; cultivating cheerfulness, magnanimity, charity and the habit of holy silence; exercizing economy in expenditure, carefulness in conversation, diligence in appointed service, fidelity to every trust, and a childlike trust in God.—*Bishop John H. Vincent, at the Chautauqua Woman's Club.*

CHAUTAUQUA PLATFORM ECHOES

All personal development is the working out of our vision moments. There is a so-called deadline in all professions, and the question is when that deadline is reached. It is reached when we cease to dream, and cease to work out the hopes of the eternal that come into our soul. There can be a rebirth of the power to dream, as there can be a living over again, a rejuvenation of life. Life is not finished at any stage. You can have a new life if you try, for it is possible to begin again.—*Dr. C. Rexford Raymond, South Congregational Church, Brooklyn.*

Interest in the Bible has past from the theological, the devotional, and the critical study to the historical, the literary, the social and the religious educational value of the Bible. The interests are historical, literary, social and educational, or gathering them all up in one word—practical. States are placing the study of the Bible in the public schools and the enrollment of students in the Bible has trebled at Yale tho the courses offered are elective. The trouble is that there are only sixty-five professors in our colleges for this study when there should be six hundred.—*Prof. Charles Foster Kent, of Yale.*

Our public schools are largely responsible for our overcrowded cities and diminished rural populations. With their over-emphasis of intellectual discipline without correlation with vocational pursuits and the almost complete ignoring of locality needs they are, in reality, making many localities poorer and non-progressive by draining them of their brightest and most efficient boys and girls, who after leaving school are forced, by the school system itself, to migrate to other regions. Unfortunately our educational system in forestry has been developed almost entirely around the demand for professionally trained men. We have sadly neglected the teaching of forestry in our public schools where the great body of our future citizens must find direction and incentive for productive labor.—*Prof. James W. Toumey, Director of Yale Forestry School.*

THE NORTHERN PORTION
OF THE
SCOTCH ESTATES OF THE DUKE OF SUTHERLAND
307,230 ACRES

THE MENZIES ESTATES, PERTHSHIRE
90,000 ACRES

Date of Sale Friday, May 29th, 1914.
AT THE ESTATE ROOMS, 20, HANOVER SQUARE, London, W.

The Auctioneers, Messrs. KNIGHT, FRANK, and RUTLEY, 20, Hanover Sq., London, W., and 10, Princes St., Edinburgh.

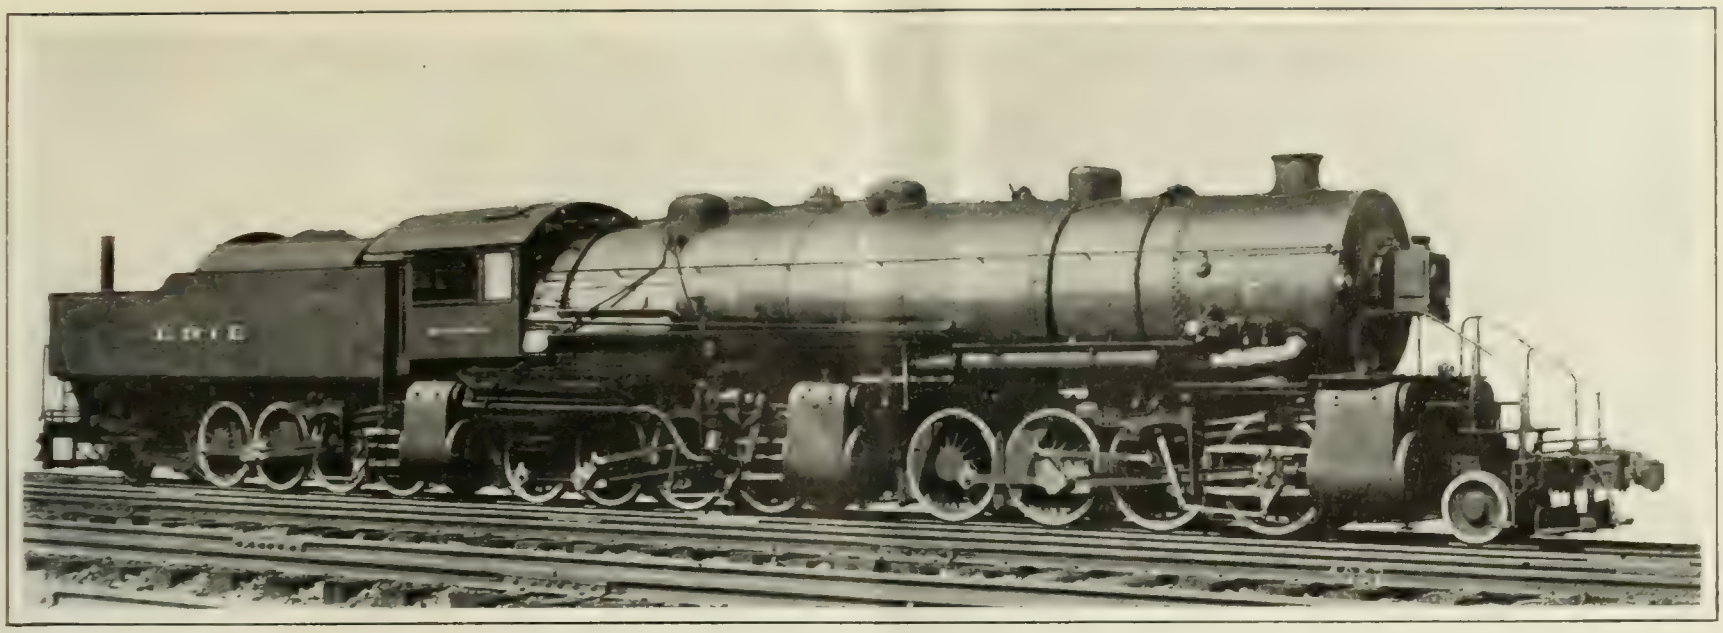
BREAKING UP THE BIG ESTATES

THE page from the London *Times* printed in facsimile above shows that the land policy proposed by Chancellor of the Exchequer Lloyd George is producing its effect in advance of its enactment. This advertisement is in itself a more emphatic condemnation of the British land system than Mr. Lloyd George's most eloquent arraignment of "the arch depopulator of the Highlands." In England and Wales the average density of population is 618 to the square mile. In many parts it is impossible for the small farmer to get land at any price. Yet on the same little island one man can offer for sale as a fraction of his holdings nearly 400,000 acres.

The great Sutherland deer forest was created in 1814, when the first Duke of Sutherland forcibly evicted with great barbarity 15,000 peasants from their holdings and colonized them on the coast. This famous incident Mr. Lloyd George has made much of in his speeches in favor of land reform, for instance :

> A Highland deer-forest is a place where formerly thousands of people made a living by cultivating the soil—thousands of the most robust and gallant people these islands have ever seen. What happens when you make a deer-forest? You turn them all out—every man of them. You pull down their houses, you burn them.
>
> Those who doubt this statement have merely got to take their next holiday in the Highlands of Scotland, and there they will find millions of acres which formerly maintained the sturdiest, the most gallant race under the sun, a desert, in order that these millions of acres may be consigned entirely to sport.

The opponents of Lloyd George defend the Sutherland clearances on the ground that the crofters were better off on the coast than on the Highlands and that the land was not and is not suited to agriculture. To this Lloyd George retorted that if the land proved to be good only for sport he would lay out 200 golf courses and open the shooting to 18,000 workingmen at 2s. 6d. a head per week. Whereupon his critics amused themselves with calculating how many millions it would cost to accommodate all these people and what would happen when the 18,000 amateur sportsmen with their 18,000 guns and the 2000 golf players and their 2000 caddies were turned loose in this nationalized deer forest.



A DEATH HOUSE FOR RATS

AT the Panama Exposition in San Francisco next year will be exhibited a model of a scientific rat trap for hotels, apartment houses, large restaurants, or any buildings larger than a residence. The trap is quite simple, tho sufficiently thrilling for the victim. In the kitchen, pantry, butcher shop, wine room, and in every part of the building that the rats would be likely to visit, an entry way to the trap has been made. This consists of a wire cage, baited and opening with an automatic door, so that when the rat creeps in to snatch at the bait, the floor drops from under him and lets him down into a long wire passage. Behind him the way is blocked and the rat can travel in only one direction—straight ahead. He trots along the tunnel until he steps jauntily thru another gate on to another trap door. This lets him down into a continuation of the passage.

The rat travels in this manner possibly 800 feet, finally winding up in the engine room. This is comfortably warm, and as he makes the final turn, he is confronted by another gate, a trifle more complicated than the rest. He is used to it by now, and plunges on ahead; there is a queer little click, the gate slams back into place, and he has been registered. He now enters the death chamber, a sheet-iron, box-like affair, containing food and water for the victims to subsist on until the date for their execution arrives.

When the main trap contains a dozen or more rats, the modern Pied Piper looks them over, shuts up all the air vents and turns on the gas. This is an easy and humane but certain death for the rats. This is probably the only trap in existence which does not scare the rats, but looks more like a place of refuge.

Since its installation in a Los Angeles club, the trap and apparatus have registered and executed 4812 rats. It is expected that a trial will be given the apparatus in the United States Navy.

THE GREATEST LOCOMOTIVE IN THE WORLD

With its twenty-four driving wheels this locomotive can pull a train nearly five miles long over the steep grades of Pennsylvania

POLITICAL HERALDRY

NEW YORK STATE has adopted a modified Massachusetts ballot, adding, for the benefit of the foreign voter, a party emblem opposite each name. But the law limits this to a square five-sixteenths of an inch across. The Republican party has been using as its device an eagle, holding a quill pen, talons on a ballot box, the whole seen—dubiously—against a setting —or is it the rising?—sun. But to compress this luxuriant symbolism into five-sixteenths of an inch was too great a task for the politicians, adepts rather at expansion than compression, and simplification became imperative.

Consequently the ballot box and quill pen have been ruthlessly pruned away, the ambiguous sun discreetly suppressed, and only a bald-headed eagle, much subdued as to anatomical detail, perpetuated.

Progressives may call attention to the fact that this surviving eagle is distinctly a backward-looking bird, but heraldic eagles always have been cervically irresponsible, and otherwise the party is fortunate in the metamorphosis. It has not always been easy, in stepping down national politics to the ballot where assemblymen and aldermen flourished, to avoid giving the impression that everything but the ballot box had quite vanished from party ken. It is a happy thought to invest each little candidate of the party in the full and adulterated dignity of the national bird.

The new ballot does away with the voting of a straight ticket by making a single cross, as the nominees are grouped by office and not by party.

THE OLD REPUBLICAN DEVICE

OSTRICHES IN THE UNITED STATES

OSTRICHES were first brought into the United States in 1882. Between 1882 and 1886, 120 were imported from South Africa, and from these were bred all the ten thousand birds now estimated to be living in the United States. Most of the ostrich farms are in Arizona, tho there are several in California and a few in Texas, Arkansas and Florida. There is now considerably more than $2,000,000 invested in the ostrich industry thruout the country, not including the value of the farms. Ostriches are very profitable if properly cared for. One acre of alfalfa will support four ostriches for one year with hardly any other food but gravel and ground bone. The same acre of alfalfa will support a cow, but a cow at the end of five years will only be worth fifty dollars, whereas the four ostriches at five years of age will be worth $1000. The birds will yield one hundred dollars' worth of feathers a year, besides the increase thru the eggs. Even the shells of infertile eggs are sold as curios. The price of feathers varies from ten dollars to $150 a pound. As it costs about ten dollars a year to support a bird, there is a profit of sixty dollars an acre from feathers alone.

No one knows the age ostriches attain for they have not been under domestication for a sufficient length of time. They mature at the age of five years, but they are supposed to live to some three score and ten.

A TITAN OF THE RAILS

THESE are days of the titans, not only in fifty-story buildings, super-dreadnoughts and 900-foot ocean liners, but in railway locomotives as well. Think of moving a train nearly five miles long, weighing ninety million tons and composed of six hundred and fifty freight cars, and one has a conception of the enormous driving power behind the wheels of the "Matt H. Shay," the largest railway engine in the world, which has just been put into commission by the Erie Railroad.

Three engines in one more nearly characterizes this latest of the land leviathans. Under the enormous boiler and the tender are placed three sets of driving wheels, numbering twenty-four in all, and these deliver to the rails a tractive power of more than 160,000 pounds. With each piston stroke there is expended energy equivalent to the discharge of four of the navy's most powerful twelve-inch guns. But instead of hurling 850-pound projectiles a dozen miles or so, the power of these steam chests is chained to the humbler task of pushing heavy freight trains over the mountains east of Susquehanna, Pennsylvania.

As a recognition of fifty years of service by one of the road's most trusted engineers, the locomotive has been named the Matt H. Shay.

THE NEW COMPRESSIBLE EAGLE

THE NEW BOOKS

A NEW KIND OF PHILANTHROPY

AFTER an opening of unusual promise it is disappointing not to find *The Ragged Trousered Philanthropists* measuring up to its great possibilities. It is a story of workingmen, not written about them after the fashion of our sociological novels, but by one of them, voicing the views, the passions, and the ambitions of a class usually inarticulate. It is such a book as Zola might have written. Robert Tressell, according to the editor's preface, was a house-painter and sign-writer, and from the rough notes he left after wearying of the uncertain life of his kind, this book has been prepared.

Into a rough group of English plasterers, painters, ditchers and the great army of unskilled laborers the reader is injected. He sees them at their work, or at their noonday discussions "on the upturned pails, planks and dresser drawers, in their shabby, ragged clothing, eating their coarse food, cracking their coarser jokes, contented so long as they had plenty of work, something to eat, somebody else's cast-off clothing to wear, convinced that the good things of life were not for the likes of them, or for their children either." So fierce is the competition among them for work that they will accept any price, allowing themselves to be pitted against one another, accepting all kinds of hardships and petty tyrannies only that they may be allowed the privilege of working for their employers. In thus heaping up wealth for the capitalists they are philanthropists, according to Frank Owen, who vainly preaches to the deaf ears of his mates the necessity of organization among them, and tries to explain to them the Socialist theories of the causes of poverty and their degradation:

> Poverty is not caused by men and women getting married; it's not caused by machinery; it's not caused by "overproduction"; it's not caused by drink or laziness; and it's not caused by "overpopulation." It's caused by private monopoly. That is the present system. They have monopolized everything that it is possible to monopolize. They have got the whole earth, the minerals in the earth, and the streams that water the earth. If it were possible to monopolize the air and compress it into huge gasometers, it would have been done long ago, and we should have been compelled to work in order to get money to buy air to breath. . . . In exactly the same spirit as you now say: "It's their land," "It's their water," "It's their coal," "It's their iron," so you would say: "It's their air, these are their gasometers, and what rights have the likes of us to expect them to allow us to breathe for nothing?"

With a setting of such promise the story opens, but beyond that it does not go. Zola would have delighted in its materials, but it lacks his treatment. There is no development, except in the general tone of hopelessness; events tread a round of repetition approaching the monotonous, for a part of which one may blame Miss Jessie Pope, who edited it; yet no greater, perhaps, than the monotony of the lives in which they figure.

Indeed, so gloomy is the picture that we should never accept it as standing for the outlook of the American workingman, and we hesitate to accept it as standing for his British brother, but with all its bias it presents an intimate view of the life of the working class that makes it a volume of more than fictional value.

The Ragged Trousered Philanthropists, by Robert Tressell. New York: Stokes & Co. $1.25.

THE PHILOSOPHY OF TAGORE

The light that beats upon a Nobel prize winner is not likely to be critical, whether or not it is favorable. The attention, therefore, that the works of Tagore have enjoyed is no index of their quality; in fact, so far as their quality is concerned, it is quite misleading, for the essential things in Tagore's writings have been known to the Occident for ages, and have never been popular among us. In this collection of lectures on the realization of life, he expounds the philosophy of India as to the oneness of the soul with the universe, the soul's realization of itself thru abnegation, the problem of evil, etc. This Indian philosophy is already familiar to students in the mysticism of Emerson, of Plato and of Christ, to name three disparate teachers, yet it is exactly this mysticism in each that the western world has found hardest to understand, not to say accept. Therefore the women's clubs which recently were expending some admiration on *Sādhanā* were reading nothing new—merely something which they did not understand. This of course is not Tagore's fault. His message is noble, and we need it, but there is no immediate chance that it will reach us. To those competent to receive it, it must sound a bit platitudinous, so often have lonely prophets preached it before.

The Crescent Moon, a collection of charming child-poems, is of a piece with the philosophy. Sensitiveness to psychological experiences and to the suggestion of the infinite, is the mark of Indian thought, and also of the appreciation of childhood. The subject matter of these poems is therefore a happy vehicle for Tagore's message.

Sādhanā; The Realization of Life, by Rabindranath Tagore. New York: The Macmillan Co., 1913, $1.25.
The Crescent Moon; Child-Poems, by Rabindranath Tagore. New York. The Macmillan Co., 1913, $1.25.

AN IRISH CRITIC

Edward Dowden, both as a critic and poet, outside of a few circles, was perhaps less known in America than the more successful of his opponents, like William Butler Yeats, or Mr. O'Grady, in the contest as to the wisdom of reviving Irish "national" literature. But his *Letters* offer an opportunity to supplement his more important work on Shakespeare and Shelley by his intimate and unconventional remarks on them to his friends, and on Gladstone's great Home Rule contest, in which he took no little part.

Dutton. $2.50.

SUFFRAGETS AND PRISONS

A plea for militant suffragism, a study of prison conditions and a psychological self-analysis, is *Prisons and Prisoners*, by Constance Lytton. Converted to the cause of militant suffragism, four times Lady Lytton is imprisoned, once for going on a deputation to Parliament, for stone throwing and for window breaking. As a plea for militant suffragism it takes too much for granted, but as an exposé of the stupidity and futility of the present punitive prison system, the author shows how it consistently defeats its own chief end by systematically developing all that is worst in its victims and suppressing all that is best and then turning them out to prey upon society. Whatever else the militant suffragets may or may not have accomplished they have improved the conditions of imprisonment in England for all prisoners, particularly for women.

Doran. $1.

TREES ON THE FARM

A handbook for the farmer in the establishment, care and utilization of small patches or plantations of timber that may be maintained in connection with the farm is afforded by *The Farm Woodlot*, by Professors E. G. Cheyney and J. P. Wentling, of the College of Forestry of the University of Minnesota. The book is a part of the Rural Science Series edited by Dean L. N. Bailey, of the Cornell School of Agriculture. The volume is also intended as a text-book for the agricultural student.

Macmillan. $1.50

INDEPENDENT OPINIONS

CRITICISM OF THE NEW HAVEN

When we published in The Market Place and editorially accounts of the difficulties of the New Haven Railroad, we had not the report of the Interstate Commerce Commission to sustain our position. Several of our readers protested that we had gone too far. Since then, however, the Commission in its report has fully endorsed the evidence which we reviewed.

From a Wall Street broker we have received an explanation which presents a point of view for which there is some justification:

Recklessness and bad judgment is the natural and probable explanation for the wreck of the New Haven and the great reason for it is this: At the time these transactions were made this and other railroads were very prosperous and had more to say about rates and charges than today. When they got into trouble over such matters their political contributions undoubtedly brought them influence to get what they wanted. They could get protection in one way or another. They have given that up. They also expected to make the public pay for their extravagance in this case by an advance in rates. They miscalculated, that is all, and instead of the public paying additional fares and rates, they are at least in some instances paying less, and rather turning the tables on the railroads by the use of those very sharp and dangerous instruments, the commissions, State and Interstate, whose salaries are paid them by the people and whose power has been given them by the people for the express purpose of getting not impartial justice, but partizan justice for their clients, the people. It is like making the judge also the prosecuting attorney and electing or appointing him at frequent intervals so that if he is not zealous and efficient in the cause of partizan justice he will not long cumber his office.

As a concrete example the New Haven, after spending somewhere about $8,000,000 or $10,000,000 on the electrification of the line between New York and Stamford and its electrical equipment, has had the interstate commutation rates to points east of Portchester reduced by the commission. The commission knows, if it knows anything, that the rates previously charged paid little profit, if any, the contention of the railroad being that all passenger commutation west of Greenwich was carried at an actual loss. I believe the commission knows the rate should be advanced to give the railroad a fair profit on its original investment, but they had strong reason to believe that a certain number of travelers were prepared to fight for lower rates and carry the fight into politics, so they got it.

Of course, the added convenience of more rapid transportation, better service, no smoke, gas or cinders has not been considered by the commission as worth any additional money, tho to get this better service cost $8,000,000 to $10,000,000. You might say the railroads are fools to add facility after

THE BROOKFIELD SCHOOL
A New Open-air School for a Small Family of Girls
DIRECTORS: Miss Helen Fairman Cooke, A.B., Wellesley
Miss Marion F. E. Cooke, A.B., Wellesley
School Year—September 24, 1914—June 17, 1915

For several weeks past we have been telling the readers of The Independent about the location, equipment and aim of our school. During the next few weeks we hope to tell you something about the course of study and the outdoor life of the school.

Our work is conducted on the principle that HOW the pupil studies is of greater consequence than WHAT she studies. It is better for a girl to concentrate her energies and know thoroughly what she learns, than to sip a little here and there and do nothing well. Every effort is made to discover by what means the girl's powers may best be made to grow. Great stress is laid upon developing ability to speak, write and read English with accuracy, skill and charm. The study of foreign languages is regarded as one of the most powerful aids in the development of judgment, discrimination and sympathy. For circular address

facility, luxury after luxury, more safety appliances and greater speed. There can hardly be two opinions about the facilities and luxuries and the speed, but the efforts to get "safety first" are necessary for self preservation. While the New Haven has been one of the chief offenders in the better facilities that it has offered the public, and has done it sometimes at great cost, and while the past management has been reckless and prodigal when it should have been frugal, it does not seem that that management should be accused of robbery any more than the public who are behind the commissions and the individual commissioners themselves, who are still willing to compel at the pistol point the giving of something for nothing. Therefore if any stockholders' suits are to be brought for robbery, the Interstate Commerce Commission and the various State commisioners should be made defendants as well as the management. If that is done I might join in.

AMERICAN INFLUENCE IN ALBANIA

Thru the efforts of George Fred Williams, our erstwhile Minister to Greece and Montenegro, American interest has been aroused in the fate of the new kingdom of Albania, which is finding the sort of independence granted by the powers indigestible. American influence, we know, played a great part in the Balkan states, particularly during the late wars, which brought many returning immigrants, and a correspondent suggests how potent has been its influence even in Albania, most backward of the states.

It is not generally realized how much the United States has been a foster mother to the Albanian nationalist cause. Altho the Albanians are supposed to be descendants of the ancient Pelasgians and the oldest people in the Balkans, the Turkish government refused official recognition to the Albanian language, and forced the schools to be conducted in the Greek language, and only at the American Missionary School for Girls at Korschte was Albanian used by teachers and pupils. There is a very strong Nationalist League in America, the "Vatra" or "Hearth," which was formed June 13, 1912, out of smaller organizations. The "Vatra" has 5,000 members. Its headquarters are at 97 Compton street, Boston, Mass. An Albanian weekly, the "Dielle" or Sun, has been printed in Boston since 1906.

Many of the Albanian leaders in their own country have received their training in the United States. Among them are two Harvard men, Father Fan Noli, of the Albanian Orthodox Church, who has translated the Bible into Albanian, and a Mohammedan, Fark Korintza, A. M., who has been suggested as Minister to America; an Oberlin student, Christo Duko, now heading the Protestant Mission at Korschta, and Christo Floki, who is at present a judge of the Albanian Supreme Court. All of these men have been actively connected with Vatra and the societies which preceded it, and all of them have been editors of the Dielle. Therefore American influence is strong among the people who float the newest of flags, the black double-headed eagle of Scanderbeg on a red ground.

THE DUBLIN TAMMANY

The Irish question has developed very greatly since I wrote you. The position in Ulster is now like a historical repetition of what occurred in the original stage of the Union and which thru England's lack of intelligence and obstinacy became a revolution. I suppose there is not an Englishman now living who does not frankly concede that we were mistaken and who does not side with Chatham, Burke and other statesmen who then opposed the Government of the day. I have just spent a few days in Dublin and find people there talking of the Corporation as a small Tammany. This may be an exaggeration, but it is this class of people who will have control when Home Rule becomes law, and I do not suppose any one who lives in New York or who knows anything about it, would consider that a good thing for the country.

AN ENGLISH READER

UPHOLDING THE DIGNITY OF STANFORD

From Sacramento, on the part of an "undergrad," who for "reasons of state," wishes his name to be withheld, comes the plaint that the investigation described in "A Number of Things" for June 1 was unfair to Stanford in ranking it lowest among the great American universities in the number of students selecting courses in the Philosophy Department. The trouble is not with Stanford men, he writes, but with the professors, who "cannot pass out their knowledge in a way which will penetrate thru the inner convolutions of the student's cerebellum." He points out that students freely elect courses as difficult as Philosophy, but in which the professors "make their courses throb with real human interest," from which he draws this very interesting conclusion:

After all, teaching is a whole lot like salesmanship: the professor must first get attention, then interest, and then desire, before the mind of the student will react on what he is saying. The salesman who is most successful is the one who always finds something in common between himself and his customer; and it is equally true that the successful professor must have something more than book lore—he must possess the common touch.

My criticism, then, of the results of this investigation into the popularity of university courses is that it falls into the common error of *a posteriori* reasoning—it neglects an all-important factor in the selection of courses and places the emphasis upon the *popularity of the subject* rather than upon the *popularity of the professor* giving that subject. The first of these factor is not negligible, but of the two I believe the latter is the dominant consideration governing the student in his selection of courses.

PEBBLES

Guest to Student Waiter—What was the result of yesterday's meet?

S. Waiter—Hash.—*Cornell Widow.*

'14—Jim snores terribly.

'15 (an autoist)—Yes, he sleeps with his cut-out open.—*Texas Coyote.*

"Can I git off today, boss?"
"What for?"
"A weddin'."
"Do you have to go?"
"I'd like to, sir—I'm the bridegroom."
—*Cornell Widow.*

The New Yorker was descanting on the glories of Broadway. "The streets are ablaze with light—a veritable riot," he said. "Why, there is one electric sign with one hundred thousand lights."

"Doesn't it make it rather conspicuous?" asked his English friend.—*Philadelphia Public Ledger.*

When Eve brought wo to all mankind,
Old Adam called her wo-man.
But when she woo'd with love so kind,
He then pronounced it woo-man.
But now with folly and with pride,
Their husbands' pockets brimming,
The ladies are so full of whims,
That people call them whim-men.
—*Cornell Widow.*

I love to fish the rippling brook.
And climb up trees to find my hook.
It fills me full of keen delight,
To feel the big mosquitoes bite.
And as the fishes flirt with death,
I simply love to *bate* my breath,
Then when I leave the fishy horde,
I *reel* in happy as a lord.
—*Princeton Tiger.*

So live that when thy summons comes to join
The investigated caravan which moves
To that imperious realm where each shall be
A witness in the silent halls of Congress,
Thou go not like the frenzied financier,
Burning his books; but, hiding no secrets
Of some rascally trust, approach the stand
Like one who, having dined, serenely sips
His coffee, and talks about the weather.
—*Life.*

David Belasco, apropos of the inroads moving pictures have made on the regular theater, said:

"The cream of the theater has not suffered. No, the best has not suffered. But down at the bottom, down among the skim milk, so to speak, there the suffering has been terrible.

"I heard of a sad case the other day. There was a chap who had a dozen performing parrots. For a long time, thanks to the movies, this chap had been out of a job. But, at last, his agent wired him that he'd signed him up at a good price.

"Several days past. Then the agent received on a soiled postal card from the poor fellow this tragic declination:

"'Can't accept. Have eaten my act.'"

MEETING

NOTICE OF SPECIAL MEETING OF STOCKHOLDERS

of

UNITED CIGAR STORES COMPANY OF AMERICA.

NOTICE IS HEREBY GIVEN, that by order of the Board of Directors, a special meeting of the stockholders of UNITED CIGAR STORES COMPANY OF AMERICA will be held at the office of the Company, No. 15 Exchange Place, Jersey City, N. J., on August 14, 1914, at 2 p. m., for the purpose of acting upon resolutions to amend the Certificate of Incorporation of this company so as to change the par value of the shares of its capital stock, both Common and Preferred, from $100 per share, present par value, to $10 per share, and to transact such other and further business as may lawfully come before said meeting.

Dated July 8, 1914.

GEORGE WATTLEY, Secretary.

THE MARKET PLACE

FISCAL YEAR'S FOREIGN TRADE

The nation's foreign trade in the fiscal year that closed on June 30 amounted to $1,258,795,735 and was less by only $20,000,000, or about half of one per cent, than that of the preceding year. Imports were $1,894,169,180. Here was an increase of $81,000,000, but it should not be ascribed exclusively to tariff changes. The value of foodstuffs alone brought into the country was larger by $53,000,000 than in the preceding year. A considerable part of this increase was due to imports of meat, of which we are not at present, it appears, producing enough to meet the demands of our own people. These imports have not reduced prices, which are now rising. Altho the free list was enlarged by the new tariff law, there has been only a slight increase of the free imports, from 54½ per cent of the total to 59½ per cent.

Exports amounted to $2,329,731,886 and showed a reduction of a little less than $99,000,000. More than three-fourths of this may be accounted for by the smaller sales of our foodstuffs —grain, meat, etc.—to foreign buyers. These sales have declined for the same reason that explains the increased imports of similar products. The domestic output has not kept pace with the growth of population. Our exports of foodstuffs were reduced by about $75,000,000. They will rise again this year because of one product, wheat, we have much more than we need, and can sell 250,000,000 bushels. But a crop of 930,000,000 bushels cannot be harvested every year.

Our tariff reductions have not assisted the foreign manufacturers of iron and steel and cotton goods. The iron and steel industry in Great Britain, Germany and Belgium is now suffering from depression. Prices are low and the export demand is weak. At the English and Belgium cotton mills depression has caused a severe curtailment of output.

ON THE STOCK EXCHANGE

Last week's transactions on the New York Stock Exchange showed an increase of fifty per cent (the total rising to 1,608,000 shares) owing mainly to the effect of the Interstate Commerce Commission's report concerning the New Haven railroad company. There was no evidence of any considerable unloading of New Haven shares held for investment, but the severity of the report suggested to speculative traders a series of sales for the decline. New Haven shares fell, on Thursday, to 49⅜, but a recovery to 54 left a net loss of 2½ points for the week. The report caused some liquidation by holders in Europe. Attacks were also made by speculators on Missouri Pacific, Denver & Rio Grande and other roads of the Gould group. New York Central declined to 83⅝, the lowest price in thirty years.

The effect of the New Haven report was not due to any disclosure of facts that had not been known, but to the severity of the commission's expressions, to the recommendation that both civil and criminal suits should be brought, and to an impression that the tone of the report foreshadowed a sharply adverse response to the Eastern railroad companies' long pending application for permission to increase freight rates.

The withdrawal of Huerta had no perceptible effect upon share prices. It was not discussed as a factor in the market, partly because the prevailing belief was that the Mexican problem had not been solved. But events relating to Mexico have not, since the beginning of the year, moved prices one way or the other.

Reports as to the condition of trade thruout the country were favorable, in that they showed moderate improvement and the growth of optimistic sentiment, mainly on account of the crops.

RAILROAD EARNINGS

The coming increase of freight traffic, due to the large crops, will help the railroads, and the reports of gross and net earnings since the beginning of the year show that they need this help. May is the latest month for which both the gross and the net are now available. In that month the gross revenue declined ten per cent (as compared with the revenue in May, 1913), and the reduction of net earnings was 17¼ per cent, altho the operating expenses had been reduced by 7½ per cent. The loss of net was especially noticeable in the Central West and Northwest, where it exceeded twenty-six per cent.

For the five months that ended with May the loss of gross was 6½ per cent, and this was accompanied by a reduction of net earnings that amounted to 13¾ per cent, or $41,000,000. Revenue returns of this kind restrain the companies from making improvements and confine within narrow limits their purchases of material and equipment.

A FREIGHT BOYCOTT

The president of the Erie Railroad Company was interviewed in Milwaukee last week, and his opinions as to the cause of the unsatisfactory condition of business were sought. "The automobile craze, the moving picture habit, and fool law making," he remarked, if the published reports are trustworthy, were symptoms of unreasonable unrest, and depression was due, he added, to attacks upon the rail-

roads. While he did not distinctly assert that "the automobile craze and the moving picture habit" were also causes of depression, a prominent motor company in Detroit understood that he had done so. "He stated," the company says in an order issued to its traffic agents, "that moving picture shows and the 'automobile craze,' as he termed it, were jointly responsible for the greater part of the so-called hard times."

This order goes on to say that such an attack upon the automobile business is "ill-advised in the extreme, unwarranted, and manifestly unfair" to the manufacturers and their employees. Pointing out that the company has given 9000 carloads of freight and 430,000 express parcels to the railroads, the order directs the traffic agents to make all freight and express shipments hereafter "by way of lines other than those of the Erie Railroad Company."

If President Underwood was correctly reported, the interview was an unfortunate one, in more than one sense of the word. Before using the boycott, however, the automobile company should have verified the published report, and then, even if it were proved that Mr. Underwood had ascribed the depression to "the automobile craze," it might have been well to let an advertised boycott alone. The case as it stands appears to be one for mediation.

The Missouri Public Service Commission has issued an order reducing express rates in that state by twenty-one per cent.

A coöperative glass company in Cumberland, Maryland, has declared a dividend of ninety-two per cent for the year ended with June. Nearly all of the company's shares are owned by its 300 employees.

A census report recently issued, relating to the 195 cities having a population of 30,000 or more, shows that the average payment per capita for municipal expenses increased from $13.02, in 1902, to $17.34 in 1912.

In the eleven months that ended with June, 1,254,548 immigrants arrived in this country, and 312,818 of them were Italians. The number of those coming from countries that took part in the Balkan wars has been increasing.

The number of cattle marketed in Kansas City since January 1 has been less by 150,000 than the number sold in the corresponding months of last year. "We must look to New England and the South," says the general manager of the great beef firm of Swift & Co., "for an increase in the cattle supply. The West cannot supply the demand."

The following dividends are announced:

American Light and Traction Company, preferred, quarterly, 1½ per cent., common, 2½ per cent, and 2% shares of common stock on every 100 shares of common stock outstanding, all payable August 1.

Federal Sugar Refining Company, preferred, quarterly, 1¾ per cent, payable July 31.

United States Realty and Improvement Company, 1¾ per cent, payable August 1.

Westinghouse Electric and Manufacturing Company, common, quarterly, 1 per cent, payable July 25.

St. Louis & San Francisco Railroad Co.

To Holders of 4% Refunding Mortgage Gold Bonds

Due July 1, 1951:

As stated in the Committee's circular, dated June 23, 1914, the Receivers have informed the Committee that the earnings of the properties were more than sufficient to pay interest on the Refunding Bonds, but that the same were used for the physical rehabilitation of the property, the payment of car trusts, and for other capital expenditures. In consequence no funds were available to pay the interest due July 1, 1914, on the Refunding Bonds, and when the Court refused to issue Receivers' certificates to provide for this interest, default naturally followed.

The Committee now announces that a majority of the bonds have been deposited under the Deposit Agreement dated June 20, 1914, that the Certificates of Deposit of THE CENTRAL TRUST COMPANY OF NEW YORK have been listed on the New York Stock Exchange, and that the Trustee under the Refunding Mortgage has filed a bill to foreclose the same.

For the present, holders may continue to deposit their bonds, but the Committee desires to make clear to bondholders that have not yet deposited that it is acting solely for the deposited bonds, and that it reserves the right at any time without further notice to refuse further deposits.

Dated, New York, July 16, 1914.

FEDERAL SUGAR REFINING CO.

July 15, 1914.

The regular quarterly dividend of ONE AND ONE HALF PER CENT. (1½%) on the Preferred Shares of this Company will be paid July 31, 1914, to stockholders of record at the close of business July 29, 1914. Transfer books will not close.

A. H. PLATT, Sec'y.

UNION PACIFIC RAILROAD COMPANY

105 Broadway, New York, N. Y.

The [illegible] dividend on the common stock of the Union Pacific Railroad Company declared January [illegible] 1914, will be payable on July 20 1914 at 165 Broadway, New York, N. Y., upon surrender of the warrants therefor for July issued.

The dividend warrants to be cash upon each warrant being $1.00 per share of Union Pacific common stock to which the warrant appertains) will be increased by the interest share of the Interest Realized from April 1 to July 20, 1914 during at the rates of 2% per cent. from April 1 to July 1, and 2 per cent. from July 1 to July 20, upon a special deposit of the cash dividend fund maintained during the period of the postponement of the payment by reason of litigation.

Stock certificates of The Baltimore and Ohio Railroad Company for the number of full shares, and scrip of the Union Pacific Railroad Company for any fraction of a share of stock of The Baltimore and Ohio Railroad Company due upon each warrant will be issued clearing at the rate of 12 one hundredths of one share of Baltimore and Ohio preferred stock and 22½ one hundredths of one share of Baltimore and Ohio common stock per share of Union Pacific common stock to which the warrant appertains. The said fractional scrip will be in favor of "bearer," and will be exchangeable when surrendered to the Union Pacific Railroad Company in amounts aggregating one or more full shares, for a stock certificate of The Baltimore and Ohio Railroad Company for the full shares, and scrip for any fraction of a share in excess thereof, included in the aggregate amount of the scrip so surrendered. No voting right will attach to the scrip nor will any Baltimore and Ohio dividend be paid thereon.

The Baltimore and Ohio Railroad Company has declared its regular semi-annual dividends (being 2 per cent. on its preferred stock and 3 per cent. on its common stock) payable September 1, 1914, to stockholders of record at the close of business on August 1, 1914. Full shares of Baltimore & Ohio stock, represented by stock certificates of that Company, issued in exchange for Union Pacific extra dividend warrants or fractional scrip on or prior to August 1, 1914, will therefore be entitled to the Baltimore and Ohio dividend thereon payable September 1, 1914. Upon the delivery prior to September 1, 1914, of Baltimore and Ohio stock certificates issued after August 1, 1914, in exchange for Union Pacific extra dividend warrants or fractional scrip, the Union Pacific Railroad Company will deliver therewith its due bills, payable to "bearer," for the Baltimore and Ohio dividends payable September 1, 1914, when and if collected by the Union Pacific Railroad Company, upon the shares represented by such certificates. Upon the delivery on or after September 1, 1914, of Baltimore and Ohio stock certificates issued after August 1, 1914, in exchange for Union Pacific extra dividend warrants or fractional scrip, the Union Pacific Railroad Company will pay to the registered owner of such stock certificates the amount of the Baltimore and Ohio dividends, payable September 1, 1914, collected by it upon the shares represented by such certificates.

The registered holder of a Union Pacific extra dividend warrant will not be required to execute any requisition or power of attorney to obtain the issue in his own name of Baltimore and Ohio stock certificates and check for the cash payment due upon such warrant, the surrender of the warrant being sufficient in such case. The dividend right upon the whole number of shares of Union Pacific common stock to which the warrant appertains, or upon any number of such shares included therein may be assigned as an entirety, using for that purpose the form of assignment on the back of the warrant; but no other assignment or division of the rights accruing under a warrant will be recognized.

The Union Pacific Railroad Company will not buy or sell fractional scrip, nor can it in any way act or give advice with reference to such transactions.

FREDERIC V. S. CROSBY,
July 16, 1914. Treasurer.

United States Realty and Improvement Co.

111 Broadway, New York, July 14, 1914.

At a meeting of the Board of Directors of the United States Realty and Improvement Company held this day, a dividend of one and one-quarter per cent. was declared, payable on August 1, 1914, to stockholders of record at the close of business on July 21, 1914.

B. M. FELLOWS, Treasurer.

WESTINGHOUSE

Electric & Manufacturing Company.

A dividend of one per cent. on the COMMON stock of this Company for the quarter ending June 30, 1914, will be paid July 30, 1914, to stockholders of record as of June 30, 1914.

T. W. SIEMON, Treasurer.

New York, June 24, 1914.

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

SEMI-ANNUAL FIGURES

Only a few of the fire insurance companies make publication of their figures for the half year ending June 30. On the slight statistical information at hand we are led to the conclusion that the underwriting operations of the companies generally, during the first six months of 1914, will show a small margin of loss. There is probably a reasonable gain in assets due, principally, to a slight appreciation in the value of securities composing the investments, helped in some cases by a decrease in liabilities for account of unearned premiums.

The Home Insurance Company of New York shows, as of date June 30, total assets of $34,246,172, a gain of $1,106,256 since January 1. The net surplus rose from $10,073,020 to $10,391,672 in the same time, a gain of $318,652. The value of the invested securities increased $499,417. Constantly strengthening all its reserve funds the company now adds $100,000 for unreported losses and $50,000 for taxes. The premiums for the half year were $7,741,099; losses incurred, $4,292,777 (55.46 per cent); expenses and taxes, less investment expense, $2,926,597 (37.86 per cent); total outgo for losses and expenses, $7,219,374. The difference between total premiums and total losses and expenses, $521,725, measures the "trade" gain. But the unearned premium liability increased $840,938, with the result that the "underwriting" shows a loss of $319,213.

The semi-annual statement of the Continental, another of the big companies, shows total assets of $28,115,274 and net surplus of $15,088,209, gains, respectively, of $486,797 and $24,711.

The Fidelity-Phenix shows total assets of $15,487,561; net surplus of $4,257,908. Gains for the six months were: assets, $529,464; net surplus, $77,851.

The few figures quoted indicate the difficulties the companies are experiencing this year in making headway against adverse underwriting conditions, and it is probable, unless the last half of the year shows an improvement in this respect, that any progress made by the end of the year will be due to appreciation in investment values, provided, of course, securities at least maintain their present level.

THE POSTAL LIFE

For the benefit of such of our readers as apply from time to time for information respecting the Postal Life Insurance Company of New York we submit the following facts:

The company began business in June, 1905, under the corporate title "Life Insurance Club of New York," continuing under that name until November 22, 1906, when it adopted its present one. It has always been an old line, legal reserve life insurance company, practising the methods used by companies of that class, except as to the manner of securing new business. It employs no agents, as do all the other companies. It does, however, offer to pay policyholders a small fee per $1,000 of insurance for such new business as they introduce. In addition to this, it relies on the advertising it does.

At the end of 1905 the Life Insurance Club showed, cash capital, $100,000; total admitted assets, $117,633; policy reserve, $4,186; net surplus, $13,447. During the last half of 1905 it wrote a total of 205 policies for $347,000 of insurance and had in force on December 31, 1905, 201 policies for $342,000.

In the following November the name of the company was changed, as stated. At the end of 1906 the total admitted assets were $131,192; reserve, $16,250; net surplus, $14,942. It issued that year 475 policies for $701,500; and had in force at the end of the year 601 policies for $949,500.

At the end of 1907 the admitted assets were $155,150; reserve, $32,229; net surplus, $22,586; new policies issued, 122 for $199,750; in force at end of 1907, 644 for $1,005,750.

In June, 1908, the Postal reinsured certain legal reserve and "contract reserve" policies of the Mutual Reserve Life Insurance Company, then in the hands of receivers. At the end of 1908 the Postal's assets were $429,920; reserve, $256,113; net surplus, $40,296; policies issued, 1,126 for $1,967,522 insurance; in force, end of year, 1,697 policies for $2,830,772.

In April, 1909, the Postal reinsured the business of the Economic Life Insurance Company of Wilmington, Del. The Postal's assets at the end of 1909 were $548,233; reserve, $376,458; net surplus, $61,827. Issued that year 1,208 policies for $3,151,237; in force, end of year, 2,125 policies for $4,170,254.

On December 31, 1910, the Postal took over all the business—assets, liabilities and insurance in force—of the Provident Savings Life Assurance Society of New York, including $9,854,027 of assets and 26,480 policies for $58,474,236 of insurance. In that year the Postal itself issued 241 new policies for $429,318 of insurance. The whole amount of insurance outstanding at the end of 1910—that strictly of its own writing and the reinsurances of the Mutual Reserve, the Economic and the Provident Savings—aggregated 28,661 policies, representing $62,669,531 of insurance. The total admitted assets, December 31, 1910, were $10,851,329; reserve, $10,375,822; net surplus, $98,098.

The Provident Savings business is kept to itself, with a separate accounting to holders of those policies. Since December 31, 1910, the total admitted

assets, net reserve, net surplus, new insurance issued and insurance in force show as below:

December 31	1911	1912	1913
Assets	$10,603,384	$10,102,298	$9,773,262
Reserve	9,967,168	9,497,316	9,212,572
Net surplus..	231,640	126,084	130,044
No. of new policies	730	1,660	†
Amt. of new policies	1,423,223	3,018,187	3,052,039
No. policies in force	25,309	24,426	†
Amt. ins. in force	53,750,223	49,995,999	47,250,058

†Insurance Department figures not issued at this date.

It is impossible from the New York Insurance Department reports to state the number and amount of actual new policies issued by the Postal itself, for it is reasonable to presume that, to the extent it can do so, the company is taking up the policies of the Mutual Reserve, the Economic and the Provident Savings, substituting its own policies for them on terms satisfactory to itself and the reinsured policyholders. The Postal was examined by the New York Department in 1912, as of June 30 of that year. Persons interested in the findings doubtless could secure a copy of that report from the company or the Superintendent of Insurance, Albany, N. Y.

From date of organization in 1905 to December 31, 1913, the Postal has paid out in dividends the following totals: To stockholders, $5,000; to policyholders, $102,110.

An investigation covering a period of thirteen years made by the Department of Agriculture, Ontario, demonstrates that lightning rods are 94.5 per cent efficient. For a period of eight years in Iowa insurance companies paid losses of $4,464 on buildings equipped with rods and $341,065 on the same number having no such protection.

An examination of the Great Eastern Casualty Company of New York, made by the New York Insurance Department as of date March 31, 1914, raises the company's liabilities on unpaid loss reserves and unearned premiums by $18,367 and reduces the net surplus that much. The assets are put at $949,569 and the net surplus at $60,710.

The commission appointed about a year ago to appraise the value of the capital stock of the Prudential Insurance Company, which is to be transformed into a mutual, has made its report, fixing the amount at $18,174,109. The outstanding stock aggregates $2,000,000 par value. At the end of 1913 the net surplus of the company was $23,568,576.

In a suit for recovery under a burglary policy, Prager v. Insurance Company, City Court, New York, the court held that the contract was void because the assured stated in his application for the insurance that he had never suffered any loss by burglary or theft. It was proved that he had on several occasions. The court characterized the suppression of this information as a breach of warranty.

The Joke—He Never Thought of B. V. D.

FANNING, mopping and grimacing, "Phew! how hot," *won't* keep you cool, when the sun grills. B.V.D. *will.* It lifts a burden from your body and weight from your mind. You forget the heat, because you're too busy "enjoying life"—lounging, dancing, a game of golf, a bout at tennis, watching a baseball game. Remember that *not all* "Athletic" Underwear is B.V.D.

For your own welfare, fix the B. V. D. Red Woven Label in your mind and make the salesman *show* it to you. That positively safeguards you. On every B. V. D. garment is sewed.

This Red Woven Label

MADE FOR THE B.V.D. BEST RETAIL TRADE

(Trade Mark Reg. U.S. Pat. Off. and Foreign Countries)

B. V. D Coat Cut Undershirts and Knee Length Drawers, 50c., 75c., $1.00 and $1.50 the Garment.

B. V. D. Union Suits (Pat. U. S. A. 45,507) $1.00, $1.50, $2.00, $3.00 and $5.00 the Suit.

The B. V. D. Company, New York.

ATLANTIC MUTUAL INSURANCE CO.

Atlantic Building, 51 Wall Street, New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries.

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,219,045,826.00
Received premiums thereon to the extent of	288,298,429.80
Paid losses during that period	141,567,530.39
Issued certificates of profits to dealers	89,740,400.00
On which there have been redeemed	82,492,340.00
Leaving outstanding at present time	7,248,060.00
Interest paid on certificates amounts to	2,558,640.25
On December 31, 1913, the assets of the company amounted to	13,530,924.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

A. A. RAVEN, Pres. CORNELIUS ELDERT, Vice Pres. WALTER WOOD PARSONS, 2d Vice Pres. CHARLES E. FAY, 3d Vice Pres. G. STANTON FLOYD-JONES, Sec.

ROMANCES OF MODERN BUSINESS

Beauty and Printers' Ink

Out in Cleveland there is a drug-store, perched on a quiet corner of the Ohio metropolis. It is an unpretentious building, much like many another drug-store. Yet loyal Clevelanders, passing with a visitor, point to it with pride. "There," they are wont to say, "is where Fred Stecher got his start."

And then will follow the story of the young Cleveland pharmacist who filled prescriptions, sold stamps, and graciously met all the demands made upon a community-druggist before he made a fortune out of Pompeian Cream.

This Cleveland druggist—Mr. Frederick W. Stecher—began to study the inquiries of his customers in the hope of discovering some definite need that he might fill. It was not long before he realized that every woman who came into his store was interested in enhancing her good looks and in preserving her youthful appearance.

Age-old fact though this was, it was an inspiration to young Stecher. He concluded that a different kind of a face-cream designed to clean the skin pores would have a wide appeal to lovers of good complexions.

A few months later the young druggist was doing a thriving local business with Pompeian Massage Cream.

That was in 1901. Mr. Stecher reasoned that if he could address millions of readers of periodicals at once he could create a great demand for his product.

Fired with faith and enthusiasm, the druggist came to New York in 1902. He explained his proposition to several advertising men. They discouraged him. But Stecher would not be disheartened. He looked up another advertising man and met that Columbus of the advertising fraternity, Mr. William H. Johns.

"What is your cream good for?" asked the advertising agent. Mr. Stecher explained that it was a massage cream to rub in and rub out, bringing the pore-dirt with it. Mr. Johns discovered an idea there. "It's worth a trial, at least," he said. So the Ohioan accepted a plan as outlined and gave his check for two hundred and twenty-nine dollars, the cost of the first two magazine advertisements.

The following month the advertisements appeared, and it was only a short while before the little drug-store in Cleveland was unable to meet the demand for samples of Pompeian Cream requested by magazine readers in all parts of the country. The good news was telegraphed to New York, and with it the determination to devote the greater part of all money realized to a large fall advertising campaign in the national periodicals.

A number of magazines and weeklies in the September issues of 1902 carried as much advertising of Pompeian Cream as eight thousands dollars would buy. The sales from the two magazine advertisements determined Mr. Stecher to invest this amount in publicity. "I want to make a beauty appeal," he said "and I'll do it with printers' ink."

The rest of the story is one of phenomenal growth. Less than a year after the first advertising appeared in the periodicals, the business had outgrown the drug-store. A large new place with facilities for manufacturing and distributing was secured. Today nearly fifty thousand barbers use Pompeian Cream in their shops, approximately fifty thousand druggists sell and feature it, and about twenty thousand beauty shops throughout the country use this product.

"The real test of advertising," said Mr. W. W. Wheeler, secretary of the Pompeian Company, "is the response. From the first, Mr. Stecher pinned his faith in periodical publicity. It created a national interest.

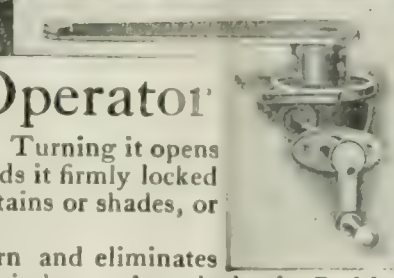
"As the business grew, the cost of manufacturing decreased. Mr. Stecher made little money the first few years. As fast as the money came in he put it into advertising. He was content to build for the future, and kept a resolute faith in the power of periodical publicity. The world has come to know Pompeian Cream solely through periodical publicity.

"The time has passed when the manufacturer could depend on the dealer to make his product salable. The dealer has crawled into his shell. He says to the manufacturer: 'Create the demand and I will handle your goods.' And the manufacturer has to do it. This means advertising, and advertising is growing more important and necessary to business all the time."

This is one of a series of articles that is being published by the business department of The Independent to show how magazine advertising is serving the public.

The Independent
Peace Centenary Prize Contest
For American Schools

THE Independent offers a PEACE CENTENARY MEDAL for the best essay from any competing school in the United States on the Hundred Years of Peace between Great Britain and the United States, as its contribution to the celebration of the Centenary of the Treaty of Ghent, which was signed on Christmas Eve in the year 1814. This event is to be celebrated under the auspices of distinguished committees in England, Canada and the United States, with a series of events which have not been matched in impressiveness by any international celebration at any time in the history of the world. The Independent has arranged for the publication of a series of eight articles, covering the chief difficulties between Great Britain and the United States which were settled by diplomacy or arbitration during the past hundred years. These articles have been prepared by Preston William Slosson, of Columbia University, and will tell the story of these difficulties in simple and direct language, each article occupying two pages of The Independent, and containing some historical illustration. The first will appear about the first of October, and the series will conclude early in December. Each article will show how great were the issues at stake and how high the tension of popular feeling in both countries, and how, nevertheless, patriotic and honest statesmanship did not fail to find a satisfactory solution without recourse to war.



The first article will tell the story of THE GREAT TREATY concluded at Ghent in 1814. The second article will cover the story of THE BOUNDARY OF PEACE from the Atlantic to the Rocky Mountains, a boundary unfortified by nature or man, and yet in bitter dispute for many years. The third article will describe the greatest of all our territorial disputes with Great Britain, the question of the ownership of the Oregon country which raised the cry "FIFTY-FOUR FORTY OR FIGHT." The fourth article will sketch our difficulties with Great Britain during the war between the States and describe the peaceful solution of the ALABAMA CLAIMS. The fifth is entitled PRESIDENT CLEVELAND AND THE VENEZUELA DISPUTE, which brought us to the verge of war. The sixth will cover the ALASKA BOUNDARY QUESTION. The seventh article treats of the many questions which have arisen as to American fishing and sealing rights along North American coasts, questions which have equally concerned FISHERMEN AND STATESMEN. The eighth article deals with the disputes which have arisen at one time or another in regard to the project of an interoceanic canal under the caption THE CLAYTON-BULWER TREATY AND THE PANAMA CANAL.

These articles in The Independent are the basis of the competition and a knowledge of the facts contained in them is the first condition for entering the contest. Any American school, public or private, elementary or secondary, may take part in the contest, but a medal can not be awarded unless ten pupils at least compete from that school. Each competitor must complete an original essay of from 500 to 2,500 words and hand it in to the judges by January 1st, 1915. Schools intending to enter the contest should send in their names at once.

The judges should award the prize to that essay from each school which shows that the competitor has not only read the articles in The Independent and remembered the events of the Hundred Years of Peace, but has most thoroly *studied their significance* and *learned how to express it*. The school authorities may, at their pleasure, exact further qualifications from contestants, such as a certain amount of outside reading. A brief list of suggested readings will be given at the close of every article. As soon as possible the judges should send the name of the successful contestant to The Independent, which will at once send the well-earned medal.

Who will be the judges? The schools themselves. In the case of elementary schools the school authorities shall select three judges from among the faculty, pupils or outsiders (but including no contestant). In the case of secondary schools the contestants themselves may get together and select any three judges they may choose, except a contestant. This democratic method of selection is, we admit, an experiment, but we believe it will be a most successful one.

A New Casement Operator

The bronze metal handle is all that is seen Turning it opens or closes the casement window with ease and holds it firmly locked at any point. There is no interference with curtains or shades, or with window screens placed on the inside.

This device makes casements easy to govern and eliminates many objections to this very desirable form of window. Any dealer in Corbin hardware can tell you all about it. Or we will send you descriptive matter upon request. Let us hear from you.

A world conference of ministers meets at Constance, Switzerland, *August 2-5*, under the auspices of the Church Peace Union and the British and German Peace Councils.

The tenth International Esperantist Congress is being held at Paris *August 2-10*.

The annual meeting of the American Osteopathic Association will be held in Philadelphia from *August 3* to *8*.

The annual art exhibition of the Royal Academy is open in London until *August 3*.

The Forty-first Assembly at Chautauqua is now in progress. The fortieth anniversary will be celebrated on Old First Night, *August 4*. Recognition Day falls on *August 19*. The assembly closes on *August 30*.

Matches for the Davis Cup are now in progress. The winners of the Australasia-Germany match will meet the British team at the Longwood Cricket Club, Boston, on *August 6*, *7* and *8* in the finals. The challenge round will be played at the West Side Tennis Club, Forest Hills, Long Island, on *August 13*, *14* and *15*.

The British Association for the Advancement of Science will hold its next meeting in the antipodes. The Commonwealth of Australia will pay the expenses of 150 members, who will be taken on a tour of the principal cities from *August 8* to *September 1*.

A Colonial Exhibition will be held at Samarang, Java, from *August* to *November, 1914*. It is to "give a comprehensive picture of the Dutch Indies in their present prosperous condition attained since the restoration of Dutch rule in 1814."

An open-air flower exhibition will be held in Boston from *August 18* to *21*.

The National Negro Business League is to hold its fifteenth annual session at Muskogee, Oklahoma, *August 19, 20* and *21*. This organization is composed of negro men and women who have achieved success along business lines.

The Interparliamentary Union will meet in conference at Stockholm on *August 19*.

The thirtieth annual convention of the National Society of American Florists and Ornamental Horticulturists will be held in Boston from *August 18* to *20*.

An international congress of women socialists will be held in Vienna on *August 21* and *22*. More than twenty countries are expected to participate.

There will be an eclipse of the sun on *August 21*—total in parts of Europe and Asia, and partial in northeastern America. The full effect will be seen in Persia, Russia and Scandinavia. At sunrise, a partial eclipse will be observed in Canada and in our northern states.

From *August 23* to *28* the ninth International Socialist Conference will be in session at Vienna.

The tenth annual conference of the Chinese Student Alliance in the eastern states will be held at the Amherst Agricultural College from *August 28* to *September 4*.

The National Star-spangled Banner Centennial, commemorating the successful defense of Baltimore at North Point and Fort McHenry, and the writing of the national anthem, will be held at Baltimore, *September 6* to *13*.

September 6 has been designated as Labor Sunday by the Federal Council Commission on the Church and Social Service.

The annual conference of the International Law Association will be held at The Hague in the Palace of Peace from *September 7* to *12*.

At Denver, Colorado, from *September 8* and *9*, will be held the eighth annual conference on taxation, in charge of the National Tax Association.

The races for the America's Cup are to be held at New York on *September 10*, *12* and *15*.

The twenty-first World's Peace Congress will occur in Vienna *September 15-19*.

The Baltic Exhibition at Malmö, Sweden, to which Swedish, German, Danish and Russian exhibits have been sent, is open until *September 15*.

An Anglo-American exposition to celebrate the centenary of peace and progress in arts, sciences and industries is open at Shepherd's Bush, London, till *October*.

At Leipzig an International Exhibition for the Book Industry and the Graphic Arts will remain open until *October, 1914*.

The International Sunday School Conference will be held in Tokyo, Japan, from *October 18* to *25, 1916*. One thousand delegates from America and 300 from other countries are expected to attend.

TO PROSECUTE THE NEW HAVEN RAILROAD

ATTORNEY-GENERAL JAMES C. MC REYNOLDS, WHO, UNDER INSTRUCTIONS FROM PRESIDENT WILSON, HAS BROUGHT SUIT AGAINST THE RAILROAD UNDER THE SHERMAN LAW. MR. MC-REYNOLDS WAS ASSISTANT ATTORNEY-GENERAL OF THE UNITED STATES FROM 1903 TO 1907 AND HAS LONG BEEN CLOSELY IDENTIFIED WITH THE GOVERNMENT'S TRUST PROSECUTIONS. RUMOR MAKES HIM THE PRESIDENT'S CHOICE TO FILL THE VACANCY IN THE SUPREME COURT CAUSED BY THE DEATH OF JUSTICE LURTON

The Independent

VOLUME 79 MONDAY, AUGUST 3, 1914 NUMBER 3425

SHALL MEDIATION PREVENT WAR IN EUROPE?

EUROPE and the civilized world are facing a crisis more momentous and threatening than anything that has been known since the Franco-Prussian war. The forces of Austria have already invaded Servia, the great bridge across the Danube at Belgrade has been blown up, the Servian administration has removed its headquarters fifty miles from the border, and the rulers of Russia, Germany, Italy and England are conferring with grave concern as to the titanic European conflict which has suddenly become an immediately impending possibility.

There is no good reason for this great war, which would deluge Europe with blood, and destroy untold billions of material value. Sir Edward Grey, speaking for Great Britain, has already taken the initiative in asking Austria and Servia to delay action in order that the mediation of leading nations may be invoked to examine the conditions and that their good offices may make the dreaded contest unnecessary—as it certainly would be a crime against civilization.

It is just the sort of question that comes within the scope of The Hague Convention. The points at issue are all capable of solution thru mediation or a commission of inquiry or arbitration. It is the right and duty of every one of the powers signatory to The Hague—even the United States—to proffer good offices and mediation in such a case as the present one.

In reply to Austria's demands for the suppression of the anti-Austrian propaganda, Servia has agreed to take all necessary measures and to leave any details that cannot be agreed upon to The Hague. This is the proper spirit and ought to be perfectly satisfactory to Austria-Hungary.

THE enmity between Servia and Austria has like everything human a double root and is the product of both economic and psychologic forces. We can readily understand the first by putting ourselves in Servia's place.

Imagine a country about the size of Maryland, but with twice the population tho without Maryland's mineral and maritime wealth; a mountainous country, four-fifths of it uncultivated, much of it oak forest. It is a decapitated country; the upper classes killed off, driven away or proselyted during the Ottoman occupation, no princes of either the monarchical or mercantile kind, few capitalists or great landowners such as dominate neighboring Rumania. It is a land of peasant proprietors; "A Poor Man's Paradise," the scribbling tourist is fond of calling it, altho it is doubtful whether the poor man enjoys living in such a country as much as he does where there is more money going, even tho he does not have so much of it as some others. The people are Slavic by race, Asiatic in culture, four-fifths of the adults illiterate, Greek Orthodox by religion, frugal, hard-working, independent, democratic and patriotic.

Given such a people in such a country what are they to do for a living? Obviously not much except to grow grain and meat for export. Hogs can find their food in most of the oak woods and be fattened on the corn of the fields, but where can they be sold? Not to the southward, for the Mohammedans of Macedonia and the Jews of Salonika do not eat pork. But to the north just across the Danube is a big, rich country inhabited mostly by Catholics who have no aversion to swine-flesh except on one day of the week. Austria-Hungary is then the natural market for Servian products and here they mostly go. But whenever Austria wants to annoy Servia or to please Hungary all she has to do is to raise the tariff rates on trans-Danubian produce or prohibit the importation of Servian pigs or poultry by quarantine rules on the ground of some suppositious disease. By the practise of such tactics, called by the German writers *Schwein-politik*, Austria has reduced Servia to a condition of economic dependence from which Servia is striving to free herself by securing an outlet to the sea and so to the wide world market. But so far Austria has checkmated this endeavor. Last year at the sacrifice of some seventy thousand men Servia cleared the way to the Adriatic, but now finds herself shut out from the sea by the interposition of the Albanian principality manufactured for the purpose.

BUT the chief grudge of Servia against her big neighbor across the river is the frustration of her national rather than her industrial development. Servia remembers—with the aid of the guslar and his one-stringed fiddle—that there was once a time, some six hundred years ago, when a Serb chieftain, Stefan the Daring, conquered nearly all the Balkan peninsula and assumed the titles of "Emperor of the Romans" as successor to Cæsar, and "Czar of Macedonia" as successor to Alexander the Great, thus combining in one person the glories of both ancient Greece and Rome. But Austria again has destroyed the possibility of such a Servian empire or even one including the Servian race alone. More than half the Serbs live on the north side of the Danube in Bosnia and Herzegovina, which were placed in the power of Austria by the Congress of Berlin in 1878 and formally annexed thirty years later.

Whether the Serbs under Austrian rule are better off than their independent brethren on the south side of the Danube is a disputed question. The tourist usually

reports that Bosnia is more prosperous than Servia. He tells of the establishment of agricultural colleges and experiment stations, the erection of fine public buildings, the building of railroads, the opening of the country by handsome hotels in picturesque spots, the development of manufactures, the improvement of trade and the equalization of taxation. But the contentment of a people is not to be measured by commercial statistics. How the Serbs themselves feel about it was shown in our issue of July 13 by Professor Pupin of Columbia, the most distinguished of his race in America. The Serbs in Bosnia complain that taxes are much higher than they used to be under the Turkish régime, that they are being strangled by the red-tape of the Austrian bureaucracy, that the schools are under the control of Catholic priests, that they cannot sing the old songs, that their press is muzzled, and that the Government discriminates in various ways against the Orthodox Serbs and in favor of the Catholic Croats.

This accumulated resentment against Austria resulted in the tragedy of June 27, when a Servian student, lately returned from Belgrade aflame with racial fanaticism, assassinated the Austrian heir-apparent and his wife in Sarayevo, the capital of the annexed province of Bosnia. This is the method used by the Serbs in their own country for getting rid of unpopular rulers, so it is no wonder that it should have been adopted in the case of the Austrian. In a hundred years Servia has had eight rulers, of whom three have been assassinated and four deposed by revolution or the threat of one. It does not yet seem likely that the present King Peter will prove an exception to the rule and complete his reign by a natural death. He owes his throne to the officers of the army, who eleven years ago entered the palace by night and murdered King Alexander and Queen Draga as well as the Premier, the Minister of War and two of the Queen's brothers. The outrages inflicted on their bodies by those who both before and afterward held high office in the state, make quite credible the reports of atrocities committeed by the Serbs on unarmed Bulgars and Albanians in the late war.

We cannot then regard as unreasonable the demand of the Austro-Hungarian monarchy that the Servian Government put a stop to the hatching of such conspiracies as resulted in the crime of Sarayevo. And whatever we may think of the Austrian administration of Bosnia we cannot sympathize with the Serbs in their denunciation of the annexation of the province by Austria when we see that Servia has this last year almost doubled her territory by the conquest of a territory inhabited mostly by alien races. If it is wrong for Austria to extend her rule over the Serbs of Bosnia and Herzegovina it is wrong for Servia to extend her rule over the Albanians, Turks and Bulgars in Macedonia.

THE NEW HAVEN SUIT

THE Government's suit for a dissolution or disintegration of the New Haven railroad system was ordered because, President Wilson said, the company's directors, upon a "slight pretext," had failed to carry out a dissolution agreement so far as it related to the company's Boston & Maine shares. It should be borne in mind that the directors, represented in the negotiations with the Government by Chairman Howard Elliott and Dr. Hadley, the president of Yale University, proposed to abide by all the remaining parts of the agreement and offered to meet the difficulty presented by new legislation affecting the marketable value of these shares by so disposing of them temporarily that all the requirements of the Sherman act would be satisfied. We are unable to agree with Mr. Wilson and the Attorney-General in regarding the difficulty in question as a "slight pretext." It seems to us that Dr. Hadley and his associates were not guilty of bad faith, but were honorably and reasonably serving the interests of the stockholders. We regret that their offer was not accepted, and that this suit, which will drag along for two or three years, was begun.

We are in no sense defending or excusing the many offenses of the predecessors of Mr. Elliott and Dr. Hadley. We trust that those who are guilty will be brought to justice. But it is unfortunate that the suit should have been caused by, and should be based upon, the acquisition of the Boston & Maine, which, in our judgment, did not involve such a suppression of competition as should warrant prosecution under the Sherman act. A similar suit was brought by Attorney-General Bonaparte in 1908, and discontinued by Attorney-General Wickersham in 1909, because, it was understood, he could see no warrant for it. For certain reasons, the original complaint, if our memory is not at fault, did not refer to the acquisition of the steamship lines, and this was something which would have afforded a technical foundation for the proceeding. The Boston & Maine and the New Haven were not competing roads or systems, except perhaps with respect to a very small part of their traffic, in a narrow strip of territory where the two systems were in contact with each other. It can be shown that existing competition was by no means suppressed, and that the public suffered no injury, by the acquisition of a considerable number of the urban and interurban trolley lines.

In a certain sense, the prosecution has been misdirected. There are crimes for which severe punishment should be inflicted, but few, if any, of them have been violations of the Sherman act. Forcible disintegration of the system, if the courts shall order this, may not serve the public interest, but we shall be glad to see punishment for those who are guilty of something worse than maladministration.

VOCATIONAL EDUCATION

THE present educational question is not so serious a one as it looks, and as many pedagogs would make it. It is the question of vocational education.

We have always had vocational education, and always will have, and always ought to have. There is a German story of a youth who wished to marry a princess who had a glass heart. Because of her two sisters with glass hearts—one unfortunately broke hers, and the other's heart was cracked—the lover was required to apprentice himself to a glazier. It was a seven years' apprenticeship, and the first year he learned to wash and dress the children; the second year he got the bread from the baker's; the third year he learned to putty up holes, and at the end of the seventh year he was an expert glazier to whom a glass heart could be safely entrusted. He began with a general education, and finished with

vocational instruction. It is an extreme case, but it gives the true order of education.

First we teach our children to read and write. There is nothing special or vocational about that; it belongs of right to every child. Then follow plain arithmetic, geography, grammar, history, the common branches the rudiments of which every one should be required to learn whatever business he expects to go into. These are the basis of education and can be carried on indefinitely far into all the divarications of general culture, or they can stop with the bare rudiments. Wherever they stop, there vocational education must begin.

But why stop? For two reasons. One is that life is not long enough to learn everything; and the other is that boys and girls must, most of them, go to work and earn a living, and vocational education teaches them how to make a living.

We have always had it. The doctor, the lawyer, the minister, the teacher, the engineer require in their professions more general knowledge than does a day laborer. It takes them a longer time than it takes a porter or ditcher to get the general education they will need, and they put off their specializing vocational training till they are men grown, and we are now requiring this time to be lengthened, and demand the degree of Bachelor of Arts before entering the professional school. That is, for the professions we are very properly putting off professional study, and then are even lengthening the period of professional study from three years to four years. There is no pedagogic problem here for candidates for the professions. The question is settled by lengthening both periods of study, so that young men with the best opportunity can hardly begin their life-work before they are twenty-five. They delay even longer than did Milton, who was troubled because his three and twentieth year showed no bud or blossom of accomplishment. The question is not about these ambitious and favored youth, but with the candidates for commoner service.

And they are the multitude and must be. They are what we call the common people. They have no unusual ability or ambition. They have the ordinary common sense and they make up the commonwealth. They are fitted for the forms of service which must be performed by most people. Such work boys and girls can do before they are out of their teens, and they want to get at it. It is no pleasure for them to spend their time in study better spent in remunerative work. They want and need a limited general education, and then to join the great army of workers. In the old days they could get their vocational education as apprentices, but the apprentice system has nearly gone out of use, and it has to be replaced by something better, and the state is giving it more and more. We are in the transitional stage, but are rapidly learning how to keep the boy and girl in the high school by making the high school more vocational. The great majority of children have not gone beyond the grammar school; they have left it to go to some sort of work for which they were ill prepared. Now we are giving the chance to add to their general education in the high school while learning the business of the farmer or carpenter or mason or merchant, and are learning it better than it could be learned in the miscellaneous way in which it used to be picked up.

We take an example. We happen to have before us the curriculum of the Hopkinton High School, Contoocook, New Hampshire. It has three courses of study. One is classical, has four years of Latin (no Greek), two years of French, algebra, geometry, two years of either chemistry or physics, and it fits for the modern college. Another is domestic, has French two years, but no Latin, algebra and geometry, cooking, dressmaking, hygiene, nursing, and the choice of chemistry or physics. The third course is agricultural, and has the same French and mathematics, history and other English studies, but adds animal husbandry, dairying, horticultural and farm management to chemistry or physics. This is admirable, but its merit is half in the fact that it will persuade a multitude of youth to continue their education beyond the eighth grade, and that, too, in general as well as vocational studies. The vocational part will be the attraction and of great advantage, but the French and mathematics and civics and chemistry and history will be of value all thru life as well as the dairying and nursing and dressmaking and agronomy. And there are hundreds of such high schools in our eastern as well as our more progressive western states.

We have previously spoken of the careful report on the public school system of Vermont made by the Carnegie Foundation. That report has its great excellences, and, as we have previously indicated, its defects. Of the defects perhaps the chief is that it looks too much, if that be possible, to the importance of making out of the boy or girl a creator of material products; and not enough to the aim of old of the New England school system to give character and culture. After all, that is the chief thing in education, not immediate productivity, but ability and character. The child must learn to make his living, and the state will do well to teach him how, but most fortunately the productive value of high culture and broad education is greater than comes from that sort of training which is devoted directly to the trades that make a living. If you have a boy or girl of quite ordinary type, one who has no special ambition or initiative or ability, let the vocational training come comparatively early, in the high school period as well as in the home and on the farm; but if your boy or girl is one of a hundred and shows more than usual ability and ambition, if he loves to study and surpass and lead, then put off all but incidental vocational training as long as you can; give him or her the full benefit of time and money to secure the broad pyramid base for the special labor of life. Either way makes worthy men and women, for either way gives power and character and usefulness. It is always to be remembered that the greatest wealth one can have in this world is in such children, the more the better, and not in pigs or calves or colts or acres or dollars.

THE CHECK-OFF

IT would be strange if many of our readers knew what the check-off is. It was explained not long ago in Congress in a speech by Representative Kindel, of Colorado, on the labor troubles in his state.

It is a demand made by the United Mine Workers for something a good deal more than recognition by the operators of the coal mines. Other labor unions demand recognition, and also demand that none but members of unions be employed; that is, that whoever wishes to be employed must join the union. This the United Mine

Workers demand, as was to be expected; but they also demand that employers shall and must deduct from the pay-roll of every employee, whether such employee desires it or not, any sum assessed by the union against him, and send it to the union treasury. The worker, after being forced to become a member of the union, is required to give up control of his own wages, and its officers have the authority to assess or fine him as they see fit, and he cannot help himself, for the employer must take the miner's money and give it over to the men who demand it. Really, the thing is not merely un-American, it is robbery, and the employer is asked to be the instrument of the robbery. It is not strange that the operators have refused to yield to such a demand not required by other unions.

According to the data given by the reports of the State Coal Mine Inspector the average number of miners in September, 1913, was 12,346. The troubles came in the next three months when 4000 men left or were driven from the mines. Beginning with January, 1914, the average rose again to over 10,000. So that the loss of men has been about 2000. The men are mostly of foreign birth, and their wages run from $4.25 to $5.25 a day, and they get it all, without deduction, and without being compelled to spend it in company stores, or to pay assessments or fines of their unions unless they choose to.

OPERA BOUFFE IN FRANCE

FRENCH courts and French justice have long been the butt of those who cherish Anglo-Saxon institutions. The Caillaux case is no exception to the rule. Unlike the English, the French regard the prisoner as guilty until proven innocent, hence the whole attitude of the two systems toward justice is different. In English or American courts under the rules of evidence, unknown in France, it would be impossible for the political significance to obscure the simple facts of such a case. But in France the private intrigue of two women and a man has been made to threaten the existence of a Cabinet, and like the Dreyfus case, has shaken France to its foundations. Instead of the trial of Mme. Caillaux for the murder of the editor Calmette, it is a trial of the Ministry of her husband. Not Caillaux, the husband, but Caillaux, the Minister, spends the greater part of two days reviewing and defending the acts of his administration, while witnesses elaborate to the jury on the income tax, electoral reform, and take excursions into moral philosophy!

But it is the emotional French character, with its love of dramatic effect, of climax, of transitions from pathos to Gascon fancy that furnish unconscious humor to the Anglo-Saxon. Barrie could have looked for no truer setting for the trial of "Leonora" than in that of Mme. Caillaux. She, herself, dressed in the hight of French fashion, cross-examines the witnesses, commending and disapproving their testimony, and in general holding sway in the court room as in a drawing room. Witnesses apologize or pay graceful compliments to her; even ex-Premier Barthou, the political rival of her husband, could not refrain, as if by way of offsetting his testimony, from paying her tribute. Another witness, impatient at the interruptions of his testimony, shouts, "You shall not stop me! I have the right to talk here because they are seeking the life and liberty of a woman!" And in the resultant uproar of vivas and hisses court has to be adjourned for half an hour. Caillaux, in an eloquent speech in which the tears start from his eyes, wishes that he might take his wife's crime upon himself, whereupon cheering and vociferous crowds escort him as he leaves the Palace of Justice, only to jeer and threaten to stone him the very next day when he casts insults upon his former wife. Both prisoner and lawyers weep in their vehemence, while at the climax, when the sentimental letters of the ex-Premier are read, Mme. Caillaux faints and is borne from the court room on the shoulders of four attendants! The lawyers on both sides are jealous in their attentions to her; while two of the judges, because of fancied slights toward the distinguished and beautiful prisoner, arrange to fight a duel!

Gilbert and Sullivan, with all their delightful fantasy and delicate humor, could never have improved on the opera bouffe of a trial in France!

A NOTABLE ACCESSION TO MODERNISM

PROFESSOR WILLIAM SANDAY, the veteran New Testament scholar of Oxford, has at last definitely allied himself with the "Modernists" in the Anglican struggle over the creeds. He says in his reply to Bishop Gore that his own thought has developed toward the modernist position quite rapidly during the past two years, partially, he admits, under the subconscious influence of younger scholars. This accession to the forces of liberalism has been recognized on all sides as an occurrence of great significance. Already confusion has smitten the ranks of the narrow constructionists. Dr. Sanday is noted for his broad and careful scholarship and his conservatism in expressing opinions on controverted subjects. His well known reputation for caution and ability, which has been often used as a conservative asset, will give more weight to his words in many quarters than a contrary statement endorsed by the entire Anglican Episcopate. Besides, the Oxford divine is unquestionably right in declaring that the free criticism of the Scriptures, in which his opponents as well as his friends have indulged, was bound sooner or later to result in some alteration of the creeds which were formulated to express the views of biblical truth which prevailed before the age of criticism began.

It seems to us almost a truism to say that if the creedal statements of sixteen or seventeen hundred years ago are to be retained at all they must be modified and interpreted in the light of modern research and philosophy. This can and ought to be done in the spirit of tolerance and harmony, and for the worthy purpose of coming more closely to the deeper truth which lies behind the literal statements of the symbols, truth which frequently coördinates and accounts for both the old and new expressions. When this course is pursued the way is open, as Professor Sanday suggests, for the modern man to "enter the Church of Christ with his head erect," and to join in the forms of worship with his traditional fellow-Christians "without any real equivocation of heart." Traditionalism, however, is intuitively felt by many of its supporters to be a prop to special privileges of great moment in other than religious spheres, and we foresee that the fight of the Anglican Modernists has only just begun. They will need many champions of Dr. Sanday's caliber and influence.

THE STORY OF THE WEEK

For Peace in Mexico

The appointment of representatives of the Carbajal Government to confer with Carranza as to the transfer of power at the Mexican capital was delayed for several days, but at last Reginaldo Cepeda, formerly a Maderist senator, was sent to Tampico. It appears that the three original envoys, Urueta, Novelo and Mangel, who had tried to reach Carranza at Saltillo, were merely volunteers, acting without authority. And Cepeda himself was only an advance agent, directed to make plans for those who should follow him. He met Carranza at Tampico, and on the 26th Carbajal appointed General Lauro Villar, chief of the Supreme Tribunal of Military Justice; Judge David Gutierrez Allende, of the Supreme Court, and David Iturbide, Assistant Secretary of Foreign Affairs. These were to reach an agreement with the leader of the revolutionists.

Carbajal sought amnesty for all, with guarantees for life and property. From the beginning, Carranza and his generals insisted that they must be free to punish those who had been responsible for the overthrow and assassination of Madero. Our Government urged the rebel leader to be generous and to pardon all. For a time there was ground for hope that he would yield, but after the appointment of Carbajal's delegates he insisted that his right to punish certain men must be reserved. He demanded an unconditional surrender, and some thought that Carbajal would prefer to fight. Villareal, Carranza's Secretary of the Treasury, said that amnesty to all would only invite and promote revolutionary intrigue.

Villa's Strange Course

The attitude of Villa continued to excite curiosity and suspicion. Altho he was the commander of the victorious central army, he remained idle at Juarez or Chihuahua while Obregon, on the west side, and Gonzales, on the east, were moving toward the capital. Carranza ignored him, when he announced that Gonzales would join Obregon in the vicinity of Queretaro, and that their united armies would go southward; also when he permitted it to be known that he intended to make Obregon or Gonzales Minister of War. Our Government warned Villa that he must be loyal to Carranza, and his response was satisfactory, but his conduct needed explanation. On the 22d he left Chihuahua City, saying he was about to rest for a week at the home of his wife's father, in the western part of the state. It was reported that he was seeking an alliance with Carbajal; also that he was gathering recruits and buying arms. While he and a majority of his soldiers were idle in the north, Obregon's advance guard was within an hour's ride of the capital, and his main force only 160 miles from it.

Villa had asked that General Angeles, whom Carranza dislikes, should be made Minister of War, believing that he himself would then be appointed commander in chief of the army. There was no indication that Angeles would be placed in the Cabinet. Villareal asserted that Villa was loyal, and that Carranza was paying his troops and sending them ammunition. But the man and his army appeared to be out of the fight.

Zapata and Others

The capital was repeatedly menaced by Zapata's bandit soldiers, altho Zapata himself promised to coöperate with Carranza. Villages within fifteen miles of the city were captured and burnt, but in two or three battles the Zapatists were routed. English and German residents of the suburbs were urged by the ambassadors to seek safety in the city, where Carbajal gathered a garrison of 20,000 soldiers. San Luis Potosi was evacuated by the Federals. In Lower California the rebels captured Rosario. Further south they surrounded Guanajuato and besieged Manzanillo.

Huerta sailed for Jamaica on a German cruiser, but the departure of more than 100 of his relatives and friends from Puerto Mexico was greatly delayed. It was officially announced that our Government would not recognize any concessions granted by Huerta since October 10, 1913, when he dissolved Congress and became a dictator. Eugenio Paredes, his Treasurer-General, was accused of stealing $1,000,000. It was asserted that Huerta himself received $500,000 because he authorized the sale of 100,000 acres in Lower California for one cent an acre. The cattle on the great estate of General Luis Terrazas were sold to a resident of Texas for $3,000,000, half of this sum going to General Villa (for the rebel Government) and half to the exiled Terrazas family. The general's son, who had been in prison seven months, was set free. The French Government complained at Washington because Villa's men had killed two French priests at Zacatecas and put eleven other priests in jail.

Opening the Great Canal

The Panama Canal will be opened to the commerce of the world on August 15, Secretary Garrison says, and the first steamship to pass thru it will probably be the "Cristobal," which belongs to the War Department and is now lying at Colon. The

THE WEEK IN CONGRESS

Leading subjects of debate were the bills relating to water power privileges, river and harbor appropriations, and trusts. Senator Burton reached the eleventh day of his attack upon the river and harbor bill. Gifford Pinchot denounced the power bill as a surrender to the water power trust and a reversal of the conservation policy of Presidents Roosevelt and Taft.

No action on the Trade Commission bill was taken in the Senate. The Clayton Omnibus Trust bill and the Railroad Securities bill were reported, and the Democratic senators decided to dispose of the three bills before adjournment. Two hours were added to each daily session. Probably there will be no action upon the Nicaragua and Colombia treaties or Mr. Bryan's peace agreements, twenty of which have been sent to the Senate committee. The River and Harbor bill, carrying $33,000,000, was sidetracked and passage of it is not expected. Probably Congress will not adjourn before September.

Representative McDermott, of Chicago, accused during the lobby investigation, resigned, but will be a candidate for reëlection. A majority of the House committee had voted that he should be censured, and a minority asked for expulsion. Representative Sharp, of Ohio, resigned to become Ambassador to France.

The President withdrew the nomination of Thomas D. Jones for the Federal Reserve Board, and the correspondence between him and Mr. Jones was published.

Representative Good, of Iowa, renewed his attack upon Secretary McAdoo for his use of revenue cutters. Representative Foss, of Ohio, said two-thirds of the members of the House were willing to eat out of the President's hand.

Among the subjects considered by committees were the control of coal deposits by railroads, the leasing of oil lands, and the naval retiring (or plucking) board. The restoration of Commodore Veeder, retired in 1910, was recommended.

New York World

A NEW HAVEN SUIT

Secretary's official announcement is as follows:

The Panama Canal will be open for commerce, to vessels not needing more than thirty feet of water, on and after August 15, 1914. The official opening of the Canal, as heretofore announced, will be in the month of March, 1915. An appropriate announcement will be made when a greater depth of water than thirty feet has been secured. On the 15th of August Colonel Goethals will inaugurate the commercial service by sending a Government boat thru the Canal. There will be no ceremonies incident to the occasion, but American newspapers which may desire to have representatives present may do so. The others who will be present on the boat will be determined between now and the time mentioned.

Some work remains to be done. The channel thru the Culebra Cut must be deepened and widened, and there must be additional excavation at the approaches, but the Canal in its present condition can be used by vessels drawing not more than thirty feet.

The Treaties Laid Aside

It has been decided that no action upon the treaty with Nicaragua, the treaty with Colombia, or Mr. Bryan's peace agreements shall be taken at the present session of Congress. They have been laid aside. This is due mainly to the action of a caucus, or conference, of Democratic senators, which undertook to dispose of the Federal Trade Commission bill, the Clayton Trust bill, and the Railroad Securities bill before adjournment. As at least one of these bills, and probably all of them, will be vigorously opposed, some have said that the discussion of them will consume two months. It was held that consideration of the treaties in committee and, possibly, in executive session, would delay action upon the bills.

In a letter to Mr. Stone, chairman of the Committee on Foreign Relations, Mr. Roosevelt has asked the committee to hear him concerning the treaty with Colombia. In his letter he says:

I was President thruout the time of the negotiations, first with Colombia and then with Panama, by which we acquired the right to build the Panama Canal. Every act of this Government in connection with these negotiations and with other proceedings for taking possession of the Canal Zone and beginning the building of the Canal was taken by my express direction or else in carrying out the course of conduct I, as President, had laid down. I had full knowledge of everything of importance that was done in regard thereto by any agent of the Government, and I was solely responsible for what was done. I request to appear before you, to make a full statement of exactly what I did and of what was done by my orders, to state the reasons therefor, and to answer any questions that your body or the members of your body may choose to put to me.

Before the treaties were laid aside Mr. Stone remarked that he did not want any horse-play in the committee. He suggested that Mr. Roosevelt should write out what he wanted to say, or should put it in a speech delivered on the steps of the Capitol. Mr. Wilson has sent to the Senate twenty of Mr. Bryan's peace agreements, and he would like to have them ratified before adjournment. The latest signatures are those attached to the agreements with Argentina, Brazil and Chile.

Hayti and Santo Domingo

For a time, last week, it appeared that our Government might not be able to avoid intervention in both Hayti and Santo Domingo. With respect to Hayti there were complications, owing, it is understood, to Germany's demand for representation in any fiscal protectorate that might be established, and to the similar attitude of Great Britain and France. The fighting continued, without regard to warnings from commanders of our battleships, and it was thought that it might be necessary to land a thousand marines. Five hundred rebels got into Cape Haytien, but they were driven out, and thirty-one who were afterward found hiding in houses were put to death. In the following days, however, the continued successes of Government troops pointed to a suppression of the rebellion.

In Santo Domingo the situation was less satisfactory. While President Bordas was fighting with rebels in the north, the desertion of General Sanchez and his troops was announced, and rebels in the south menaced the capital. The truce procured there by the United States chargé, Mr. White, expired on the 24th. He sought an extension of it. The Government consented to confer with representatives of the northern rebels, but refused to have anything to do with those in the south. The food supply at Puerto Plata had been exhausted, and ten persons died there of starvation.

Conditions may be improved by the Government's employment, at the suggestion of the United States, of Herbert M. Johnson, a financial expert, of Indiana, who is to guard that part of the revenue which heretofore, after the withdrawal of about one-half of it for payment of the foreign debt, has been turned over to the Government. Mr. Johnson is now in Santo Domingo. No warrants drawn against the customs funds will be honored without his approval.

South America

Dr. Durand, leader of the Liberal party in Peru, assisted Colonel Benavides (now President), in February last, in deposing President Billinghurst and expelling him from the country. He has recently been at variance with the Government which he helped to set up. A few days ago the Government ordered his arrest. He escaped by running in a secret underground pas-

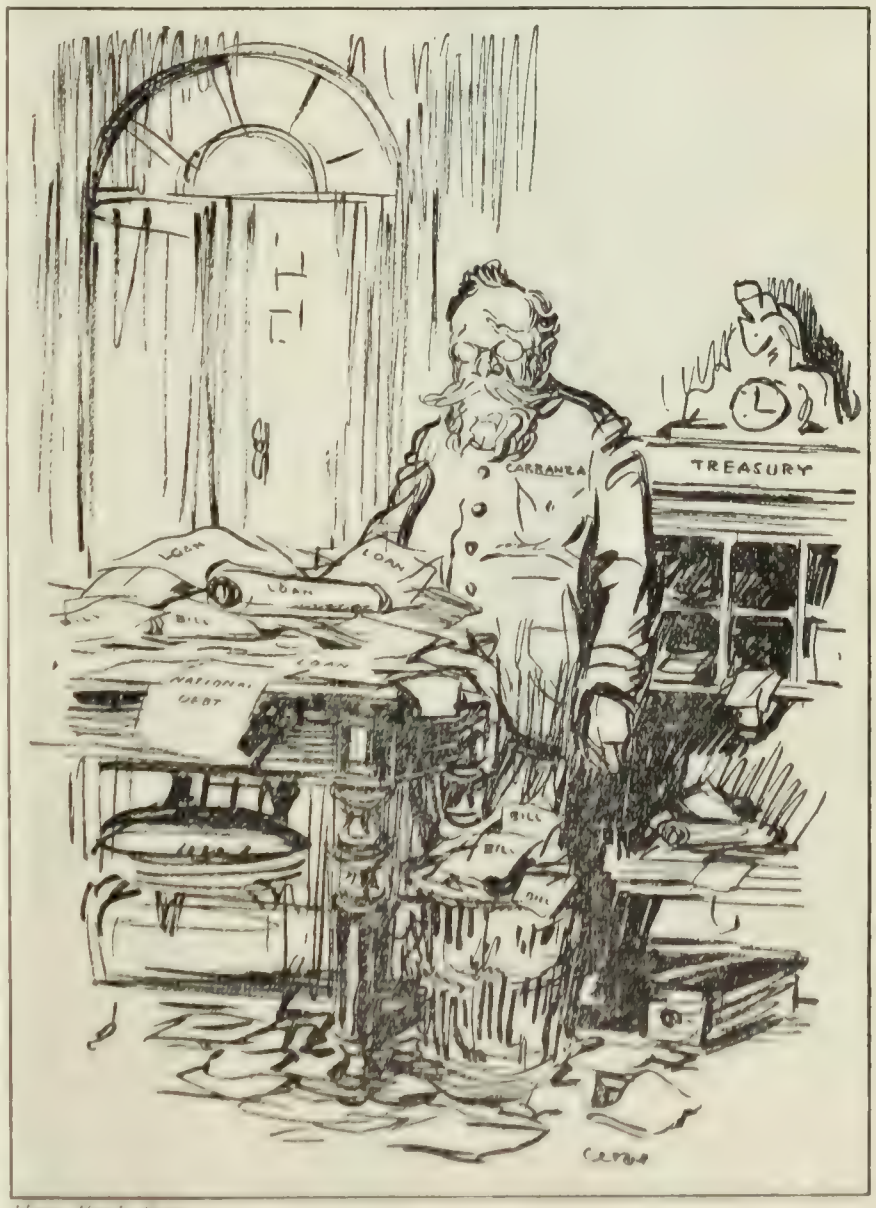
sage from his residence in Lima to the Argentine Legation, but after a time he was surrendered to the authorities, who placed him in confinement on a warship. He will be exiled. Alberta Ulloa, director of the leading newspaper in opposition to the Government, has sought refuge and protection in the Bolivian Legation. Roberto E. Leguia, Vice-President under Billinghurst, has for some time been a fugitive, but his surrender and imprisonment are expected. On the 23d a conspiracy against the Government was discovered. Many of the conspirators, among them seven officers of the army, were surprized and captured at the residence of Dr. Gerardo Barranco.

General Faria, chief of the Brazilian General Staff, regards with some favor the proposed alliance of Argentina, Brazil and Chile, but says that Brazil, having no conscription system and being weaker in armed force than the other two nations, must first prepare for war. General Aguiar says that if such an alliance should be hostile to the United States, its attitude would be unwarranted, because the United States has given proof of friendship in accepting mediation and in its course at Niagara Falls. In Buenos Ayres an anti-American organization, formed in the interest of Mexico and called the Latin-American League, asserts that its purpose is to oppose "the reprehensible ambition of the United States in seeking to establish predominance in the Gulf of Mexico and the three Americas."

Bloodshed in Ulster

After weeks of tension and dread blood has finally been shed in Ulster, but it is Nationalists' blood and not that of Ulster men. During a gun-running attempt near Dublin on Sunday, July 26, four persons were killed and sixty or more injured when a mob of Nationalist sympathizers sought to interfere with the detachment of troops which had been sent to seize the consignment of arms.



Warned that an attempt to land arms for the Nationalist Volunteers was to be made, the Constabulary, reinforced with a detachment of the King's Own Scottish Borderers, intercepted the gun-runners near Clontarf, and attempted to take from the Volunteers the 10,000 rifles which had been landed from a yacht earlier at Howth. Coast guards who had attempted to board the vessel had been ordered off at the point of revolvers. After landing the arms the Volunteers started back toward Dublin, and met the soldiers and police.

The Nationalists resisted the attempt to disarm them by using the butts of their guns, and a few of the more hot-headed fired revolvers at the troops, who were drawn up at Clonmel Bridge. Most of the Volunteers escaped by making off thru the fields. When the troops returned to barracks they were met by a hostile crowd, which included many women and children. After jeering and hooting for a time, they threw stones and bottles at the soldiers, whose patience had been sorely tried. Who gave the order to fire has not been discovered, but at the first volley, those that were not left dead or wounded scattered in all directions. A body of Dublin police, who had been ordered to attack the Volunteers, refused, and were suspended from duty. The Lord Mayor issued a strong letter of protest on the outrage and demanded an inquiry to fix full responsibility.

King's Conference a Failure

The conference called by King George at Buckingham Palace on July 21, to arrange a compromise on the Ulster question, was not only a failure, but served further to complicate a delicate situation.

The conference was attended by representatives from all parties, the Labor men, only on pressure, yielding a reluctant consent to obey the royal "summons." The King himself welcomed them with a speech, and beyond the speech the conference never got. Not only the delegates, but all England listened in amazement to the royal words, when the King spoke of "the cry of civil war" as being on the lips of some of the "most responsible and sober-minded of my people." On all sides the King was accused of trying to

HIS LEGACY

play the part of George III in an attempt to revive the royal prerogative. Then the attack was directed toward Premier Asquith, who under the British Constitution is responsible for all the utterances of the monarch, for carelessness in failing to strike out the objectionable clause. The Premier himself felt obliged to meet the criticism by explaining in the House that by "civil war" the King really meant "civil strife." Following the speech episode, the conference immediately deadlocked, and made no more satisfactory progress toward compromise than had been made in Parliament. Neither Sir Edward Carson nor John Redmond could be induced to yield their positions. Following the failure of the conference compromise plans, public opinion began again to consider the possibility of a general election as a way out, but the developments in international politics, growing out of the Austro-Serb troubles, make a change in ministry virtually impossible for the present. Meanwhile Great Britain has something else to think about besides Home Rule, which may help bring about a settlement of the Irish dilemma.

Trial of Mme. Caillaux

Even the threatening European Armageddon fails to divert the attention of the French public from the trial of Mme. Caillaux for the murder of Gaston Calmette, which began on July 20. Mme. Caillaux, it will be remembered, aroused by the publication of letters of Caillaux in *Le Figaro* written before her marriage, went to the office of Editor Calmette on March 15, and without any warning shot him.

Like the Dreyfus case, the Caillaux trial has stirred France to its foundations, and owing to the latitude allowed in French courts has assumed more of a political nature than the facts warrant. Under the guidance of Maître Labori, one of the shrewdest lawyers in France, and made famous in the Dreyfus case, the defense has tried to shift attention from the case itself to the political background in which they seek to justify the motive. For the greater part of two days Caillaux occupied the witness stand and defended himself against the libels which Calmette sought to place upon him. He reviewed his whole political career, the course of the negotiations with Germany over Morocco, from which *Le Figaro* charged he personally profited. Ex-Premier Barthou, Paul Bourget, the novelist, and scores of men prominent politically have testified, but their evidence has had little to do with the crime.

Great interest has been shown in the mysterious documents found on the person of the dead editor, which were supposed to be conclusive proof of Caillaux's dealings with Germany. It is said that because of their nature they were turned over to the Government, and to prevent a grave situation were suppressed. Mme. Caillaux's attorneys deny the existence of any such documents, and demand their production. Letters from M. Caillaux, in the hands of his former wife, Mme. Gueydon, because of their political secrets, were supposed to threaten the existence of the present Cabinet, but when they were read, were found to be nothing but harmless love phrases and sentimentalities.

JOB E. HEDGES

Who was nominated for Governor of New York two years ago, and who has formally presented himself as a candidate for the Republican nomination in a statement challenging boss nominations and offering Republicans "an opportunity to assert themselves and maintain their political and personal manhood"

Because of the political turn the case has taken, especially when the prisoner is a woman, it is difficult to say what the outcome will be, but French papers predict either acquittal or a very light sentence.

Austria Takes Vengeance on Serbs

With an invasion reported under way, altho no formal declaration at this writing has yet been made, war has practically been declared between Austria-Hungary and Servia, as a result of the assassination by a Servian student of the Archduke Francis Ferdinand and his wife, at Sarayevo, on June 29. In Vienna there was a definite feeling that the plot which underlay the murders had its origin in Belgrade and the investigation undertaken by the Servian Government was unsatisfactory to the Austrian Government. The Servian press was openly boastful and defiant, and when the Austrian Consul General at Belgrade dropt dead in the consulate, did not attempt to conceal their satisfaction and hinted that he had been poisoned. Later a rumor became current that the Austrian legation had been undermined and was to be blown up on Sunday night, July 19th. So generally was this believed that the Austrian Minister was compelled to make representations to the Servian Government that such occurrences must

stop. Finally, on Thursday, July 23, the Austrian Minister presented an ultimatum to the Servian Government and demanded a reply by six o'clock on Saturday evening. The Austrian demands were:

1. Apology by the Servian Government in its official journal for all Pan-Servian propaganda, and for the participation of Servian army officers in it, and warning all Servians in the future to desist from anti-Austrian demonstrations.
2. That orders to this effect be issued to the Servian army.
3. That Servia dissolve all societies capable of conducting intrigues against Austria.
4. That Servia curb the activities of the Servian press in regard to Austria.
5. That Austrian officials be permitted to conduct an inquiry in Servia, independent of the Servian Government, into the Sarayevo plot.

At ten minutes to six on Saturday evening the Servian Government delivered a reply accepting all the terms except that allowing Austrian officials to conduct investigations in Servia, which it did not deem "in accordance with international law and good neighborly relations." Servia asked that this demand be referred to The Hague. The Austrian Minister, Baron Giesl von Gieslingen, refused to accept the reply and with the entire staff of his legation left the capital.

Serbs Desert Belgrade

Following the breaking off of diplomatic relations, both countries prepared for hostilities. The Servian Government offices and the bank reserves were removed from Belgrade, which is on the Danube and exposed to full Austrian attack, to the old capital of Nish and to the fortress of Kragonyevatz in the interior, where the real defense against the Austrians will be made. To delay the Austrian advance, the railway bridge connecting Belgrade and Semlin was blown up by the Serbs.

So unexpected was the war that the Servian chief-of-staff and four staff officers, who were in Hungary in civilian clothes, had not time to get back to Servia and were arrested, but later released by the Austrian authorities.

In Austria-Hungary all the provincial assemblies, constitutional guarantees, jury trials and freedom of the press have been suspended and the country placed under martial law. While the war is primarily one of revenge, full use of it is being made by the militarist party to stamp out and put an end to the growth of democratic institutions, which have been forced from the Hapsburgs to appease the great popular unrest. For some time pretexts have been sought to curb them and the war offered the opportunity as well as to deal a death blow to Pan-Slavism. Arbitration is regarded as improbable, as the Austrian demands were meant in the first place to be unacceptable.

Prospects for a European Armageddon

Even more serious, however, is the involving of Europe in the struggle and the precipitation of the Armageddon which has been the nightmare of the powers since the alignment of the Triple Entente against the Triple Alliance ten years ago. By these pacts, if one of the powers is attacked by another and an outside power threatens to interfere the other members of the agreement are bound to come to the first power's defense. The efforts of Europe are now directed toward localizing the conflict between Austria and Servia.

Russia has already notified Austria and Germany that she will back Servia and is prepared to take extreme measures. Altho a rigid press censorship has been established all over the continent it is believed that the Russian troops are already being mobilized. In case Russia thus enters to defend Servia, as she must do if she is to keep her influence in the Balkans, Germany is bound to come to the aid of her ally, Austria.

A master stroke could scarcely have caught the Triple Entente less prepared. The delivery of the Austrian ultimatum came when Russia was occupied with great internal strikes, England with the Home Rule contest, while President Poincaré of France and M. Viviani, the Premier, were absent from the country with the two most effective units of the French navy. Preservation of peace, therefore, depends upon Emperor William, who hastened home from his cruise in Norwegian waters, and upon the attitude of England. In the past the German Emperor has shown himself on the side of peace, and it is thought that he will lend his influence toward the acceptance of the proposition made by Sir Edward Grey, the British Foreign Secretary, for a conference in London of the French, German and Italian Governments with a view to coöperative mediation.

THE MILITARY ASPECT OF EUROPE

Over nearly all the territory there is definite preparation for war. The figures are conservative estimates of the armies that could be readily mobilized for European service, but they do not include, except for Servia, the great host of civilian reserves who would be called to the colors in a long war, or as Russia's case the huge forces tied up in Asia. England's part, were she involved, would be chiefly naval. The shading marks the Triple Alliance, now on the aggressive. Of the Balkan states, Rumanian sympathies are with Russia. Bulgaria would probably oppose Servia, and Montenegro and Greece will support Servia, the latter with 100,000 men. Even Belgium is partially mobilizing and Holland is taking military precautions

THE COLLEGE ATMOSPHERE

BY EDWIN E. SLOSSON

THE two things that every collegian in speaking of his alma mater is most apt to boast about are the superlative beauty of its campus and its unique democratic spirit. By democracy, however, is sometimes meant merely the comparative disregard of the distinctions on which aristocracy is based in the outside world, such as wealth and family. The substitution of a collegiate aristocracy when the line is drawn between the Sophomores and Freshmen, between Greek and Barbarian or between classical and science students is commonly overlooked. Yet these distinctions may be as strongly emphasized and as keenly felt as any others. Even this however has its advantage, in that it accustoms the student to artificial class discriminations such as he will encounter in other forms when he leaves college. If the college did "prepare the student for life in a democratic society," as it is sometimes said to do, where on earth would he find the society for which he has been prepared? As things are, the Freshman whom we see humbly begging permission of a Sophomore to wear a hat instead of a skull cap in cold weather and producing a doctor's certificate in proof of his need of the indulgence is being suitably trained for the time when he may have to beg permission of a political boss to become a candidate for public office or appeal to his landlord to be allowed to have a baby in his flat.

Who indeed would suspect that the universities had any intention to inculcate a spirit of democracy when he sees the academic procession file thru the Gothic halls robed in the costume of the medieval gilds and arranged in hierarchical order in strict accordance with a system of traditional, artificial and in large part fictitious honorific distinctions? It is curious that those who have most reason to know how inadequately the prevailing system of examinations and degrees represents real distinctions of ability, learning and public usefulness should be inclined to lay such emphasis upon them. The folds and coloration of the academic gown give but slight indication of the convolutions of the cortex and the ramifications of the cerebral neurones.

BOARDING HOUSE OR DEPARTMENT STORE?

Classified according to their root form, American colleges fall into two categories: the boarding-house type and the department store type. The first represented by the New England college, the outgrowth of the English public school, brings together a selected group of young men for a common life and a specified training during a fixt term of four years. The second type, that of the Western state university, stands ready to provide educational facilities in great variety to anybody who applies. Come and pick out what knowledge you want or have it delivered at your own home by our extension service.

It is not necessary to discuss which of these is the better for, very curiously, each kind of institution is dissatisfied with its own original form and is imitating the other. The Western universities which used to boast that they had "no rules except the Ten Commandments and the statutes of the state" and which made little attempt to enforce either are now taking a personal interest in the private life of the students, regulating their hours of study and play, providing dormitories and looking after their physical health. On the other hand the Eastern college has expanded in various directions in the effort to meet the needs of all sorts and conditions of men and even, for part of the year, of women. Most of our universities therefore have come to be of a composite type and in the same institution both plans are being tried and in a variety of ways. This ought to afford an opportunity for the comparison of the effects of the different ways of living, but so far as I know no authoritative investigation of the question has yet been made. From what information I can gain I get the impression that the best undergraduate class work is done by students living at home; next to them stand those living in other private houses; third, those living in college dormitories and fourth and lowest, those living in fraternity houses. But so many other factors come in that it would be unsafe to assume that this is universally true.

FRATERNITY SCHOLARSHIP

There are, however, abundant statistical data to show that on the average fraternity men get lower grades in their studies and are more liable to suspension for deficiencies and delinquencies than non-fraternity men. Since the men chosen by fraternities are moré apt to have money and leisure and to be above the average in ability, they might naturally be expected to excel in the classroom as much as they do in the extra-curricular activities. Since on the contrary they fall below we are forced to the conclusion that fraternity life, whatever its advantages in other respects, is not conducive to scholarship. It may be that there are some colleges where this rule does not apply, but all of the reports I have seen confirm it. Of course where almost all the students belong to fraternities, their average tends to approach that of the whole institution, and where the rushing season begins with the first day of registration or before there is less difference in the quality than where the selection is postponed a few months or a year, for when the newcomers are taken off the train just as they come, the best regulated fraternity is liable to get hold of a dig or grind occasionally.

The existence of a negative coefficient of correlation between fraternities and scholarship has been often demonstrated, so I will here refer to a few recent investigations.

The University of Michigan publishes a sort of thermometer of scholarship on the scale of which the averages of the various organizations and classes are ranked. That for 1912-13 reads as follows from the top down:

A Grade—
Phi Beta Kappa (honorary literary)
Tau Beta Pi (honorary engineering)
B Grade—
Women's Clubs (non-Greek)
General Sororities
All Unorganized Students
Entire University
Men's Clubs (non-Greek)
Professional Fraternities
Varsity Athletes
C Grade (passing)—
General Fraternities

In the University of Kansas for the same year the thermometer of scholarship reads much the same as in Michigan. I select a few of the numbers giving the average grades:

Phi Beta Kappa (honorary literary)	99.9
Sigma Xi (honorary scientific)	98.6
Y. M. C. A. Cabinet	94.3
Y. W. C. A. Cabinet	94.0
Non-Sorority women	79.8
Sorority women	79.1
Daily Kansan staff	75.5
Orchestra	72.2
Phi Beta Pi (honorary engineering)	67.2
Non-Fraternity men	61.4
Entire university	57.7
Fraternity men	50.0
Football	46.5

An examination of the Kansas table, as published in the *Graduate Magazine* of that institution for March, 1914, shows that above the level of the average grade for the student body as a whole are: All the twelve honorary and professional fraternities except one; all of the seven national sororities; all of the six debating and literary societies;

all of the five senior societies; all of the nine dramatic and musical societies; and five of the seven athletic teams. Below the university average are: All of the Greek letter societies except one; the sophomore and freshman societies; and the baseball and football teams.

In Stanford University comparative statistics of scholarship have been kept for the past fifteen years, and the fraternity men have always stood lower than the non-fraternity men. During the year 1912-13 16.5 per cent of the fraternity men were disciplined for scholarship deficiencies, while the average for all the men, fraternity and non-fraternity together, was only 13.5 per cent. That the fraternity men have been making an earnest effort to improve is shown by the fact that they have cut down their delinquencies from 20 per cent in 1908 to its present figure.

In Cornell the non-fraternity men stand higher than the fraternity in every one of the seven colleges and the four classes. The average grade for the first term of 1913-14 for the 1497 fraternity men is 70.7 per cent. For the non-fraternity men it is 74.1 per cent. To quote from the report in the *Cornell Alumni News* of April 16, 1914:

> One of the most significant results of the comparison is made between fraternity and non-fraternity men as to the character of the marks received. It was found that only about one-third of one per cent of the fraternity men ranked better than ninety per cent on the term's work, whereas, of the non-fraternity men whose marks were investigated, more than one and one-half per cent attained that high grade. For those ranking above eighty-five per cent the comparison is even more striking, the percentage of fraternity men being about three, while that of non-fraternity men is nearly ten. Above eighty per cent, the difference is still great, 13.6 per cent of fraternity men and 23.6 of non-fraternity men attaining that grade. A little more than half of the total number of fraternity men averaged better than seventy per cent in their marks, while the proportion of the non-fraternity men who stood higher than seventy per cent was nearly three-fourths.

The University of Chicago avoids invidious comparisons between Greek and Barbarian, but *The University of Chicago Magazine* for February, 1914, states that "the situation is more serious than ever before in the history of the university." Of the sixteen freshmen dismissed at the end of their first quarter for poor work eleven were fraternity pledges. Out of 152 pledged at the beginning of the year fifty-three failed to attain a C— average, a grade that leads to expulsion if continued thru the year. Of the rest twenty-nine were placed on probation. The average grade for the eighteen fraternities at Chicago is only C, the lowest compatible with permanent residence in the university.

I have no figures from Columbia, but the papers report that the fraternities have received warning that they must pay more attention to their studies. As an inducement President Butler has offered to award a prize cup to the fraternity making the best record during the year.

Since it has been shown that those who later attain distinction in the field of scholarship are as a rule those who have done creditable work in college, it follows that the inferiority of the fraternity man in this field continues thru life, notwithstanding that a fraternity connection is of material aid toward advancement in an educational career.

We must, of course, recognize that the examination and classroom grades register for the most part only one particular kind of ability, and that perhaps not the most important kind, the ability to acquire knowledge in a systematic way. Also we must allow for the fact that these grades very imperfectly represent the attainments they are designed to appraise, and that they are not closely comparable between colleges or courses. Still, they are the best standard we have, and the colleges are established especially to train this particular kind of ability, so if any group of students, or more accurately speaking, attendants at college exercizes, fail to secure good credits, it is a fair presumption that they are not getting what they came for or were sent for.

IS THERE A REASON?

As a barbarian I have, after the manner of my kind, speculated often as to what the Greek letters stand for, but now I know: they stand for poor scholarship. Why it is so I as an outsider have no means of knowing and no right to surmise. I might be inclined to ascribe it to the secrecy, or the ritualism, or the social activities, were it not for the fact that the sororities, who have, I presume, much the same ceremonies and who attend the same parties, get quite as good grades as their sisters outside the pale.

Nor can I discern anything necessarily inimical to scholarship in the comfortable houses in which the fraternities are lodged. At any rate, some such provision for student living has become inevitable. The proportion of students who can be housed in homes tends to become inconsiderable except where the college is small or the city large. We are, therefore, restricted to halls, houses and dormitories under varying degrees of official supervision. In any case the tendency is to make the conditions of living more and more unlike those of the outside world and to cultivate that peculiar form of existence known as "college life." This is indeed regarded by some as the greatest advantage that such an institution can offer and superior even in educational value to those specified in the catalog. That it is not universally so regarded, however, is shown by the fact that it is common for boys who are fully prepared for college to be held back by their parents for a year or two for fear of subjecting them too young to the influences of "college life."

NET RESULTS OF "COLLEGE LIFE"

We have then this strange situation—on the one hand there is a general complaint that college graduates are too old and are not able to establish themselves in their professional career and set up homes of their own until well toward middle life. On the other hand we see the students deliberately retarded in their entrance to college because it is felt that while they are old enough for college work they are too immature for college play. The colleges blame the high schools for not sending up the students younger. The high schools retort that they already prepare students for college younger than they are allowed to enter. It has been conclusively demonstrated that the preparatory school course could be shortened by one or two years if there were anything to be gained by it. I do not mean for infant prodigies and the sons of psychologists, but for the average boy.

This much lauded "college life" is, then, the cause of a double loss of time. It acts both as a deterrent and a retarder. It prevents the student from entering college young and it absorbs a large part of his time at college. I find on looking thru a recent college annual 150 student organizations listed there, each with its quota of officers and specific activities. Granted that these are mostly harmless and often beneficial they nevertheless represent an enormous amount of time taken from the objects for which the college ostensibly exists. As Mr. Wilson said, when he was president of a less tractable organization than the United States, "The side shows have swallowed up the circus."

But there are those who claim, not without reason, that you get more for your money in the side shows than in the circus. There is, at any rate, in some of these voluntary activities a more definite sense of use-

fulness and responsibility than in the required work and accordingly they call out more earnestness and energy on the part of the student. The student spirit is often a more dominant influence than the faculty spirit. One might well say, "Let me make the songs of a college and I care not who makes its laws."

EDUCATION IS SELFISH

College training suffers from one defect that is apparently inevitable, at least under the present system. The aims of the undergraduate are in the first place personal and in the second place fictitious. The student may be getting his education with the loftiest motives of ultimate service to the world, but for the time his purpose is purely selfish. He is educating himself, not doing anything for others. In after life he finds that he is not able to earn a living whatever his occupation, except by doing something for other people that they are willing to pay him for. But education is as selfish as eating. Eating a dinner cannot in itself be called an altruistic process. But think of a man eating steadily for four years without doing any work. That of course is just what the child does, and college has been aptly defined as an institution for the artificial prolongation of childhood.

School work thus necessarily takes the form of play in that the immediate aims it sets up are intrinsically valueless and their importance a pretense. The problem that it sets before the student is not a real problem. It is merely an "example." The old name was the honester. The answer is in the teacher's head or his desk. School tasks are not real "work"; they are only exercizes. Why does a student study? Primarily to recite. But he knows that it does not make any real difference to anybody else whether he gives the right answer or not, any more than it makes any real difference whether he kicks the football over the goal. If he gives a right answer the instructor is not enlightened; if he gives a wrong answer the instructor is not deceived. Of these two kinds of play-work or exercize the sport is the more real. The one is designed to train the mind, the other the body, but in both cases the immediate and ostensible object is fictitious and valueless in itself.

FICTION AND REALITY

It is no wonder that some earnest and sincere, tho short-sighted young men, give it up in disgust and go into business or work where everything they do counts, not merely in personal training but in concrete results of benefit to somebody else. Some students fail to discover the fictitiousness of it and so never discern the reality behind the fiction. They become so acclimated to the academic atmosphere that they cannot leave it and are mechanically past on from degree to degree, from fellowship to fellowship, for years, perhaps eventually entering the faculty, where they cultivate in their students the illusions of the dream-world from which they have never been able to free themselves.

It is, as I say, doubtful if the educational process can be entirely freed from this disadvantage of the fictitiousness and selfishness of its immediate aims. We may imagine that some day the college course might be made a part of life instead of "a preparation for life." Certain forms of vocational training and original research have been in a measure freed from these defects. But even research tends to degenerate into an exercize, and the doctor's dissertation sometimes fails to fill any other want than that for the degree it secures. We can only hope that the student, necessarily immersed for years in this artificial atmosphere, may somehow retain or attain a sense of reality, so the shock may not be too great when he goes into the open air. In the college he has been continually under pressure. He is being helped and urged on all sides to do his best and make a success of his work. He is being pushed and pulled along, and unless he wilfully refuses to comply he is carried thru by the current. But when he gets out of college this pressure is suddenly removed. His superiors and associates in his business or profession are not always anxious for him to get ahead; sometimes indeed they are more disposed to trip him up than to help him on. So the young graduate suddenly released from the confinement of college is apt to suffer from caisson disease, a painful and disabling tho transient malady.

BARRACK LIFE

The campus still claims as part of its medieval inheritance the privilege of extra-territoriality. Students have their own code of conduct, which only in part corresponds with that of the rest of the community, but public opinion and police give them "the freedom of the city" to a greater extent than is allowed to the non-matriculate citizen. It is very much to their credit that they do not take greater advantage than they do of this comparative immunity from the restraints which society deems necessary to impose upon others. We are told by "old grads" that organized disorder and cultivated dissipation are nowadays less common than they used to be, and we are glad to believe it. Still, it may be questioned whether in moral standards and practice the student body is as much above the average level of the country as it is in intellectual attainments.

A great deal of study has of late been given to the matter of student housing, and great improvements have been made in consequence. Perhaps, however, attention has been rather too much concentrated upon details. The question of whether dormitories should be kept on the single entry or double entry system is, after all, not of the first importance. It is indeed usually impossible to tell by a man's character and career whether he spent the formative years of his life in a hostel of Gothic or Renaissance architecture. The inherent defect of dormitory life is that it is more like that of the club, the monastery and the barracks than that of the home, which, after all, we must regard as the normal habitation of human kind. The student away at college is cut off from association with old and young people. He meets few except those near his own age, and in some colleges only those of his own sex. A young man may never come to know a decent girl during the four years. It might be said that he could have found a way to make the acquaintance of some if he tried hard enough, but that is not sufficient. A young man is not attracted by girl in the abstract, but by girl in the concrete. An institution that deliberately deprives him of all opportunity to learn the characteristics of a sex with which he will be intimately associated for the rest of his days cannot be said to give a well rounded education or an adequate preparation for life.

So long, however, as education is restricted to a specified period of time and to particular places, a certain amount of segregation is inevitable. But if we cannot altogether remedy the defects, it is necessary to recognize them. Considering the artificial conditions under which students live and labor, it is astonishing that they can remain as normal and wholesome as they are. But we must make allowances for their disadvantages and not expect too much of them. As Kipling says of young men in a like situation:

We aren't no thin red 'eroes, nor we aren't no blackguards too,
But single men in barricks, most remarkable like you;
An' if sometimes our conduck isn't all your fancy paints;
Why, single men in barricks don't grow into plaster saints.

AN EDUCATIONAL BY-PRODUCT: HARVARD'S WINNING CREW

THE SPLENDID SPECTACLE AT HENLEY WHEN HARVARD UNDERGRADUATES WON THE GRAND CHALLENGE CUP FROM HARVARD GRADUATES. A TRIUMPH FOR THE AMERICAN COLLEGE ROWING SYSTEM

AN OUTDOOR CLASSROOM IN INDIA—THE GURUKUL ACADEMY

TAGORE AND HIS MODEL SCHOOL AT BOLPUR

BY BASANTA KOOMAR ROY

The award of the Nobel Prize for Literature to India's poet of idealism, Rabindranath Tagore, was for most Westerners a revelation of an entirely unknown genius. And even now when his "Song Offerings" are so widely read and sung, and his symbolic dramas have become familiar, the work to which he gives himself, to which he devoted, in fact, the Nobel prize money, is little known. We are glad to present this picture of his school, which so strikingly combines Eastern and Western ideals, by a graduate of Calcutta University who has been a frequent contributor to the more serious American and Indian periodicals.—THE EDITOR.

LONG before Tagore cut off his connection with active politics in 1907, a change was dawning in his inner consciousness—a change that demanded a fuller sacrifice for national regeneration. And after reconnoitering the entire field of politics, economics and sociology, he came to the conclusion that if there was a panacea for all of India's evils it was education, liberal education full of freedom and love—an education that would not only develop intellect and morals, but more than that, spiritual personality. Referring to the prevalent system, he says: "Education is imparted under conditions that make it an infliction on young boys innocent of any crime that makes them deserve the punishment. Let not education defeat its own ends by its methods, but make the whole process as easy and natural as possible."

To make this possible, Tagore decided to open a school at Bolpur. His father gave his unconditional approval to the scheme. When once his conscience spoke for it, neither debt nor adverse public criticism could daunt the spirit of Tagore. The school was accordingly started in 1902 with three or four children. Tagore's son was in the first batch of students. His idea in opening this *Brabmo Vidyalay* may best be exprest in his own words: "To revive the spirit of our ancient system of education I decided to found a school where the students could feel that there was a higher and nobler thing in life than practical efficiency—it was to know life itself well. I meant to banish luxury from the *ashrama*, and to rear boys in robust simplicity. It is for this that there are neither classes nor benches in our school. Our children spread mats under trees and study there; and they live as simple a life as possible. One of the principal ideas, to build the school in a vast plain, was to take it far away from city life. But more than that, I wanted to see the children grow with the plants; there would thus exist a harmony between the growth of both. In the cities children do not see much of trees. They are confined within the walls. Walls do not grow. The dead weight of stones and bricks crush the natural buoyancy of child nature.

"I do not always get the best kind of boys in the school. The public look upon this as a penal settlement. Mostly those whom their parents cannot manage are sent here." And still, under the love and guidance of Tagore and his co-workers, the boys get ready for the matriculation in six years, whereas in the school owned or controlled by the British-Indian Government they take eight.

The day's routine is quite different from any that is followed in any other residential school excepting the Gurukul Academy of the Arya Somaj. The students and the teachers get up with the morning bell at 4:30. They make their own beds, and all come out singing songs and chanting hymns in praise of the Lord of the Universe. After washing they put on white silk robes and sit down for individual meditation and prayer. Then they take breakfast of *luchi*, *halua*, puffed rice and milk or any other light food. The school begins at 7:30. The students fetch their individual pieces of mat seats, spread them under the trees and without any books begin their class lessons, in literature, history or geography. Only for the experimental sciences they repair to the physical or chemical laboratories. The lessons are given orally, as the sun shines, the breeze conveys the sweet odor of

flowers, and the leaves rustle to supply the music. No teacher is allowed to have more than ten students in a class; at times only one has all his attention.

At 10:30, after three hours' intensive study, the classes disperse as appropriate songs are sung. Soon after the students and the teachers go to take their daily bath. Bathing over, the boys chant hymns in praise of God and the *Ashram Janani* (mother-hermitage). The second meal is served at about 11:30. Then the boys study books or magazines in the library, or study their own lessons, or spend the time just as they like till school time. At two the classes assemble, again under the trees. In the class the teachers are not allowed to use canes or inflict any kind of corporal punishment.

The school closes at about four. The boys then take a light lunch and rush to the playgrounds to play football, cricket, hockey, tennis, *hadugudu*, or other games, as the case may be. In games, as in studies, the Bolpur boys excel. In football and cricket they have defeated many Calcutta college teams. In military drill they can vie with the best drilled boys in any military academy. To temper the boys in heat and cold they are made to run for miles in hot days and are made to wet themselves when it rains. At times they are out walking twenty miles at a stretch. The Spartan training has made the Bolpur boys perfect in health. The wretched condition of the health of Bengali students is deplored on all sides. But Tagore has shown what can be accomplished by care and devotion to an ideal. Unless sick the boys are never allowed to use shoes or stockings, nay, not even in winter. Of course, the winter at Bolpur is very mild and lasts only for two months.

Many older boys, inspired by the life of Tagore, deprive themselves of the games, but run to the neighboring villages where the aborigines live in crudest superstitions and pitiable unsanitary conditions. These students, on entering a village, pretend to begin a game, and crowds gather round. The boys stop their game and begin to preach to the populace. The latter respond quickly, for the young Hindu missionaries from Bolpur do not go with any sense of superiority, or to preach one form of religion or decry others, but with a feeling of brotherhood, a sense of equality which Tagore always inculcates in his school. The students have now started day and night schools for the Santal children. In case of sickness they nurse them as they would the members of their own family. The Bolpur boys are so unselfishly devoted to the cause that even in hot summer days they do not hesitate to work like a common coolie, without any remuneration, to build a cottage for a Santal in need.

It is the wish of Tagore that his boys should combine in life the spiritual tendencies of India with the spirit of social service so characteristic of Western society. Of course, many years before the establishment of Bolpur School, the same idea acted thru Asvini Kumar Datta, the noble philanthropist and educator of Barisal, who established in connection with his school and college, Brojomohun Institution, what is still known as "the Little Brothers of the Poor."

Games over, the *brahmacharins* (students) take baths or wash themselves clean, and put on their white silk *dhotis* and spend about thirty minutes in prayer and meditation. Then the evening meal is served. The meals at Bolpur have to be strictly vegetarian; for it was the wish of the *Maharshi* that none should be allowed to use wine, meat or indecent language at Bolpur, nor should any religious controversy be allowed to disturb the divine harmony of the *Shantinikatan* (Peace Cottage).

Contrary to the prevalent custom in India, Tagore teaches music to the students in his school. He loves music and believes in its uplifting and ennobling influence. The music classes assemble in the evening, when singing and playing on different instru-

THE KIND OF LADS TAGORE IS MAKING INTO MEN—NOT MACHINES

ments are taught. The dramatic clubs get busy rehearsing seasonal plays written by Tagore. Tagore himself trains the boys and takes part in the plays.

At night the boys also edit their newspapers, of which they have four in the school. They are all written by hand and illustrated by hand. The best paper is the *Shishu*, run by children between six and ten. They write poems and even literary criticisms. The Bolpur students read and make summaries of important articles in the magazines of England and America for different Calcutta monthlies. The day's work ends between nine and ten.

Tagore himself lives all alone in a house. He gets up with the morning bell, sometimes before, and takes his morning bath, goes on the roof and loses himself in meditation for hours at a time. Boiled rice, boiled potatoes, cauliflowers or beans, enough of butter, are all that he cares to eat. He takes long walks for exercize and is fond of gardening. Plain living and high thinking is the keynote of his life at Bolpur. He preaches to the boys and the teachers twice a week in the temple. His love for the children is of an idealistic nature.

Once a boy of six summers was playing with Tagore's beard as he lay plunged in the poet's lap. All of a sudden the child said: "*Burudey*, you write so many poems, why don't you teach me how to write poems?"

"My child," replied Tagore, "its burden is exceedingly heavy, I feel smothered at times myself. I don't want to burden you with it."

"All right," said the child gravely, "I shall learn to write poems myself. They all seem to like your poems, even tho you are burdened a little." That boy is now about ten years old; and he has by this time written some beautiful poems in Bengali. He is a constant contributor to the school papers.

To teach students leadership and self-government, the internal management of the school is left to them. Every Tuesday the students elect a captain for a week. He is the chief magistrate. Every house elects its own leader. The leaders take notice of acts of misbehavior in class or outside. The cases are brought not before Tagore or the teachers, but before the student's court, which sits in the evenings on appointed days. The prosecuted student defends himself, or engages a brother student to defend him. If found guilty the judge asks the convicted to choose his own punishment. The punishment is generally in the form of depriving oneself of games for a day or so, or to do some extra work to keep the houses and the gardens clean. Unkind words, like corporal punishment, are strictly prohibited in the school. And this is a great factor to cement friendship between teachers and pupils.

Beside the spiritual training, the entire system of education is planned to develop the imagination and faculty of observation in the students; whereas in other schools all over India cramming is most systematically encouraged. Here boys are made to observe a single insect or a single flower from birth to death. Tagore publishes these interesting observations in his own magazine, *Tattwabodhini Patrika*.

To watch the daily life of the Bolpur boys is exceedingly fascinating. Here a few boys are talking poetry and literature; there another group is watching the growth of an insect, or of a plant; a third group is busy feeding the birds and the animals; a fourth nursing the flower bushes as if they were his own brothers. Like fawns these boys frolic about in their new home, full of love and saturated with freedom.

The thought, the culture—in fact, the entire atmosphere at Bolpur—are all Indian; truly nationalistic and universal. And as most of the students are from eastern Bengal, patriotism plays a prominent part in the school. Tho isolated in a kind of intellectual and geographical oasis, still the students are wide awake and are in touch with all the world movements. Tagore is a voracious reader. Every month he buys many books on literature, philosophy, economics, politics, sociology and history. He reads them all and then presents them to the school library, where the boys and the teachers read them. There are to be found books on feminism and socialism, and even the single tax does not escape the attention of Tagore and his students. He himself inflicts no particular system of political or economic theories on the students, as is done in other schools in India, and even in American universities, but asks them to read on all sides and then decide for themselves.

This kind of tolerance and the patriotic nature of the school have made the British-Indian Government place this school on the "black-list." About three years ago Sir Lancelot Hare, the Lieutenant-Governor of Bengal, issued circular letters to the Government officers to take their children out of that school, and asking them not to send their children there. It was apparently done because Tagore employed in his school a young patriotic poet, Hiralal Sen, as a teacher. Sen was forced out of the school by the Government, but Tagore employed him in his own estate, with higher salaries. The Government, to gain control of the school, offered a monthly allowance. But, tho the school never was in a sound financial condition, Tagore, detecting the motive of such kindness, flatly refused any financial help from the British-Indian Government. Tagore has given the Nobel prize money to the school and the royalties on his books have been devoted to the same purpose.

Just a few days before his departure for America, in course of a conversation, Mr. Tagore said to the present writer: "There are many at home who do not realize the far-reaching and deep-seated influence of my school; but you know how, every year, I am turning out so many men, whereas in the Government schools they turn out mostly machines."

Whether the educational institutions of both the East and the West should turn out men or machines, or just operators of machines, is one of the greatest problems of the world that needs immediate solution. Tagore is trying to solve it in his own idealistic way.

Chicago, Illinois

TO ALMA MATER

BY MARION PELTON GUILD

Storm-worn and travel-weary, home at last
To thy great arms and sheltering breast we turn;
Not as these jocund younglings, who but learn
Thy gracious alphabet, nor yet the massed
Ranks of today's fair fruitage, they who cast
Already backward looks that cling and yearn;
Nor can their ears that deeper note discern
Which breathes not from thy present, but thy past.
In every breeze some lost, remembered voice;
In all thy twilight groves and radiant meads,
In every dimple of thy fairy lake,
Some ancient spell that bids us yet rejoice;
Or if that may not be, some balm that pleads
Acceptance for old love's most sacred sake.

RABINDRANATH TAGORE, POET AND TEACHER

AWARDED THE NOBEL PRIZE FOR LITERATURE [illegible] 1913 FROM A PORTRAIT BY ABANINDRANATH TAGORE,
THE POET'S NEPHEW [illegible] INDIA'S FOREMOST PAINTER

A PARTHENOGENETIC BUTTERNUT

THE experiments of Dr. Jacques Loeb and other biologists on the generation of low forms of animal life without the participation of the male element have attracted popular interest as well as scientific attention, and lay writers have used them as the starting point for far-reaching speculations in physiology, sociology and even theology. From Dr. Edward F. Bigelow, editor of the *Guide to Nature*, we have received the following surprizing account of a case of asexual reproduction in the butternut tree, indicating that this form of propagation can be extended very much higher than has been supposed in the vegetable kingdom.

Dr. Robert T. Morris, of New York City, a well-known physician, devotes his spare time to the development of nut trees and to experiments pertaining thereto at his extensive farm in the northern part of Stamford, Connecticut. One of his lines of investigation has been toward the production of hybrids which, as is well known, are produced by transferring the pollen from one species to another. In doing this with some butternut trees he made the remarkable discovery that the butternut would grow even if the pollen had not reached the stigmas or female portion of the plant.

At first he thought that he must have been careless and had failed to keep all the pollen from the pistillate flowers. He repeated the work with careful checking at every stage and found that a nut could be produced without the intervention of the male element.

But it occurred to him that this nut might not be fertile. As most people know, hens will continue to lay eggs just as well if there is no male bird in the flock as they will with one, but such infertile eggs will not hatch. So Dr. Morris might well have reason to think that even if such a butternut was produced it would be infertile, and could not germinate. But experiment in planting this parthenogenetic butternut showed that it would produce a tree as readily as one that was the result of male fertilization. Some fifteen months ago he planted a germinated parthenogenetic butternut and it has now grown to a hight of thirty-seven inches, with a spread of thirty-nine inches, altho some other parthenogens produced in the same manner have not grown to so large a size as the one shown in the accompanying illustration. Previously to Dr. Morris's remarkable discoveries of various parthenogetic shrubs and trees, the highest forms of plant life that had been known to botanists to be thus produced were limited to the algæ and the fungi.

THE PARTHENOGENETIC BUTTERNUT

Dr. Robert T. Morris and Mr. Frank A. Bartlett, tree expert, are examining the young tree which was grown without fertilization of the pistillate flowers

HEART-BEATS AND SOOT

A UNIQUE method of diagnosing heart disease, first demonstrated in Germany, operates upon the principle that extremely slight vibrations in the atmosphere will create corresponding changes in a burning flame.

A wide paper tape is made to travel above two small smoking gas flames, so that they will trace parallel bands of soot upon its surface. An instrument somewhat like a telephone transmitter, containing a very sensitive diaphragm, is placed over the heart of a patient. Its vibrations are reproduced by the diaphragm and transmitted by a tube to a gas chamber thru which passes the gas for one of the flames. The slight flarings of the flame in response to the various vibrations result in characteristic rings of smoke on the paper tape. From these abnormalities in the heart-beat can be read. Time is recorded by the second flame, influenced similarly by vibrations from a tuning-fork. The smoke-rings vary in shape and position according to the character of vibration causing them, and so help to simplify the diagnosis.

THE WORLD'S MAIL-BAG

POST office officials at Washington have discovered that English letters crowd the world's mail-bag. It appears that of all the letters that pass thru the post offices of the world two-thirds are written by and sent to persons speaking English. Roughly speaking, there are over 500,000,000 persons speaking colloquially one or another of the ten or twelve chief modern languages, and of these about thirty per cent speak English. About 90,000,000 speak Russian; 75,000,000, German; 55,000,000, French; 45,000,000, Spanish; 35,000,000, Italian; and 12,000,000, Portuguese. Thus, while only a little more than one-quarter speak, as their native language, English, two-thirds of those who correspond do so in that tongue.

This curious situation arises from the fact that so large a share of the commercial business of the world is done in English, even among those who do not speak it as their native tongue.

Altho 90,000,000 speak or understand Russian, the business of the Russian post office department is relatively small, the number of letters sent thruout the Czar's empire amounting to less than one-tenth the number mailed in Great Britain alone.

THE SIPHON COLLAPSED

The Los Angeles water supply pipe caved in when a vacuum was created within it by a break in the steel plates

WHAT WATER DID

WHEN a ten thousand length of ten-foot steel pipe collapsed on the Los Angeles Aqueduct, the loss of about a quarter of a million dollars was averted by a brilliant engineering feat. As the collapse was caused by a cloudburst that washed out the foundations near the center, the siphon broke at that point and the water gushed out with such force as to cause a vacuum within the pipe. The atmospheric pressure was too much for the quarter-inch steel plates to withstand, and the top fell in, almost touching the bottom in some parts and causing the splendid piece of work to look like a complete wreck, beyond repair.

William Mulholland, the chief engineer of the aqueduct, hit upon a method of restoring it, however. After repairing the break and replacing the foundations at the washout, the water was once more allowed to enter the concave pipe. At first the pressure was kept slight, then as the amount was increased a little at a time, the force of the 200-foot head gradually brought the siphon back into shape. Finally every wrinkle was smoothed out and the great siphon, ten feet in diameter, came back to its normal cylindrical shape. A little more than $2000 did the work and that included such repairs as provided against a repetition of the accident. This Antelope Valley Siphon is said to be the longest of its diameter of the world, composed almost entirely of steel plates. It has a total length of 15,596 feet and forms a link of the Los Angeles Aqueduct, which is well toward 250 miles in length.

THE WORLD'S COAL RESERVES

THE world is still rich in coal. Very detailed reports recently issued by the International Geologic Congress present data on the total reserves of the world. The following table summarizes the final figures as given in these reports. It includes known reserves of all kinds and grades of coal, arranged by continents, in millions of tons.

Continent	*Anthracite*	*Bituminous*	*Lignite*	*Total*
N. America	21,842	2,239,683	2,811,906	5,073,431
S. America	700	31,397	.....	32,097
Europe.....	54,346	693,162	36,682	784,190
Asia.....	407,637	760,098	111,851	1,279,586
Australia..	659	133,481	36,270	170,410
Africa.....	11,662	45,123	1,054	57,839
Totals...	496,846	3,902,944	2,997,763	7,397,553

The total known coal reserves of the world, of all classes, amount, therefore, to over seven million million tons. As the world's annual consumption of coal is not at present more than about fourteen hundred million tons, it can be seen that the total supply provided for some five thousand years more of coal, at the existing rate of consumption. As a matter of fact, however, two things check excessive optimism. The rate of consumption is still steadily increasing each decade; and much of the coal contained in the reserves above tabulated is either of very low grade or else poorly located so far as commercial utilization is concerned. But, even after making allowances for these features of the matter, it is obvious that very many centuries will elapse before coal becomes a rare mineral.

ALMOST BACK TO NORMAL SHAPE

Py forcing water into the pipe at a gradually increasing pressure the steel plates were forced out again

A CITY THAT OWNS ITS SUMMER RESORT

THE little Ohio city of Conneaut, 9000 people, lying forty miles east of Cleveland, leads all the rest in municipal ownership. For it has the distinction of being the only city in the country owning its own summer resort.

Twelve years ago the summer resort adjacent to Conneaut was taken over by the city, but leased to private holders. It was run-down, mismanaged and thoroly unsatisfactory as then operated. Last fall the Socialists put up a winning ticket, electing as mayor, D. W. Brace, formerly a railroad conductor, and S. W. Mahaffey, a day laborer, as director of public service. The first thing these men did was to clean up the park and declare it a free resort for people of small means. Now when the hurrying crowds of working people scatter out for rest and recreation they bathe or swim from city owned beaches, eat and sleep at a city hotel. City officers say that city ownership has only just begun.

Underwood & Underwood

THE INDIVIDUAL DRINKING PAIL

In Philadelphia the drinking trough has been abolished to avoid the spread of glanders. The Society for the Prevention of Cruelty to Animals provides the paper substitute which is more than the passengers on some railroads can get in a similar difficulty

FROM FARM TO CONSUMER DIRECT

A NEW PLAN TO FEED FOLK IN THE CITIES AT LOW COST

WITHIN the last twelve months a new order in marketing has appeared. Buying fresh foodstuffs direct from the producer has been made possible and practical for the city consumer thru the efforts of the large express companies to link the farm and family.

In the City of New York during the month of May, there came upon order of consumers, thru a single express company, over 40,000 pounds of butter, eggs and meats direct from country producers. The vital significance of this lies not in the amount—for that is only a jot in the monthly market basket of the metropolis—but in the fact that the products purchased in this way cost the consumer twenty per cent less than what he would have paid to his local retailer. These shipments—and they are steadily increasing in all the larger cities of the country—came direct from producer to consumer, without seeing a commission merchant, a city wholesaler or a retailer of any kind.

It was the parcel post competition and the losses of revenue caused by the recent express rate reductions ordered by the Interstate Commerce Commission that stimulated the express companies into their present new field of endeavor. To create commerce between the producer and consumer and to secure a more even distribution of foodstuffs generally, the big agencies established food products departments in the principal cities of the country.

Their initial step was to gather quotations on eggs, butter, fruit, poultry and vegetables at producing centers, and to publish them in bulletin form for the benefit of consumers. In this way, city folk were furnished with the sales lists of reputable farmers. The carrying companies went further. They used their thousands of offices for receiving orders from consumers and promptly turned them over to reliable producers to be filled. By thus taking to themselves the middlemen's function without the middlemen's profits, the express companies are able to secure better prices for the former and offer cheaper and fresher foodstuffs to the consumer.

Generally speaking, any shipment of more than twelve pounds can be bought from a producer even a thousand miles away at an express charge so slight as to make direct buying profitable to the householder. This is possible because of the low rates applying to the class of shipments known as food products seventy-five per cent of the charge for the transportation of merchandise packages. In addition to this, certain special rates—"commodity rates"—have been made to tempt the shipment of perishable goods, such as vegetables, which must travel either by express or not at all. On most shipments the transportation cost is two or three cents per pound.

California fruits and nuts, in five and ten-pound cartons, New York State apples and potatoes in combination bushel-hampers, hams and strips of bacon from Pennsylvania, and butter and egg combinations from Indiana and Ohio—all have been popular bargains among the consuming public. Just recently fresh vegetables and delicate fruits have been added to the weekly quotation sheets. One company is doing a large business fetching soft shell crabs and clams from the shoal waters of Chesapeake Bay to consumers' clubs in the inland states. Thruout the past winter tons of fish were gathered from the fishermen of the Great Lakes regions and carried upon order to consumers in small prairie cities, where such food was rare and high-priced.

The "farm to family" movement has found its most widespread expression in the organization of consumers' clubs. By purchasing direct from the producer in quantities larger than those which the individual housewife orders to her doorstep, a consumers' buying club is often able to get fresh produce even cheaper than the single buyer. In Fort Wayne, Indiana, over 1200 people are served by the thirty odd buying clubs in the city. Neighborhood clubs are springing up. The National Housewives' League, in Cincinnati, has divided the city into sections and has assigned a chairman to each to arrange the distribution of the produce brought in weekly by express. Paterson, New Jersey, has sixty buying clubs in active operation among its business houses. New York has over a hundred and fifty, including some of the largest department stores and insurance offices. The membership of the clubs vary from ten to several hundred; altho there is one buying club in a large firm in Chicago, which purchases produce each week for over 700 families. The monthly "grocery bill" amounts to $5,000. The progress of the movement has been remarkably rapid in Philadelphia, Pittsburgh, Boston, Buffalo, Milwaukee, St. Paul and a number of smaller cities as well.

The future of this direct buying movement depends largely upon the American farmer, rather than the consumer. Experiments in direct buying thru the parcel post, recently conducted by the Government at Washington, bear out the experience of the express companies, that reliable producers, capable of carrying on a mail order business with the consumer, are hard to find. The food products department of one large express company in the West has already announced that it dare not proceed too fast lest it be swamped with orders. For that reason, the express companies are sending marketing experts into the country districts to show Farmer Jones how to pack his eggs for shipment, how to grow the certain vegetables which Mr. City Man wants, and how to sell food products in a business-like way.

Whatever the future of this plan, it has certainly past beyond an experimental stage. The economic worth of the "farm to consumer" movement has been proved by actual reductions of the cost of living for those who have tried it.

READY FOR SHIPMENT FRESH FROM THE FARM

Vegetables, fruits, butter and even eggs can be packed safely and conveniently for express transportation. Combination packages are favored

THE EDITOR AS SCHOOLMASTER

BY HAMILTON HOLT

This is an abbreviation of the address delivered by Mr. Holt at the recent National Conference of Newspaper Men held under the auspices of the University of Kansas at Lawrence.—THE EDITOR.

I COME from New York City to Lawrence to present to you this morning what seems to me the most interesting and significant new movement in present day journalism—a movement that unless all signs fail is destined to have a far-reaching effect not only upon the reading public of the present time, but also upon future generations. I refer to the introduction of daily, weekly and monthly journals into our schools, colleges and universities as textbooks for classes in current events, modern history, civics, English literature, composition and debating.

Our educators are at last beginning to recognize that the greater part of the reading nowadays both for pleasure and for profit is in papers and periodicals rather than books, and the youthful mind needs guidance in this field even more than any other. The schoolroom is obviously the best place to train the child to discriminate between what has permanent value and what has only passing interest and to exercize his critical judgment on new material which has not yet been authoritatively classified—in fact to train his taste for general reading and the study of public affairs.

The student, however, if left to himself is not likely to choose the best of current literature. Most of the required reading in the curriculum is now devoted to the past. When he has satisfied the classroom requirements in regard to the *Vicar of Wakefield*, Irving's *Sketch Book* and Macaulay's *Essays*, if he reads at all, he is apt to select contemporary matter of the lighter sort. I well remember as a student at Yale how Professor Hadley, now President Hadley, once sent me over to the library to consult recent numbers of the London *Spectator* in regard to an essay I was required to write. It was one of the most valuable educational experiences of my life, for I soon found that to get the matter I wanted I had to read the leaders in that unexcelled weekly for a year back and that was a liberal education in itself. I had experienced something a hundredfold more vital and stimulating than anything I had read in the classics.

The fact is that the living literature of today is in the form of pamphlets, periodicals, reprints and clippings. "A bound volume," as has been said, "is an emeritus work and when the author comes out in sets he is on the road to oblivion."

If this is the case, what are the respective merits of the newspaper, magazine and book from the pedagogical standpoint? Here permit me to quote from an editorial that appeared in The Independent not long ago:

> The American magazines have to a large extent fallen heir to the power exerted formerly by pulpit, lyceum, parliamentary debates and daily newspapers in the molding of public opinion, the development of new issues, the dissemination of information bearing on current questions. The newspapers, while they have become more efficient as newspapers—that is, more timely, more comprehensive, more evenhanded, more detailed and on the whole more accurate—have relinquished, or at least subordinated, the purpose of their founders, which was generally to make people think with the editor and do what he wanted them to do. The editorials, once the most important part of a daily paper, are rarely so now. They have become in many cases mere casual comment, in some have been eliminated, in others so neutralized and inoffensive that a man who had bought a certain daily for a year might be puzzled if you asked him its political, religious and sociological views. He would not be in doubt if asked what his favorite magazine was trying to accomplish.

The dailies, however, like the natural monopolies, are public necessities. People have got to read the news. But the magazines have to attract by their merits alone. They must maintain at all hazards the people's confidence in their integrity, leadership and independence. Perhaps this is the reason that most of the great magazines leading public opinion are liberal and a majority of the great dailies reflecting public opinion are conservative.

The magazines of America, however, have two marked advantages over the dailies. They are national in scope and they have time to weigh their words.

No daily can ever become a national paper in the United States as in a small nation like England or Japan. The country is too large. A daily cannot circulate more than a few hours' distance from its seat of publication. No Chicago man, for instance, will subscribe for the New York *Tribune* when he can get the same news in the Chicago *Tribune* twenty-four hours ahead with McCutcheon's cartoons thrown in.

Nor do the dailies have the same time to consider the form of their expression and investigate the subjects they treat as do the more leisurely magazines. There is little *otium cum dignitate* in the average daily newspaper office, as many here can testify. The author of *The Story of a Country Town* gave as one of the reasons why he retired from the Atchison (Kansas) *Globe* to Potato Hill Farm was that he might have more time to mature his thoughts and polish his aphorisms. But in his case I doubt if the excuse was valid, for the man who could write amid the daily hurly-burly such paragraphs as "All some men achieve in life is to send a son to Harvard" or "If you put sugar and cream on a fly it will taste like a black raspberry" needs no extended leisure to give his fancy free rein. The daily paper nevertheless is made up in too much of a hurry. When a bit of news comes in over the wire at midnight it has to go in about as it is received. The editor has little time to connect it with what has gone before or to explain and amplify its meaning. Besides, there are so many accidents, crimes, earthquakes and Kansas cyclones in the average day's news that there is little room for extended treatment of the more important and less spectacular events.

In the magazines the case is different. All we have to do is to wait till press day draws nigh and then go over our thousand classified clippings and by the simple process of elimination, selection and amalgamation make up our ten items from them, adding explanatory comment from the encyclopedia, *Who's Who*, the almanac and our inner consciousness.

Especially in the treatment of such difficult subjects as science are the advantages of magazines manifest. No matter how much we admire the dailies when the "Titanic" sinks or a political convention is on, the average reporter's account of, for instance, a medical discovery, is the despair of all physicians and probably accounts for their congenital fear and hatred of publicity. Whereas who does not remember the several truly remarkable magazine treatments of the surpassing surgery of the Mayo brothers and the value of Ehrlich's 606?

The prime requisite of the daily is to give the news immediately and in detail, of the magazine to give the news sifted and interpreted. Accordingly the dailies are written by reporters, at one-half cent a word, the magazines by publicists and specialists at one hundred dollars a thousand. The dailies inform, the magazines explain. Both are essential.

I now pass on to the magazine in its relation to the book. It has some

times been said that the magazine is driving the book out of existence. This is not correct, because more books are published each year, but it is true that they are becoming less important in comparison with periodical literature. In some of the most vital and progressive departments of modern thought books have been practically eliminated. Take chemistry, for example. If you go into the chemical library of a large university you will see the walls lined with shelves full of sets of journals, but you will find only a dozen or so of books, and of these the only ones used are dictionaries or compendiums—mere indexes to periodicals. If you go to the workroom of some great leader of thought, a statesman, preacher, sociologist, editor, educator or author, you will find stacks of unbound pamphlets, files of clippings and yards of magazines, but very few books in the ordinary sense. In every newspaper office the morgue is the livest thing in evidence next to the managing editor. One daily in New York adds over one thousand clippings a day to its morgue, while another has one hundred stuffy manila envelopes headed "Roosevelt," one of which contains the cross-reference "See Liars." We have in our library in The Independent, for example, about fifty bound volumes on internationalism, tho we seldom consult more than half a dozen of them. But our several thousand classified peace periodicals, pamphlets and clippings are in constant use. In fact it has been said that a man's intellectual interests may be measured by the ratio of unbound to bound volumes in his working library. The more durable the binding, the less useful the book.

The study of the magazine, then, supplemented by text-books and newspaper clippings, seems destined to be the next forward step in American education. Its main advantages are as follows:

1. It cultivates intelligent reading.
2. It informs students on questions of the day.
3. It furnishes them with topics of conversation out of school hours.
4. It brings the family closer together.
5. It stimulates excellence in oral and written expression.
6. It wakes up both class and teacher.

The testimony of the teachers who have conducted magazine courses is, as far as I have been able to gather, wholly favorable. They tell us that the students very soon read more understandingly, their vocabularies are enlarged, their use of dictionary and atlas more frequent, their general knowledge and information is increased and their oral and written expression is much improved.

Furthermore, the interest in the magazine does not end with the recitation hour. The paper is taken home and all the family read and discuss it. One boy writes "I like the course chiefly because I was able to show my brother he didn't know everything."

Perhaps one of the most interesting by-products of the magazine course is the effect it has on the teacher. It keeps him alert and up-to-date. In my father's day at Yale political economy was taught by the professor of Latin. He assigned to the students a page or two to be learned by rote as he would have a Latin declension and then called the men up to recite without any comment or explanation on his part. But with a live magazine as a text-book I defy any teacher to conduct a class and go to sleep. Unless he bestirs himself he is likely to find the knowledge of the class on many points exceeding his own.

I am not now talking from theoretical considerations. During the past six months we have introduced The Independent into over 150 schools and colleges thruout the country, some of them subscribing for as many as five hundred copies a week.

I have attended some classroom exercizes where The Independent was being used. In one instance I chanced upon the novel and somewhat embarrassing experience of hearing the pupils recite on one of my editorials, tho they did not know it was mine. It was on President Wilson's Panama policy and when I remembered with what care-free nonchalance I penned it and then heard the girls—it was a girls' class—reciting on it as tho it might have been Milton's *Paradise Lost* or Lincoln's *Gettysburg Address*, I received a lesson in humility and editorial responsibility which I hope affected at least the next few editorials I composed.

In the girls' school in question each issue of The Independent was the subject of two recitations in the civics class. At the first recitation the teacher, who had previously gone thru the issue and had marked what he wanted the girls to study, assigned them topics requiring further research on which they were to prepare themes for the next recitation. The class then went over the designated articles and discussed them. At the next recitation they brought in their themes and continued their discussion. I can truthfully say that I never attended a class where more interest was evinced in the subject under consideration.

In a boys' high school which I next visited they were using The Independent as a text-book in modern history. Here the same methods were followed as in the girls' school and the same intense interest was shown in the subject matter by both teacher and pupils. One feature common to both classes caught my attention. I noticed that many of the boys and girls had been talking over their lessons with their fathers, for frequently I heard the statement "My father says this" and "My father says that." In most families what teacher says is generally the constant reminder to the rest of the household of parental ignorance. Instead of teacher being brought into the home, father is now evidently being brought into the school. This may signify the eventual restoration of father to his pristine leadership in the family. Who knows?

The method of teaching by means of periodicals is of course nothing but the case system as used in many law schools applied to current events. Thus, if the pupil reads an article on "The American Workingman," by Secretary of Labor Wilson, the teacher works back from the article to the writer and from the writer to the office. For the next lesson the pupils are required to write a theme on "The Composition of the President's Cabinet and the Duties of Each Member." A lesson conducted in this way is of vastly more human interest than the study of the usual text-book on the Constitution of the United States.

President Eliot, who has recently returned from the Orient, says that the backwardness of China is due to the fact that the Chinese have not yet learned the inductive method of arriving at truth as have the Western nations. The old deductive method of working from the general to the particular, which we inherited from Aristotle and which we used till recently, still prevails in China. To work back from the particular to the general is the twentieth century or magazine method of education.

To show what the pupils are supposed to have learned after studying the weekly issues of The Independent for four months, supplemented of course by assigned research in encyclopedias, who's whos, text-books, etc., let me give you the mid-term examination paper used in one school.

1. (a) What is the title given to the chief executive of the nation; of the state; of the city? (b) Name each of the above officers. (c) Name the three divisions of our Federal Government. (d) Give the particular function of each.

2. Discuss Congress under the following heads: (a) Houses, (b) manner in which number of senators and representatives for each state is determined, (c) length of term in each

house, (d) how a vetoed bill can become a law, (e) title of presiding officer in each house, (f) how is he chosen?

3. Describe the President's Cabinet, telling (a) how one becomes a member, (b) length of service, (c) how many members there are, (d) name at least three members, (e) give general duty of Cabinet as such, (f) give general duty of any one of the department represented in the Cabinet.

4. (a) Are you a citizen? (b) Why? (c) George Swanson, who landed here yesterday, wishes to become a citizen; give, in outline form, the steps he must take.

5. (a) Discuss the Panama tolls question from England's and from ex-President Taft's viewpoints. (b) Give the principles of the Monroe Doctrine.

6. What is the connection between Mayor Mitchel, Colonel Goethals and the New York police bill?

7. "In his address to Congress last week asking for the repeal of the provision exempting American vessels passing thru the Panama Canal from paying tolls, President Wilson spoke four hundred and twenty words."—Independent, March, 1914. Comment fully on that address.

Some of the comments of the students who have used The Independent as a text-book are as follows:

"Besides keeping in touch with current events, we learn how to express ourselves and to tell what we know grammatically and at the same time interestingly."

"It has aroused in me an interest in many of the current issues of the day."

"Life in a dormitory does not afford daily newspapers and it is not always convenient to go to the library to read them. The practise of putting into my own words the different topics every week is gradually teaching me to express adequately what I have to say."

"It has been the medium thru which I have gained a certain familiarity with current, political and industrial events; thru which I have been introduced to some of the world's greatest men and become informed as to their activities, characters and principles; thru which I have acquired an up-to-date knowledge of recent scientific investigations and discoveries and of modern works of art, music and literature which are worthy of attention. . . . Last but not least, it establishes the habit of reading weekly."

Up to the present time the press has been conducted by individuals for individuals. It has become largely a business enterprise for private profit. Fortunately, keen competition and the laws of supply and demand have kept it as a whole on a fairly high plane of excellence. But now a new era is dawning. The people are beginning to realize that newspapers and magazines have public functions to perform like universities, railroads and banks. Accordingly we hear much about the necessity of publicity concerning the management and control of periodicals. In many quarters is to be heard the call for endowed journals that can speak out fearless of both advertisers and subscribers and tell the truth as they see it irrespective of anybody and everybody. Such national conferences of journalists as the one held under the auspices of the University of Wisconsin, two years ago, and the one being held here this week under the auspices of the University of Kansas, where newspaper and magazine efficiency, morality and ideals are the chief topics for discussion, are but other indications of the coming of the new journalism.

But perhaps the two most encouraging signs of all are the introduction of technical instruction in journalism in our colleges and universities and the study of the news of the day in our schools. Schools of Journalism signify that the making of periodicals is hereafter to become a profession instead of a business. The introduction of papers and magazines into the schools indicates that the editor is to add the rôle of schoolmaster to his multiplex personality and that classical and current literature will soon stand on a parity in the curriculum.

This new alliance, therefore, between the editor and the educator should be welcomed by all, for it is in no sense a combination in restraint of trade to be prosecuted under some Sherman law, but a combination for the uplift of our profession, the diffusion of general education and the promotion of the common good.

AN ATHENIAN NIGHT

BY CLINTON SCOLLARD

You recall our ramble in the moonlight,—
In the flood-tide of Athenian moonlight,—
Where above us, like a mighty bastion,
Like a massy, cyclopean bulwark,
The sublime acropolis loomed darkly?
You recall the night-sounds,—the faint chorus
Wafted from the lips of unseen singers;
The belated note of the cicada
Dreaming still of the hot pulse of sunset;
The low-whispering breeze amid the lime-trees,
Soft as are the vows of loitering lovers
Loth to part? I know that you recall it,
All the golden glamour of the heavens,
All the wondrous witchery that engirt us,
Every foot of earth tradition-hallowed,
Every sound a strophe Sophoclean,
Every stone or shard a treasure classic!
Vain are words in voicing such a vision!
Beauty,—'tis a figment that eludes us!
Ecstasy,—alas, we may not snare it!
Yet, ah, yet that ramble in the moonlight,—
In the full flood of Athenian moonlight,—
How it ever holds me, ever haunts me!

VACATIONS THAT EDUCATE

Brown Brothers

THE CAMP FIRE

The summer camp for small boys has grown into one of the two or three greatest educational influences which are at work to make the next generation better than this

Jessie Tarbox Beals

GO IT!

The girls, too, are sharing in the hearty out-of-doors life that is unbroken the year round in the educational schedule of the present day. The Camp Fire Girls rival the Boy Scouts, and summer camps are numerous

THE NEW BOOKS

RETOUCHING ENGLISH HISTORY

THE history of the English people never loses its interest except when it is presented without imagination or sympathetic appreciation. It is a subject that lends itself to treatment from many angles because it embodies the story of the slow but constant evolution of a considerable population composed of mixt races and continually modified by alien additions. This island people absorbed very diverse external influences and developed in a remarkable way its own latent forces during the long centuries of progress from an incoherent barbarism to a high state of national freedom and social efficiency. The interplay of internal vital, social and economic forces, and the reaction of the whole upon the rest of the world, present an almost infinite variety of materials for consideration. No matter how many times its constituent elements are examined and described, its events recorded and its lessons proclaimed, there are ever fresh combinations, new criteria for evaluation, and changing points of emphasis, to say nothing of the recovery of materials which modify former judgments. We therefore welcome the first two volumes of Mr. Innes' *History of England and the British Empire*, which carry the narrative from pre-Roman times down to the reign of William III. It is manifestly impossible for a single writer to cover as a specialist so large a field, and the author makes no such pretensions. His aim is to produce a history midway between the school outline and the comprehensive works written by coöperating specialists who rely on a critical examination of the sources at every point. So far as the first two volumes are concerned (the work will be completed in four), Mr. Innes has succeeded well with his task. His arrangement is good, his style deliberate, and his judgments reasonably impartial. He has given less attention than one might have expected to the industrial, commercial and social conditions of the various periods, but he has recognized their influence everywhere on the political and religious course of development. The author's plan of treating the *Empire* instead of England alone as the unit of his story increases the amount of space allotted to the later centuries and accounts for the limited treatment accorded to some phases of medieval life. Mr. Innes proposes to give the intelligent reader so much of the story of past events, personages and movements as will make clear the sources and character of the complicated institutional and social life of the modern British Empire, and these volumes warrant the expectations that his very practical purpose will be worthily attained in his complete history.

A work that will attract far more attention is the new edition of *Macaulay's History of England* profusely and beautifully illustrated. It may be matter for surprize that the task of illustrating this great British classic has not been undertaken before, but the ability and thoroness with which the work is now being done amply atone for any past neglect. Professor Firth, of the University of Oxford, has ransacked every possible source for illustrative material connected with the scenes Lord Macaulay depicted. Portraits of kings, statesmen and minor personages of all descriptions, caricatures, medals, contemporary maps and plans, views of buildings and places, broadsides, ballads, autographs and original letters and papers have all been utilized in great abundance to make a full pictorial accompaniment to the narrative. Notable among the pictures are four portraits and several photographs of Macaulay himself. The history, character and value of these are discussed by the editor. Many of the portraits used are reproduced in color on specially prepared paper, and all the workmanship shows taste and skill. It is unfortunate that the general excellence of the volumes should be marred by the extraordinary weight of the paper used. This edition, to be complete in six volumes, is a splendid tribute to the literary value and lasting power of a history conceded to have defects but endowed with a charm which even time does not efface.

A History of England and the British Empire. In Four Volumes. By Arthur D. Innes. Vol. I to 1485. Vol. II, 1485-1688. The Macmillan Co. $1.60 each.

The History of England from the Accession of James the Second. By Lord Macaulay. Edited by Charles Harding Firth. In Six Volumes. Vols. I and II. Macmillan. $2.25 each.

THE DEGRADATION OF A SOUL

Sometimes the story of a manuscript is as interesting as its contents. A novel that had been lost for years, written by Frank Norris in 1895, that had past thru the earthquake and fire at San Francisco, and been packed away in a crate with a wrong label, has recently been rescued and published. *Vandover and the Brute* lacks the author's revision, and is crude and unfinished in spots, yet it bears the impress of Frank Norris's genius. It shows the struggle for mastery in the soul of a man between the good and evil forces of his nature. Its painful realism recalls Zola, its plot reminds one of Stevenson in *Dr. Jekyll and Mr. Hyde* or Oscar Wilde in *The Picture of Dorian Grey*, but there is no touch of the supernatural in the steady downward pull of the Brute, and if the story repels we hear the voice of Frank Norris speaking out of the past: "I told them the truth. They liked it or they didn't like it. What had that to do with me? I told them the truth; I knew it for the truth then, and I know it for the truth now. A grim and bitter truth! But no one can dispute its power."

Vandover and the Brute, by Frank Norris. Doubleday, Page & Co. $1.35.

VAUDEVILLE IN BOOKS

Two decidedly clever and amusing little books are *Roughing It De Luxe*, by Irvin S. Cobb, and *I Should Say So*, by James Montgomery Flagg. The former is Mr. Cobb's humorous impressions of a trip thru the West, appropriately illustrated by McCutcheon, and the latter, a series of satirical sketches and pictures which have recently made merry in one of the magazines.

Doran. $1 each.

A ROMANCE FROM CAIRO

An American girl—beautiful, of course—is enticed into the *Palace of Darkened Windows*, owned by an Egyptian officer in Cairo, and held prisoner while a young American engineer strives to rescue her. A medieval plot in a modern setting, a preposterous story, but diverting withal and with rapidly changing and picturesque scenes. The book is by Mary Hastings Bradley.

Appleton. $1.30

A WELL-MERITED POPULARITY

Familiar to readers of contemporary verse is *Saint-Gaudens: An Ode, and Other Verse*, by Robert Underwood Johnson, just published in its fourth edition. All these poems have had unusual praise on their former appearances; but a fourth edition for any collection of poems, however fine, by a living American, deserves a special consideration. What impresses the reader in this book is a certain up-to-dateness in its sympathies, together with a preference for the nobler manner of poetry, rather than for the strained attitudes

Interesting New Macmillan Books

NEW FICTION

CRADDOCK. The Story of Duciehurst. By Charles Egbert Craddock (Mary Murfree). A delightful story of life in Mississippi just after the Civil War. ***$1.35 net***

Published at 64-66 Fifth Ave. N. Y. **THE MACMILLAN COMPANY** On Sale Wherever Books Are Sold

of the verse we usually call up-to-date. These poems treat of politics, of science, of literary and civic occasions, always with force and dignity and clearness. Mr. Johnson evidently has not felt it beneath the dignity of the muse to serve public causes, and the list of causes of which he has made himself laureate is to his credit as a citizen as well as a poet. That his poetry should need a fourth edition is to the credit of the public for whom he has spoken. Many of the shorter lyrics have much charm; all of the poems are thoughtful. The finest is probably the ode to Saint-Gaudens, which gives the name to this collection. No lover of our great sculptor can afford to miss this lyrical yet discriminating appraisal of his work.

Bobbs-Merrill. $1.50.

FROM INSIDE THE PRISON

The story of the week spent in Auburn Prison as a regular convict, sharing the life of the prisoners in every detail, even to a night spent in the jail, without light or bed, or sufficient air, by Thomas Mott Osborne, chairman of the New York State Prison Reform Commission, is intensely interesting. *Within Prison Walls* is free from sensationalism and is a straightforward report of the conditions found in Auburn in 1913. His bias is in favor of the prisoner, but there is an effort to be fair to the officers, who are even more victims of a faulty system than are the men they guard, as they are held responsible for the custody and safety of the prisoner. The book proves the author's contention: "I found that, partly by force of imagination and environment and partly by the actual physical conditions of confinement, one could really come into astonishingly close sympathy and understanding with the prisoner" Another man might not have been able to win the men by a self-imposed sentence, but Mr. Osborne's manliness and sympathy made him friends among his companions, and his experience has value from his unique endowment.

Appleton's. $1.50.

A PRIMER FOR THE NATIONAL GAME

In order to show the boy or young man how to become a good ball player John J. McGraw, manager of the New York "Giants," has written *How to Play Baseball.* The purpose of the book is not to develop professional ball players, but to give instruction in the various positions so that American boys may become better men. The book is well worth consideration by all lovers of the national game.

Harpers. 60 cents

AN INTERPRETATION OF AMERICAN HISTORY

The *Rise of the American People*, by Roland G. Usher, Ph.D., is rather an interpretation of history than the chronicle itself. The character of the people, the forces acting upon them and their reaction to these forces are analyzed, while the course of events is only their outcome. Mr. Usher's failure to trace to its source the new democracy that grew up in the Western Hemisphere, entirely ignoring the early Eng-

lish settlers who came to America already well equipped for democracy, however, stands out as a striking defect. But still more unsatisfactory is the author's inadequate comprehension of the great forces that are at work in the nation today. He recognizes the fact of the increasing concentration of wealth in the hands of a few, but does not seem to grasp the fact that with growing numbers of Americans the real question is whether the few have a right to a monopoly of the wealth and resources of the country, while the many have nothing; nor does he see that it is the insistent question as to the morality of the system which permits this unequal division which is at the root of much of the modern unrest.

Century Co. $2.

THE ART OF RAISING VEGETABLES

An excellent book for the housewife is *The Kitchen Garden and the Cook*, by Cecilia Maria Pearse. The volume is an alphabetical guide to the cultivation of vegetables and contains recipes for cooking them. It should prove to be invaluable for the care of the kitchen garden.

Dutton. $1.50.

TRUTH IN A LABYRINTH OF WORDS

If one can manage to wade thru many useless pages of verbosity and repetition, he will find much useful and suggestive matter presented in President Marion Leroy Burton's addresses on *Our Intellectual Attitude in an Age of Criticism*. The causes of doubt and the difficulties of faith are frankly discussed, and an urgent appeal is made in the interest of students for larger freedom of thought, a more ready acceptance of critical and scientific conclusions, and the establishment of a broader basis of belief.

Pilgrim Press. $1.25.

ON THE MORAL DOWNGRADE

Mr. Harold Begbie's mastery of an incisive, bold and spirited style has been shown to good advantage in his sharp indictment of present vulgarity, tolerance of impure suggestions in advertisements and the public prints, the sex obsession of much current literature, and the changing attitude toward woman, all of which indicate, so Mr. Begbie contends, that we are facing a *Crisis of Morals*. The author calls for a program that will include a pure thought campaign, the restoration of a more knightly and chivalrous attitude toward woman, and the application of religious motive to the individual will and conscience.

Revell. 75 cents.

THE LAWS OF STATISTICS

Dr. Frank Zizek's *Statistical Averages*, translated and copiously annotated by Professor W. M. Persons, is a theoretical study in statistical method. Its more discussion of some of the most vital questions in the "science of averages," as one scholar has defined statistics, will make the book of value and profit to the specialist in the university or the census bureau, but the technical character of the book will prevent it from having a wide circulation outside of these circles.

Henry Holt & Co. $2.50.

Notable New Textbooks for Fall Use

Robinson and Breasted

Outlines of European History

Part I

A new two-year course in history for high schools written by recognized authorities. Part I covers ancient and medieval history to the eighteenth century. Part II, published last year, from the eighteenth century to the present.

Caldwell and Eikenberry

Elements of General Science

A logically arranged and teachable first-year high-school course in general science, dealing with concrete scientific facts of common interest and worth-while significance. All the sciences contribute to the survey.

Wardall and White

A Study of Foods

Food materials, their preparation, their nutritive value, and their money value. A practical and worth-while course for high schools.

Davis and Lingham

Business English and Correspondence

A well rounded exposition of the fundamentals of English, business correspondence, and their mutual relations. The book supplies an abundance of practical exercises.

Long

American Literature

A companion volume to Long's "English Literature," written in the same spirit and organized on the same distinctive lines.

Millikan and Gale

First Course in Physics

(Revised Edition)

The Revised Edition makes this the most teachable and attractive high-school physics textbook ever published. It was used widely and with marked success last year and will be more widely used this year.

Wentworth-Smith

Academic Algebra, School Algebra Books I and II

A new course in algebra by the authors of the Wentworth-Smith Geometry. It combines the best in the latest developments in algebra teaching with what was of genuine value in the old courses.

Kittredge and Farley

Advanced English Grammar

A high-school grammar notably compact, comprehensive, clear, and logical. It emphasizes the more difficult problems of syntax and analysis.

Briggs and McKinney

First Book of Composition

A new course built up around the qualities of good writing rather than around forms and formal rules.

Tuell and Hatch

Readings in English History

The maximum of outside reading in English history required in high school, given in a single volume. A wide range of interesting and instructive material.

These Men

Have the World's Most Wonderful MEMORIES

THEY can instantly give the population of any place in the world of over 5,000 —
THEY can give every important date in world history
THEY have 100,000 Facts and Figures stored away in their brains.

William, Max and Felix Berol are the names of the three remarkable men and a few years ago their memories were distressingly poor. The Berol brothers' amazing efficiency was developed through their own simple practical method.

The Berol method is now being taught under the direction of William Berol with great success to large classes in leading educational institutions in New York City. William Berol will teach it to YOU, by mail.

He Can Build YOUR Memory So That It Will Never Fail

You need never forget Names, Faces, Dates, Telephone Numbers; this simple system will cure mind-wandering and teach concentration; you can remember the facts in a book after one reading; you can recall any episode that you wish; you can become a clear thinker, and in public speaking never be at a loss for a word. Give William Berol a few spare minutes each day at home and you will be astonished. He guarantees to strengthen your memory immeasurably.

GREATER KNOWLEDGE AND EFFICIENCY

You Need It Every Day
You Need It In Your Private Life
You Need It In Your Public Life
And You Can Have It

In every issue of The Independent about fifty distinct subjects are discussed, not counting the minor items. This means that in the course of a year the opportunity is given of gaining information about twenty-five hundred timely topics. For the business man there are weekly pages of practical talks on finance, insurance, commerce and industry. For the teacher there are discussions of all phases of education from kindergarten to the university. For the clergyman and the church worker there is abundant information about the modern movements in theology and about the methods of social service. And so on throughout all spheres of human labor.

You know the value of The Independent—if your next door neighbor knew it as you do he would be a reader also. Send his name and address and The Independent will send him a specimen copy with your compliments.

AUGUST WAYS

Butterflies are the glory of insect life this month, but nearly all are of second broods.

Asters and golden-rod! These are August's flowers; and a collection of all their kinds makes a worthy herbarium in itself.

Now are all sportsmen lovingly looking over their gunning tackle and camp equipments preparatory to the fall shooting.

The annual encampment of the Camp Fire Club will be held this month at the new estate of Ernest Seton Thompson, "The Fincheries," near Greenwich, Connecticut.

August has its floral monument in the Joe pye weed, sometimes ten feet tall, that towers above masses of tangled herbage in the fence-corners like a pole garlanded with purplish boquets.

One of the most constant visitors at the seaside in midsummer is the crow. He gets shore dinners much to his liking between tidemarks, and at sunset returns, fat and happy, to his inland roost.

A late breeder among the fishes is the fine Spanish mackerel, which only now, in Long Island and Vineyard Sounds, is depositing its spawn, when most other migratory sea-fishes are going offshore and southward.

This is the month to search for eggs and young of the little creatures of the sea—shellfish and all the various creeping and swimming things that haunt the rocks or hide in the eel-grass or float with the tide, and a search for them is well rewarded.

In the steady heat of August the snakes shed their skins, backing out of them, and so turning them wrong side out; and the young of most venomous snakes are born in August, yet some, as the green grass-snake, wait until this month to lay their eggs.

In August all the young birds that have survived the vicissitudes of early summer are getting strong of wing and learned in food hunting; and even now the restlessness of the migratory impulse begins to show in their movements and their tendency to gather into sympathetic flocks.

The twisted coral threads of the bindweed are now spreading lace-like over all the little waterside jungles and every thicket along the country roads, covering them with a graceful veil of little green leaves like arrow-points, and pink and white blossoms, every one a minute chalice of exquisite beauty and sweetness.

August is a month of great excitement among the sea-birds that have hatched their eggs on islands all along the Maine coast, for now the young must be taught to fly and must be protected from ravens and jæger-gulls. These ornamental and useful sea-fowl are recovering, under the protection of the wardens of the Audubon Society stationed at their nesting resorts, from the extinction that had nearly overtaken them.

THE CHAUTAUQUA CIRCLE OF HOME READERS

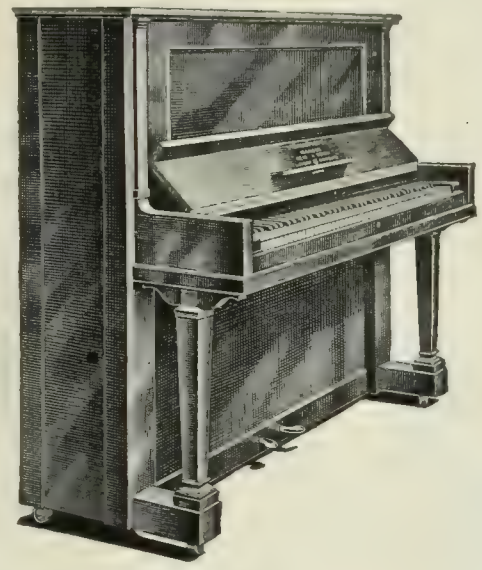
BY FRANK CHAPIN BRAY

Many graduates of the Chautauqua Home Reading Circle will ceremonially receive "diplomas" at Chautauqua on "Recognition Day" this month. Others will have been or will be similarly "recognized" at various Chautauqua Assemblies elsewhere during the summer. By far the largest number of diplomas will go by mail to graduates at their homes. The diploma is issued only by Chautauqua Institution and simply certifies that the holder has completed the prescribed four-years' course of reading and is enrolled as a member of the graduate society. No examination is required, but significantly the design on the diploma is a pyramid, with spaces for "seals" which are awarded for answering review questions on the prescribed course, and for additional reading; one may go on adding seals to the diploma as long as he lives by reporting additional reading of special courses.

Thus are symbolized the spirit and method of the Chautauqua System of Popular Education. The purpose of this branch of Chautauqua work is to give adults a plan of reading so systematized that—at home and in the English language—they may gain a view of history, science, letters and art, comparable in kind to that "college outlook" which even collegians must follow up if they would keep abreast of the times in which they live. Here is the idea in a nutshell:

Don't Read at Random.

Everybody reads nowadays. But of what use is nine-tenths of it afterward?



Concentrate your attention on a group of topics worth while and you will get something out of your reading which will stay by you.

Some system in reading is as important as system in business if one is to get anything out of it.

The Chautauqua Course each year takes up an important set of subjects and presents them in such authoritative, and at the same time popular, form, that they become part of your permanent equipment of knowledge and enlarge your outlook.

This is the Chautauqua Idea of culture for personal efficiency.

Concretely, take the topics of the "English year" now offered: "Democratic England," by Percy Alden, M. P., a survey of the modern attempts at solving England's social problems; "Thru England with Tennyson," by Oliver Huckel, an intensive study of the land and work of Tennyson; "Among English Hedgerows," by Clifton Johnson, glimpses of rural home life; "Your Child Today and Tomorrow," by Mrs. S. M. Gruenberg, with an introduction by

STEINWAY

THE owner of a Steinway never speaks of it as "a good piano"—the name means so much more than that. It signifies sweetness, purity and power of tone unexcelled.

Mechanically as well as artistically the Steinway is a world standard—the preferred piano of untold thousands of music lovers of all countries. It is the instrument by which all other pianos are judged and measured.

These facts are of the utmost value in the choice of a piano, and the purchase of a Steinway not only reflects the intelligent judgment of the buyer, but it puts the seal of supreme approval upon his musical taste. This should appeal to you.

We shall be glad to send you illustrated literature about the Steinway Piano and the name of the Steinway dealer nearest you. Mention this magazine.

E. P. DUTTON & CO.

Publishers, **681 5th Ave.** New York.

Bishop Vincent, a practical exposition of the results of modern child-study; the interpretative "Story of the Week" in The Independent and a supplementary series on England's problems of the day by Sydney Brooks. Four books and a magazine interpretation of current events, plus a "Chautauqua Bulletin" teacher to help one get the most out of reading such a course. Time required to complete this reading less than many give to the Sunday newspaper.

Obviously, it is the kind of reading done, not the quantity of it, that counts in the Chautauqua Course. One foreign educational investigator reported that its main purpose was "to prevent the modern reader from drowning in the sea of magazines and other popular reading, and to teach him the difficult art of concentration."

The individual is not obliged to join anything to get the benefits, to read the course is the important thing. But he is eligible to automatic enrolment in the Chautauqua Circle of those who, all over the world, are reading the same course at the same time. The "English year," which may be the first for him, is for others of the circle the second, third or fourth of the four-year cycle of subjects which includes in succession similar groups of American, continental European and classical topics. Thus each year, while complete in itself, is a part of the four-year scheme of reading leading to a "diploma" if desired. And it is really remarkable how enticing that diploma becomes to persons beyond ordinary school and college age. The founder of the Chautauqua system of home education saw keenly into human nature when he associated with the reading course as many appeals as possible to those instincts which, exercized in academic circles, make up the so-called "college spirit."

As a matter of record, nowadays, the proportion of individual readers of the course increases. The number of husbands and wives who find a common ground of intellectual interest in reading the course together is notable; in many cases they have thus avoided the family tragedy of seeing their children educated away from them. There are some 1500 local circles of Chautauqua readers in which group methods of association add to the persistence and interest of members. Statistics show that, roughly speaking, an enrolment of 25,000 readers includes 17,750 women and 7250 men; 3460 between the ages of ten and twenty years, 11,040 between twenty and thirty, 4680 between thirty and forty, 2209 between forty and fifty, 998 between fifty and

eighty. Housekeepers (11,500) overwhelmingly predominate among the women; among the men professional men and salaried employees are represented in almost equal numbers. Since figures have been published which report that in this country an average of only one in seventy grammar grade pupils will get either college, professional school, or even normal school training, the perennial need of this School for Out-of-School People is apparent.

"It is the mission of the Chautauqua Home Reading Circle to enrich and render more attractive and useful our domestic and social life, to increase our appreciation of the opportunities offered to all of us by the civilization in which we live, to turn into educational opportunity the minutes of leisure scattered thru a busy life, to relieve the monotony of a life of manual labor in a field or shop or home, to keep us in close, appreciative and sympathetic touch with our children, and with our neighbors' children, to make church and religious life more sane, interesting and useful, and finally, to make home a preparatory department of the university, so that the children may from their earliest schooling be familiar with the pathway of culture from that first grade in the university of life to the end. Chautauqua insists strenuously and persistently on the possibilities of education in the later years of life—men and women of sixty being at their best as interpreters of life, its significance, its demands, its intellectual possibilities. Large experience is better able than youth to interpret history as already recorded, and history as it is making."

COMMENCEMENT AT YALE

BY REV. JOHN P. GULLIVER

From The Independent, August 4, 1864

Yale has just celebrated her birthday with unusual cheer. The tokens of her prosperity were never so abundant. The hope of a splendid future, when she shall be acknowledged the queen of learning in this broad land—the great national university of America—was never so sustained by substantial facts.

Among the gifts which have been subjects of congratulation during the present week are the following:

The projected building for the Arts and Sciences, to be erected by Mr. Peabody, the American banker, of London.

The building for the Fine Arts, to be erected by Mr. Street, of New Haven.

The chapel, to be erected by Mr. Batteer, of New York.

The monster dormitory, for which $25,000 have been given or pledged by an unknown benefactor of the college.

A dormitory, for which £30,000 are to be given by Mr. Farnum, of Chicago.

PEBBLES

"It's such a silly superstition to be always picking up pins!"

"You may call it a superstition if you wish, but I know a chap who makes about six dollars a week by doing it."

"How can a fellow gather that many?"

"He works in a bowling alley."—*Judge.*

"Are there enough lifeboats for all the passengers?"

"No."

"Are there life preservers for everybody?"

"No."

"Well, hasn't anything been done in preparation for shipwreck?"

"Well, the band has learned to play 'Nearer, My God, to Thee' in the dark."—*The Masses.*

JUANITA

(*Tangoized*)

The south'ren moon is sinking by the
fountain, kid,
The dawn is slowly breaking, dearest
heart;
Oh gaze upon me, cutie, with ycur dark
eyelid,
And kiss me once again before we part.

Oh Nita dear, come over here
And weep upon my bosom, dear,
I want you ever, darling, by my side.
Oh come, my love, my turtle dove
And shuffle 'neath the stars above
That sneaky, freaky Spanish Omelette Gl-i-i-de.

Apropos of the human side of President Wilson, the President was out for a ride in his automobile one afternoon. The machine past a small boy standing beside the road.

"Did you notice what that boy did when we past?" the President asked.

"No, Mr. President; I did not."

"He made a face at me."

"Is it possible?" exclaimed the shocked companion. "I didn't observe him."

"He did," said the President; "but did you notice what I did?"

"No, sir."

"Well," answered the President happily, "I made a face right back at him!"—*Saturday Evening Post.*

A stranger in our land was he;
He tried to learn our spelling,
He thought it would as easy be
As buying or as selling.
He tried to write but couldn't quite
Learn when to spell it wright or right;
He couldn't tell just where he stood
When using cood or wood or shood.
He had to stand a lot of chaffing
When cruel people started laffing.
Then other things confused him so
As doe and dough and roe and row
And mail and male and sale and sail
And many more that turned him pail.
Said he: "I left my wife and daughter
In other lands across the waughter.
I wanted much to bring them here,
But they shall have to stay, I fere,
And I must leave you." With a sigh
He added: "Else I'll surely digh."

UNION UNIONISM

BY G. DOUGLAS WARDROP

STAFF CORRESPONDENT OF THE INDEPENDENT IN ENGLAND

That important changes in the social fabrics of countries come unostentatiously, and often without a full realization on the part of the people of the countries themselves, is proved by past history. It is receiving further proof in Britain today. The Miners' Federation, the National Union of Railwaymen, and the Transport Workers' Federation have agreed upon a scheme of joint working under joint control for certain purposes. Combined and concentrated action is what is desired, and a consultative committee of the contracting unions will be formed for the securing of this desire. When it is realized that the membership of the three unions now amalgamated numbers over a million and a half, and that these control the national fuel supply and the main instrument of communication, it is clear that Britain is facing an event of far-reaching and highly important significance.

When the Miners' Federation met in annual conference last year they threw out the suggestion of amalgamation to the other unions. The suggestion found favor and a committee of the three unions considered the broad question and made recommendations. The present concentration of energies is the result. But a few years ago even the contemplation of the action now taken would have met with the stoutest and sternest opposition. Perhaps more important than any other one factor in the arrangement was the effect of the 1911 strikes. They precipitated a revival of trade unionism, for the strikes showed that the unions were weak in numbers and lacking in faith and coöperation. Confidence and the necessity of welding together the chaos of small and ineffective unions was taught and the Trade Union Congress of that year resolved to work toward amalgamation. That resolution was soon acted upon more or less effectually. Movements to unite in a single union were set on foot in the building trades, the iron and steel trades, the carpenters, all vehicle workers and many others. There is a project now for combining the general laborers and the transport workers into a united body with 400,000 men. Even the cotton workers, the most conservative of trade unionists in Britain, have under consideration a plan for uniting all cotton workers into a single trade union. The most successful of all these schemes has been that which has brought the three most power-

ful railway unions together into the National Union of Railwaymen, which numbers some 200,000 members. Two features of this movement of concentration are noteworthy. In the first place it makes for combination along the line of trade, and not as hitherto along the lines of subsidiary crafts in a trade. The older method divided the higher from the poorer paid workers and frequently set them in opposition to one another.

The new method, if Australian experience is any guide, is likely to substitute the idea of the brotherhood of labor and to tend to equalize conditions. The second characteristic is the increase of fighting force. Concentration must increase the power of workers in a trade, and it is worth observing that the constitution of the new National Union of Railwaymen expressly gives the executive the power to declare a strike without a ballot of members. From the idea of grouping in a single union all the workers in the same trade the passage to the idea of coöperation between various trades was natural.

The interdependence of trades was effectually demonstrated in 1911. The coal strike was a failure because the transport trades accumulated large stocks of coal. At the same time it cost the railway unions alone in consequential unemployment $600,000. In the same way the transport workers' strikes put many miners and railwaymen out of employment. The alliance now formed will support each with the strength of all and prevent them working counter to one another. It will substitute the single strike (or the threat of it) for successive sectional strikes. There will not be a repetition of the events of 1911. If strike there must be, its action will be short and decisive, for the organizations concerned have the key to the tying up of all Great Britain's industries—that key is coöperation and unified action.

The moment chosen for this drastic action is significant. It is a critical year in all three trades. The coal agreements run out and the miners will be free to insist upon a reform of the minimum wage. The railway conciliation scheme terminates in December, and with it the railwaymen are highly dissatisfied. And finally the transport workers are preparing a program.

The more strongly labor is organized, particularly in a period of ebbing trade, the fewer are the strikes. But the labor conflicts of the future will, when they come, be on a scale much larger than Britain has hitherto experienced.

THE BROOKFIELD SCHOOL

A New Open-air School for a Small Family of Girls

DIRECTORS: Miss Helen Fairman Cooke, A.B., Wellesley
Miss Marion F. E. Cooke, A.B., Wellesley

School Year—September 24, 1914—June 17, 1915

COURSE OF STUDY

A girl who is going to college has a course mapped out for her to fit the requirements which she must meet, and she is allowed to advance as rapidly as her own mentality permits. By this method a girl of superior ability may be saved much valuable time, and yet do her work without strain. The time necessary for completing a given amount of work is determined after the girl has been associated with her teachers long enough for them to understand her capacities and limitations. No CRAMMING PROCESS IS EVER PERMITTED.

A girl who has some other school in view is given the work necessary to prepare her for that school plus such foundation studies as seem, after consultation with her parents, to be best suited to her needs. A girl who has no higher school in prospect is given the work which will best help to make her an intelligent, useful and happy woman, in the sphere of life which she will occupy.

In all the teaching every effort is made to cultivate to the highest possible degree the powers of concentration and mental alertness.

OUTDOOR LIFE

Throughout the year the school work is, as far as possible, done out of doors. Each girl has her own garden, which she plants and tends. There are trees to climb and woods and fields to explore. Every girl is encouraged to take part in some form of outdoor play. Tennis and basket ball grounds are provided. The country furnishes abundant opportunity for skating, coasting, and snow-shoeing. Tramping and camping trips are a feature of the life, and occasional nights are spent out in the open. The play of the school is always under the guidance of competent teachers.

Yearly rate, $400 to $600. Write FRANK MacDANIEL, D.D., Headmaster, Pennington, N. J., Box 10.

A COLUMN FOR CAMPERS

An ordinary lantern suspended from the ridge pole is a better camp light than the little pocket lamps, altho the latter have their uses, for it distributes the light instead of concentrating it.

To keep minnows alive when it is impossible to change the water frequently, wrap the bucket in wet cloths to keep the water cool and occasionally blow air into it thru a straw or rubber tube.

Frogs' legs are a welcome addition to the camp menu, but are hard to secure unless there is a small rifle within reach. Failing this, try "shining" the frogs at night with the camp lantern, or angle for them by means of a treble hook draped with red flannel.

A poncho or slicker is a more convenient means of carrying your duffle than is the pack-bag or basket; roll your belongings up in it and rope the ends. When unrolled, everything is at once available—and the poncho is ready to serve as a floor cloth, waterproof cover, small tent fly or any similar purpose.

A few feet of very light chain is a handy thing to have in the kit. It serves as a fish stringer or a binder for anything requiring something heavier than ordinary cord—and it is the finest thing in the world for suspending kettles over the fire, for the hight at which they are held may be very easily adjusted.

To secure cold water when a spring is not handy, lower a corked bottle into the deepest part of the lake and draw the cork by means of another cord; pull up the bottle, which will be full of cool water. To keep it so, wrap in wet cloths and stand in the sun—the evaporation will considerably reduce the temperature.

A variation of camp cooking may be had by wrapping your fish or game—without dressing them—in several thicknesses of wet paper, covering with mud or clay to make a large ball, and roasting the whole in the ashes. When done, skin or feathers will adhere to the clay as the ball is broken apart, while the meat will be firm and delicious.

To make yourself popular with your fellow campers, pack a few yards of mosquito netting with your other dunnage. Draped over your couch or across the tent entrance it will do much to alleviate mosquito troubles; handy minnow nets or provision safes may be made with it, with the frames consisting of small saplings, and it will be found to fill a number of needs economically.

The newest tent is simply a flat strip of water-proof cloth fitted with an ingenious arrangement of tapes; by varying the points staked down, a tent of almost any form may be erected. At other times it may be packed in very small compass, used to pack your belongings in after the manner of a slicker or put to almost any other use from that of a canoe cover to a hammock or table cloth.

Centenary Collegiate Institute for Girls

A remarkably equipped medium-priced school

100 acres in campus, athletic field and farm. Beautiful modern buildings, gymnasium, swimming pool. College preparatory, certificate privilege. ORGANIZING FOR SAFETY

Students of industrial accident statistics estimate that only about one-third of our preventable accidents can be stopped by the mechanical guarding of machinery. The remaining two-thirds are the problem of the safety organizer, whose business it is to reach the man on the job and teach him caution.

The United States Steel Company was the first large corporation to demonstrate conclusively the possibilities of the "safety first" campaign. During the past ten years it has reduced the number of its accidents about one-half, by organizing for safety. The organization used by its subsidiary, the Illinois Steel Company, is typical; each plant has a safety inspector who looks after the shops from day to day, pointing out dangerous conditions, keeping track of accidents and making settlements with injured employees. Then, the company prints "safety rules" in the several languages spoken by its workmen, each of whom must satisfy his foreman that he has read and understood the regulations which mean so much to the general safety. For safety purposes the plants are divided into three or four divisions, each having a committee of three workmen, who are required to consult with their fellows in regard to improvements over dangerous conditions. Serving one day a week for two months, these men get an interest in the work of prevention that they do not lose when other workmen take their places as safety men.

All safety work is largely a matter of education. The Illinois Steel Company carries on an elaborate campaign that is full of suggestions for the smaller manufacturer. At all its gate entrances illuminated safety signs remind the employee, first in English, then in the various foreign languages, of his need for caution. Along all roadways are signs and symbols that cannot be misunderstood. At the entrance of each department is a "safety bulletin" telling of the success of the various departments in accident prevention. In the Joliet works safety tokens are given to men in those departments having the best records, and the prize caps, charms, etc., act as constant reminders for all. A monthly safety bulletin gives the names of men who have made good suggestions and the stories of various accidents. Vivid pictures in series describe in a way that no foreigner can fail to understand the causes and results of accidents. As a result of its campaign the Illinois Steel company has made a reduction in its five plants of sixty-

MEADVILLE THEOLOGICAL SCHOOL,
Meadville, Pennsylvania.
Please mention The Independent

six and two-thirds per cent in accidents during the last ten years. That is a form of education that has brought rich dividends in dollars and cents, to say nothing of the prevention of human suffering.

The most remarkable thing about the majority of industrial accidents is the ease with which they might have been prevented. The American Steel Foundries, for instance, with eight plants, have reduced their eye injuries ninety per cent by the simple expedient of requiring their employees to wear goggles when doing heavy chipping. A Wisconsin manufacturing company gathered up twelve pairs of goggles broken by flying chips in ten days, each pair probably representing an eye saved. It would seem that enlightened self-interest alone would cause every employer to insist upon such precautions as this.

Sixty-two per cent was the accident reduction made by a Wisconsin machine company during its first year of organized safety work. With a safety committee composed of members of the firm, the responsible heads of departments, and representatives of the rank and file of the employees, this company has a democratic form of organization which encourages the workman in developing his ideas. Probably the greatest single factor in this company's success is the talk that the assistant superintendent gives as soon as an accident happens. Stopping all machinery in the department in which it occurs, he explains to the fellows of the injured man just how it happened, how it could have been prevented, and what it is costing in suffering. Thus, by striking while the iron is hot, he is able to teach a lesson that is not easily forgotten.

All over the country employers are conducting campaigns for the reduction of accidents. In Wisconsin splendid results have been obtained by the coöperation of manufacturers with the Industrial Commission, which keeps an expert safety adviser in the field to aid employers in organizing their men. Thus the state not only exerts its police power to make its shops mechanically safe, but it helps the manufacturer to make his men safe by placing at his disposal the accumulated safety knowledge of the industrial world. This form of public service, which Ohio, New York and Pennsylvania have recently taken up, has a universal appeal. Besides the physical suffering which it saves the employee and the financial loss which it saves the employer, it makes for that coöperation between the two which must come before the problems of modern industry are solved.

Franklin and Marshall Academy
Founded 1787. Box 413, Lancaster, Pa.
Prepares boys for leading colleges and technical schools; also well-ordered Academic Courses. Beautiful elevated grounds. Commodious buildings—modern equipment. Good library. Gymnasium. Athletics of all kinds. Terms moderate. Personal inspection invited. Send for catalog.

FOR CHURCH UNION

The Church Peace Union has called a World Conference now meeting in Constance, Switzerland. At the same time a Roman Catholic Peace Conference will convene at Liège, Belgium.

At the yearly meeting of the Friends in England, held in May, a whole day was devoted to unity proposals, and particularly to the projected World Conference on Faith and Order. A Quaker correspondent writes that "the idea was warmly taken up" by the assembly. It is significant that this subject has power to arouse enthusiasm even in a Quaker meeting.

The Spanish Evangelical Church is an informal union of about one-half of the Protestants in Spain, comprizing the churches organized under the American Board, the English Presbyterians, the German Lutherans, the Swiss Reformed and some minor missions. The biennial Synod met at Madrid in May, and the reports of the sessions indicate the value of the union efforts.

At the recent quadrennial meeting of the General Conference of the Methodist Episcopal Church, South, a plan for the union of that church with the Methodist Protestants and the Methodist Episcopal Church (North), was adopted with marked enthusiasm. It is generally hailed among the leaders of those communions as the first official step in the final reunion of the Methodist family of churches.

The General Assembly of the United Presbyterian Church at its recent meeting voted to drop the proposal for union with the Southern Presbyterian Church and send down to the congregations a referendum on the plan of union for the entire family of Presbyterian and Reformed churches, submitted by the Presbyterian Church in the United States. It is believed by many that the larger step can be more easily undertaken than the smaller.

The dominant question before the fortieth General Assembly of the Presbyterian Church of Canada, which met in June, was that of union with the Methodist and Congregational churches of the Dominion. By a vote of nearly three to one a resolution was past approving the amended basis of union presented, and demanding the consummation of the union as speedily as the necessary processes permit. The sister denominations in the movement are ready and waiting for this action.

Rev. Dr. David J. Burrell, senior minister of the Collegiate Reformed Dutch Church, in his advocacy of the reunion of all the Reformed churches, declares that their divisions are as petty and inexcusable as the family feuds of the Kentucky mountaineers. The barriers that separate them, he asserts, are little better than "spite fences." This places the moral level of interchurch neighborliness pretty low and should arouse thinking men to ask how long Christians of individual intelligence, morality and self respect can suffer themselves to participate in such corporate blindness, error and humiliation.

INFORMATION!

The Independent invites inquiries from its readers, and will gladly answer all questions pertaining to Travel for pleasure, health or business; the best hotels, large and small; the best routes to reach them, and the cost; trips by land and sea; tours domestic and foreign. This Department is under the supervision of the BERTHA RUFFNER HOTEL BUREAU, widely and favorably known because of the personal knowledge possessed by its management regarding hotels everywhere. Offices at Hotel McAlpin, Broadway and 34th street, New York, and the St. Charles Hotel, New Orleans, La., where personal inquiry may be made. THE MARKET PLACE

MR. JONES AND THE HARVESTER COMPANY

The correspondence between President Wilson and Mr. Thomas D. Jones, in connection with the withdrawal of the latter's nomination to be a member of the Federal Reserve Board, tends to confirm the opinions of those who thought that the President had nominated a good man. But the country is not to have the benefit of his services. It is known that after the publication of his answers to the Banking and Currency Committee's questions, the nomination could not have been confirmed. And the votes changed by that testimony were affected merely by Mr. Jones's defense of the International Harvester Company, or by certain senators' fear of the attitude of their constituents toward that corporation.

If the Harvester Company had been found guilty, in a suit under the Sherman anti-trust law, or under a state anti-trust law, of unjust and oppressive practises, with respect to either its competitors or its customers, or even if the press, by unofficial investigation, had shown that its methods were hostile to the public interest, there would have been some warrant for the denunciations uttered in the Senate and elsewhere, but its guilt has not been shown either by the courts or in the press.

On the day when the nomination was withdrawn and the correspondence made public, Mr. Reed, a Democratic senator from Missouri, bitterly attacked the nomination, Mr. Jones, and the Harvester Company, in this strain:

Long continued robbery does not ripen into a privilege. You cannot steal long enough to make larceny a vested right. If you could, Ali Baba's forty thieves would still be doing a flourishing business.

A man who volunteers to serve on board a pirate ship with an already established criminal history may be worse than one who enlisted with the original crew. The latter might have been deceived into the service; the former knows the gory record of the craft. He sees the black flag at the masthead; he steps upon decks slippery with the blood of the slaughtered. A gentleman of that kind knows what he is doing. The man who assists in conducting the Harvester Trust cannot escape responsibility by alleging that his sponsor and friend created it before he took service.

Two days earlier, Senator Vardaman, of Mississippi, had said that the Harvester Company was "the most iniquitous, obnoxious, outrageous, indefensible and predatory trust in all America." If the new currency law, he added, should be administered as the Harvester Company had been managed since Mr. Jones became a director of that company, it would be "an engine of far-reaching oppression and an outrage upon justice."

Now Mr. Reed, as we have said, is a senator from Missouri. He ought to be familiar with the notable and important decisions of the courts of his state. The case against the Harvester Company, under the anti-trust law of the state, was carried up to Missouri's Supreme Court. We recently pointed to the essential parts of the court's memorable decision. The court said that the company had slightly increased the price of machines, but that this increase had been preceded by a greater increase of the cost of material and labor, and had been accompanied by a reduction of the price of repair material to the farmer; that "farmers generally" had "profited by" the company's competition with other manufacturers in the same industry; that these other manufacturers and competitors had not suffered by reason of the company's methods and policy; that the testimony of many retailers was to the effect that the company used no unfair methods, and that "on the whole, the evidence shows that the company has not used its power to oppress or injure the farmers."

One would say that a company deserving such commendation from the Supreme Court of Missouri must be one which the people of that state would be glad to see doing business there. But the court, evidently with reluctance and regret, was forced to oust it, simply because the company, on account of its size, had power to be unjust and unfair, altho it had not used this power to the disadvantage of the public.

The company itself, by its general counsel, sent to the Senate committee last week a statement showing that assertions in the committee's majority report against Mr. Jones were not true. Reviewing the history of the litigation in several states, this statement says:

In no case has it been found that the company has used any of the wrongful competitive methods mentioned or complained of in the report, or that the company has oppressed or injured the farmers. And no farmer has ever so testified against the company; but hundreds of farmers have testified to its fair treatment, moderate prices and improved machines and service. It is significant that the defenders of this company, as shown by the court records, are the farmers, the dealers, and the competitors, who alone would suffer if the charges were true that are made against the company by those who have never had business dealings with it.

So far as we can learn, this is true. Senator Reed must have known something about the opinions so clearly and forcibly exprest by the Supreme Court of his own state, when he drew that picture of Mr. Jones "stepping upon the decks of a pirate ship slippery with blood of the slaughtered." Whether Senator Vardaman ever looks for evidence, we do not know.

It is unfortunate that the Banking and Currency Committee is controlled by men who are not of senatorial size. Probably Mr. Warburg is not to be a member of the Reserve Board, because he will not submit to such an examination and become the object of such denunciation as fell to the lot of Mr. Jones. And because of the treatment of Mr. Jones, which he justly characterizes as "grossly unfair," the President will find it difficult to procure for the Reserve Board vacancies such men as ought to be placed in them.

BLUE SKY LAWS

Another "blue sky" law (severely restricting the sale of bonds, stocks or other securities) has been pronounced invalid by the Federal courts. The first statute of this kind to be the subject of an adverse decision was Michigan's new law, and now the similar statute in Iowa has fallen. In this second case the court holds that the law is unconstitutional because it seeks to regulate interstate commerce and also because it discriminates against the residents of other states.

The first "blue sky" statute was soon followed by many others; and now twenty-two states have such laws. By this legislation the lawmakers sought to defend the people against swindlers who do their work by use of the mails, the swindlers whom the Post Office Department is constantly pursuing, and whose plunder during the last three or four years exceeds $100,000,000. But the laws unwisely imposed severe restrictions upon the sale of good securities and upon bankers engaged in marketing securities of established value. They have been opposed and attacked by the Investment Bankers' Association, which has been ready to confer, by means of its committee, with the legislators of any state, and to assist in the promotion of legislation which will be effective against rascals, while it does not interfere with a legitimate banking business. The fate of the Michigan and Iowa laws foreshadows the fate of others, and the states should consider the expediency of reaching an agreement with the Investment Bankers' Association as to legislation that will protect investors, be acceptable to bankers of good repute, and not be at variance with the national Constitution.

California's apricot crop this year, the largest ever harvested, is valued at $4,000,000.

European crops of wheat, oats, rye and barley are smaller than last year's, and the decrease tends to support present prices of grain in this country.

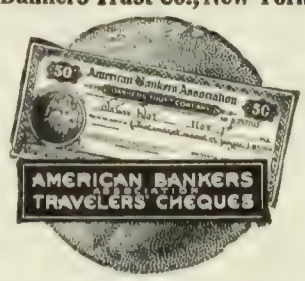
Exports of raw cotton in the fiscal year that ended with June made a new high record. Their value was $610,000,000. Twelve years ago, in 1902, the cotton exports were only $291,000,000.

Two steamships from Australia and New Zealand brought about 5000 tons of beef, mutton and lamb to Boston and New York, last week, and other cargoes are to follow. Imports of meat in June were 12,642,023 pounds.

Travel on "A.B.A." Cheques

They will relieve you from the risk of carrying actual currency and from the annoyance and expense of exchanging money at frontiers. They will make money matters easy and safe for you while seeing the world.

"A.B.A." Cheques are the safest kind of "Travel Money" because they are useless to a thief without your counter-signature and because they may be replaced if lost or stolen.



They are issued in $10, $20, $50 and $100, each cheque plainly engraved with its exact value in various foreign moneys. When you want to pay a hotel bill, buy railway or steamship tickets, or make a purchase, you sign one of them and use it exactly like currency.

"A.B.A." Cheques will be cashed for tourists by over 50,000 banks throughout the world. They are the only travelers' cheques accepted, under the law, in payment of U. S. Customs duties.

Get them at your Bank

If your own bank is not yet supplied with "A.B.A." Cheques, write us for booklet and for information as to where the cheques may be obtained in your vicinity.

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, and operating as a mutual company on a cash basis. The entire surplus was liquidated and paid to its members in cash. A dividend of 40% was declared out of the earnings of the year 1913, and the Atlantic Mutual Insurance Company has paid a total of $[illegible] in losses and interest to the assured since its organization.

During the year the company issued policies covering marine risks to the value of	$27,219,045,826.00
Received for premiums during the year	282,208,121.80
Paid losses during the year, and	141,367,566.40
Issued certificates of profits to the assured	89,710,400.00
on which there have been redeemed	82,497,340.00
Leaving outstanding at present time	7,243,060.00
Interest paid on certificates redeemed to	22,585,640.25
On December 31, 1913, the assets of the company amounted to	13,259,024.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

HOME LIFE INSURANCE COMPANY
Geo. E. Ide, President.
256 BROADWAY NEW YORK

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

FEDERAL SUPERVISION

For several months past President Kingsley, of the New York Life Insurance Company, has been actively engaged, thru the medium of correspondence, in securing the opinions of insurance company officials in all branches of the business on his proposition for an energetic campaign in support of an amendment to the Constitution which would have the effect of concentrating the supervisory power over the companies transacting an interstate business in the Federal Government, simultaneously excluding the states from exercizing those powers. Our readers are familiar with Mr. Kingsley's views on the subject thru his contribution to The Independent of April 20 last.

Since that time Mr. Kingsley has procured an opinion on the question from Hon. John C. Spooner, former United States Senator from Wisconsin. The resolution now pending in Congress is in the following form:

"Congress shall have power to regulate the business (or commerce) of insurance thruout the United States, its territories and possessions."

Mr. Spooner thinks the phrase, "or commerce," adds nothing and should be omitted. As the comprehensive form of this proposition would place the whole business of insurance (intra-state as well as inter-state) in the supervision of the Federal Government, Mr. Spooner expresses a doubt that a sufficient number of states would ratify it. He proposes the following as a substitute:

"Congress shall have power to regulate the business of insurance by a corporation in states other than that by which it was created."

It seems altogether probable, says Mr. Spooner, that such a provision, while not impairing the efficiency of the congressional power, would be more popular and satisfactory to the states. That it would be more acceptable is readily admitted, for if any of the states are willing to denude themselves of their regulatory power over the companies of other states operating within their borders, it is not reasonable to suppose they would yield jurisdiction over the companies of their own creation.

The real difficulty to be encountered in this matter is the probable unwillingness of any state to agree to any amendment that will have the effect of abridging, by ever so little, the authority it now possesses.

If adopted what would be the effect of an amendment phrased as proposed by Mr. Spooner? Under it, he says, "it would seem clear that no state could impose any license, imposition, or other form of tax at all on insurance corporations, or upon the agents of such corporations, carrying on an insurance business in a state other than that which created such corporation. Certain it is that the Federal power would be held by the Supreme Court to be 'complete in itself and exercizable to its utmost extent, without limitations, other than those prescribed in the Constitution itself.'

"Hence, it would follow that no state could compel a foreign corporation to pay for the privilege of engaging in the business of insurance within that state."

In further prosecution of the work he has undertaken in this interest, Mr. Kingsley has communicated Mr. Spooner's opinion to the heads of the various insurance companies of the country, supplementing it by a report of the developments since he wrote them in March. He states that it is now necessary to confer with the insured for the purpose of ascertaining their wishes in the matter. He asks his colleagues if they are willing in their own way to put the question before their policyholders, asking that they answer yes or no to substantially the following inquiry:

"Do you favor the passage of a joint resolution by Congress, submitting to the several states, for ratification or rejection, a constitutional amendment under which (if adopted) all insurance interstate in its character shall be subject to regulation only by the Federal Government?"

THE GREATEST BUSINESS IN THE WORLD

The business of life insurance has grown to proportions so large as to render its succeeding annual records not easily comprehensible by the human mind. We have become accustomed to listening to and reading about objects aggregating hundreds of millions, but except relatively, they mean little to us for the imagination is unequal to the task of mentally realizing them. It would be impossible for a man standing before a neatly stacked pile of silver dollars to correctly state whether they numbered one million or ten millions. So when we read in the advance sheet of the annual life insurance report of the Insurance Department of New York that the thirty-five life insurance companies authorized to transact business in that state held on December 31, 1913, assets aggregating $4,417,298,211, about all we actually understand is that the sum is tremendously large because the mind is incapable of forming a picture that will remotely represent it. We may attempt to re-state it in simpler terms: as that it is four thousand four hundred and seventeen millions and odd, but we cannot imagine one million, to say nothing of four thousand millions.

Further along, when we read that this sum represents an increase in assets during the year of $243,344,632, about all we know is that substantial progress has been made, and that at the same rate another billion will be added in the next four years. We remember that the total population of the continental United States is about 100,000,000 and we calculate that the assets of these thirty-five life insurance companies if equally distributed among them would give each man, woman and child a fraction more than $40. It is thru such extraneous aids as these comparatively applied that we are enabled to partially understand the vast extent to which the life insurance estate has grown in the United States. And then we are to keep in mind that there are about 200 companies in existence which, not doing business in New York, do not report to its Insurance Department and that their assets are not included in the figures quoted. The aggregate of these, however, will probably not reach a billion.

The total number of "ordinary" policies in force on December 31, 1913, in the thirty-five companies reporting to the New York department was 7,452,154, representing $14,304,638,791 of insurance, a net increase for the year of 450,241 policies and $777,317,569 of insurance. In addition there was $3.656,603,109 "industrial" insurance in force, a gain in the year of $223,835,640, the total increase of both classes being $1,001,153,209. So that we find, adding the "ordinary" and "industrial" together, that thirty-five companies are carrying $17,961,241,900 insurance of the old line, legal reserve quality.

The Massachusetts Bonding and Insurance Company of Boston has completed the task of increasing its capital stock from $1,000,000 to $2,000,000. Its semi-annual statement as of June 30, filed with and approved by the Insurance Department of Massachusetts, shows total assets of $4,787,135 and surplus as to policyholders of $2,179,425. Several months ago the Massachusetts Bonding acquired by purchase the plant and business of the United States Health and Accident Insurance Company of Saginaw, Michigan, giving it an increased annual premium income of $1,000,000. The expense of this transaction was incurred before the semi-annual statement was made, and the company has taken no credit for the value of the purchase in making up the account.

An examination of the financial condition of the Royal Indemnity Company just completed by the Insurance Department of New York, as of December 31, 1913, shows assets aggregating $3,514,126; total liabilities (not including capital), $1,928,384; net surplus, $585,741. The net surplus was calculated by the department to be $167,000 greater than claimed by the company. The examiners pronounce the company to be strong financially and efficiently and economically managed.

Quality Is Economy

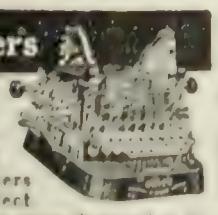
"Rear-Platform Observation has this Disadvantage—You don't observe things until you pass beyond them."
THOMAS BRACKETT REED

Your Candidate Reformer who is out
to save the voters from the Interests,
is a rear-platform observer.

He sees the vanishing menace
of Railroads and Trusts, and shouts his
lurid warnings of a danger
that is past and gone.

It isn't the tyranny of business
over politics which worries the
American people now: it is the
meddling of politics with business.

Well; what has this to do with
Murphy Varnish?



We make Varnishes of the fine
and lasting quality which is required
by the great Transportation Companies
and by Manufacturers of the finest
products; and we know how these
Business Leaders, and their employes,
have suffered from the meddlesomeness
of law-makers whose appeal
is to ignorance and passion.

CALENDAR

Matches for the Davis Cup are now in progress. The winners of the Australasia-British Isles match will meet the American team in the challenge round at the West Side Tennis Club, Forest Hills, Long Island, on *August 13, 14* and *15*.

The Interparliamentary Union will meet in conference at Stockholm on *August 19*.

The thirtieth annual convention of the National Society of American Florists and Ornamental Horticulturists will be held in Boston from *August 18* to *20*.

An open-air flower exhibition will be held in Boston from *August 18* to *21*.

The National Negro Business League is to hold its fifteenth annual session at Muskogee, Oklahoma, *August 19, 20* and *21*. This organization is composed of negro men and women who have achieved success along business lines.

There will be an eclipse of the sun on *August 21*—total in parts of Europe and Asia, and partial in northeastern America. The full effect will be seen in Persia, Russia and Scandinavia. At sunrise, a partial eclipse will be observed in Canada and in our northern states.

The Forty-first Assembly at Chautauqua is now in progress. Recognition Day falls on *August 19*. The assembly closes on *August 30*.

A Colonial Exhibition will be held at Samarang, Java, from *August* to *November, 1914*. It is to "give a comprehensive picture of the Dutch Indies in their present prosperous condition attained since the restoration of Dutch rule in 1814."

The tenth annual conference of the Chinese Student Alliance in the eastern states will be held at the Amherst Agricultural College from *August 28* to *September 4*.

September 6 has been designated as Labor Sunday by the Federal Council Commission on the Church and Social Service.

The National Star-spangled Banner Centennial, commemorating the successful defense of Baltimore at North Point and Fort McHenry, and the writing of the national anthem, will be held at Baltimore, *September 6* to *13*.

The annual conference of the International Law Association will be held at The Hague in the Palace of Peace from *September 7* to *12*.

At Denver, Colorado, from *September 8* and *9*, will be held the eighth annual conference on taxation, in charge of the National Tax Association.

The races for the America's Cup are to be held at New York on *September 10, 12* and *15*, unless England goes to war.

The twenty-first World's Peace Congress will *not* occur in Vienna *September 15-19*.

The Baltic Exhibition at Malmö, Sweden, to which Swedish, German, Danish and Russian exhibits have been sent, is open until *September 15*.

An Anglo-American exposition to celebrate the centenary of peace and progress in arts, sciences and industries is open at Shepherd's Bush, London, till *October*.

At Leipzig an International Exhibition for the Book Industry and the Graphic Arts will remain open until *October, 1914*.

The United Typothetæ and Franklin Clubs of America will hold their twenty-eighth annual convention in New York *October 6, 7* and *8*.

The American Banking Association will hold its annual convention at Richmond, Virginia, on *October 14* and *15*.

The International Sunday School Conference will be held in Tokyo, Japan, from *October 18* to *25, 1916*. One thousand delegates from America and 300 from other countries are expected to attend.

The American Bar Association will hold its annual meeting on *October 20, 21* and *22*, at Washington. There will be addresses by William Howard Taft, president of the association; Senator Root, the Ambassador from Argentina, and Sir Charles Fitzpatrick, Chief Justice of Canada.

The seven hundredth anniversary of the birth of Roger Bacon will be observed at Columbia with commemorative exercizes and the publication of a volume of studies. A great pageant of the culture of the thirteenth century will be given on *November 4*.

Barnard College, in Columbia University, will celebrate its twenty-fifth anniversary on *November 5*.

The sixth annual Medical Missionary Conference will be held at Battle Creek, Michigan, *November 17-20*.

The Intercollegiate Prohibition Association will hold its national convention in Topeka, Kansas—the prohibition capital of the nation—*December 29* to *January 4*.

The Second Universal Races Congress will be held in Paris in *1915*. Mr. G. Spiller is honorary secretary, 63 South Hill Park, London.

Between *March 4* and *April 15, 1915*, a monster naval parade from Hampton Roads to San Francisco via Panama will mark the formal opening of the Canal.

The Second International Eugenics Congress will be held at the American Museum of Natural History, New York City, *September 23-28, 1915*.

The Independent

VOLUME 79 MONDAY, AUGUST 10, 1914 NUMBER 3426

WHOM THE GODS WOULD DESTROY

ANCIENT history closed at midnight of July 31, 1914. The monstrous war with which modern history begins will end, as the big and little wars of the old days did. This is hard to realize now, but the sooner those men upon whom will fall the duty of shaping a new order of things begin to think about their problem, the better it will be for all concerned.

There will be some accounts to be settled after peace is declared, and the biggest one will be that which Enlightenment has against Medievalism.

Whatever causes of strife may have been lurking in the minds of the peoples of Europe, they would not have massed and exploded in this demoniac war without the agency of the Head Devils. Race differences there are. Conflicting national interests there are. The growth of populations already dense, and looking for new opportunities for enterprise and livelihood, has been disturbing economic equilibrium. Religious antagonisms have fostered hatred. But none of these things by itself, nor all of them in combination, would have made war if the consuming vanity, the monstrous egotism and the medieval-mindedness of the absolute monarchs had not been thrown into the scale.

When the work of devastation is done there will be left the stricken, sobered peoples. Every family will have lost father or son, husband or brother. Resources will have been swept away. Industry will be paralyzed. Farms will have been stripped, villages, towns and cities desolated. But fortitude and courage will be left, and men will set themselves about the task of building a new civilization.

They will not be tolerant then of pious hypocrites asserting divine right, and claiming to be vicegerents of God. They will not be tolerant of taxes for the wanton expenditures of royal families. They will not deprive themselves of the necessaries of life to enrich the manufacturers of artillery and powder. They will cross these items from their ledgers, and turn their attention to the creation of a social order under which men and women who are content to dwell peaceably on their own reservations can enjoy liberty and pursue happiness.

Whom the gods would destroy they first make mad. Mad with the lust of power, drunk with their own egotism, the Head Devils have signed their own doom. Their days are numbered. The monarchs must go—*and they will.*

THE HIGH DUTY OF THE UNITED STATES

THERE are fifty-five nations in the world claiming sovereignty. Of these, forty-six were civilized enough to be invited to the second Hague Conference. Forty-five came.

These unanimously agreed to favor the employment of mediation, commissions of inquiry and arbitration in the settlement of disputes after diplomacy had failed.

Six of these forty-five nations are now in a state of war. Thirty-nine are still neutral. Of the latter the United States, Japan and Italy are the only powers of the first rank. But Japan is an ally of England and Italy a member of the Triple Alliance. It is therefore the high duty and privilege of the United States to rally the neutrals together and enlist them in the cause of peace.

President Wilson should now invite all the governments of the world represented at the second Hague Conference, except those at war, to unite in a joint note to the belligerents in the name of civilization, looking to the settlement of the questions at issue and the restoration of peace.

In case it should appear that the neutral nations of Europe will be deterred for reasons of prudence from joining in such a note, the twenty-five nations of America and Asia should act without them.

Probably the most promising course of procedure would be for the neutral nations to offer either mediation before a joint board, or the establishment of an armistice pending the investigation and report of an international commission of inquiry on the questions involved.

In view of the fact that several governments have already proffered their good offices and been repulsed, it is quite likely that the belligerents will reject any further suggestions along the same line at the present time, even tho backed by the united sentiment of the rest of the globe.

Still, it is of the greatest present importance that a course of action shall be initiated which will create the wisest possible precedent for imitation in future crises. It is equally important to bring together the neutral nations in joint advocacy of peaceful methods of settlement which they will be ready to urge strongly on the belligerents when one side or the other shall have received a repulse which will incline them to listen to reason.

At all events, the neutral nations have nothing to lose and everything to gain by organizing now for peace. Let the United States take the lead.

THE FORCES BEHIND THE CONFLICT

THE primary and ostensible cause of this furore which has set the world aflame is the shooting of the Archduke Francis Ferdinand and his wife at Sarayevo on June 27 by a Servian youth. It is because of this deplorable but relatively insignificant event that the financial system of the world is in chaos, that international commerce is suspended, that industries are everywhere demoralized and families ruined, and that millions of men in Europe have taken up arms with intent to slaughter each other.

Yet it may be doubted whether the Archduke, hated and disliked by all the races of his future empire, is, even after the Scythian fashion, worth all this carnage. The willingness of Servia to make all amends and comply with all the conditions except one demanded of her, shows that avenging the Archduke is a mere pretext for a Servian invasion.

There would be something inspiring in the thought that all Europe sprang to arms at the spectacle of a great nation bullying a weaker one, fifty millions against two; that a wave of righteous indignation swept round the world at the prospect of Servia's loss of independence. Unfortunately, the facts cannot be interpreted so favorably to human nature. The powers viewed with great calmness the ravages of fire and sword in the Balkans last year. A generation ago Gladstone's tale of the atrocities of the Bashi-Bazouks in Bulgaria thrilled the heart of the British people and changed the policy of the Government from pro-Turkish to pro-Russian, but it cannot be claimed that Great Britain now champions the cause of Servia from any such noble motive. No doubt the Russian people have a considerable sympathy with their fellow Slavs in the Balkans, but it is not unduly cynical to suppose that it is not so much this racial sympathy as it is the fear of losing all hope of getting Constantinople which has rallied Russia to the defense of Servia in distress. And far away Japan, what cares she for the shifting boundaries in the Balkans?

No, a world-wide war under these conditions cannot be justified even by an appeal to selfish national interests or blind racial prejudice. The line-up of the opposing powers is as arbitrary and irrational as if they had been picked by chance. They call it a struggle between Slav and Teuton, but there are twenty-four million Slavs in Austria-Hungary, and two million Teutons in Russia, to consider only the principal antagonists, and as for their allies, it is embarrassing to class the English, French and Japanese as Slavs and the Italians as Teutons. Is it then a war between European and Asiatic, between the White and the Yellow races, such as Californians and Australians are looking for? If so, what is the average complexion of the British empire as a whole, and how come France and Japan to be on the same side? Is religion the divisive factor, as unfortunately it has often been in history? But we see Protestant Prussia rallying to the support of Catholic Austria, and Orthodox Russia backed by Protestant England and Shintoist Japan. Classified according to national character, ideals, language and religion, France and Italy belong together, so do Germany and England, but the caprices of international politics have placed England and France on one side and Germany and Italy on the other. If we consider the alignment from the point of view of national interests, it appears quite as absurd. Austria and Italy are rivals in the Balkans, as Russia and Japan are in Manchuria.

Such is the ridiculous and tragical situation resulting from the survival of the antiquated superstition of the "balance of power," that is, the theory that the prosperity of one nation was an injury to others; a doctrine as false and pernicious as the analogous theory of the "balance of trade," that in every commercial exchange one country was a loser and the other a gainer. This idea of the necessity of maintaining the "balance of power" has led to the intricate network of secret alliances and ententes in which the world is now ensnared. None of these governmental engagements has been submitted to a vote of the people of the countries concerned, and those who are being called upon to support them with their lives do not even know the terms of the agreements to which they have been pledged. The people, therefore, would be quite justified in repudiating these unauthorized contracts of kings and cabinets when it is found that they are opposed to national interests or conscience. It is hard to see how a war can be prevented when a nation is fighting mad or when it is tempted by some great prize. But it ought to be possible to prevent a war—or even to stop one after it is started—when the countries involved have no hatred toward one another and can see no gain by engaging in warfare. That is the case today. Most of the people concerned in the present conflict have neither racial antagonism nor economic interests as an excuse for enmity. They are no more enemies than the Reds and the Blues into which an army corps is divided for practice maneuvers. But now the guns are loaded and those who bear them have nothing to say about whom they shall shoot. Universal democracy and public diplomacy may not stop war altogether, but it should stop such a futile and disastrous conflict as has come upon us.

AMERICA'S PART IN THE STRUGGLE

IN the great European war the United States is seriously concerned. But it need not convulse us. Luckily we have the Atlantic between us and Europe. It is their war, not ours. We can keep cool and accept our share in the general misfortune, while rejoicing that we and the republics of the two Americas are not of the chief sufferers.

We have no concern with the European balance of power. Nor are we Servia's Big Brother. Russia is her Big Brother. We are Big Brother to our American republics, and if any European power should endeavor to take any of their territory we should speedily protest with army and navy. We should thus keep the peace, prevent robbery, and make the most of our Monroe Doctrine. Russia has a parallel doctrine for the defense of the Slav states; and if one of these days those Slav states should choose to cast in their lot with a regenerated Russia, we could not grieve. We would not like it to have either Austria or Russia take them without their good will, just as we would not have the United States take one rod of contiguous or non-contiguous territory without the assent of its people. The larger a nation is the better, if it is only a really free, self-governing nation. Enlargement means fewer custom houses and fewer chances of war.

What the alarm of war means we see first in the sud-

den closing of all the stock exchanges of the world. In the event of war a multitude of people will need ready money, and to get it they must sell their securities. These are thrown on the markets in such quantities that there are no buyers unless the price goes down. So for two or three days in Wall Street the prices of the best securities, those sure to pay six or eight per cent dividends, fell so rapidly that a general panic seemed inevitable and a multitude of failures. No one could guess what the havoc might be. So the governors of the Exchange closed it and stopped all business indefinitely, and let the brokers go a-fishing. That it should close and all our other exchanges close is unfortunate and inconvenient; but it is not so bad for us as it is for the Europeans who were glutting Wall Street with orders to sell. We Americans are not compelled to sell. We have had no failures of stock-brokers on account of the war scare. We can hold what we own in our boxes and vaults and be happy.

There is no evil without some minor good. In case of war all foodstuffs—and foodstuffs are the chief of products—will rise in value to the advantage of farmers. Already wheat has past the dollar mark. If the breadwinners are sent to the army, Europe will have to buy wheat from us, and our harvests are plenteous. Cotton may fall if European mills withdraw their orders, but nearly everything else that Europe wants she will have to seek from us. The main question is likely to be, How can we transport our products if the big fleets of German and French and English steamships are taken by the governments for military use? But that gives a wonderful opportunity for our commercial navy if we have wisdom to take advantage of it. At present we have no commercial navy, except for coast service, because we do not, by a foolish law which The Independent has often condemned, allow any ship to carry the American flag unless it is built in this country; and we allow no foreign flag to be engaged in domestic commerce. Accordingly, only American vessels sail from port to port, and only foreign vessels reach us from the rest of the world. That law, made for the benefit of shipbuilders, gives them no benefit, so far as foreign commerce is concerned. What we ought to do, and we hope this Administration will do, is to repeal the present law and put in its place a law which will allow our merchants who export our products to send them abroad in their own vessels. A hundred years ago our flag was seen in every harbor of the world. Now it is known abroad only as seen flying over a consul's office.

The withdrawal of the steamships just at this time may be a very great inconvenience to the tens of thousands of Americans visiting Europe. They may thank Congress for their annoyance, for it is Congress that has given over the transatlantic service to foreigners. The rest of us who have remained at home may thank their poverty or their luck that they escape this evil, which is about the most unfortunate of all the troubles which a European war will give us.

But above all nations is humanity. The whole body suffers when any of its members are maimed. And chiefly our most hearty sympathy and sorrow must be felt for the nations involved and their peoples, with whom we are at peace, and whose strong men will be mown down like grass at harvest time. Can it be—can the Christian nations of Europe allow it—that they shall engage in murderous slaughter and kill their own men and starve their own women and children? It is incredible, but it may be true. The first blame rests on the nation that wantonly lit the fuse that blew up the whole magazine. May Heaven aid the counsels of those statesmen who are trying to hold back the conflagration and save the homes and lives of all the grandest nations of Europe. And may the same kindly Power forge iron in place of tow to make strong the bands that hold together the nations that send their envoys to the Peace Palace of The Hague.

THE PITY OF IT

SERVIA's trouble is swallowed up in the larger tragedy that Austria's wantonness has unfolded. But that it has occurred is largely Servia's fault. We do not refer to the assassination of the Crown Prince of Austria, for we cannot imagine that the Servian Government was in any way responsible for that foul deed, altho Servians committed it. What we would say is, that Servia was guilty, shockingly guilty, after Turkey had been humbled by the combined Balkan powers, in breaking up that combination and joining with Greece and Montenegro in humbling Bulgaria. We do not decide the question whether Bulgaria was also at fault and by her greed had provoked her allies. That may be true, but it was a shameful deed which set the four little nations, strong together but weak apart, to fighting each other.

Think what might have been, and then what was. Suppose the Balkan powers, with Greece as their ally, had stood together. Then, in firm compact, they might have defied Turkey and even Austria. But they quarreled and fought each other, and the first result was that Turkey took advantage of the chance, as of course she would, and recovered Adrianople, which had cost so much blood. Bulgaria was humiliated by defeat and the loss of half her conquests. Servia gloated over the disgrace of her ally, not thinking that her turn would come. But Austria, which had before taken Bosnia and Herzegovina, came down on little and feeble Servia when the chance came, and now declares war, just for the purpose of compelling Servia to give up a goodly portion of her territory to her big neighbor. Had these small nations held together Servia could have kept her own, which now she may lose. Servia had not learned the lesson which we learned early, "United we stand; divided we fall." Oh, the pity of it!

CANNON SMOKE

WHEN Winston Churchill, the First Lord of the Admiralty, in his Manchester speech on the 18th of last October, renewed his proposal in behalf of the British Government that Great Britain and Germany agree to take a year's holiday in battleship building, Grand Admiral von Tirpitz, Naval Secretary of State for Germany, replied:

> The German navy has a purely defensive function, and no aggressive purpose.

Yet within less than a year Germany declares a war so stupendous as to stagger humanity, while the whole armed camp of Europe leaps to the challenge.

Thus the chief argument of the militarists that peace can be maintained only by heavy armaments vanishes like cannon smoke.

A MESSAGE TO THE PEOPLE OF THE UNITED STATES

BY WILLIAM HOWARD TAFT

AS I write, Germany is reported to have declared war against Russia and France, and the participation of England on the one side and of Italy on the other seems imminent. Nothing like it has occurred since the great Napoleonic wars, and with modern armaments and larger populations nothing has occurred like it since the world began.

It is a cataclysm. It is a retrograde step in Christian civilization. It will be difficult to keep the various countries of the Balkans out of the war, and Greece and Turkey may take part in it. All Europe is to be a battleground. It is reported that the neutrality of Holland has already been ignored and Belgium offers such opportunities in the campaigns certain to follow that her territory, too, will be the scene of struggle.

Private property and commercial shipping under an enemy's flag are subject to capture and appropriation by prize proceedings and with the formidable navies of England, France, Germany, Russia and Italy active the great carrying trade of the world will be in large part suspended or destroyed or will be burdened with such heavy insurance as greatly to curtail it.

The commerce of the world makes much for the prosperity of the countries with whom it is conducted and its interruption means great inconvenience and economic suffering among all people whether at peace or war. The capital which the European people have invested by the billions in the United States, Canada, Australia, South Africa and in the Orient must perforce be withdrawn to fill the war chests of the nations engaged in a death grapple, and the enterprises which that capital made possible are likely to be greatly crippled while the hope of any further expansion must be definitely given up.

This general European war will give a feverish activity in a number of branches of our industry, but on the whole we shall suffer with the rest of the world, except that we shall not be destroying or blowing up our existing wealth or sacrificing the lives of our best young men and youth.

It is hard to prophesy the scope of a war like this, because history offers no precedent. It is impossible to foresee the limits of a war of any proportions when confined only to two countries. In our own small Spanish war we began it to free Cuba and when the war closed we found ourselves ten thousand miles away with the Philippines on our hands.

The immense waste of life and treasure in a modern war makes the loss to the conqueror only less, if indeed it be less, than the loss to the conquered.

With a high patriotic spirit, people enter upon war with confidence and with the thought of martial glory and success. The sacrifices they have to make, the suffering they have to undergo are generally such that if victory does not rest upon their banners they seek a scapegoat for that which they themselves have brought on in the head of the state, and the king or emperor who begins a war or allows one to begin puts at stake not only the prestige of his nation, but also the stability and integrity of his dynasty.

In such a war as this, therefore, with the universal tendency to popular control in

every country, the strain and defeat in war may lead to a state of political flux in those countries which shall suffer defeat, with all the attendant difficulties and disorder that a change of government involves.

While we can be sure that such a war as this, taking it by and large, will be a burden upon the United States and is a great misfortune, looked at solely from the standpoint of the United States, we have every reason to be happy that we are able to preserve strict neutrality in respect to it. Within our hospitable boundaries we have living prosperous and contented emigrants in large numbers from all the countries who are to take part in the war and the sympathies of these people will of course be with their respective native lands. Were there no other reason this circumstance would tend to keep us free from any entanglement.

We may sincerely hope that Japan will not be involved. She will not be unless the war is carried on to the far Orient, to India or to China. Germany has but a small settlement in the Orient, while France and Russia and England would be allies in this war and it would seem quite unlikely that there would arise any obligation under the English-Japanese alliance for Japan to assist England.

Of the great powers of the world, therefore, the only ones left out are likely to be the United States and Japan, and perhaps only the United States, by reason of the alliance between Japan and England. Japan, if she keeps out of the war, will occupy the same advantageous position, which will be ours, of complete neutrality, of an actually judicial attitude, and therefore, of having an opportunity at some time, we may hope, to mediate between the powers and to help to mitigate this disaster to mankind.

At the time when so many friends of peace have thought that we were making real progress toward the abolition of war this sudden outbreak of the greatest war in history is most discouraging. The future looks dark indeed, but we should not despair.

"God moves in a mysterious way His wonders to perform." Now that the war is a settled fact, we must hope that some good may come from this dreadful scourge. The armaments of Europe had been growing heavier and heavier, bankruptcy has stared many of the nations in the face, conflict between races had begun to develop.

War seemed likely at some stage and the question which each country had to answer for itself was at what time the situation would be most favorable for its success. The immediate participants have decided that the time has come and thru their international alliances all Europe is involved.

There has been no real test of the heavy armament on land or water as developed by modern invention and this contest is to show what has been well spent for war purposes and what has been wasted. It is by no means certain that waste will not exceed in cost that which was spent to effective purpose.

One thing I think we can reasonably count on is that with the prostration of industry, with the blows to prosperity, with the state of flux that is likely to follow this titanic struggle, there will be every opportunity for common sense to resume its sway; and after the horrible expenditure of the blood of the best and the savings of the rich and the poor, the opportunity and the motive for a reduction of armament and the taking away of a temptation to further war will be greatly enhanced.

It is an awful remedy, but in the end it may be worth what it costs, if it makes this the last great war. The influence of America can be thrown most effectively for peace when peace is possible and for minimum armaments when disaster and exhaustion shall make the contending peoples and their rulers see things as they are.

Manor Richelieu, Quebec

THE STORY OF THE WEEK

Europe Plunges Into War

Armageddon has begun. The nations of Europe, after ten years of preparation, at last are joined in the greatest struggle since Europe was arrayed against Napoleon just one hundred years ago. Germany has invaded Russia and France, Russia has invaded Austria and Germany, and France has hurled her forces into German territory. England also has cast her lot on the side of war.

The conflict was immediately precipitated by the ultimatum of the Kaiser to Emperor Nicholas on July 31 for Russia, which was preparing to attack Austria in aid of the Serbs, to cease the mobilization of her troops within twenty-four hours.

But the Russians, with the memory of their humiliation of 1907 when they were compelled to stand aside and see Austria annex the Slavic provinces of Bosnia and Herzegovina, were not again to be bluffed by the threats of the Kaiser. The answer of the Czar was to order complete mobilization of all Russian troops. When a conflict between Russia and Germany was thus seen to be inevitable unless one or the other receded from its position, England and France exhausted every resource to find a "formula," as diplomats say, acceptable to both. King George himself personally appealed to both the Kaiser and the Czar, while the Kaiser sent his brother-in-law, the Grand Duke of Hesse, to plead with the Czar to accept the conditions he himself had made.

THE FRANCO-GERMAN FRONTIER

The three French fortresses oppose a strong line to the German line based on Metz and Strassburg, but the general German attack, shown by the long arrows, is directed elsewhere

Germany Declares War on Russia

For the first time since 1871 Germany has been compelled to make good on her policy of bluff and rattling the scabbard, which has long been the distinguishing element of her statecraft, and when the Czar refused to yield the only alternative was the declaration of war, which was made at 7:30 p. m., August 1, two hours after the Kaiser had authorized the mobilization of the entire German army.

But while mobilization was authorized by imperial decree only on the 1st, under cover of the decree declaring Germany in a "state of war," equivalent under the German constitution to the martial law familiar in most countries, it had been secretly proceeding for several days. At the very moment when the German legions were thus gathering, it is reported that Russia and Austria, due to the pressure of Great Britain, had consented to refer the case of Servia to a neutral power, but whatever possibilities of peace were then entertained were destroyed by the uncompromising attitude of Germany. Her purposes were all too plainly shown by the many orders to her vast commercial fleet, scattered in all parts of the globe, to cancel

sailings and to seek the shelter of neutral ports. The sailing of the "Imperator" from Hamburg and the "Vaterland" from New York was canceled, while the "President Grant," of the North German Lloyd line, a day out, was hastily recalled.

At Prostken, in East Prussia, following the war declaration, shots were exchanged between the border patrols, while two squadrons of cavalry with artillery have invaded Germany with Johannisburg as their objective point. German troops crost into Russian Poland and occupied the important railway junction of Kalisz and the cities of Czenstochowa and Bendzin. In the North Sea the German and Russian fleets are already reported to have met, the Russians retiring after a short engagement to the Bay of Finland. The German cruiser "Augsberg" reported that she had bombarded the important naval port of Libau, where there are vast stores of grain and naval supplies, and fired the city.

The German plan of campaign, however, does not anticipate dealing with Russia until she has first crushed her ally, France. During the weeks that it takes to mobilize the slow-moving Russian forces Germany confidently expects to repeat her march to Paris.

WAR ON THE RUSSIAN FRONTIER

The probable arrangement of the Russian forces after their tedious mobilization is shown here. Crosses indicate fortresses. Four army corps at Vilna will form the Russian right, four at Bielostok the center, five at Brest-Litovsk the left, with five corps at Warsaw as an advance guard and two held in reserve east of Brest-Litovsk. A chain of fortifications protects the frontier and Cossack cavalry form an advance screen. The German line opposed to this is based on Danzig, Thorn and Breslau. The Austrian line takes in Cracow, Przemysl and Lemberg, but the Servians will prevent a normal disposal of Austrian forces. The Russians oppose this with four army corps at Rowno, one of three strong fortresses on which an attack on Austria would be based. The arrows show the early movements of border forces in both directions

France Involved

While the German Ambassador to St. Petersburg was delivering his Government's declaration of war, Baron von Schön, the Kaiser's representative to France, which under the terms of the Dual Alliance is bound to aid Russia, asked Premier Viviani for a declaration of French intentions. Twelve o'clock Sunday was set as the limit of the ultimatum, and hardly had it expired before German troops were on the march toward the French frontier.

By border outrages Germany sought to make France shoulder the burden of declaring war, but France realized that, if she was to have English support, Germany must take the aggressive. Not until Germany had partially mobilized did President Poincaré call the French reserves to the colors; the tearing up of French tracks and the seizure of French locomotives provoked no retaliation; even when France saw herself menaced thru the German occupation, on August 2, of the neutral grand duchy of Luxemburg, and the violation of Belgian neutrality by the seizure of Arlon, so important was English support that at grave peril to herself she delayed her military movements. On the other hand, even the invasion of French soil at three different points and German repulses at Longwy and Petit Croix, where a corps of Uhlans were put to rout by French machine guns, found the German Ambassador still in Paris, the Kaiser violating international precedents in his anxiety to have it appear that Germany had not been the aggressor.

The lightning-like moves of the Germans in the first days of fighting show that they have adopted practically the same plan of campaign as in 1870-71. Instead of meeting France at her own border, which with a great chain of forts has been made almost impregnable, Germany has sought to catch her on the flank by marching thru the neutral states of Belgium and Luxemburg, where the frontier is unprotected. That Germany had guaranteed the neutrality of these states mattered not in the face of the reckless course on which the Kaiser had embarked. Germany realizes that her back is against the wall and that nothing but bold measures will save her. Thus at Longwy, the "iron gate of France," where twice before Germans have been victorious, is destined to be fought the first great battle of the modern war of nations.

The Position of England

France's anxiety to win British support and the efforts of the Germans to forestall it clearly indicate the position of England in this momentous struggle. Her enormous fleet, only recently mobilized for the royal review at Spithead, is sufficient to blockade the German

Brown Brothers

BELGRADE, THE FIRST OBJECTIVE OF THE AUSTRIAN ADVANCE ON SERVIA

The old city has been held in turn by Hungarians, Turks, Austrians and Servians. The Servian Government, considering it indefensible, withdrew to Nish, a strategic point on the Servian plateau, when war broke out

coast, and unless the French and Russian campaigns are brief, failure of the foreign supplies on which Germany depends will do the rest. Like England, she too must depend upon the sea.

Under the entente, as Premier Asquith explained to the Commons, England is under no definite obligations to her allies. So long as the war was confined to the four belligerents, no direct British interests were involved. Her chief interests were on the side of peace, and until the beginning of hostilities British statesmen labored unceasingly to compose the differences of the powers. When Sir Edward Grey's proposal for an ambassadorial conference at London to consider the Servian question met with failure, efforts were directed toward Berlin and St. Petersburg in attempts to modify the warlike tone of the notes exchanged between the two powers. King George himself made personal appeals to the Kaiser and to the Czar, but without success.

With the occupation of the neutral Grand Duchy of Luxemburg, and the ultimatum to and violation of the neutrality of Belgium in the German advance on France, British interests were directly threatened. The railroads of the grand duchy, and Arlon, in Belgium, were seized on August 1, in order to facilitate the movement of German troops toward the unprotected part of the French frontier. Two British steamers in German ports were also seized, but the Kaiser's Government declared these were not acts of war, but simply necessary as a police duty.

At the Cabinet meetings and the Privy Council, in session nearly all of Sunday at Buckingham Palace, England's position was thoroly discussed and her policy determined upon. Sir Edward Grey outlined it to the Commons in a memorable speech on Monday. While no definite promise had been made, the Foreign Minister said, England could not stand by with arms crost and see France invaded. Consequently he had delivered a definite promise to the French Ambassador that England would undertake to protect the French northern and western coasts from German attack. Germany had offered, he said, to refrain from such attacks as a price of British neutrality, but the Government had refused it as too narrow an engagement. Sir Edward's speech was greeted with tremendous enthusiasm in the House.

Parliament has granted a war credit of £50,000,000, the naval and army reserves have been mobilized, King George has proclaimed a moratorium, suspending the payment of all debts for sixty days; in every way possible England stands ready for the conflict. Her home fleet, numbering some 43 battleships, is already in the North Sea, within striking distance of the German coast.

Serbs Hold Mountain Passes

In the larger European drama that has unfolded, small Servia and her threatened invasion by the overwhelming forces of Austria-Hungary have almost been forgotten. Except for the occupation of Belgrade, which the Serbs evacuated, there has been little fighting of a decisive nature. Not only do the Austrians require some time to mobilize, but the larger war has made it necessary to proceed with caution.

So far attempts have been made only to gain possession of the Servian passes. At Semendria, the key to the important Morava valley, which opens a direct road to Nish, the temporary capital, and at Losnitza, on the Drina, heavy fighting occurred on July 29 and 30. The Austrians were repulsed at Semendria, while at Losnitza a small Servian force was able to hold its own against

THE WAR BEGINS

June 29—Archduke Francis Ferdinand and his wife assassinated by a Servian at Sarajevo

July 23—Austrian ultimatum to Servia demands satisfaction for murder plot and suppression of pan-Serb propaganda

July 25—Servia returns an answer unsatisfactory to Austria

July 28—Austria declares war on Servia. Russia moves troops toward Austrian frontier

July 29—Austrians occupy Belgrade

July 30—Germany demands that Russia stop mobilization within twenty-four hours. Austrians repulsed at Semendria. Servians lose at Fotcha in Bosnia, but check invaders at Losnitza

July 31—British fleet leaves Plymouth. Continued fighting on Danube and Drina frontiers of Servia

Aug. 1—Germany declares war on Russia after Kaiser orders mobilization. France mobilizes army. Italy announces her neutrality

Aug. 2—German troops occupy Luxemburg, move on Longwy and invade France near Nancy. Russians invade German empire at Eydtkuhnen and Eichenried and attack Johannisburg. German fleet engages Russian off Aland Islands and drives it into Gulf of Finland

Aug. 3—German cavalry repulsed at Petit Croix, on Lorraine frontier. German cruiser bombards and fires Libau, on the Baltic. Germans seize Kalisz and two other cities on Polish frontier, and invade Belgium, taking Arlon, Belgium appeals to England for aid in preserving her neutrality

THE ALIGNMENT OF EUROPE

The Triple Alliance between Germany, Austria-Hungary and Italy, was formed in 1883 by Bismarck by the inclusion of Italy in the German-Austrian Alliance dating from 1879. Austria and Germany pledged mutual assistance if attacked by Russia, Italy and Germany if attacked by France.

The Triple Entente is the product of the Dual Alliance between France and Russia (1887) and informal understandings between England and France (1904) and England and Russia (1907). It was designed by Edward VII to balance the Triple Alliance.

superior numbers until night, when it retired. At Fotcha, in Bosnia, on the 30th an invading Servian force was repulsed after a loss of 800 men. The Serbs seek to invade Bosnia in order to start a revolt among the Slav subjects of the dual monarchy.

With Russia threatening Galicia, a large part of the Austrian offensive campaign against Servia will have to be abandoned. The three corps gathered at Semlin, which with Sarayevo and Zvornik were to be the bases of Austrian operations, according to report have already been moved to Galicia. As far as can be determined the Austrian plans contemplated movements against Servia from two directions, one down the Morava River valley from Semendria, and the other west from Sarayevo, to intercept any union of the Montenegrins with the Serbs, and to occupy the Sanjak of Novi Bazar, both columns finally converging on the city of Nish. The Serbs, owing to their inferior numbers, were expected to confine themselves to a defensive campaign, for which the mountainous country is admirably adapted. Were the Austrians able to employ their full force under the most favorable circumstances the task would not be easy, as they must face the undefeated veterans of two Balkan wars.

ANYWHERE IN EUROPE ON AUGUST 1

Marching men filled the highways of the continent. These troops are French, and their scouting aeroplane is a solitary piece of evidence that the world has made some progress since the unhappy days of past wars

Mme. Caillaux Acquitted

As was freely predicted, Mme. Henriette Caillaux, wife of the ex-Premier and ex-Minister of Finance, was acquitted last week of the murder of Gaston Calmette, editor of *Le Figaro*, on March 16. The jury was out only fifty minutes.

Because of the political element which had been injected into the trial, in addition to the fact that no woman in France has ever been found guilty of such a crime, her acquittal was not unexpected. Even the Paris public, unused as it is to the rendering of impartial justice, recognized the particular flagrancy of Mme. Caillaux's crime. When the verdict was announced it was greeted in the courtroom with cries of "Murderess," "Assassin" and "Down with Caillaux," while general free fighting, even in the space reserved for court officials, broke out, which it required the dragoons half an hour to subdue. The verdict was evidently expected, as Caillaux was not even in court, but waited outside in an automobile, where he was joined by his wife as soon as she had signed the official register.

The acquittal is almost unanimously condemned by the French press as reflecting on the honor of the nation. Being French, there remain, of course, the inevitable duels to be fought. No less than three are to result from the Caillaux trial.

THE CALL OF THE FATHERLAND

Reservists of all the fighting nations have been crowding the consulates in America clamoring to be sent home to the front line. The suspension of Atlantic steamship service has prevented many sailings. These are Austrians, but the picture is typical

The Situation in Mexico

General Lauro Villar and Judge Allende, of Mexico's Supreme Court, peace delegates appointed by President Carbajal to confer with General Carranza, started from the capital for Saltillo on July 27th. Six days later they had not arrived at that city. It was known that they would insist upon general amnesty, while Carranza would demand unconditional surrender. Carbajal also asked that the regular army as it existed when Madero was killed should be recognized and respected; that all professional military men should retain their rank and not be punished for serving Huerta; and that no one

should suffer except those who had assassinated Madero and Suarez or been responsible for the crime. In a telegram to Zubaran, at Washington, Carranza said he was not striving to prevent an agreement, but must have unconditional surrender.

The rebels were still fighting. Carbajal desired an armistice without delay, in view of the "certain success" of the negotiations, but hostilities were not suspended. Several cities within 100 miles of the capital were captured, Federal officers who fell into the hands of the rebels were put to death and towns were looted in violation of Carranza's promise.

Some predicted that the peace conference would fail because of disagreement about amnesty. The delegates' route was by way of Vera Cruz and Tampico. They had been accompanied by newspaper correspondents. But these were not allowed to go beyond Tampico. They reported that rebel officers at that port derided the conference, saying that the revolution must be carried to the end by fighting and that at least thirty per cent of the residents of the capital would be put to death. They showed long lists of prominent residents who were to be killed.

Villa and Carranza

It was asserted officially nor unofficially had Carranza invited Villa to take part in the triumphal entry into the capital city. Villa and his army remained in the state of Chihuahua and he was adding recruits to his forces at the rate of about 400 a day. In this way his army had grown from 23,000 to nearly 30,000 men. He had an abundance of money and had bought medical supplies enough for 4000 wounded. Our Government sought in vain to heal the breach between Villa and Carranza. George C. Carothers, who had been with Villa a long time as a representative of our State Department, came to Washington and was in conference with President Wilson and Mr. Bryan.

Stories about Villa's grievances and aims at once got into print. He asserted, it was said, that Carranza had broken the agreement signed by representatives of both at Torreon. Therefore, he had refused to move southward with his army. He did not intend to start a new revolution, but would remain in Chihuahua until Carranza should respect the agreement and, if Carranza should continue to ignore it, would set up an independent government in that state. He had done, he said, all he had promised to do, but Carranza had deliberately and repeatedly violated the agreement which his chosen representatives, at the end of a four days' conference, had signed. By recruiting he hoped to increase his army to a total of 60,000 men.

Progress of the War

Guanajuato, a city of 35,000 people, was taken by the rebels after a two days' fight, and a Federal general, Cordado, was killed. Queretaro was evacuated by the Federals, but in a battle near the city many prisoners were taken by the rebels, one of them being the Governor of the state. The Federals gave up all of Lower California. There was delay about the evacuation of Mazatlan. When that port is given to the rebels they will have the entire Pacific coast except Manzanillo, which is surrounded. It is said that General Pascual Orozco will fight no more, but will go to Canada. In the south, Zapata, it is said at Washington, has agreed to support and assist Carranza. Gabriel Huerta, a relative of the ex-President, voluntarily returned from Puerto Mexico to clear himself of charges made by men who were his subordinates while he was chief of the Secret Service. They have testified that they killed more than twenty of the ex-President's political foes by order of Gabriel.

Antonio Villareal, Governor of Nuevo Leon, and an ally of Villa, has issued a decree concerning the Catholic Church. He orders the expulsion of all foreign priests and Jesuits, prohibits confessions, directs that several Catholic colleges and schools be closed, and denounces the Church as the enemy of the Liberal movement. It has forgotten its spiritual mission, he says, and gone into politics with the reactionaries.

Railroad Rate Decision

The long delayed decision of the Interstate Commerce Commission in response to the application of the northeastern railroad companies for permission to increase their freight rates by five per cent was made known on August 1st. It contains 35,000 words and relates to many subjects in the broad field of the inquiry. While it is difficult to make an accurate summary of such a statement in brief space, it can be said that to railroads west of Pittsburg and east of the Mississippi the commission grants an increase that will add from $10,000,000 to $15,000,000 to their gross revenue, and that no increase is given to the eastern trunk lines and New England roads, altho the trunk lines will gain something by reason of their ownership of roads in the territory formerly affected. It was not a unanimous decision. Five members signed it, and two, Commissioners McChord and Daniels, dissented, holding that something should have been granted to the roads which are not permitted to increase their rates.

The grant to the roads in the central territory is modified by the exception of iron, coal, cement, brick, and certain other commodities which are a large part of the tonnage. The commission points the way to economies and reforms which might yield more than the desired advance of five per cent. It recommends a sale of all property not held for transportation purposes. The value of such property is $648,000,000. A readjustment of rates which would increase revenue is invited, and the opinion is exprest that the passenger service is not bearing a fair share of the burden. The commission suggests conferences with local commissions in states where passenger rates are below their proper level.

The Western Trainmen

The three members of the Federal Board of Mediation and Conciliation reported to the President that they had been in conference for ten days with representatives of the 55,000 locomotive engineers and firemen of ninety-eight railroads west of Chicago, and of the companies, and had failed. Among the demands of the men is one for an increase of wages because of the higher cost of living, and the companies said the proposed increase would amount to $33,000,000 a year. Before the mediators took up the case, ninety-seven per cent of the men had voted to strike. A plan proposed by the mediators was accepted by the men, but rejected by the companies. It involved arbitration.

President Wilson asked members of the board and representatives of the men and the companies to confer with him. The men had decided to go on strike on August 7th if the companies should persist in opposing the mediators' plan. After the conference, at the end of last week, Mr. Wilson was confident that the strike would be averted. He had appealed to the patriotism of both parties, urging each to make concessions, and pointing out that the proposed strike, paralyzing the railroads at a time when European conditions caused a crisis would be a national calamity. It would compel a failure of his plans for building up the merchant marine by new legislation for the admission of foreign ships to American registry. The men accepted the terms proposed, which involved arbitration for the wage increase, and the companies acquiesced later.

TEUTON AGAINST SLAV

DYNASTIC AMBITIONS AND RACIAL ENTANGLEMENTS THAT UNDERLIE THE GREAT WAR

BY WILLIAM MILLIGAN SLOANE, L.H.D.

The harsh simplicity of the issues of war is only superficial: the problems with which the nations of Europe wrestle in time of peace are no less bewildering than before and will loom large when the days of reconstruction come. With these essential factors in the future of Europe Professor Sloane is thoroly familiar, as his recent study, "The Balkans; a Laboratory of History," attests. The best known of the other works prepared during his long service as professor of history at Princeton and now at Columbia are studies of Napoleon and of the French Revolution. He was Theodore Roosevelt Professor at Berlin in 1912-13.—THE EDITOR.

THE European situation seems unreal. We simply dare not consider the possibilities of a general European war and all its frightful consequences. Americans who are really such feel a much deeper interest in their nearer European neighbors, even tho the recently adopted masses are still, at heart, most concerned with the far-off governments and peoples from out of which they have lately come.

But it is absurdly insufficient to look at Europe from the west as we mostly do. Great Britain and France are full of poignant interest for us, Germany to quite the same degree. Their problems, internal and external, and their relations to each other, are fascinating to the extent of absorption. But we forget that they too have an eastward outlook and that much of the east which to us is far, far away is for them close by and that their policies cannot neglect what we see but dimly. At this moment, as for a year past, it is central to the comprehension of western politics that we recall how determinative in the arrangement and alignment of powers is a race question which presses upon the older western Europe from behind with the obstinacy of natural law: the oncoming of the Slav, the self-defense of the Teuton. Besides it Franco-German relations are, however weighty, of minor importance.

The European balance of power is as unstable as that of a pyramid poised on its apex. Race, religion, nationality, equality, interest, are the stock terms of politics and not one of them has a definite meaning. Nationality is the most misleading of them all, yet it is this vague concept which is central to the alarms of the present hour. The populations of Europe discriminate between Anglo-, German-, Irish-, Italo-, Slav- and Afro-Americans with insistence and give portentous reality to these designations because they cannot think in other terms. So far as they think at all they affect contempt for the assimilative process upon which we ourselves rely.

Russia and Greek Catholicism, Germany and Teutonic culture, France and Roman civilization, and British imperial sway, each of these has a planetary system which revolves about it. Language is not strong enough to depict the passion and devotion of the millions upon millions who pay and fight, who sacrifice all that life holds dear, for these undefinable but poignant conceptions. Intertwined with them are all the rest, material prosperity, race supremacy, peace of mind, social order and justice.

The pyramid has long been rocking and toppling: indeed the props and guys were always there in the form of treaties and alliances. Each of the systems has always been incomplete at the edges and sometimes at the very center. The Slavs are not all of the Greek confession, nor under Russian sway. A large minority are of the Roman faith and very many are faithful Moslems. The Latins are not all Roman Catholics, many are Protestants and among ecclesiastical adherents are enormous numbers of free-thinkers and indifferent. The number of Roman Catholics among Germans, within and without the empire, is as great as that of other confessions: the counter-reformation is still active thruout western Europe, tho quiescent in the central lands.

Accordingly the confessional bond still plays a major rôle, possibly the major rôle, on the stage of east European politics. But nationality runs it a hard race for first place. The cross purposes between the two act and react to produce confusion, and dim the vision of observers.

Prolific as Anglo-Saxons once were, and as the Germans still are, no instance is known to history of a natural growth of population like that of the latest years among the Slavs. They now outnumber the Germans nearly three to one: as we consider civilization theirs is, with the conspicuous but negligible exception of a minute proportion, about that much lower and more primitive than the German, dark and medieval as is the latter at its worst. Among the Slavs there are two lines of division: the aristocracy and towns-folk, a relatively very small number with some veneer of western culture and learning are separated by an abyss from all the rest, the overwhelming majority of primitive artizans and peasants whose one controlling power is fear, fear of the state, fear of the church. Then secondly straight thru the heart of the continent lies Hungary, which divides the north from the south Slavs and makes common cause with the Germans of Austria, as far as a hated necessity requires, to form the Dual Monarchy.

What with the iron sway of Turkey and the stern repression of the Magyars the south Slav differs slightly from his congener of the north in speech, institutions, tradition and general characteristics. But very slightly, after all. They are a peasant folk, placid when comfortable, savage when roused. Since their emancipation from the Turkish yoke they have produced no ruling class, and only a handful of native statesmen and administrators. Servia has a worthless native dynasty, Montenegro a strong but rude one; the other states have had foreign princes imposed upon them.

Since the Slavs appeared in history there has been an embittered, remorseless, and often bloody struggle for supremacy between Teuton and Slav. The elements of humanity commingle in warfare as in peace, probably in the higher degree, by taking prisoners than by merchandising. Whatever order and control has existed in eastern Europe proceeded more or less directly from German sources, and along the broad mark or frontier from the Baltic to the Adriatic upon which the clashes have occurred there has been some admixture of blood as well as of institutions.

Until lately there were large numbers of German traders in Slavic towns, and in the administration of Russia men with German names were prominent. The University of Dorpat was a distinguished center of German learning. Within the German lands Slavic laborers were numerous and men with Slavic names rose to considerable eminence in all walks of life as far westward as the Elbe. Eastern Prussia has large populations of Slavs and its Polish subjects in Posen constitute a Slavic society which defies assimilation. The landed proprietors of Russia's Baltic provinces and the merchants of the Baltic seaboard were and remain German in speech and tradition. On

both sides of the frontier there was toleration for the respective aliens.

But within a generation the passion for "nationality" has become fanatical and insensate. Whoever was a subject must become Russian: in Finland the upper classes of Swedish stock and culture as well as the indigenous Finns; in Poland, where all are Slavs, all must become Russian; in the Baltic provinces Germanism must be uprooted and Dorpat was turned into Yurieff with a corps of Russian professors. The same fiery zeal in the reverse sense overmastered Prussia and Hungary for Teutonizing or Magyarizing all the Slavs within their borders. There was from north to south a nationalizing passion which rekindled the fires of hate and fury until today the conflagration rages to destruction.

The flames leaped over and set fire to the Balkans. Germanism in Austria-Hungary was put on the desperately defensive alike by Magyars and Slavs. At no time within the historic record was the race and confessional antagonism as savage as it is today. Nationality and autonomy are the war-cries. "In the name of liberty" is the plea which the combatants shout westward as they arm to the teeth, marshal their enormous armies and commit atrocity upon atrocity in the face of high heaven. The recent Balkan wars have completely overset the military equilibrium of Europe, because they have placed on its military map at least a million disciplined troops with the lust for combat engendered by their war of emancipation and the internecine conflicts for national grandeurs into which it degenerated.

Austria-Hungary is the most extraordinary congeries of unrelated parts ever compacted into a nominal state. On every treasury note the denomination and value are printed in about twelve languages so that it may circulate thruout the monarchy, and there are some eighteen groups of population that lay claim to "nationality." Within Cis-Leithia, which we know as Austria, lies the kingdom of Bohemia, overwhelmingly Slav, and vociferous for recognition as such. Trieste is almost a pure Italian city, lower Tyrol is Italian, and the townsfolk of Dalmatia are Italians. The districts of Carniola and parts of Carinthia are Slav again. Trans-Leithia, which we know as Hungary, is ruled by Magyars, but within its limits are millions of Slavs; and Croatia, which is pure Slav, possesses a would-be autonomous local government standing by treaty in the same or a similar relation to the supreme Hungarian power as that in which Hungary stands to Austria. Yet the "Hungarian" seaport of Fiume is a pure Slav city.

Confessionally the Slav subjects of the monarchy are of the Roman faith, tho in certain places there are small congregations of the Greek faith. The recently annexed provinces of Bosnia and the Herzegovina belong to the monarchy as a whole, their populations are pure Slavs, mainly of the Greek confession, tho the higher social classes are faithful Moslems, the immigrant administrators and traders from the monarchy are Roman Catholics. Control is generally Germanic, stigmatized as the sauerkraut and sausage régime.

But over all this unprecedented mosaic of race, religion and language a German dynasty reigns and the once all-powerful German influence still largely predominates. The German empire in its entirety, whether Roman Catholic or Protestant, exists today as it is because Austria was expelled from the German hegemony, but its peoples and its rulers have a deep concern for Austria-Hungary as a bulwark against the ever-rising and surging tide of Slavic numbers and a menacing inundation of lower civilizations.

Within the triple alliance of Germany, Austria-Hungary and Italy the relations of the two former are thus much closer than those of Italy with either. The dominant figure of the triple alliance is of course the German Emperor, and by an overmastering will, backed by military power of portentous strength both afloat and ashore, he has kept, indeed commanded, the peace of Europe so far thruout his reign. This has been to the immense advantage of his people, as they clearly understand, but a peace lord who is a war lord as well has an unenviable task in restraining a military party of great influence straining at the leash when wars are raging and insults fly hurtling thru space from defiant foes, increasing yearly in strength and self-reliance.

German socialism, stripped of all its trimmings, is nothing more or less than good old-fashioned Ameri-

THE DREADED GERMAN ARTILLERY

A squad of artillerymen moving a gun carriage into position. Germany's supremacy in armament over France and Russia is especially marked

can patriotism, a determination to share the offices high and low with the privileged classes and enjoy the social distinctions as well as the emoluments pertaining thereunto. Ambition for power and the pomp of power stir the breast of the humble. Thus far German socialism is not international and is not likely to become so. Yet it is a serious weakness in a system so hierarchical as that of Prussia or even in the other more democratic states of the federal empire.

Had the United States a Russia on one shore and a France on the other, with not one truly friendly power on either side, we could visualize the problem of the German empire, perhaps even realize it. The vast extent of her land frontier is a decided weakness. Another is over-population; sixty-six millions on a territory about the size of Texas and not comparable in fertility of soil and natural resources. Already by the magic touch of scientific agriculture but little is unreclaimed and most yields to the very limit of its capacity.

Still another weakness is the Polish question, which renders Posen a focus of discontent and exhibits the futility of all efforts at Germanization of unwilling Slavs. But the most serious weakness of Germany is the tenure and treatment of Alsace-Lorraine. The truth about this question is at the bottom of the well: the keenest French observers declare that they would be entirely content as an autonomous state in the federal German empire and do not desire reincorporation in France. But France desires it, and cannot condone their loss. The Hohenzollerns have conquered the German home, they desire no world conquest, but they mean to defend to the death what they have secured.

As between Germany and German Austria the bonds of trade and sympathy are many and powerful, but the religious question lies athwart union in any calculable period. Prussia is still a Protestant, intensely Protestant power, altho the natural increase of Romanists is in excess of any other. In a high sense Prussian policy is German politics, and the majority of Protestants thruout the empire steadily dwindles. The entrance of German Austria would throw them into a hopeless minority. Nevertheless the question is as yet not perilous, for stancher patriotism than that of Bavaria, the Rhineland and Westphalia does not exist in Prussia proper, or Saxony, or Wurtemberg.

To these elements of strength and weakness possibly another should be added: the prosperity in commerce and industry of all Germany. Based on unprecedented expansion of credit, this is therefore an exceedingly delicate structure and forces a pause ere active military steps are taken. In the alarms of a few years since it was the merchants and bankers who commanded a halt and a return to sanity.

Ultimately the increase of numbers may call for territorial expansion to the eastward or a desperate effort at it, but for the present German policy is easily legible: maintain what it has, strengthen Austria-Hungary against the Slav, and be prepared in every respect to repel any advance of its own eastern neighbors, perhaps even to drive them far behind their present lines. For success in this she must be strong enough to hold France in check, and to that end she has just enlarged her armaments.

Russian power viewed from without is portentous. With her population of a hundred and sixty-eight millions it seems as if she could put some millions of troops in the field, overpower all Europe, and constitute herself suzerain of Slavic peoples as well as of the Greek Church—to which position she has long laid claim. But so vast, so unorganized, so inert is most of her empire that its very weight seems often to threaten a break.

But her most salient weakness is the double question of Finland and Poland, with their sense of outrage and resistance to Russian influence. It was no wonder that she could not coerce Japan, or even conquer Turkey without Rumanian help: howsoever many men she may have under arms there is always a Polish terror of major size and a Finnish nightmare less in dimension but equal in grimness, at the very door of St. Petersburg, moreover. And the haunting specter of intestine violence can only be concealed by troops and police. The national territory must be garrisoned against Russian, Polish and Finnish discontent.

Apparently her Government measures greatness solely by size, so steady is its advance to the eastward in the seizure and occupation of territory or the establishment of influence zones. Quantity is the relentless foe of quality and numbers are the Iscariot of efficiency. The modern world is all astray on this question and Russia seems the blindest of the blind. Her northern frontiers are for-

lined by their Arctic position; her others are the weakest possible, the most vulnerable in all their extent. Her policy is not easily legible, but in the Triple Entente, the bonds of which are very slight, there is of course a threefold understanding which gives some guarantee of her swollen dimensions and assures her a free hand for the defensive if not for the offensive. A hegemony among the Slavs she may secure if she strikes successful blows for the Servian cause, but a protectorate in form never. She has never been able to charm her southern relations and the great secret service of spies innumerable which she maintains among them exasperates, sometimes intimidates, but never cows them.

Why protect Servia? Why bring all Greek Christians under her religious sway? Why set up a Pan-Slavic federation? Why the pogrom and Jew baiting? Why swell to bursting with zones of influence in Central Asia which belie their name in that they do not bind? Why the browbeating of Armenia and the hounding of Turkey? There seems no sense and little unity in the enormous program.

If there be any solution to the riddle at all, it lies in her persistence that her door-key may be wrested from Moslems and the exit to the area of world commerce thru the Straits as well as thru the Baltic be her very own to command. It is not given to outsiders quite to comprehend how everything works together to that end, but we hear it with perpetual iteration and it may be so. Meantime we somehow feel that Russia resembles the athlete who ran so far to gain impetus that on the take-off line for the jump he fell in exhaustion. The preliminaries have hitherto been so protracted that accomplishment halted.

Since Russia has had armies on European battlefields their laurels have been those of subsidiaries rather than principals. It was not until Gorck and his Prussians went over to the Russians at Tauroggen in 1813 that their standards advanced by self-impulsion. We are told on good authority that the existing army, entirely regenerated since the Treaty of Portsmouth, longs and even lusts to redeem its good name. Therein lay the danger of the hour.

Should Russia restore to Finland the liberties of which she has been robbed, should she grant autonomy to Russian Poland as a buffer state between the Russian Orient and the German Occident and liberate a nation of twenty-four millions, Roman and romantic in religion and culture, her gravest internal danger would be diminished if not removed. But of this there is little chance, so fanatical is Greek ecclesiasticism and so powerful at St. Petersburg.

The Servian protection is ancillary to the broad Russian policy. The writer in his recent book on the Balkans has quite fully explained the genesis and described the distribution of the Slavic stock in the great southeastern peninsula of Europe. It suffices to say here that the Serbs are the purest and most numerous branch of the southern Slavs. They are numerous in Hungary proper round about the city of Temesvar, they are almost exclusively the inhabitants of Croatia, Slavonia, Istria, Dalmatia, Herzegovina and Bosnia. Of their confessional divisions we spoke in another connection. Within the Austria-Hungarian domain they number about five millions; without in Servia, Montenegro and elsewhere about as many more. These last are almost exclusively of the Greek faith, among the former possibly a fifth are also of that profession. Hence the concern of Russia, real or professed, for the orthodox who are anxious before the militancy of Romanism.

Thus divided the independent Serb states have remained insignificant in the power of their political sovereignty and are so still. But they have been impassioned apostles of the Great Servia idea and thru a desperate propaganda have infected the Austrian subjects of their own stock. It is the unrest within the dual monarchy which more concerns its Government than even the devilish complots which find hospitality in Servia and have found two victims in the Austro-Hungarian heir and his morganatic wife. The war on Servia may be merely punitive, but it is really a terrible warning to those within Austria-Hungary to cease from troubling.

The dream of a united Illyrian kingdom began with the liberation of Servia from Turkish misrule. But the congress of Vienna and Waterloo quenched all hope during thirty years. Hungary considered Croatia as a mere province and exasperated the Croats by an effort to Magyarize them. Their Emperor gave them a patriotic Ban or viceroy in 1848, the famous Iellaschich, who in the crisis of his long career turned all his folk in frenzy against Hungary in her struggle for independence and saved the Hapsburg monarchy from extinction. The efforts of Joseph II to Germanize Croatia were vain, but it kept its identity. In 1868 an unsatisfactory "compromise" was forced on it. In spite of Hungarian stubbornness this charter has been several times modified in a sense favorable to Croat aspirations, but the people still cherish resentment. They have a representative of the Hungarian crown, a national diet in control of local affairs, including courts and schools, and in the ministry at Buda-Pest they have one member with three members of the upper and forty of the lower house. There are endless wranglings and sometimes rebellious outbursts of violence as Hungary seeks to recall more or less of what has been wrenched from her, and Croatia to wrest from her a higher degree of autonomy. The Servians elsewhere sympathize, especially those not in Croatia-Slavonia but directly under Austrian administration. If we may trust our judgment, based on personal observation, Austria-Hungary has seized the occasion of the hideous crime so lately committed to secure peace within her own borders by the punishment of Servia.

France has always had a noble sentimentality for the insurgents against any "oppressor" except herself, and claims for herself the liberation of Greece. It is hard that Austria-Hungary should pitilessly monopolize and regulate Servian trade, as she does; the enlarged Greece suspects the dual monarchy of seeking a highway of her own to the Aegean and desires to reserve for herself the transit and outlet for Servian commerce to the Mediterranean. Hence Servia may hope for at least moral and possibly for material aid from France and Greece as well as for the protection of Russia. During the recent wars Servia amazed the world by the regeneration of her army as a fighting machine and that of any invader, no matter how efficient, is likely to meet with fierce resistance.

Italy still harbors a deep-seated distrust of her next-door neighbor in the alliance and their interests clash on the Adriatic. At its head is an *Italia irredenta* under Austrian rule and opposite in both Montenegro and Albania they have opposing desires. The dynasty of the former is kin by marriage to the House of Savoy, and a German prince, if he of Wied ever gets a firm seat as Mpret of Albania, is not likely to favor Italian interests to any disadvantage for the powerful Austrian Lloyd steamship company, for long years the adroit and insinuating queen of the Adriatic, at least on the eastern shore.

Finally there is the movement, inchoate as yet and not very assertive but nevertheless of importance, to combine into a common interest the hitherto disjointed and mutually sus-

THE CZAR

WHO WAS COMPELLED TO CHOOSE BETWEEN HIS BALKAN POLICY AND THE PEACE OF EUROPE

pacious policies of the nations which border on the Mediterranean, for protection against the great commercial powers which make it a world's highway, notably Great Britain and secondarily Germany. France, Italy and Spain are Latin, the new Greece at least classical in its aspirations and maritime to the utmost. From Gibraltar to the Great Syrtis Spain, France and Italy hold the African coast. While Italy alone has hopes of important colonization in its possessions, since the population of the others is stationary, all are engaged in the development of their possessions and the commerce which accompanies it. Each aspires to expand its Mediterranean importance, all are impatient of British supereminence on its waters. The maintenance of present conditions is manifestly the British policy and the line of her Mediterranean fortresses will not be without the support of her fleets whatever the understanding with France and Russia may be.

The efforts of the British Government, seconded by that of Germany, to keep the peace of Europe or at least localize the war, were as commendable as they were manifestly sincere and to the immediate interest of both. The struggle for the world's carrying trade is not entirely confined to Great Britain and Germany, nor the rivalry in building great fleets to defend it. French and Italian and Austrian, even Russian and Japanese, packets ply many a far distant main. Yet separately and combined they are minor rivals. It is to be hoped that if the great ones can emulate each other in peace for mercantile supremacy, they may combine to maintain the unstable equilibrium of the balance of power to which reference has been made. The internal politics of both are uneasy and in both there are portents of social upheaval, but their stability and domestic balance are rockfast compared with that of the other great powers.

Princeton, New Jersey

THE VERDICT OF CIVILIZATION

JEAN JACQUES: War is the foulest fiend that ever vomited forth from the mouth of hell.

THOMAS JEFFERSON: I abhor war and view it as the greatest scourge of mankind.

BENJAMIN FRANKLIN: There never was a good war or a bad peace.

WILLIAM LLOYD GARRISON: My country is the world; my countrymen are all mankind.

NAPOLEON BONAPARTE: The more I study the world, the more am I convinced of the inability of force to create anything durable.

PAUL ON MARS HILL: God hath made of one blood all nations of men for to dwell on all the face of the earth.

ANDREW CARNEGIE: We have abolished slavery from civilized countries, the owning of man by man. The next great step that the world can take is to abolish war, the killing of man by man.

GEORGE WASHINGTON: My first wish is to see the whole world at peace, and the inhabitants of it as one band of brothers, striving which should most contribute to the happiness of mankind.

ABRAHAM LINCOLN: With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us strive . . . to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations.

EMANUEL KANT: The method by which states prosecute their rights cannot under present conditions be a process of law, since no court exists having jurisdiction over them, but only war. But through war, even if it result in victory, the question of right is not decided.

WILLIAM ELLERY CHANNING: The doctrine that violence, oppression, inhumanity, is an essential element of society, is so revolting that, did I believe it, I would say, let society perish, let man and his works be swept away, and the earth be abandoned to the brutes. Better that the globe should be tenanted by brutes than by brutalized men.

ROBERT E. LEE: But what a cruel thing is war, to separate and destroy families and friends, and mar the purest joy and happiness God has granted us in this world; to fill our hearts with hatred instead of love for our neighbors and to devastate the fair face of the beautiful world.

CHARLES DICKENS: There will be the full complement of backs broken in two, of arms twisted wholly off, of men impaled upon their bayonets, of legs smashed up like bits of firewood, of heads sliced open like apples, of other heads crunched into soft jelly by the iron hoofs of horses, of faces trampled out of all likeness to anything human. This is what skulks behind "a splendid charge." This is what follows, as a matter of course, when our fellows rode at them in style and cut them up famously.

BARONESS VON SUTTNER: What is most astonishing, according to my way of looking at it, is that men should bring each other into such a state—that men who have seen such a sight should not sink down on their knees and swear a passionate oath to make war on war—that if they were princes they do not fling the sword away—or if they are in any position of power they do not from that moment devote their whole action in speech or writing, in thought, teaching or business, to this one end—Lay down your arms.

VICTOR HUGO: A day will come when the only battlefield will be the market open to commerce and the mind opening to new ideas. A day will come when bullets and bombshells will be replaced by votes, by the universal suffrage of nations, by the venerable arbitration of a great Sovereign Senate, which will be to Europe what the Parliament is to England, what the Diet is to Germany, what the Legislative Assembly is to France. A day will come when a cannon will be exhibited in public museums, just as an instrument of torture is now, and people will be astonished how such a thing could have been. A day will come when these two immense groups, the United States of America and the United States of Europe, shall be seen placed in presence of each other, extending the hand of fellowship across the ocean.

The World is so full of

A NUMBER OF THINGS

I'm sure we should all be as happy as Kings

AN OCCASIONAL PAGE BY

EDWIN E. SLOSSON

THE other day I strolled into the sociological department of Columbia University and found one of the Fellows (cap F of course), Mr. Edwin L. Clarke, reading a little old brown book. On demand he surrendered the volume and I glanced at the title page with an eye of journalistic disapprobation. It was published in Harrisburgh in 1811.

"Why do you waste your time on stuff a hundred years old? Here, take my copy of the morning paper and read something up-to-date, all about Bryan and Wilson and the Constitutionalists."

"If you will read this you will not have to read the morning paper," he retorted. "The news of the daily is not so new as you think. Listen to this," and he turned over the yellow pages until he came to the desired paragraph and read as follows:

THE COLONEL'S OPINION

. . . With respect to Mr. Bryan, so conspicuous at this era, . . . he was one of those, whose memory treasures up small things with even more care than great ones. He was said to be a very diligent reader, and was certainly a never weary monotonous talker. . . . It was, moreover, his passion or his policy, to identify himself with the people, in opposition to those who were termed the well-born. . . . In other respects Mr. Bryan was well enough: let us say a well meaning man, and even one, who, in the main, felt he was acting the patriot: for this part, it is well known, is played in very different styles. . . . Some see only danger, bless their optics! on the side of aristocracy; and, therefore, rivet themselves with all their might, in an anti-patrician spirit of perverseness to everything candid, or noble or honorable. Nothing is republican with them, but as it is crawling, and mean, and candied over with a fulsome and hypocritical love for the people. I do not say that Mr. Bryan was actuated by such motives, but merely, that his patriotism was of the humble character they are calculated to inspire. . . .

This was understood to have been principally the work of . . . Bryan, in conjunction with . . . , a schoolmaster; and it was severely reprobated by those who thought checks and balances necessary to a legitimate distribution of the powers of government. . . . Of his colleague . . . it may not be uncharitable to presume, that having the little knowledge of man, and scholastic predilection for the antique in liberty, which generally falls to the lot of a pedagogue, he acted accordingly.

. . . The constitutionalists, however, claimed him, and whether he thought with them or not, he was too prudent to disoblige them. It is rather probable that the philosopher was of the opinion, that the ferment of the revolution should be left to work itself off.

. . . As he had discovered that oil would smooth the ruffled surface of the sea, so had he found it most effectual in assuaging the troubled minds of his fellow men. Hence his demeanor to both parties was so truly oily and accommodating . . . while president.

. . . These constituted the duumvirate, which had the credit of . . . laying . . . the cornerstone of that edifice, which, however retarded in its progress by aristocratical interference, towers like another Babel to the skies, and will continue to tower, until finally arrested and dilapidated by an irremediable confusion of tongues: for anarchy ever closes the career of democracy.

"Your're faking," I declared when he had finished. "History does not repeat itself."

"See for yourself," he replied, handing me the little leather bound volume and I saw he was right. The twentieth century has no monopoly of colonels, Bryans, schoolmasters and Constitutionalists. The paragraphs he read were from the pen of one Alexander Graydon, who served his country in the War of the Revolution. They are to be found beginning on page 266 of his Memoirs. He is describing the part played by George Bryan and a Mr. Canon in the formation of the first Pennsylvania state constitution.

For the benefit of Americans who are hankering after titles I reprint without charge to F.Z.H. the following advertisement from the *London Times*:

> STRICTLY GENUINE! Direct from Home Old AUSTRIAN TITLE with Coat of Arms and Seal, dating from the 16th Century, for SALE.—Offers to F.Z.H., 616, Rudolf Mosse, Frankfurt-a-Main.

This is worth looking into. The Austrian uniforms are the handsomest in Europe and apparently this title can be obtained without the sacrifice of a daughter. Our multimillionaires must realize that the price of nobility is rapidly rising like the price of Rembrandts and saltcellars and for the same reason. They probably will never have a cheaper chance to get in on the ground floor of the peerage than now. The recent discussion in the British Parliament over the prices paid for admission to the House of Lords showed that the general advance in living expenses extends even to the cost of coronets. A mere baronetcy costs from $150,000 to $375,000. A peerage such as twenty years ago could be got for $150,000 now sells at $500,000 or even as high as $2,000,000. Even at these figures a British barony is a good, safe investment, for if the House of Lords should be abolished as some radicals threaten, the value of the title would be greater than ever, for it would thus be unencumbered by any pretense of official duties.

We have seen it demonstrated by various writers, that by the year 2000 or later mankind will be:

Hairless, toothless, epileptic, childless, dead of heart disease, dead of nervous diseases, dead of cancer, insane and idiotic; entirely Russian, entirely Chinese, entirely Mohammedan; Roman Catholic, Christian Scientist, Mormon, spiritualist and atheist; tyrannized over by capitalists, Socialist bureaucrats, Syndicalist labor unions, Free Masons, Jewish financiers and Prussian militarists; devoid of petroleum, of coal, iron and wood; starved for lack of potash, phosphorus and nitrogen; polygamous, polyandrous, promiscuous and living in barracks; wiped out by war, pestilence, the cooling of the earth, the return of the Glacial Period, falling into the sun, collision with a comet, blown up by radium emanation, poisoned by atmospheric changes and ended by the advent of the Millenial Dawn.

How lucky that *all* these things can't happen!

"I dare do all that may become a man." Who dares do more is a suffraget.

THE MOST BRILLIANT OF THE YOUNG CALIFORNIANS WHO NOW DOMINATE AMERICAN TENNIS IS THE LEADER IN DEFENDING THE DAVIS CUP, WHICH HE HELPED TO WIN LAST YEAR

CHILDREN AND BUGABOOS

BY H. D. BAILEY

PROFESSOR OF BIOLOGY IN MUHLENBERG COLLEGE

SNAKES, toads, beetles, devil's darning needles — what dread inspiring words! Who does not start at the mere sight of a wriggling reptile? But the little child, ignorant of myth and superstition, actually loves these dreaded creatures — certainly, in most cases, cares more for them than for its dolls or toys. Such, at least, is the belief of the writer, who for a number of years has been making observations to ascertain whether or not little children are possest of an innate antipathy, as is generally believed, for creatures such as call forth dread in adult man. In the scores of tests made no trace of such antipathy has been found, excluding, of course, those cases in which the tests were vitiated by influences (parental admonition, etc.) before the experiments were made. In all instances, irrespective of sex or parentage or region of birth, the child manifested marked interest in and pronounced care for all of the animals employed.

Preferences were noticeable—one little boy of two years displayed especial fondness for snakes, a black one, five feet in length, being his favorite; a little girl of three summers bestowed her most zealous care on a box turtle, scarred and mutilated as it was; but in no case was there evident, even in the slightest degree, aversion for any creature offered. The conclusion is inevitable, that our so-called "natural" dread for some creatures is not a "natural" feeling at all, but rather an acquired condition brought about by personal experience or by influences emanating from others of our race.

William, photographs of whom accompany this article, is a little fellow not yet four years of age. All of the views here reproduced were taken when he was between the ages of one and three. He is a normal child in every respect, and his behavior under the circumstances shown is precisely that displayed by any other normal child under similar conditions.

The dragon fly, perhaps better known to some as snake-doctor or devil's darning needle, is an insect about which, as indicated by its names, a number of weird and monstrous fables have grown. The writer can easily recall how, as a child, watching this insect skim over the woodland ponds, he entertained the greatest dread lest, with diabolical intent, it should pounce upon him and sew up his ears. William will never pass thru an experience of this nature. He knows dragon flies only as harmless and beautiful objects. He takes great delight in holding the "pretty red" ones, and watching them as, with voracious appetites, they greedily snatch the flies or other insects that he offers them. As to fearing them—why should he?

One day the little fellow carried into the house a huge caterpillar, heavily armed with club-like projections and bristles, the kind that one sometimes sees on the foliage of maple trees, and which invariably calls forth fear and confusion on the part of woman or man; he discovered his prize as it was crawling about on the stones that lined the dusty roadway. "This is a nice caterpillar—not a naughty one," he exclaimed to his mother as he fondled its spines. For a long time this

WILLIAM'S FAVORITE SNAKE IS THE HISSING VIPER

At the age of 3 years and three months he is coolly examining a viper, a blacksnake and several box turtles

THIS IS A NICE CATERPILLAR

"frightful" wriggling worm served as his inseparable companion. Untiringly he gazed at the colored hairs; examined the grotesque knobs; studied the creature's curious method of progression; taught it how to crawl up one finger and down another, up once more and then back again.

One day the writer presented to William a live bullfrog; it was the first he had ever seen. It was interesting to watch the actions of the child. For many minutes he gazed at the frog intently; he circled it several times. First he was attracted by its moving throat, then its bulging eyes, next its ears and later its huge webbed feet. After a bit he tried to pick it up. He found the task no easy one. Time and again the slimy amphibian slipt from his grasp; finally he succeeded in holding it. "Now I has it," he announced gleefully, as he tried to carry it across the lawn. But suddenly the creature leaped wildly from his hands. The little fellow was holding on grimly at the time, and, in consequence, the frog failed to escape, but dangled in the air suspended by one of its long legs. And then occurred what the little lad perhaps will never forget—the frog cried out with one long, pitiable, bleating, agonizing cry. William looked amazed, then glanced at me. "It is afraid you will hurt it," I told him. He put it down tenderly, and never afterward picked it up again. That wet, slimy creature gave the little boy many hours of joy. Of course it did not hurt him, notwithstanding superstition.

But of all the creatures I have given to this little child, snakes have charmed him most completely.

"Do you have the snakes again?" he inquires almost every time I come. One day I brought a kettle full—garter snakes they were, ranging from twelve to thirty inches in length, a writhing, squirming, scaly mass. I knew their nature; I had been handling them for weeks; they were a gentle lot when kindly treated. "Now, William," I said, "when I take off the lid, see how many you can get." The little lad went in with both his hands. When he arose he was clutching six of them. It was a long time before he put them back, for such a "whole big lot" had to be proudly shown to mother and her neighbor friends, much to their terror and concern.

Snakes, somewhat like dogs, soon learn to recognize their master. For months I kept in captivity a huge blacksnake, nearly eight feet long. While it would oppose the presence of any strange hand within its cage, I could at any time, with covered eyes, thrust hand or arm within its reach in perfect safety. As long as I kept it captive I never felt the imprint of its jaws. One day while William was passing by I decided to try a somewhat risky experiment. The big snake was not poisonous, but quite capable of inflicting ugly wounds, as a number of my friends had ascertained.

"Does William want the snake?" I inquired.

"Is it a nice snake?" he asked in turn.

"Yes, when it isn't cross," I said; then quickly added, "It isn't cross now. It likes William."

The little lad walked up to it immediately. I hastened to his side, tense, ready to spring forward if necessity required. In an instant the child was fondling the big serpent

WARTS? NONSENSE!

affectionately. I am sure that he could and gladly would have played with it for a long while, but, trembling all over, I bade him lower the serpent into its cage. He never saw it again.

The little fellow's favorite snake is the one shown in the photographs, the "hissing" viper or "blowing adder," as it is sometimes called. It attains a length of thirty inches, is beautifully colored, perfectly harmless, and displays, when approached, a number of unusual and interesting habits. It first tries to frighten the intruder away by producing a loud, hissing sound, effected by widening and flattening the neck region tightly against the ground. Failing in this it rolls over on its neck, becomes limp, and sticking out its tongue, feigns death, opossum like, and permits itself to be handled in any manner desired, if, as is not likely, the intruder is foolish enough to bother with a reptile corpse.

Certainly, not all snakes would permit of such handling. The writer bears on his hands a number of scars that attest the vicious nature of our common water moccasin, a reptile which will not "tame." But the number of native snakes possessing such proclivities is small. The great bulk of them are amenable to kindness, and this article has been written with the hope that some readers, following the lead of the child, may find out for themselves how harmless and how interesting most of these "venomous" and "repulsive" animals are.

THE HISSING VIPER PLAYS DEAD

William at the tender age of two is an interested spectator of the process

THE CHAUTAUQUAN

MERGED WITH THE INDEPENDENT, JUNE 1, 1914

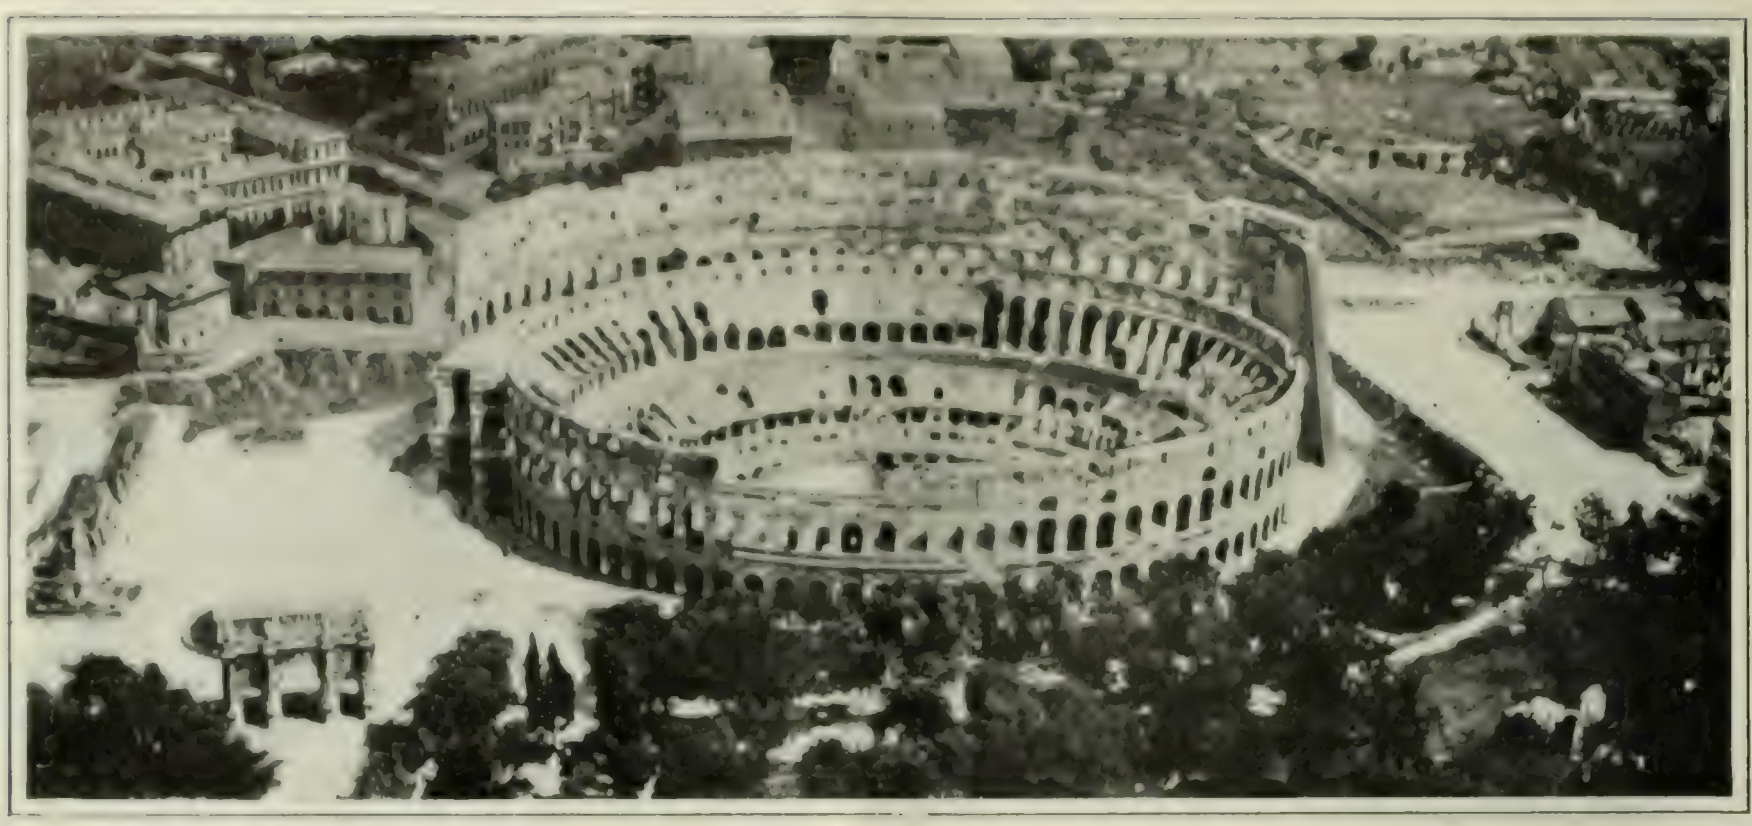
Official Publication of Chautauqua Institution, a System of Popular Education, Founded in 1874, by Lewis Miller and John H. Vincent.

JOHN H. VINCENT - - Chancellor
GEORGE E. VINCENT - - President
ARTHUR E. BESTOR - - - Director

FRANK CHAPIN BRAY - - - - Chautauqua Editor

CHAUTAUQUANS are keenly interested in every extension or adaptation of unconventional methods of education. In Wisconsin the popular lecture system under direction of the extension division of the State University has practically superseded the local or circuit Chautauqua thruout that state. The university offers free lectures for community problems or welfare; educational-inspirational lectures by the faculty of the university, free except lecturer's fee; for educational and entertainment numbers and courses by persons or troupes not belonging to the university staff, the community pays all but overhead expenses. The 209 courses now offered are made up of two-fifths concerts, two-fifths lectures and one-fifth other forms of entertainment. Moving picture service has been installed. About one-fourth of the contributors to the courses are drawn from the university faculty. Educational and artistic merit are thus assured and small communities secure courses formerly not within their reach. For two years the University of Minnesota extension division has been conducting "University Weeks," which are in reality Chautauquas maintained on an educational level. Other western state universities are offering similar service at varying cost to the community served. In New York City the Institute of Arts and Sciences, Columbia University, offered a program of approximately 250 lectures, concerts, readings and recitals, of the Chautauqua type and on the season-fee plan, for the first time last winter. The enrolled members numbered 1248, the large majority of whom lived within a few minutes' walk of the university, along Riverside Drive, Central Park and the upper West Side. The program for a second season is now made up.

Increased attendance at Chautauqua and summer schools elsewhere East and West is reported this season which will break the record of last year, when these schools numbered eighteen per cent over the preceding season, employed twenty-six per cent more teachers and enrolled 27.5 per cent more students. The student total was 181,282, or only eleven per cent less than the number of regular college students reported. Commissioner Claxton, of the United States Bureau of Education, estimates that three-fourths of the attendants are teachers, thus showing their desire to prepare for better work and the popular demand for more efficient teachers. He attributes the large increase to "the growing popularity of these schools, which afford teachers, college students and others opportunity to devote to study time which would otherwise be lost. Not all summer school work is of college grade, but much of it is, and most of it is done with an eagerness and earnestness of purpose and a maturity of mind which much of the college work of the regular sessions does not show."



While Congress has not yet resolved to turn itself into a full-fledged Chautauqua, it is generally conceded that President Wilson, college fashion, has in two seasons placed Congress in the lead as a summer school.

The College of Agriculture of Ohio State University at Columbus will hold a "Country Life Week" August 10-14, for the purpose of giving rural ministers, school principals and teachers, Y. M. C. A. and Y. W. C. A. secretaries, editors, officers of Granges, institute lecturers and all others interested in country life an opportunity for conference and instruction. The three general divisions of the five-day program are: (1) methods of better farming; (2) rural sociology; (3) methods of dealing with rural problems and definite results that have been secured. Townsend Hall will be used for the six sessions a day and all buildings on the campus will be open to visitors.

Circuit Chautauqua business develops a lingo of its own. "Community-building" is the sales slogan of the bureaus with Chautauqua program talent to place this season. A Chautauqua for Old Home or Homecoming Week is an effective variation. In some places they call it Chautauqua Festival, and lecturers, readers, or entertainers are advertised as "platformists."

Pleading at Chautauqua for the establishment of genuine municipal home rule thru the coming state constitutional convention, Mayor John Purroy Mitchel of New York City declared that "Primary and election voting, including registration, should be conducted in public school houses or on public property available. Elections should be taken out of the barber shop and the livery stable and surrounded with safeguards which make the exercize of the franchise a solemn and impressive civic act. School houses, or other public assembly halls, should be available for free public discussion of civic questions."

At least nine states past laws during the past year recognizing explicitly the principle of wider use of school plants for social, intellectual or recreational purposes. Both New York and New Jersey laws permit school property to be used: (1) By persons assembling to give or receive instruction in any branch of education, learning or the arts; (2) for public library purposes or stations; (3) for holding social, civic and recreational meetings and entertainments, and other uses pertaining to the welfare of the community; (4) similar gatherings at which admission is charged but proceeds devoted to educational or charitable purposes; (5) for polling places for holding primaries and elections, for the registration of voters, and for holding political meetings. In Idaho the law permits use "for community purposes"; in Massachusetts "educational, recreational, social, civic, philanthropic and similar purposes" are specified; in Indiana school house meetings must be nonpartizan. Kansas laws include religious, political, literary, scientific, mechanical or agricultural societies, night schools, societies for the suppression of crime, and improvement associations. California law comprehensively provides for "free use of all public school houses and property for the establishment of a civic center at each and every public school house in the state, and the maintenance, conduct and management of the same." Use as polling places for both men and women voters is common on the Pacific Coast. Wider use for Chautauqua Circle meetings is now practicable.

THE COLOSSEUM—"TYPE OF THE ANTIQUE ROME"—PHOTOGRAPHED FROM A DIRIGIBLE

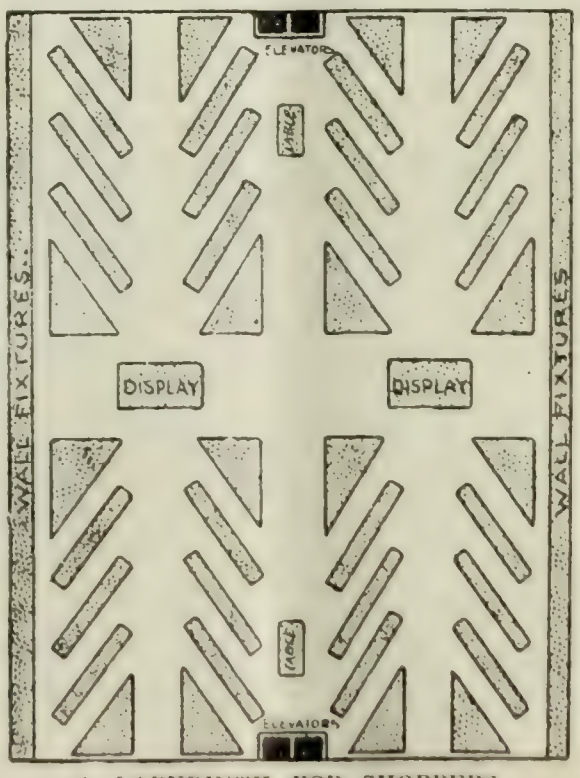
Pompeii has been photographed from an airship—we printed the picture on March 23, 1914—the ancient theater of Bacchus at Rome is the scene of daily orchestral concerts, and now comes this photograph with its ultra-modern rendering of another Roman landmark

Photograph by Paul Thompson

IF ITALY AND SWITZERLAND SHOULD FIGHT

BOTH Italy and Switzerland have adopted measures to fortify the entrances of the famous Simplon tunnel.

Near the middle of the tunnel, a few yards from the Swiss frontier, Italian engineers have put in place a double iron door that can resist the rush of an express train proceeding at the rate of sixty miles an hour. This iron door is worked by electricity from Iselle, the station at the Italian end of the tunnel, and under ordinary conditions it is hidden in the rocky side of the tunnel. The door is carefully tested once a week.



The mines are connected with Brigue and Iselle by electrical devices, so that by the mere pressure of a button the Simplon tunnel could be destroyed in a second.

PAVING STREETS WITH RUBBER

ENTER the noiseless city! At last the tired nerves of city dwellers are to be relieved of the incessant din and clatter of city streets, which, according to our nerve specialists, are partially responsible for the increasing insanity rate of our cities. Rubber is to replace brick, stone and asphalt as the paving of future cities, according to the prediction of Sir Henry Blake in opening the Fourth International Rubber Exhibition in London. Advances in the production and manufacture of the product during the past three years have been so great as to bring within the realm of reality this Utopian suggestion.

At the London exhibition everything possible was made of rubber. One entire room was completely furnished in rubber. The walls were covered with it, skilfully disguised as wall paper, the pictures were mounted in rubber frames; even the carpets were of the same all-conquering material. Tables, chairs, blotters, inkstands, paper weights, letter racks, penholders, were of rubber, while the electric light fixtures were of vulcanite. Dainty curtains hung at the windows; even these were of rubber hung on rubber rings, suspended on a rubber pole!

Outside the hall where the exhibition was held was a tennis court made of rubber, for which is claimed the most perfect results yet attainable for the game. Its resilience gives the balls the rebound of billiard cushions. After witnessing an exhibition match on the court the rubber growers and manufacturers attending were invited to a luncheon, where again everything but the food—even to the menu cards—was of rubber.

A LABYRINTH FOR SHOPPERS

MAKING DRY GOODS IRRESISTIBLE

"THREE aisles over and turn to your left." The familiar phrase on the lips of a nonchalant floorwalker or department superintendent is bad salesmanship. The shopper, according to sales-psychologists, has an ingrained objection to turning right angles and stepping aside from a broad straight aisle lined as far as the eye can see with tempting tidbits of merchandise at such *ridiculously* low prices, my dear. Only the shopper with a definite aim in view will take the abrupt turn or apply to the floorwalker.

But that sort of shopper does not often occur in the feminine gender. It is to take advantage of the fact that a woman can be lured into purchasing many things that she does not definitely come after that a plan has been worked out to do away with right angles and to make "every aisle a main aisle." As described in the New York *Times*, such an arrangement as that shown in the diagram is designed to lead the shopper gently and almost unconsciously back and forth in a sort of herringbone course past miles of counters and tables till she finally brings up at the wall counters, buying all the way. Only by the exercize of the most rigid determination can the elevators be reached. "Obviously," says the designer, Sidney J. Rockwell, "this is not a store laid out for men."

THE NEW BOOKS

ANCIENT ROME AND MODERN AMERICA

DR. FERRERO finds that modern America bears on the whole a greater likeness to ancient Rome than does modern Europe. The power of the judiciary, the absence of a permanent bureauocracy for executive purposes and the Latin American dictatorship are all institutions which the author finds peculiar to American political systems and those of the ancient world. Many of our social customs also, such as the practise of benevolence on an enormous scale by private individuals, recall the times of Pericles and Agrippa. Dr. Ferrero does not hesitate to record his somewhat startling conclusion: "It seems to me that you might well invite many European professors to come and go thru a finishing course in America, studying not only in libraries but in the live world, and observing what happens in American society. Nobody is in a better position than you are to understand ancient society." One might almost imagine that the spirit of the Roman Empire had leapt the centuries like a high-tension spark to reach twentieth-century America.

It is only fair, however, to say that Ferrero, while boldly dogmatic at times, does not belong to that school of historians who spend their time trying to make history repeat itself and so save themselves the labor of discerning permanent changes. On the contrary, he emphasizes the gulf between the classical civilization and our own. Modern wealth and luxury, he contends, are on a scale so vast that nothing in history can even be remotely compared with them. It is certain that the entire budget of the Roman Empire at its greatest extent was less than the municipal budget of New York City today. While absolute poverty may be rarer, the relative economic gulf between rich and poor has increased beyond historic precedent. All the peril that the parasitic metropolis was to the agricultural life of ancient Rome is reproduced manyfold today, and if our own civilization has not succumbed as did the Roman it is because of the comparative greatness of our resources. The gospel of mere size and growth has crost the Atlantic and threatens to submerge what is left there of the old cultural ideal. "In the lap of modern civilization, there are twin worlds struggling with each other for leadership. But these two worlds are not, as people are apt to think, Europe and America. Their names are Quality and Quantity." But altho we are more luxurious than the ancients and more prone to measuring all things by a dollar standard, we have gained values as well as lost them. The people of today, we are informed, are more humane than in the past and much more courageous. Ferrero never fails to end an essay on an optimistic note.

One of the most interesting sections of the book relates a series of Roman state trials, the cases of Verres, Clodius and Piso, in each of which politics played a part as important as in the Dreyfus case. The technicalities of law are ordinarily regarded as dry reading, but these are told in such a manner that they are not only interesting but thrilling. Perhaps it is not the least of parallels between ancient Rome and modern America that Ferrero has succeeded in doing for the former what Professor Beard has done for the latter, to make constitutional law read like a romance without forcing the reader to suspect that it *is* one.

Ancient Rome and Modern America; a Comparative Study of Morals and Manners, by Guglielmo Ferrero. New York: G. P. Putnam's Sons. $2.50

THE CASE AGAINST THE PRISONS

That the elaborate machinery for the suppression of crime and the punishment of criminals is fundamentally wrong those who have given any real thought or study to the subject have long realized, but the case is again demonstrated by Tighe Hopkins in *Wards of the State* thru an exhaustive accumulation of specific instances of failure accompanied by supporting statistics. Mr. Hopkins' survey is primarily of conditions at the present time in his own country—England—but he gives some historical review and he touches upon the worst and the best examples thruout the world and as one knowing anything of our heterogeneous conditions would expect, he finds in America both the most medieval and the most enlightened examples of legal procedure and prison management. No stronger arraignment of the old penology of vengeance, still unhappily dominant, or stronger endorsement of the new penology of brotherhood could be presented than in Mr. Hopkins' 334 pages of incontrovertible facts.

Wards of the State, by Tighe Hopkins. Little, Brown & Co. $2

DRAMATIZING A CITY'S PAST

Last spring St. Louis gave a pageant and a masque in celebration of the one hundred and fiftieth anniversary of the founding of the city. Percy Mackaye, as chief upholder of the civic theater idea, was chosen to write a civic masque. The present volume, *Saint Louis; a Civic Masque*, is the result. Accompanied by ample preface, notes and appendices, the masque is an elaborate treatment of American growth from prehistoric times and thru the pioneer days. An interesting picture in legitimate spectacle is the use of the aeroplane for the first time as a stage accessory.

Doubleday Page. $1.

STUDIES IN PESSIMISM

In spite of the name, which suggests life, *Modernities*, by Horace B. Samuel, is a morgue of dead souls. These "modern" spirits are: Stendhal, Heine, Disraeli, Nietzsche, Strindberg, Marie Corelli (what is she doing in that *galère?*), Wedekind, Schnitzler, Verhaeren and the Futurists. Their theories madly circle in a *danse macabre* to the thin but apparently approving pipe of the critic. The matter-of-fact, almost cheerful air with which the author acts as showman is like that of the morgue cicerone in the grewsome presence of a daily tragedy—become a commonplace to him because of its accustomedness.

Dutton. $2.50.

THE GALLERIES OF EUROPE

Two more volumes of Prof. John C. Van Dyke's admirable series of guide books to the galleries of Europe have appeared. These volumes deal with the Imperial Gallery at *Vienna*, the Fine Arts Museum at *Budapest* and the Prado at *Madrid*, the latter published separately. The books are an invaluable reference to the "old masters" and aim to be of service to the traveling public as well as the art student.

Scribner's. $1 and 75 cents.

REDUCING BUSINESS TO A SCIENCE

A fourth and revised edition of *Science of Organization and Business Development*, by Robert J. Frank, a member of the Chicago bar, has just made its appearance. As a well-written treatise of the practical questions involved in the organization, reorganization and financing of business enterprises, the book is valuable not only to the corporation attorney, but to all interested in corporation management.

Laird & Lee. $2.75.

WHEN LIVING SEEMS FUTILE

The utter wretchedness, brutality and suffering of life stripped of all but animal strength and the struggle for mere existence are mercilessly laid bare in Patrick Maggill's autobiography of an Irish navvy, *Children of the Dead End*. In its terrible pictures the book slips over the border line of effect and gives rather more than one can grasp.

Dutton. $1.35.

SCHOOLS

CONNECTICUT

THE ELY SCHOOL

For girls. In the country. One hour from New York City.

THE CONNECTICUT AGRICULTURAL COLLEGE

Four-year Course in **Agriculture** for graduates of high schools. Degree B.S.

Four-year Course in **Home Economics** open to graduates of high schools.

Two-year **School of Agriculture** open to those who have had a common school education.

Two-year **School of Mechanic Arts** open to those who have completed two years of high school work.

Two-year **School of Home Economics** open to those who have had a common school education.

Send for catalog. C. L. Beach, Pres. Box H, Storrs, Conn.

THE GUNNERY SCHOOL

WASHINGTON, CONNECTICUT.

A School in the country for sixty boys. New Gymnasium. Illustrated circular. Address JOHN C. BRINSMADE, Head Master.

A HOME SCHOOL

Delightful country home school for limited number of young ladies. Personal, individual attention. Terms reasonable. Address Miss RUTH B. SMITH, WOODBURY, Litchfield Co., Conn.

FLORIDA

WHY IMPERIL HEALTH of boys and girls by confinement in stuffy and superheated school rooms, and exposure to severe weather, when at

ROLLINS

Florida's Oldest College **At Winter Park**

they can live out of doors, and have best instruction and care, at less cost than at home? College, Academy, Music, Expression, Art, Business—tennis, golf, boating, gymnasium, athletics. Pres. W. F. BLACKMAN, Ph.D., LL.D. (Oberlin, Yale, Cornell, Berlin). Refer to **Hamilton Holt, Trustee.**

ILLINOIS

Kindergarten Collegiate Institute

Organized in 1881 as Chicago Free Kindergarten Association. Two years' regular course. Credit allowed for work in special courses. Unexcelled instructors. University credits. Address EVA B. WHITMORE, Fine Arts Bldg., 410 S. Michigan Ave., Department 306.

MASSACHUSETTS

Abbot Academy

A School for Girls. Founded 1828. 23 miles from Boston. General course with Household Science. College Preparation. Address Miss Bertha Bailey, Principal, Andover, Mass.

POSSE NORMAL SCHOOL OF GYMNASTICS

BACK BAY, BOSTON, MASS.

Twenty-sixth year begins Wednesday, October 1, 1914. New gymnasium with entirely new equipment and latest modern improvements. Send to Secretary for catalogue. 779 Beacon St.

School for Social Workers

Maintained by Simmons College and Harvard University

ELEVENTH YEAR, 1914-15 18 Somerset St., Boston, Mass.

For study and training in social service; to men and women; for paid or volunteer work.

FIRST YEAR PROGRAMME begins September 23.—A desirable preparation for any form of social service. SECOND YEAR PROGRAMME begins September 9.—For further study and training in a selected field. Boston offers exceptional opportunities for practice work. Send for the 1914 Bulletin, and the circulars describing advanced courses offered—Organizing Charity, Children's Work, Medical-Social Service, Neighborhood and Community Work.

JEFFREY R. BRACKETT, Director ZILPHA D. SMITH, Associate

THE BROOKFIELD SCHOOL

A New Open-air School for a Small Family of Girls

DIRECTORS: Miss Helen Fairman Cooke, A.B., Wellesley
Miss Marion F. E. Cooke, A.B., Wellesley

School Year—September 24, 1914—June 17, 1915

AIM

To develop a sound mind and heart in a sound body.
To make the girl capable, alert and womanly.
To make her thorough.
To make her reliable and resourceful.
To make her likable.
To teach her to think and act with intelligence.
To teach her how to study.
To teach her how to use her mother tongue.
To help her to find herself, and therefore.
To make her happy and useful.

EQUIPMENT

Colonial house — atmosphere of simplicity — open-air sleeping and dining porches—open-air school-room—unstinted sunshine—a garden for every girl—space for play—woods and fields—experienced, understanding, motherly teachers.

METHODS

Individual and class instruction—close supervision of work—careful study of each girl's nature—work made a joy—power of concentration developed—intimate association with teachers—sports made a means of education—teaching by example rather than precept.

COURSE OF STUDY

An enriched high school course—general, special and college preparatory—modern languages a part of daily life—Domestic Arts—Music—Gymnastics—foundations laid for culture—no evening study.

PLAY

Tennis — basket-ball — tramping — coasting — skating — snow-shoeing — Dancing — singing — games — story-telling — play-acting.

References given and required.

Address MISS HELEN FAIRMAN COOKE

The Brookfield School **North Brookfield, Mass.**

FORWARD-LOOKING WOMEN

The House of Lords has broken an ancient precedent in allowing selected women to listen to the debates.

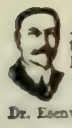
The Washington State Minimum Wage Commission has fixed a minimum wage of $9 a week for telephone girls.

Fifty thousand dollars will be needed for the seven campaign states in November and the suffrage leaders pin their faith on the proceeds of a Sacrifice Day—announced for August 15.

The stirrings of revolution have touched the Turkish woman, and one result of her awakening and education is a newspaper in Constantinople—the *Kadular Dinyossi*, or Woman's World—run entirely by women.

The formation of a state suffrage league of five city groups, in South Carolina, and of a society of 225 members in the city of Columbia, in face of the spirited opposition characteristic of the South, is a notable advance.

The Washington Woman Suffrage Council, an auxiliary to the Congressional Committee of the N. A. W. S. A., is planning a speakers' bureau, listing and classifying speakers on suffrage for the benefit of suffrage organizations.



Three cities have offered their hospitality to the National Suffrage Convention which is to meet at Tennessee. Last year one single family assumed practically the whole responsibility for the entertainment and expense of the convention.

A traveling stereopticon show is the latest tool of the New York City suffragists and the public are enlightened, solely by night, by cartoons, speeches and pictures of conditions—and parades—thrown on a large screen carried on a motor truck.

A new suffrage moving picture play is in demand to replace the old one, worn out by good service, starring Dr. Anna Howard Shaw and Jane Addams. Tho well-known writers have been invited to compete, amateurs may try for the $50 prize offered by the New York State Woman Suffrage Association.

Pioneer days are not entirely over, at least for women. Mrs. Belle Van Dorn Herbert, president of the International Congress of Farm Women, is the first woman to be decorated with the cross of the Order of Agriculture of Belgium. The Paris Sorbonne has for the first time conferred upon a woman, Mlle. Jeanne Duportal, the degree of Doctor of Literature.

A national exposition at Christiania (open to September 30), celebrating Norway's adoption of a constitution, has an interesting exhibit of the progress of women. Since 1913 all women in Norway have had parliamentary suffrage and can now serve as judges, superior magistrates, sheriffs and district physicians, hold all state offices of public instruction, jurisprudence, etc. Woman's work in legislation has been welcomed.

SHORT-STORY WRITING
A course of forty lessons in the history, form structure, and writing of the Short Story taught by Dr. J. Berg Esenwein, Editor Lippincott's Magazine.
250-page catalogue free. Please address

PEBBLES

The mosquito misses a good deal by not being admitted to the ballroom.—*Montgomery Advertiser.*

Picking chicken bones with your teeth and eating roasting ears off the cob may not be in keeping with propriety and table etiquette, but it is "the taste that lasts."—*Foard County News.*

"What is that man doing, up in the tree, while the woman throws stones at him?" we asked of a citizen of England.

"That is a persecuted woman and he is one of her persecutors."—*Denver News.*

"Pedro! You're two hours late for dinner."

"Yes, Chiquita! But the revolution today wasn't called till 3:30, and the score was 0 to 0 up to the eleventh battle, and I just had to stay and see who won."—*Life.*

"First the Mona Lisa was swiped," remarked Mr. Wombat, "and then the Rokeby Venus was slashed."

"What of it?" inquired Mr. Wampus.

"I deplore these episodes, but thru them us common people are getting an art education."—*Louisville Courier-Journal.*

My name is Arthur Noble. I have always been called "Art." In 1913 I married a college girl. She attended her class reunion not long ago and was required to make a report of progress. This was the way she did so:

"In 1913 I took the Noble prize in Art."—*W. G. Bowdoin.*

"Oh, George, before you get your razor I must tell you that I—I borrowed it yesterday."

"What, again!"

"Y-yes. I had to do some ripping. But it's just as good as ever. You'll never notice the difference. I sharpened it on the stovepipe."—*Cleveland Plain Dealer.*

The old gentleman's wife was getting into a carriage, and he neglected to assist her.

"You are not so gallant, John, as when I was a gal," she exclaimed, in gentle rebuke.

"No," was his ready response, "and you are not so buoyant as when I was a boy!"—*Tid-Bits.*

English Clergyman—And when you arrive in London, my dear lady, don't fail to see St. Paul's and Westminster Abbey.

Fair American—You bet; I'll rattle those off, sure; but what I've been hankering to see, ever since I was knee-high to a grasshopper, is the Church of England.—*London Times.*

Berlioz used to tell a story about a young woman in a music store. "But, mademoiselle," suggested the clerk, "will not this piece in five sharps perhaps be rather difficult?" "Pooh!" she replied disdainfully. "That is all one to me. Whenever I find more than two sharps or flats I scratch them out with my penknife."—*Musical Courier.*

GERMANY

An opportunity for two or three boys or girls to learn the German language in a German home where they can receive the best of care. Town of 20,000 inhabitants, near the beautiful Bavarian Alps and famous castles. Correspondence with parents solicited. Address J. A. Heberle, Kempton, Burgstr. 35, Bavaria, Germany.

SCHOOL AGENCY

An Irish girl called at Mrs. Green's to get the place as cook.

"Are you a plain cook?" inquired Mrs. Green.

"Well, Mum," replied the girl, "yez may t'ink so, but Officer Mulligan war afther tellin' me thot me eyes wor loike th' Lakes av Killarney."—*Ladies' Home Journal.*

Atlantic Mutual Insurance Co.

Atlantic Building 51 Wall St New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was promoted by a strong company of a similar name. The latter company was liquidated and paid in its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and issued with a bonus and interest at the expiration of two years

During its existence the company has insured property to the value of	$27,219,045,826.00
Received premiums thereon to the extent of	282,298,429.80
Paid losses during that period	141,567,550.50
Issued certificates of profits to dealers	89,740,400.00
Of which there have been redeemed	82,497,340.00
Leaving outstanding at present time	7,243,060.00
Interest paid on certificates amounts to	22,585,640.25
On December 31 1913, the assets of the company amounted to	13,259,024.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

AN UNPARALLELED OPPORTUNITY FOR THE WALLPAPER TRADE—One million rolls of Superlative Wallpaper to be disposed of in the greatest wallpaper auction sale ever held in this country. The Robert Griffin Wallpaper Company, whose name is a synonym and a guarantee for the finest products of the wallpaper-maker's art, both as to texture and design, desire to dispose of the surplus stock stored in their former warehouse at Eleventh avenue and Thirty-sixth street, New York City, so as to permit them to carry only fresh stock in their new quarters in Jersey City. The stock to be sold consists of the regular stock on hand, a remarkably extensive and beautiful selection of papers in perfect condition. A few of the special designs are as follows: Japanese leathers and grasscloths, special 30-inch sanitary washable blends, including aerochromes, grasscloth effects, etc.; hand-printed cut-out borders and binders, oatmeals, imported English cretonne material, and a general line of their exclusive novelty cut-out treatments of friezes and wallpapers. The property will be sold by Chas. Shongood, Auctioneer, on **Wednesday, August 12, 1914,** at 10.30 a. m., at the Robert Griffin Wallpaper Warehouse, 437 Eleventh avenue, near Thirty-sixth street, New York City. The trade, both city and out of town, is cordially invited to attend. Goods will be sold absolutely without reserve, and will be ready for delivery immediately after the sale.

A Million Dollars a Year

THERE is a man in northern Michigan who makes personal sales of one million dollars a year, all to people of small incomes.

In New England there is a small town merchant who bought a bankrupt store for $200, and in a few years turned it into a business with $100,000 annual sales.

In Illinois there is a man who started at the bottom of a big corporation less than twenty years ago, and now, at the age of 38, has reached the top.

Would you like to know how these men succeeded? Would you like to know their inside methods, their vital, business-building plans?

We have just printed a book, which we will send you free on request, that will show you how you can learn the methods of these men and adapt them to your own business. This book leads the way to bigger business, more profits and a larger income. Write for it today. Simply say on a postal "*Send me your Free book.*" Address

THE MARKET PLACE

WAR AND THE STOCK MARKET

The New York Stock Exchange was closed on Friday morning, the 31st, for the first time in forty years. But it was the last of the great exchanges to suspend business. For several days it had really been the world's only open market for securities. Under the pressure of European liquidation, prices here had suffered a severe decline. In the four business days of the week, the transactions amounted to 3,639,985 shares, against only 1,389,415 in the six days of the preceding week. On Thursday more than 1,300,000 shares were sold, and the orders on hand Friday morning pointed to even a larger number in the business of that day. As we have said, prices had been falling. The net losses of the four days ranged from 6 to 22 points. The following declines are examples: Canadian Pacific, 21⅞; Reading, 19; Steel, 8; Union Pacific, 11⅝; Rubber, 10⅜; General Motor, 20½; Consolidated Gas, 10¾.

This was the only market in which panic-stricken Europeans and others who sought gold for defense against the contingencies of a general war, could sell. Other exchanges were either actually closed or made inaccessible by requirements designed to prevent selling. The world was selling in New York, and Americans were the only buyers. Of course, prices could not be sustained, and there was danger of a disastrous collapse here if the New York Exchange should continue to take all the foreign offerings. Moreover, the situation was so tempting to speculators here that they promoted the decline by additional sales. The decision that the Exchange must be closed was wisely made.

Already there was a remarkable record. The strength of our market, and the soundness of financial conditions here had been clearly shown. We had been taking the shares of European sellers in great numbers, and giving up our gold to be exported, without any sign of weakness in our money market or the slightest indication of a demoralization of credit. But there would have been a limit to such an exhibition of strength. We could not continue for many days to take all that frightened Europe might offer, without seeing such a decline of purely domestic securities as would cause disturbance at home. Probably the outward movement of gold will now be checked. Gold will no longer be paid for securities sold by European holders, and the shipment of it is discouraged by remarkably high insurance rates. We could safely spare the gold that has already been exported. There are no indications of such conditions here as would call for emergency issues of currency. But if such currency should be needed, $500,000,000 of the bills are lying in the Treasury, ready to be used, and Congress, last week, so amended the Aldrich-Vreeland currency act that the bills can easily be obtained by the banks.

While the United States cannot expect to avoid altogether the disadvantages and injurious effect of such a war as appears to be at hand—a war involving great destruction of life and property, with a paralysis of production thruout a broad area—yet the country is in a position to gain something from so deplorable a controversy. Its foodstuffs will be needed in Europe, and we have an abundant supply. There will also, in all probability, be an increased demand for certain classes of its manufactures. The addition to the price of our wheat already amounts to $90,000,000 for the entire crop. But this is not an unmixt blessing, for the higher price must be paid by American consumers as well as by foreign buyers. It may be expected that, on the whole, our export will be stimulated and will become more profitable. But while there may be some gains in trade, there are associated with such a conflict losses and disadvantages which must affect even an isolated and neutral nation, like our own.

EFFECT UPON COMMODITIES

We have at least 250,000,000 bushels of wheat which are not needed for consumption at home, or for seed. About 75,000,000 bushels have already been taken for export, but shipments are now prevented or delayed by war conditions. Europe needs this surplus. Two or three weeks ago it was estimated by competent persons that the entire wheat crop of the world was less than last year's by 3½ per cent. In the total was included, of course, the extraordinary crop of the United States. A later estimate shows that, if the United States be excluded, the world's wheat shortage is 400,000,000 bushels. War in Europe tends to prevent the shipment of wheat from the surplus European countries to those which need imports—for example, from Russia to France. The war has already so increased the price of American wheat that, in some eastern cities, a dollar has been added to the price of a barrel of flour. But exportation has been checked. The ships are not available, or, if they can carry wheat, the insurance rates are too high. There may be new legislation at Washington to enable these ships to come under the American flag. For some time to come, the wheat taken for export will be piled up at our ports of departure.

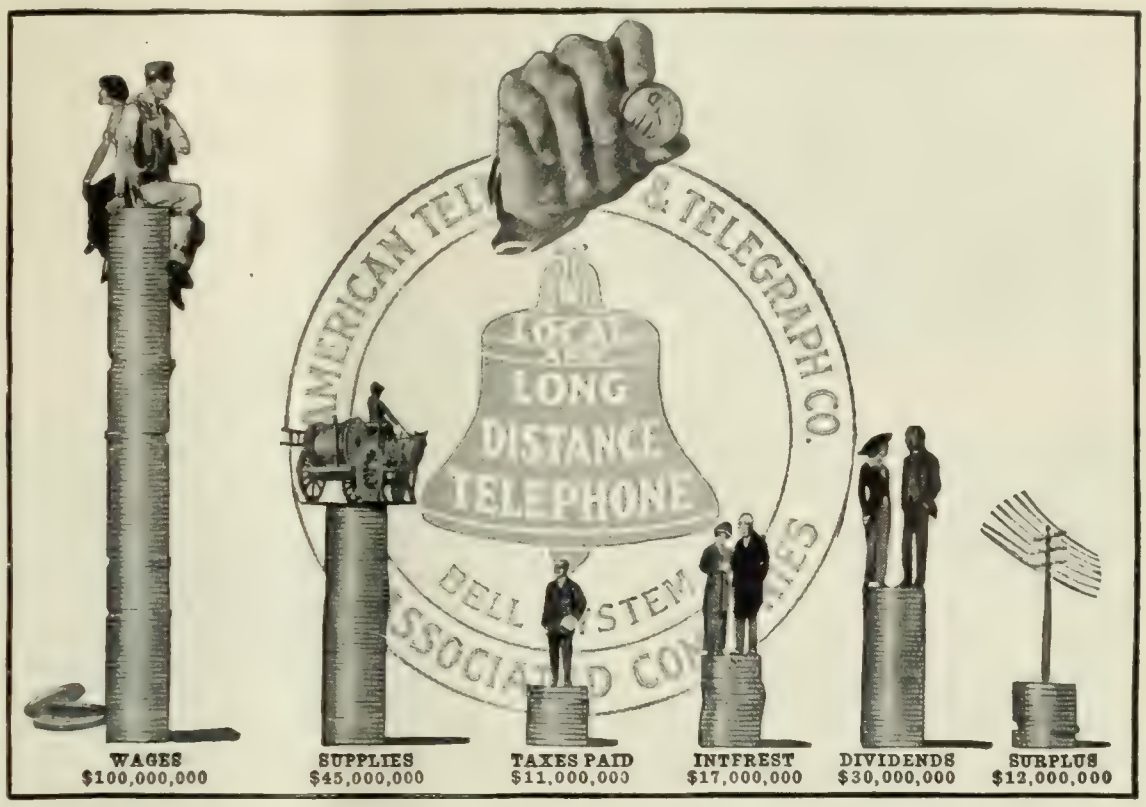
While the price of wheat has been rising, the price of cotton has suffered a great decline, having fallen about twenty per cent last week. Some of the foreign mills are on short time. Their

owners hesitate about buying. High insurance rates, due to the war, interfere with exportation. In the case of cotton, it is not an occasional large surplus that is to be considered, for nearly two-thirds of every crop is sold abroad. In the steel trade a slight increase of prices was recently made. The war will give support to that increase.

THE FEDERAL RESERVE BOARD

"In deference to the President's urgent request," said Mr. Paul M. Warburg in a telegram to the Senate Committee on Banking and Currency, "and in view of the present urgency which renders desirable the promptest possible organization of the Federal Reserve Board, I have decided to waive all personal considerations and am prepared to appear before the committee." He was questioned by members of the committee for four hours. It is now predicted that there will be a favorable report, and that the nomination will be confirmed.

The situation in Europe calls for a speedy completion of the Reserve Board in order that the new law may be carried into effect. Mr. Warburg may be regarded as an expert with respect to international exchange, and present conditions cause a demand for expert knowledge of that subject in the body that is to preside over the new currency system. We hope the nomination will be confirmed without delay.



UNFORTUNATE DELAY

The first comment suggested to a very large majority of those who read the Interstate Commerce Commission's decision in the rate case will be, we think, that the long delay was inexcusable and extremely unfortunate. To the roads in a part of the territory concerned an increase that will yield from $10,000,000 to $15,000,000 is granted. While certain changes are advised which the companies will find it difficult to make, the way is opened for a reasonable readjustment which might add to the gross revenue even the entire amount originally sought. The tone of the decision is unexpectedly favorable. It is not characterized by the severity which the hearings at times seemed to foreshadow.

We venture to disagree with the majority of the commission as to the weight of evidence relating to the needs of the trunk lines, and no one familiar with public sentiment and human nature can expect that state authorities will permit the increase of passenger rates for which the commission sees justification; but the decision is by no means hostile, and the publication of it some time ago would have exerted a favorable influence upon business.

The delay has caused much industrial disturbance and loss. There has been a direct effect to the disadvantage of business, and an unfortunate indirect or sentimental effect. The commission should explain why it waited so long.

The following dividend is announced: [illegible] & Myers Tobacco Company, common quarterly 2 per cent payable September 1

How the Bell System Spends its Money

Every subscriber's telephone represents an actual investment averaging $153, and the gross average revenue is $41.75. The total revenue is distributed as follows:

Employes—$100,000,000

Nearly half the total—$100,000,000—paid in wages to more than one hundred thousand employes engaged in giving to the public the best and the cheapest telephone service in the world.

For Supplies—$45,000,000

Paid to merchants, supply dealers and others for materials and apparatus, and for rent, light, heat, traveling, etc.

Tax Collector—$11,000,000

Taxes of more than $11,000,000 are paid to the Federal, state and local authorities. The people derive the benefit in better highways, schools and the like.

Bondholders—$17,000,000

Paid in interest to thousands of men and women, savings banks, insurance companies and other institutions owning bonds and notes.

Stockholders—$30,000,000

70,000 stockholders, about half of whom are women, receive $30,000,000.

(These payments to stockholders and bondholders who have put their savings into the telephone business represent 6.05% on the investment.

Surplus—$12,000,000

This is invested in telephone plant and equipment, to furnish and keep telephone service always up to the Bell standard.

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

THE HUMAN TOUCH

Specialization in business has tended to sever personal relations between producer and consumer and, as a consequence, to dull human sympathies, observed Mr. Robert Lynn Cox, counsel and general manager of the Association of Life Insurance Presidents in a recent address to the members of the Life Underwriters' Association at their annual meeting in Halifax, Nova Scotia. The worker, he asserted, has become more efficient and less human. Commenting on the difficulties which business, especially that portion of it popularly denominated "big business," has encountered in this country of late years. Mr. Cox thinks he sees in the segregation of classes which specialization imposes, one of the contributing causes of the discontent felt among the people. He cites one branch of trade, that of candling eggs, by way of illustration. "Just think of it," he said, "with farms to cultivate, factories to operate, railroad trains to run, stores to keep, etc., enough people to form a trades union can be found sitting day in and day out sorting and classifying eggs for other people to eat, which still others have produced. It strikes me that specialization of this sort, which has been carried into every branch of trade, is one of the causes of the selfish disregard for the interests of others which came to be a marked characteristic of the modern business conditions. There is and can be no personal relation between the egg-candler and the thousands who are dependent upon him for the quality of this important part of their food supply. He does not know, nor can he care for them or their interests, while they are even unaware that such a service has been rendered for them by any one. The man on whom society is dependent for a good and satisfactory product has no acquaintance or direct relation with the people consuming his product."

The force of this observation lies in the fact that the social element, carrying its consequent feeling of personal responsibility, is destroyed by the arrangement. The worker has become a cog in a big wheel, and the service he performs is purely mechanical and perfunctory. As Mr. Cox justly observes, "it is thru business mainly that men are brought into relation with each other and that the pleasures and recreation of life are but the by-products of business activities."

While life insurance cannot be classed as big business, in the sense that term has now acquired, it is as we know, one of the most extensive in point of volume, and it has received its share of the castigation which the reformative spirit of the age has meted out to numerous corporate activities and systems; but it has not suffered so long nor so much as have many other interests. It is really stronger and more popular than before. Mr. Cox thinks this is because the business has never been dehumanized and we believe there is force in the contention. The representatives of the companies are in constant association with the people, somewhat too persistently so for the comfort and repose of the latter; the appeal they make is addrest almost wholly to the sentiments, and the service they offer is closely related to the dearest of human interests—a man's "own," as St. Paul says.

As we see it, life insurance in all its aspects is widening its service in the cause of humanity. It no longer specializes, as once it did, in the payment of a sum of money at death. It has become in one sense a savings bank; in another a money-lending agency. It provides securities that do not fluctuate in price. The legacies it furnishes to hundreds of thousands of families are paid at one hundred per cent of their face, without the costs of administrators and free of all inheritance taxes. It is employing the sciences in relieving the sufferings of its followers; improving the environments in which they live; in keeping them healthy; and in relieving them of the burden of premium payments when they are sick or disabled. And so it goes year after year. Organized on a strictly commercial basis, it has become the most humane institution in the world, a machine, if you will, but one which thrills with human sympathy.

COMPENSATION RULINGS

Casualty underwriters are complaining of the drastic rulings made on several subjects of late by the New York Workmen's Compensation Commission and the opinion is exprest that the attitude of the Commission, as thus exprest, may eventually result in litigation that may endanger the validity of the law itself. The claim is made by counsel for the casualty companies that the Commission has developed a disposition to exceed its authority, citing as an example the recent demand that stock companies deposit $10,000 and the mutuals $5000 with the Commission as funds out of which claims are to be paid. The injustice of this is emphasized by the fact that some of the companies have written several millions in premiums while others have received only a few thousands. If the ratio of loss proves to be about fifty per cent of the premium, the company which has taken $3,000,000 in premiums would have a monthly loss account of $125,000 to settle, while the one writing at the rate of $10,000 in premiums a year would have less than $500 a month loss liability. In the first case, the $10,000 deposit demanded by the Commission

is absurdly low, and in the second case, absurdly high.

We are, in this matter, getting an example of the insurance business as it would be run by the state, which is to say, business management by politicians.

A company manager discussing the subject asks: What authority in law has the Commission for demanding such a deposit? What provision is made for interest on it? In what form will the Commission receipt for the deposit, and will it be recognized at the Insurance Department as an asset? What guarantees against loss of the deposit will be given the companies? Who will be the custodian of the fund?

Touching the validity of the workmen's compensation law, this writer is not so sure that it would stand examination by the Supreme Court of the United States. This opinion is ventured with trepidation and modesty, but none the less sincerely. It will be remembered that the Constitution of New York was amended for the purpose of making the compensation law compulsory, but it is presumed that such an amendment must square with the principles enunciated in the Federal Constitution; and we don't think it does.

New laws and amendments to old ones past by the Louisiana Legislature which recently adjourned will result in an increase in insurance taxation of about 1½ per cent.

Herbert C. Cox, president of the Imperial Life Assurance Company of Canada, succeeds his brother, the late E. W. Cox, as president of the Canada Life Assurance Company of Toronto.

The Insurance Commissioner of Kansas is gathering statistics preparatory to issuing a new order reducing fire insurance rates in that state. The Supreme Court of the state recently invalidated a previous order issued by the present incumbent's predecessor.

In a special report made by the State Fire Insurance Commission of Texas, covering 40,000 fires occurring since December 10, 1910, we learn that of 18,386 fires in dwelling houses, apartment houses, boarding houses and outhouses 86.4 per cent were preventable; and that of 21,614 fires in mercantile buildings, factories, special hazards, etc., 74.4 per cent were preventable.

This department of The Independent will furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them may seem to be inconsistent with the fundamental principles of sound underwriting. Address all communications on insurance subjects to the editor of the Insurance Department.

INFORMATION!

The Independent invites inquiries from its readers, and will gladly answer all questions pertaining to Travel for pleasure, health or business; the best hotels, large and small; the best routes to reach them, and the cost; trips by land and sea; tours domestic and foreign. To the readers of THE INDEPENDENT who send in either of the Coupons below promptly, we will send one or two of the miniature bisque statuettes shown above, absolutely FREE, all charges prepaid, on the conditions named in the Coupons. Read both Coupons carefully.

IF you are a lover of beauty, and the effort to create beautiful, simple, meaningful things—if you are trying to make your home a bower of restful beauty, a home for a soul and a mind as well as a body—if you are in the throes of building or redecorating or furnishing, and will not spurn the fruit of others' experience—if you are deeply concerned in the education of some boy or girl—if you believe earnestly in beauty through usefulness, growth through work . . .

then THE CRAFTSMAN is *your* magazine, made for you and your kind, *built up* to your intelligence, and your way of thinking, your aspirations—and the more you read THE CRAFTSMAN, and the more like you we can get for our readers and subscribers, the stronger we shall grow and the more empowered to do better and better the work you want us to do—the work no other magazine is doing—recording and furthering the best thought and aspirations of democratic-minded, home-loving, beauty-loving people.

For Example: The July number (a typical issue of THE CRAFTSMAN) contains among other features the following: "America at the Forge; or The New Civilization," by Mrs. Havelock Ellis; "Community Music-Drama," by Arthur Farwell; "The Two Great Painters of the Apple Land of Spain," by Mildred Stapley; "The Making and Planting of Water Gardens," by Alice Lounsberry; "Spring and the One Elm Tree," by Will Comfort, and articles on Outdoor Living East and West, Our Native Woods, Camping with Comfort, Poppies and Roses, More Atmosphere in Gardens, Craftsman Homes, etc.—all illustrated in the characteristic manner that has earned for *The Craftsman* a world-wide distinction as a magazine of lasting beauty.

This July Number (152 pages) will be sent to you FREE with either of the Coupon Offers below, in addition to the Statuettes.

Guaranteed Subscription Coupons—Your Money Returned if Not Satisfied

To you as a reader of THE INDEPENDENT we have no hesitancy in extending the Guaranteed Subscription Offer contained in the Coupons below, whereby you have ample opportunity to determine whether you really care for THE CRAFTSMAN or not, without risking a penny. If you cancel your subscription, we will return your entire remittance, and you may keep the magazines sent to you.

NOTE CAREFULLY: This Coupon does not require an advance remittance. If remittance is received with the Coupon, two statuettes of your own selection from the group shown above will be sent to you immediately; if you mail Coupon without remittance, the two statuettes will be laid aside for you and sent to you as soon as remittance is received.

THE CRAFTSMAN, Craftsman Building,
6 East 39th Street, New York.

Gentlemen:

Please record me as a "Guaranteed Subscriber" for one year, beginning with the August number, and send me the July Number free. If $3.00 is not enclosed with this Coupon, I will remit on receipt of bill. It is understood that at any time before receiving the October issue I may cancel my subscription and you will return the $3.00 remitted to you.

CALENDAR

The thirtieth annual convention of the National Society of American Florists and Ornamental Horticulturists will be held in Boston from *August 18* to *20*.

An open-air flower exhibition will be held in Boston from *August 18* to *21*.

The National Negro Business League is to hold its fifteenth annual session at Muskogee, Oklahoma, *August 19, 20* and *21*. This organization is composed of negro men and women who have achieved success along business lines.

There will be an eclipse of the sun on *August 21*—total in parts of Europe and Asia, and partial in northeastern America. The full effect will be seen in Persia, Russia and Scandinavia. At sunrise, a partial eclipse will be observed in Canada and in our northern states.

The Forty-first Assembly at Chautauqua is now in progress. Recognition Day falls on *August 19*. The assembly closes on *August 30*.

A Colonial Exhibition will be held at Samarang, Java, from *August* to *November, 1914*. It is to "give a comprehensive picture of the Dutch Indies in their present prosperous condition attained since the restoration of Dutch rule in 1814."

The national tennis championship tournament at Newport opens on *August 24*.

The tenth annual conference of the Chinese Student Alliance in the eastern states will be held at the Amherst Agricultural College from *August 28* to *September 4*.

At the Ekwanok Country Club, Manchester, New Hampshire, the national amateur golf title will be played for between *August 31* and *September 5*.

September 6 has been designated as Labor Sunday by the Federal Council Commission on the Church and Social Service.

The National Star-spangled Banner Centennial, commemorating the successful defense of Baltimore at North Point and Fort McHenry, and the writing of the national anthem, will be held at Baltimore, *September 6* to *13*.

The annual conference of the International Law Association will be held at The Hague in the Palace of Peace from *September 7* to *12*.

At Denver, Colorado, from *September 8* and *9*, will be held the eighth annual conference on taxation, in charge of the National Tax Association.

The twenty-first World's Peace Congress will be held in Berne *September 15-19*.

The Baltic Exhibition at Malmö, Sweden, to which Swedish, German, Danish and Russian exhibits have been sent, is open until *September 15*.

An Anglo-American exposition to celebrate the centenary of peace and progress in arts, sciences and industries is open at Shepherd's Bush, London, till *October*.

At Leipzig an International Exhibition for the Book Industry and the Graphic Arts is scheduled to remain open until *October, 1914*.

The United Typothetæ and Franklin Clubs of America will hold their twenty-eighth annual convention in New York *October 6, 7* and *8*.

The annual convention of the American Bankers' Association will be held in Richmond, Virginia, *October 12* to *17*.

The American Bar Association will hold its annual meeting on *October 20, 21* and *22*, at Washington. There will be addresses by William Howard Taft, president of the association; Senator Root, the Ambassador from Argentina, and Sir Charles Fitzpatrick, Chief Justice of Canada.

The seven hundredth anniversary of the birth of Roger Bacon will be observed at Columbia with commemorative exercizes and the publication of a volume of studies. A great pageant of the culture of the thirteenth century will be given on *November 4*.

Barnard College, in Columbia University, will celebrate its twenty-fifth anniversary on *November 5*.

The sixth annual Medical Missionary Conference will be held at Battle Creek, Michigan, *November 17-20*.

The Intercollegiate Prohibition Association will hold its national convention in Topeka, Kansas—the prohibition capital of the nation—*December 29* to *January 4*.

The Second Universal Races Congress will be held in Paris in *1915*. Mr. G. Spiller is honorary secretary, 63 South Hill Park, London.

Between *March 4* and *April 15, 1915*, a monster naval parade from Hampton Roads to San Francisco via Panama will mark the formal opening of the Canal.

The Second International Eugenics Congress will be held at the American Museum of Natural History, New York City, *September 23-28, 1915*.

The International Sunday School Conference will be held in Tokyo, Japan, from *October 18* to *25, 1916*. One thousand delegates from America and 300 from other countries are expected to attend.

Marceau

MRS. WOODROW WILSON

The Independent

VOLUME 79 MONDAY, AUGUST 17, 1914 NUMBER 3427

MRS. WILSON

THE victories of war are renowned, but those of peace and love are greater. In the end they prevail. The sweet anxieties and the brave sacrifices of quiet, patient homes are the spring and the summer and the fruitful autumn of human society and human history, which repair all the ambitious catastrophes of war.

Such was the life, in retiracy and in the blaze of public observation, of Mrs. Ellen Axsen Wilson. Hers were not the deluding joys and follies of social supremacy, but the pure, sober, stedfast and sedate duties of domestic life, to which were added the even step and musing gait of a soul whose looks commerced with the skies, and yet were cast downward also to be fixt on the earth as fast wherever there was suffering or evil to be relieved or removed. That was her last thought, the wish that Congress might enact relief for the evils of the slums of Washington; and the Senate, in her dying hours, granted her prayer, and the House agreed on the next day. No, not the last; that was for her husband, that he should be cared for and spared from burdens and pains too heavy to bear, and with that request half uttered her breath failed, and her freed spirit gained its victory over her enfeebled body. She loved beauty and art, but she loved humanity more, and set her soul and her strength, so far as devotion to husband and children allowed, to works of mercy, while to her husband were assigned the kindred service of justice for this and other lands.

Other wives have done virtuously and worthily in the White House, but none have excelled her in the virtues of womanhood; and the sympathy of the country turns from the sorrows over the multiplied evils of war to offer a prayer for him by whose side she walked so helpfully for thirty years, and for the daughters whose sorrow so soon melts in with wedded joy.

LITTLE BELGIUM

"HOW They Brought the Good News from Ghent to Aix" Browning's spirited poem tells us; and the names of the towns thru which the three horsemen dashed so recklessly—Dalhem, Tongres and the rest—we now read in the day's dispatches. But no news so good was ever sent by galloping courier, or by telegraph or wireless, as that which has gone to France and her allies these last ten days, telling how little Belgium has withstood the German giant. And again on Belgium's soil is the battle waging that may be as fateful in the world's history as that of Waterloo. "In one red burial blent," Belgians and Germans have fallen again on historic soil. And more will fall. Belgium is the old battleground of Europe. She is hemmed in by the fighting nations, and a dozen big battles besides Waterloo are to the credit of her history; and this greatest of all wars will not end till Ardennes shall wave her green leaves over the clay of the fallen soldiers of every nation that fought in that fateful battle of a hundred years ago.

Who could have believed it? Certainly not Germany, who imagined that Belgium would be cowed by the Emperor's first rough word. Nor yet England, who trusted to the treaties that assured Belgium's neutrality. Not even France, who expected that the German legions would sweep thru the land in the unequal conflict. But the courage and spirit of little Belgium have far surpassed expectation, and her soldiers have given France time to mass her armies, so that now French soldiers and English as well stand in the front of the battle to support and protect their brave defenders.

We do not believe the German soldiers are one whit less courageous than those of Belgium, but we believe they have not the heart in the fight that the Belgians have, and why should they? They have no grudge against Belgium. They fight not for their homes, but because they are ordered to fight, and they obey because they must. Belgium has checked the onrush of the invader, and supreme gratitude is due to her from France and England.

And we learn from this daring resistance that treaties are meant to be enforced. Belgium would hardly have dared to resist Germany if she had not trusted to the treaties in her defense. France had to go to Belgium's help because the attack was meant against France, not Belgium. But Great Britain was not attacked. She declared war not because she hated Germany, for she does not, but simply to keep her plighted faith. Her faith was pledged to protect Belgium against attack, and she kept her word. No matter what pride or insolence may say, treaties must be held sacred, and those who break them must suffer. That big lesson we have been learning, none too easily, on the matter of equal Canal tolls, and we have had the good fortune to learn it without war. We can imagine all Europe united against us on our claim of special privilege if it had been worth while to fight, but of our own accord we corrected our hasty error.

In the poem there was "no voice but was praising that Roland of mine," and now even the enemy must recognize and praise the supreme courage with which Belgium has defended her soil against invasion.

AN END TO RIVAL ARMAMENTS

THE real issue of the present war is whether the German Emperor shall be the dominant power in Europe, and this in its present stage can be settled only by force. The conflict has grown inevitably out of the mistaken national ideals which have dominated European statesmanship. These have been like the virus in the blood in measles, diphtheria or smallpox, which must come to the surface in an eruption before there can be a cure. The preparations for the war have been for a long time in the making. The false national policies which would logically compel it have been faithfully nourished, and the armaments diligently accumulated. This conflict has had all the certainty of a glacial movement.

Having no just occasion for the war on which they have embarked, Germany and Austria manifestly will not now listen to any offer of arbitration, international inquiry or mediation which does not begin by admitting the Kaiser's claim to be the dominant force in Europe.

After the war is over it may be hoped that conditions will be favorable for a reconstruction of the life of Europe on a basis of national policies and principles which will allow no place to hostile armaments and to the national antagonisms which have heretofore existed. Nations have thought that it matters who owns a given province, but it does not. Independent Belgium is just as valuable to Germany as tho it were under her flag; to France as tho it were one of her provinces; to Great Britain as tho it were one of her colonies; to the United States as tho it were a member of the Union. The same is true of every country which offers an open door to the world's commerce. The open door is all that any nation needs for its happiness and welfare. If its citizens have freedom of residence and trade, it has as favorable a place in the sun as has any other nation. One trouble with the Panama tolls exemption was that it was a retrograde movement, a demand for a special privilege not possessed by other nations, a denial of the open door. The trouble in the Balkans arises from the fact that the nations which have held possession there have kept other nations out, and that those which have been trying to get possession have wanted it for the purpose of obtaining exclusive privileges. Such policies lead inevitably to war.

Within a few months the war will have been fought out and the stage of the controversy will have come when reason will have to be appealed to for a settlement. While it is not probable that either peace agencies or neutral governments can do anything to prevent the awful slaughter which so profoundly shocks the moral sense of the world, it is possible that they may be able, when the time of settlement comes, to see to it that the Bismarcks and Moltkes shall not alone dictate the terms of settlement. The present duty of all friends of civilization is clearly to understand and teach the lessons from the awful phenomenon of war, and to prepare for the ultimate reorganization of Europe on a basis that will prevent for the future the enormous armaments which have led to the present conflict. It is not a logical and wise deduction for any man to say, "Away with the peace societies and the Hague conferences, which have been powerless to prevent this war." Rather let him decide that it is his duty to join the movement which has international justice and coöperation as its goal, and to give to it his zealous service. The presence in modern society of false national ideals and war-provoking armaments which were certain, unless restrained by a dominant public opinion in every civilized country, to result in Armageddon, is the message which the apostles of peace have been preaching in the wilderness, and to which a large portion of the world hitherto has refused to listen. No good can be done by butting up against the automobile which, with a mad driver at the wheel, is bounding off the road. But it may be that much good can be done by utilizing the occasion for reaching an understanding of those truths and principles of statecraft which can start the world off on a new tack when the war is over.

Joint mediation by the nations signatory to the Hague Conference not involved in the present war, and especially by the neutral nations of Europe, would seem to offer a favorable way in which to make the effort to reorganize Europe when the war is over, on principles which will result in lasting peace. Absolutism in government, mistaken national policies and hostile armaments are the causes which have led to this awful world-disaster. If history is not to repeat itself, if at the end of the present war the accumulation of new armaments is not to begin to which some reckless or wicked government will again apply a match, the mistakes of the past must be avoided. That this be done is a matter which concerns alike every nation in the world, and all have a right to a voice in the establishment of the new order.

THE GREAT WAR

SOME wars name themselves—the Crimean War, the Civil War, the Franco-Prussian War, the Thirty Years' War, the Revolutionary War, and many others.

This is the Great War.

It names itself.

THE STAKE: CIVILIZATION

EUROPEAN civilization began in the coast lands and islands of the Aegean Sea. There had mingled and blended three stocks of the white race. These were: the Mediterranean, with long heads, black hair, black eyes and olive skin; the Alpine, thick-set, round-headed, with dark or chestnut hair and gray eyes; and the Danubian, the "fair-haired Achaeans"—tall, broad-headed and rufous. There, too, had blended the culture-traditions and the arts of the primal civilizations, of the Euphrates and the Nile.

Western European civilization began in the autumn of 55 B. C., when Julius Cæsar, conqueror of Gaul, carried the Latin tongue and the Roman law into the island of Britain.

The peoples of Gaul and of the British Isles, like those of Greece and of Italy, were a blend of the three white stocks named above, with an admixture of a fourth. The Aquitanians of Gaul and the Picts of Britain, whose blood survives in Cornishmen and the dark-haired Welsh, were Mediterranean. The Celts of central Gaul, and the Goidelic Celts or Gaels of Britain, whose delicate complexions survive in those Scotch and Irish folk who combine blue eyes with black hair, were predominantly Alpines. The Belgæ of Gaul and their kinsmen, the Brythonic Celts, or Britons, across the Channel, were Danubians. The Caledonians of the eastern and

northern coasts of Britain and the Germans that Cæsar found among the Belgæ were representatives of the Baltic stock, tall, long-headed, blue-eyed and fair.

Gaul and Britain quickly assimilated Roman ideas, and a few generations later accepted Christianity. They had developed a fair civilization, and had become relatively gentle and humane when they were overwhelmed by the barbarian invasion of Franks and Burgundians, Jutes, Angles and Saxons.

The notion that in the British Isles these invaders exterminated or drove out the earlier peoples and all traces of the Latin civilization, while in Gaul the conquered assimilated the conquerors, thereby creating a people and a civilization altogether different from the English, is one of the strangest perversions of history. The evidences are overwhelmingly against it. At this moment, as the records of school children and of men fit for military service show, a majority of the population of England, not to mention the population of Scotland and Wales, is brown-eyed.

The Angles and Saxons never succeeded in creating a comprehensive political organization, altho Alfred made a creditable beginning in his Wessex kingdom. The Danes came nearer to achieving it. It was the Gallicized Normans, under the masterful genius of William the Conqueror, who created the British nation. And it was under Henry II, when England and half of France were politically one nation, and Norman French was the language of the court, that the fairer things of civilization once more grew and flourished. It was then that the Arthurian legends of the British, carried into Brittany and worked over by the minstrels of Normandy, recrost the channel, and in the English court became, as "Morte d'Arthur," the first fruitful factor from which England's wealth of glorious imaginative literature was to grow.

Also, William's defiance of Rome and Henry II's effective restriction of papal ecclesiastical power, thru the abolition of benefit of clergy, were the true beginnings of the Protestant Reformation. Those steps taken and the ground held, as it was, all that followed later in that movement on the continent and in England was inevitable. A national state had been created stronger than feudatories, stronger than the Church and separate from it.

In the face of these indubitable facts of history, how crass is the contention of those writers who say that the genius for political organization which has created the states of modern Europe is a unique quality of the Teutonic mind! Western civilization, including its political organization, its law, its literature, art and science, is a creation, as the civilizations of Greece and of Rome were creations, of that fortuitous blend of Mediterranean and Celtic, Danubian and Baltic stocks which has been most perfectly achieved in France and the Netherlands, Great Britain and the United States.

It is then no accident, it is the necessary consequence of thousands of years of history, that these peoples and no others have mastered the problem of the democratic imperium. They alone have seen how to combine political cohesion with popular sovereignty and individual liberty. Greece grappled with this problem, but she was too small and weak and too soon overwhelmed. Rome broadened the foundations of practical government by developing law and administration. On these foundations that democratic civilization which is the hope of mankind today is built.

This civilization is this hour in peril. It is the stake, the real stake, the only real stake, in the awful game of war that is being played.

This is the answer to those writers and apologists who would have us believe that England has done a monstrous thing, has been a traitor to her own race, has raised a fratricidal hand, in casting her lot with France against the militaristic absolutism of the German Government. Whether such writers are ignorant, or intend to deceive, is of little consequence. The thing they say, the thing they write, is not true.

For the German people Americans have only admiration and respect, and no nation on earth will extend to them a readier good will and a more generous co-operation than America shall, when the day comes for them to set about the task of building a republican civilization.

ANGLO-GERMAN ANTAGONISM

THE only unexpected thing about the present European war is the date of it. No war in history has been so long anticipated, so carefully prepared for and so thoroly discussed, not only in the privy councils, but in the press of all nations. Every European soldier knew where his uniform and rifle were stored; he also thought he knew as well where he was to fight, with whom he was to fight and when. Seemingly every detail had been worked out "to the last gaiter-button," and nothing had been left to chance. But chance is a factor that cannot be neglected in any human calculations. The European powder magazine was ignited by a Servian youth who stepped upon the running board of the automobile of an Austrian archduke and fired in his face. But altho the explosion was accidental and premature, the war has on the whole followed its predicted direction both as to plan of campaign and alignment of the powers. The chief divergence from expectation is that Italy has found her obligations to the Triple Alliance less binding than has been supposed—altho she was known to be disaffected—by those who had not read that unpublished convention.

This precipitation of the conflict acts to the disadvantage of Germany, for that country was growing stronger and France and England relatively weaker every year that peaceful competition continued. When Germany conquered France in 1870 these two countries were pretty nearly evenly matched in population; now Germany has sixty-nine million to France's thirty-nine and England's forty-six million. Germany is increasing in population at the rate of 14 per cent each decade, the United Kingdom at the rate of 9 per cent, while in France the deaths outnumber the births in some years. If Germany had been allowed to continue her progress unchecked by such disasters as the loss of 25,000 young men at Liege, she would before long have outnumbered both France and England.

The United Kingdom loses every year between two and three hundred thousand men by emigration, and these among the best she breeds, for the dominions oversea will accept no others. Germany, on the contrary, has checked the outflow of her people and is attracting immigration. Rural England is being depopulated, and

soon it seems there will be left, as Chesterton says, only the village idiot. Year by year more land in the British Isles goes out of cultivation and is given over to grass or game. Germany, however, is developing her agricultural resources and is enabled not only to feed her own people, but part of England's, selling her every year, for instance, a million dollars' worth of eggs and half a million of potatoes. In England pauperism has alarmingly increased and the army of the unemployed grows more menacing. Germany, meanwhile, by her system of industrial legislation and insurance, has gone far toward solving these social problems. Among the thousands of Americans now marooned in Germany, many were there to study the German methods of municipal management, model housing and technical education. For all her heavy expenditure to support her great army and navy, the public debt of Germany is only $15 per capita, while that of England is $80 and that of France $150.

It was, in fact, because the Germans were the first to apply modern scientific methods to administration, industries and commerce that they have beaten the English, who, with all their admirable qualities, are deficient in this respect, as they themselves have frankly recognized. France was beaten in 1870, according to the old saying, by the German schoolmaster. England found herself being beaten by the German schoolmaster in fields she had once held to be her own. Chemistry in its early days was called "a French science"; later England led the world in chemical manufactures; but recently Germany has been rapidly monopolizing it. The world has been paying Germans $300,000,000 a year for the dyes, the drugs and the perfumes which they have learned to make, utilizing coal tar and the like that other countries threw away. And now the cotton mills of England and the United States are closing down because they cannot get the German dyes. One German discovery alone, synthetic indigo, brought ruin upon an important industry of British India.

But it was when Germany took to the sea and began ousting England from the markets of the world that British apprehension changed to alarm. Between 1880 and the present time the value of foreign commerce per capita of England increased by about 50 per cent, but that of Germany increased by 150 per cent. Hamburg and Antwerp, both built by German trade, have outstripped London in their shipping. No British line of steamers can surpass the Hamburg-American, which had 26 vessels in 1867, but has now 439, minus such as have been sunk by British cruisers in the past fortnight. Great Britain has not been able even to hold the trade of her own colonies, in spite of patriotic appeals and devices for imperial preference. Year by year a greater percentage of the trade of Australia, New Zealand and India went to Germany instead of to the mother country.

Thirty years ago Germany determined that she needed colonies of her own for her growing population and commerce, and accordingly she demanded "a place in the sun." But here again her ambitions clashed with the interests of Great Britain and France in the Pacific, Africa and Asia. The Kaiser took possession of the northern part of New Guinea. The Australians, who had had their eye on the island for some time, promptly took possession of the southern half, regardless of orders from London, and the territory was divided. That great empire-builder, Cecil Rhodes, planned a Cape-to-Cairo railroad, but this magnificent scheme was blocked by the German and Belgian possessions, which formed a broad band across the middle of Africa. Then Germany turned her attention to Asia Minor and secured a concession for a railroad from the Bosphorus to the Persian Gulf, with a twelve-mile strip of land for colonization all along the twelve hundred mile route. This would have given a thru line from Hamburg to India, but Great Britain put a stop to it by seizing the head of the gulf and forming an alliance with her ancient enemy, Russia, for the partition of Persia. In China, Germany occupied Kiao-chau; England countered by taking Wei-hai-wei. When France took Morocco, the German "Panther" appeared at Agadir.

It was, in fact, on the question of colonies that the break finally came. According to Sir Edward Grey's recent statement to Parliament, Germany agreed not to annex any territory in Europe, but would not give the same pledge in regard to Africa. The attack on Liege is a blow at Belgium's ownership of the Kongo. Now England has been loudest in her complaints that the King of the Belgians took the Free State of the Kongo by fraud and treated the natives with unspeakable cruelty, and one of the many ironies of the present situation is that England by sending troops to the continent is defending Belgium's title to this African territory. England has already seized German Togoland, adjoining her Gold Coast colony.

The effect of Germany's amazing progress upon England everybody knows who has been reading the English papers in recent years. The British found themselves losing all around; beaten by the German men in business; beaten by the German women in birth rate. A wave of hysteria and Teutonophobia swept over the land. The people got to "seeing things at night," Zeppelins in the air and submarines in the sea. The empire was drawn together, as Kipling puts it, "by the ties of common funk." The fleet was gathered from the seven seas and placed on guard over Germany. The hotheads even called upon the Government to strike without warning or pretext, because this was the last chance and the only way to destroy Germany. Such an unprovoked attack was rightly rejected as incompatible with England's honor. The British people, rallying from their temporary flurry, set themselves resolutely to prepare for the time when Germany by some act of aggression should provoke the conflict as she has now by invading the neutrality of Belgium, and so giving England diplomatic grounds for taking up arms against her. In 1912 the British Admiralty issued an official memorandum calling upon the oversea dominions to assist in bringing the navy by 1915 up to a strength sufficient to meet the Germans in battle or to overawe them so that they would not then dare to fight. In explaining the reason for this, Premier Borden, of Canada, fresh from a conference with the British War Office, declared that "these ships are urgently required within two or three years at the outside for rendering aid upon which may depend the empire's future existence." The "Ides of March have come, but not gone"; the three superdreadnoughts which Canada was asked for but failed to furnish "within two or three years" of 1912 are now needed, for this is *der Tag* which the German officers have long been toasting. The question of the supremacy of the seas is being decided by naval instead of merchant vessels.

THE STORY OF THE WEEK

Setting the Stage for Armageddon

Except for preliminary fighting as the great military establishments of the powers have been set in motion against each other, there have been few decisive moves so far on the European war board. Thru the establishment of a censorship, unequaled in recent history for its severity, the regular news channels from England and the continent have been blocked and a curtain lowered over Europe while the stage is set for the opening of the world's greatest drama.

Direct communication with Germany ceased on August 6, when the German-American cables were cut, presumably by British warships, between the Azores and Emden, and when British and French companies refused to accept any further messages for Germany and Austria. Under these circumstances, and in view of the fact that the censors repress all but the most favorable news, European dispatches have been far from impartial, and the most sensational rumors, as a result, have gained currency. Reports were printed of a naval engagement in the North Sea, in which nineteen German ships were sunk; the cruisers "Goeben" and "Breslau" were captured by a French fleet in the Mediterraneean, while Italy had declared war on Germany, her ally under the Triple Alliance. All these reports were printed, only to be denied later as untrue. For a week mystery surrounded the whereabouts of the "Kronprinzessin Cecilie," which had sailed from New York with a cargo of $11,000,000 gold consigned to foreign bankers. She was reported captured by the English, then safe in a German port, and finally turned up after a chase by French cruisers at Bar Harbor, Maine.

A WEEK OF WAR

August 4—Great Britain declares war on Germany, Germany on Belgium. German Army of the Meuse attacks Liège

August 5—40,000 Belgians at Liège hold out against 120,000 Germans, who lose 5000 in first three days' fighting. Kitchener becomes War Secretary. "Königen Luise," German mine-layer, sunk by British and British cruiser "Amphion" sunk by mine in North Sea

August 6—Austria declares war on Russia. Continued fighting at Liège nets Germans two forts. Parliament votes 500,000 increase in army

August 7—German losses at Liège total 25,000. Armistice of 24 hours refused to Germans by Belgians. French invade Alsace at Altkirch

August 8—Germans occupy city of Liège, but forts are held by Belgians. French occupy Mülhausen in Alsace, and take passes in Vosges Mountains. 20,000 English troops land in France

August 9—Liège forts still resist Germans. French army in Alsace takes Colmar. British expeditionary force joins French in Belgium

August 10—Diplomatic relations between France and Austria broken. French advance on Neu Breisach. Austrian bombardment of Antivari, Montenegro's seaport, reported

While the dispatches are thus colored according to their Entente sources, the developments so far seem to be: the repulse of the Germans at Liège on their way across Belgium to the French frontier; the landing of a British expeditionary force of 20,000 and the advance of French troops to aid the beleaguered Belgians; the invasion of Alsace-Lorraine by the French and the seizure of Altkirch, Colmar and Mülhausen, the second largest city of the province; the defeat of the Russian Baltic fleet and the landing of German troops in Finland as well as their advance into Russian Poland. Austria-Hungary, after an unexplainable delay, finally took her position beside Germany, and on August 6 and 10, respectively, declared war on Russia and France.

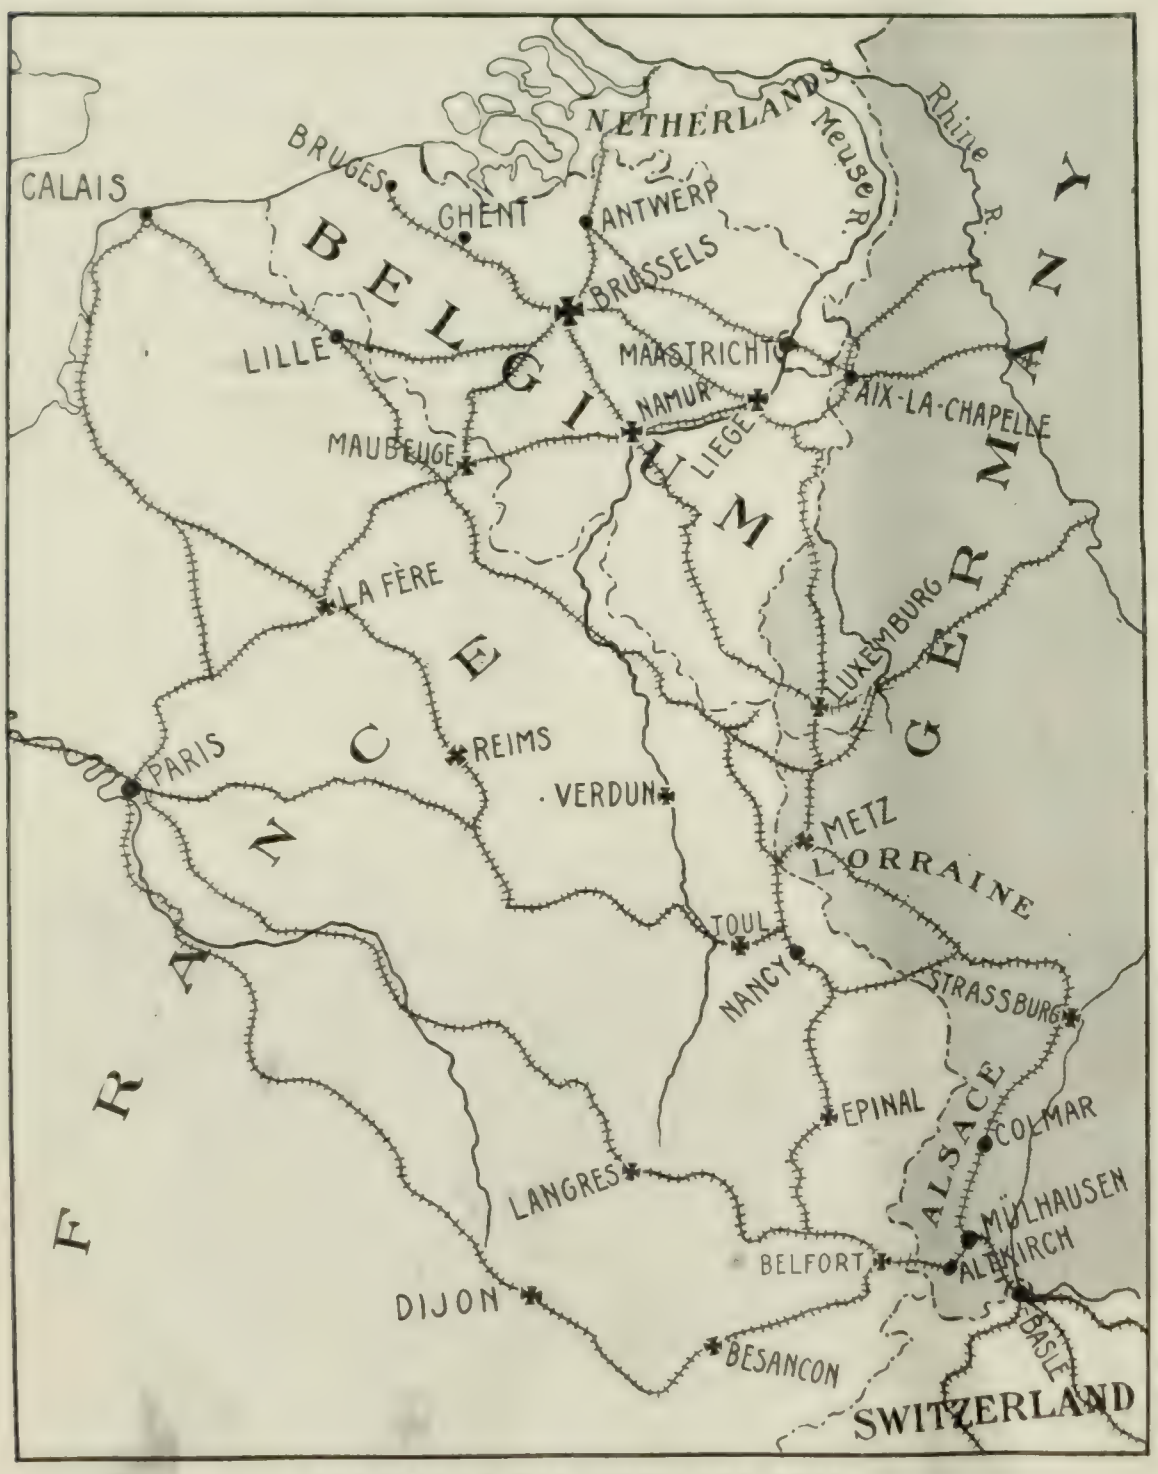
England Declares War on Germany

Tho indecisive as to taking part in the war so long as no British interests were involved, Germany's ultimatum to Belgium demanding a free passage for her troops made England's course plain, and immediately her sword was in the scales against the aggressor. Fundamental to British security is the neutrality of Belgium and the Netherlands, the "buffer states" she has established and guaranteed opposite her own North Sea coast. King Albert's ap-

International News

AFTER FORTY FOUR YEARS OF WAITING

French infantry in action. Their entry into Alsace thrilled the lost provinces and drove Paris wild with delight



peal for aid on August 3 met a ready response. Germany was asked in a note to guarantee Belgian neutrality, as France had done, to which Germany replied that it was impossible to give such assurances. England, therefore, at 11 o'clock on the night of August 4, declared herself in a state of war with Germany.

Brought thus face to face with her duty, there was no hesitation in England's response; never was a war less popularly entered into, never with a firmer determination to crush the enemy with all the might of empire. Local differences were forgotten, Nationalist and Ulsterman, as John Redmond said, stood shoulder to shoulder for the defense of the kingdom; Lord Morley and John Burns, whose peace sympathies are well known, retired from the Cabinet to make way for Lord Kitchener as Secretary of State for War, and for such Opposition leaders as Bonar Law and Austen Chamberlain, who will form a coalition Cabinet during the crisis; volunteer forces were called, the fleet sent to sea with the King's reminder of the navy's past; while the war credits were increased to $1,025,000,000.

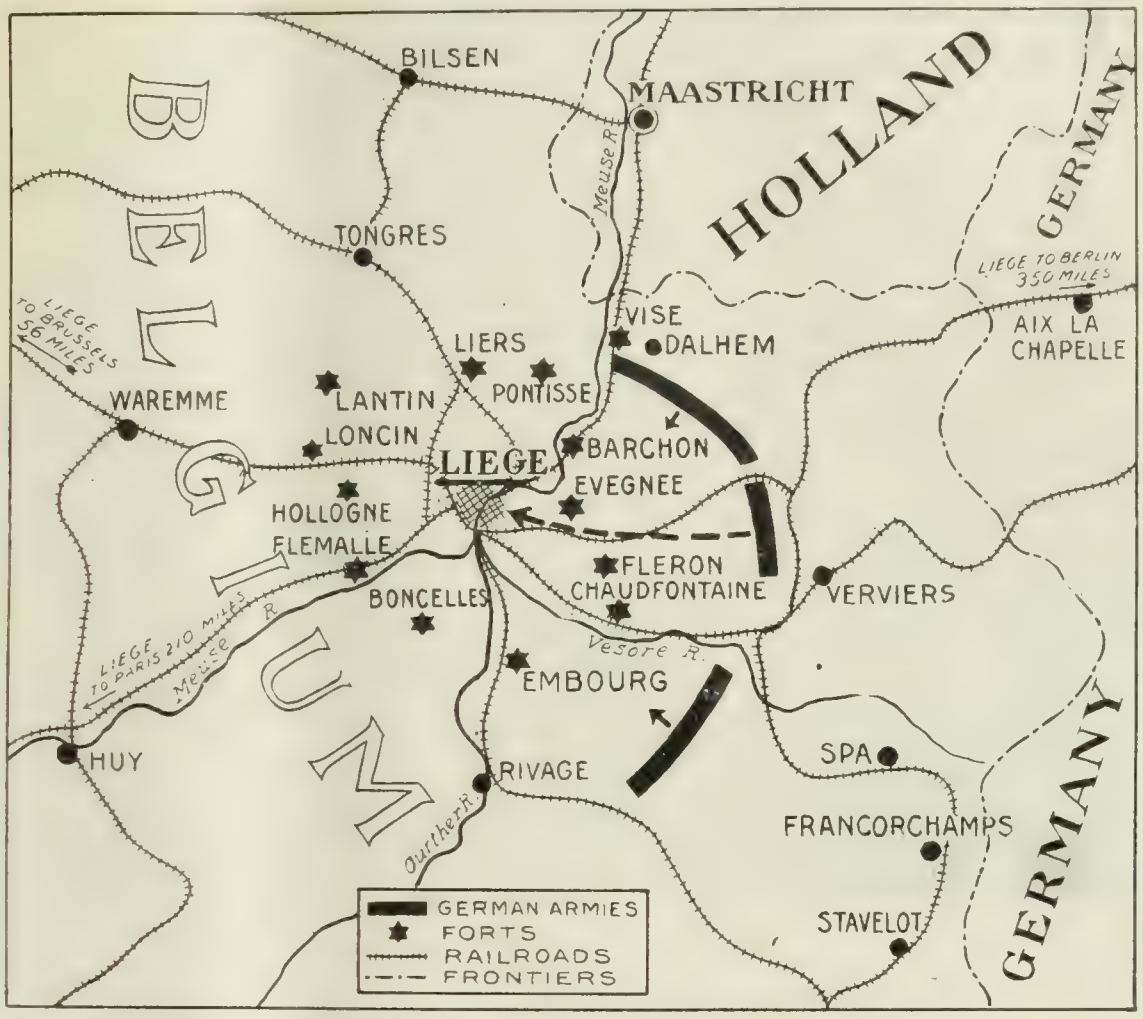
The First Engagement

Whether with knowledge of the orders to "capture or destroy" or not, the German fleet has discreetly retired before the overwhelming English armada to the security of the Kiel Canal, behind the naval bases of Wilhelmshaven and Heligoland, and the only engagements thus far reported are the sinking of the German mine ship "Koenigin Luise" and the foundering of the small British cruiser "Amphion" on one of the German mines, both of which occurred on August 6. In an attack on a cruiser squadron on the 9th, a German submarine was sunk. In harbors and on the high seas numerous prizes have been taken, and it is estimated that there are no less than $100,000,000 of German merchant ships in British harbors alone. Various engagements between cruisers on foreign stations have been reported, but so far these have been unconfirmed.

In response to Lord Kitchener's call for recruits for the army no less than 250,000 responded, while no less than 500,000 are in arms to guard the coasts of the island. The unexpected success of the Belgians in holding the Germans at Liège led to the immediate despatch of 20,000 reinforcements from England, which, in conjunction with the French at Namur, will oppose the advance of the Germans in case Liège falls. It is very unlikely, however, that England will put a very large expeditionary force on the Continent, unless the French are hard prest, for not only is it against England's policy, but with her small army it would deprive the island of its necessary protection. With offers of troops and food, the colonies have responded loyally to aid the mother country. Canada has offered 30,000 men and 1,000,000 sacks of flour, while troops from the African colonies have already occupied Port Loma and Togoland and are threatening German East Africa. Lloyd George has reported the food problem well in hand, the Government having taken over the flouring mills of the kingdom, while a proposal for the nation to take over the harvests is pending. The discount rate of the Bank of England has been lowered to 5 per cent, while the oversea trade of the empire is expected shortly to resume its normal channels.

THE SEAT OF WAR DURING THE WEEK

Showing the principal forts (shown by crosses) which still block the way to Paris even if Liège is abandoned, and the cities in Alsace which the French have occupied



Germans Invade Belgium

Despite the fact that the reports have all come from Brussels and Paris, the mighty German hosts, before which Europe has trembled for forty years, seem to have met their first reverses not at the hands of the French, but from the peaceful Belgians, when without leave they attempted to occupy Liège in order to facilitate their movement to the French frontier.

First doing the act and then asking permission, Germany, on August 3, requested to be allowed to move her troops across Belgian territory, following it on the next day with an ultimatum that if necessary she would use force to accomplish her purpose. Belgium and King Albert immediately prepared to accept the challenge of the Kaiser, prepared if need be to fight to preserve their neutrality and their independence. All classes joined to oppose the invader, and M. Vandervelde, the great Socialist leader, entered the Cabinet, just as Delcasse

and Clemenceau had entered the Ministry of France; before the common danger party strife and party differences were forgotten.

Liège, an important manufacturing and railway center in western Belgium, is important to the Germans for its commanding position in the valley of the Meuse, which they have chosen as one of the avenues for the invasion of France. With its twelve modern forts in hostile hands, Liège was in a position to threaten the German flank, and to jeopardize the success of the whole German plan. General von Emmich, the German commander, on the refusal of the Belgians to permit his peaceful passage, rather than to delay his advance, ordered the city taken by storm. But he underestimated both the valor of the Belgians and the strength of the Liège fortifications.

THE FIRST IMPORTANT ENGAGEMENT OF THE WAR

This map, modified from the New York *Times*, shows the chain of forts defended by the Belgians and the route by which the Germans entered the city itself. There was fighting at many points along the Meuse from Huy to the Dutch frontier

Repulsed at Liege

With its forts arranged so that they support each other and of the most recent scientific design, the reduction of Liège was more difficult than the Germans anticipated. The destruction of the bridges across the Meuse on the north made it necessary for the Germans to attempt to cross on pontoon bridges, but as rapidly as built they were destroyed by the murderous fire from Forts Pontisse and Barchon, while from the west approach was possible only across a plateau raked by the guns of Forts Evegneé, Fleron and Chaufontaine. Here the main German assault was attempted.

Repeatedly the Tenth Corps, which bore the brunt of the battle, charged across the plateau, the Belgians reserving fire until the Germans had almost reached the glacis of the forts. Closely massed, the Germans were mown down like grain by the Belgian machine guns, while as the line would break or retreat before the deadly fire, reserves from the forts would sweep down to complete the rout. For fifty hours the garrison of 40,000 withstood 125,000 Germans, and inflicted on them terrific loss. More than 25,000 Germans are said to have been killed, wounded or taken prisoners. The Belgians captured twenty-seven field pieces. On Friday the Germans asked a twenty-four-hour truce in order to bury the dead and remove their wounded, but the Belgians, fearing that it was a ruse to bring up the reinforcements, allowed only two hours, at the end of which the assault was renewed. During the night a detachment of Uhlans entered the city with the intention of capturing General Leman, the military governor. They had almost reached the door of the governor before they were recognized and cut down.

In the meantime the gallant resistance of the Belgians, and the consequent checking of the German dash into France, gave France time to complete her mobilization, while both French and English troops were rushed into Belgium to reinforce Liège and to prepare for the second defense against the German advance at Namur. On Saturday the Kaiser announced in Berlin the capture of Liège. The city, however, is distinct from its fortifications, which are distant from three to five miles, and was occupied by Germans, who managed to pass between the forts. As this is written, the forts, practically intact, are still believed to be in the hands of the Belgians. Following the example in the case of Belfort in 1870, President Poincaré has conferred the ribbon of the Legion of Honor on the city of Liège.

French Invade Alsace-Lorraine

While the Belgians were covering themselves with glory in resisting the German invader, the French, taking advantage of the respite thus granted them, themselves assumed the offensive, and just before nightfall on August 7 invaded Alsace-Lorraine in an attempt to redeem the "lost provinces," wrenched from them in 1871.

The news of this movement is most fragmentary, and it must not be overestimated, but its significance lies not so much in its success as in the effective rebuttal of the proud German boast which foresaw a prostrate France almost within a week. A French column swept across the border at Altkirk, near the Swiss frontier, seventeen miles west of Basle, and carried the earthworks by which the town was defended at the point of the bayonet. The Germans are said to have fled before them, while the French were acclaimed as deliverers by the joyous Alsatians. Beyond the fact that the famous African Turcos (Arabs trained from childhood to fight) took part, the French War Office has not disclosed the number or the identity of the troops or generals in command taking part in this invasion.

On Saturday, Mülhausen, the "Sheffield of Germany," and the second largest city in Alsace, after a slight resistance, was occupied by the French, who then prest on up the valley of the Ill to Colmar. In the passes of Bonhomme and Sainte Marie, in the Vosges Mountains, desperate German resistance was encountered, and in taking them the French War Office admits the losses were serious. The French are thus brought within forty miles of the great German fortress of Strassburg, where the Germans in large force are to be encountered. Military experts, however, do not look upon

SHIPPING GOLD FOR AMERICAN REFUGEES

The armored cruiser "Tennessee" sailed from New York on August 6 carrying $5,867,000 to relieve penniless tourists marooned in Europe. Each keg is worth $3000

this movement as a serious invasion, but only as an effort to feel out the German positions.

Italy Remains Neutral

When Germany delivered her ultimatum to Russia, she counted confidently not only on the support of Austria and Italy, her allies in the Triple Alliance, but on the internal troubles of Russia and England to disrupt the Triple Entente. Instead she finds the Entente solid against her, in addition to the little countries of Belgium, Portugal and possibly Japan, and the alliance broken by the refusal of Italy to enter a struggle so manifestly of the Kaiser's making.

What the terms of the alliance were under which Italy was bound to aid her allies is not known, as they have never been published, but Italy chose to interpret them for herself, and on August 3 she declared her neutrality in the struggle. Never popular among her people, support of the ancient Austrian enemy, especially when Austrian and Italian interests on the Adriatic were still in conflict, would have risked the foundation of the throne itself, and the Government adopted its course accordingly. To gain Italian support, as well as to alienate England, the Kaiser sought to place France and Russia in the position of aggressors on Germany and Austria. Austria delayed until August 6, a full week after the German declaration, her war challenge to Russia, in the hopes that the latter would first be provoked; she moved Austrian forces to aid the Germans on the Alsatian border, and not until France demanded, on the 10th, her intentions, did she withdraw her ambassador from Paris, even then without a declaration of hostilties; her ambassador is still in London, altho an Austrian squadron, with decks cleared for action and battle flags flying, is reported sailing south in the Adriatic. Germany and Austria have thus done their utmost to convince not only Italy, but the world, that they are waging a war of self-defense, but Italy and the world are undeceived. Threats and bribes of African territory are reported to have been offered Italy if she would come to the aid of her allies, to which King Victor Emanuel is said to have replied: "Neither friendship for my allies nor offers made by them, no matter how advantageous, would persuade me to sell my honor and that of my country."

British and French, to whom Italy owes much for her freedom, were quick to appreciate the Italian stand, and in London a most unusual demonstration, in which peers, members of Parliament and others prominent in the social and political world took part, occurred on Friday afternoon in front of the Italian Embassy. Italian interests in the Mediterranean are all on the side of the British and French and opposed to those of Austria, not only in Albania and Montenegro, but in the Austrian Adriatic provinces, with Trieste as their center, which, because of blood, Italy still regards as belonging to her.

Railroad Rates and Labor

Owing partly to the decision of the Interstate Commerce Commission in the Eastern railroad rate case, or to suggestions made in that decision, the railroads west of the Mississippi will ask for permission to increase their rates. They are now preparing to make application, and it is expected that their new schedules will be submitted before October 1. They will not propose a horizontal advance, as the Eastern companies did, but will ask approval of a readjustment of rates which may increase their revenue by about five per cent, and which, they think, will be such a readjustment (involving additions to rates that are not remunerative) as was suggested by the commission in the recent decision. Because of an increase of operating expenses, they assert, their need is greater than that of the Eastern roads.

Settlement of the controversy between the Western roads and their employees will soon be reached by arbitration, which the companies accepted in response to the earnest plea of President Wilson. The arbitrators will hold their sessions in Chicago. The companies had insisted that their claims and proposals should be considered, as well as those of the men. With respect to this, however, they yielded, and the arbitrators are to consider only the claims and demands originally presented by the employees.

The Situation in Mexico

President Carbajal's delegates, General Villar and Judge Allende, failed to reach an agreement with Carranza. He would not see them after their arrival at Saltillo, on the 2d, but they had a brief conference with two men representing him, Luis Caballero and Antonio Villareal, who declared that Carbajal's terms were like those of a conqueror to a defeated foe and could not be considered for a moment. It appears that Carbajal proposed that the present Congress should be displaced by the one dissolved by Huerta, which should designate a President to succeed himself; that the Federal army should be retained, and that the rank of its officers should be recognized and confirmed. On the other hand, Carranza's representatives would consider nothing but unconditional surrender. He was determined to punish all who were in any way responsible for the death

of Madero, and he refused to retain the army. Indeed, the officers of the army of General Gonzales had formally demanded that all Federal officers and soldiers should be treated as prisoners, be compelled to do menial labor, and be excluded from military service for the remainder of their lives. At first, Carbajal's delegates hoped for a second conference, but when Carranza refused to listen further they gave up the attempt and returned to the capital.

Afterward there were conflicting reports as to Carbajal's plans. An official statement said he had decided to yield and had agreed with Carranza as to terms. Carranza said there was no agreement. Two days later it was announced that Carbajal had yielded to the "war party" and that the Federal army of 30,000 men would meet the rebels on an open plain, eight miles north of the capital. There were also reports that Carbajal would go southward with the army. Zapata had agreed to an armistice. Our Government was urging Carranza to grant general amnesty. This he would not do, but he promised that the entry of his forces into the city should be marked by no excesses.

All this time the rebel armies were near the capital. Obregon, with 30,000 men, was at Toluca, forty miles from the city; Gonzales, at the head of 20,000, was waiting at Tula, fifty miles, and Flores, leading 10,000, was in camp at Pachuca, sixty miles, while a rebel advance guard of 6,000 was only fifteen miles from Carbajal's outposts. Here were more than 60,000 men, against whom Carbajal could muster only 30,000. Villa's army was still in the north. On the 8th he was directed by Carranza to start for the capital. Obregon was demanding unconditional surrender. The foreign ministers held a conference in the city and decided to go out and meet Obregon, and thus to ascertain what his course would be.

Villa's Attitude

Villa was still at variance with Carranza, and, altho he ordered a movement of his artillery to Torreon, many believed that he would not go further southward. By recruiting he had added several thousand to his original force of 23,000 men. By proclamation he had outlawed all of Carranza's fiat currency in the State of Chihuahua, and he had appointed a commission one member of it being General Angeles, the artillery expert—to cut up and distribute among his followers the great estates of "unfriendly" persons. Eighty families were quartered upon the great ranch of Benton, the British subject whose murder by Villa or his friend Fierro caused prolonged inquiry. There is much complaint about the exactions of his officers and men. American owners of property in Chihuahua have been driven away by new and heavy taxes, extortion and virtual confiscation. It was reported that Villa had sought negotiations with Carbajal.

There was fighting, as the other rebel armies approached the capital. At Irapuado, 180 miles from the city, 400 Federal prisoners were taken at the end of a three hours' battle. At Mascates, in Guanajuato, 900 were captured. At Mazatlan, on the Pacific coast, the soldiers of the Federal garrison, while striving to escape on transports, were attacked, and, on the 8th, 300 of them were killed. More than fifty priests fled from the national capital to Vera Cruz, fearing Carranza's armies. They took with them many of the ornaments of their churches.

Peace in Santo Domingo

It is understood that our Government addrest to the leaders of both factions in Santo Domingo a demand for the restoration of peace, with a proposition that a provisional government be established by agreement. A large force of marines was not far away (at Guantanamo) and could be landed at Dominican ports in a few hours. The effect of this is seen in the signing of a general armistice by President Bordas and the revolutionists' junta. This armistice is to continue for fifteen days from the 6th inst. The news was received with much satisfaction by the inhabitants of Puerto Plata, a city which had been besieged for ninety-eight days. It is expected that a settlement of the controversy will be reached before the expiration of the term of the armistice. Expenditures by the present Government from the customs receipts are to be controlled by the new American officer, Herbert M. Johnson, appointed with the consent of Bordas, but it does not appear that he has begun to exercize his power.

Owing to the war in Europe, the attention of Germany, France and Great Britain has been diverted from Hayti. They were asking for control of the customs revenue. On August 1, Hayti failed to pay the interest, $105,000, due on the foreign railway debt. The treasury was empty, and the Government's account at the national bank was overdrawn by $500,000. At that time German capitalists were proposing to lend money to the Government, in return for certain privileges or concessions, but the negotiations have been discontinued. It is understood that President Zamor has declined to ask our Government to assume control of the country's finances, altho he was urged by the new United States Minister to do so.

THE FRENCH ACADEMY SALUTED THEM AS THE "LITTLE PEOPLE WITH MIGHTY SOULS"

WHAT WILL THE GREAT NAVIES DO?

BY A NAVAL OFFICER

This study of the strength and probable course of the contestants in the clash between the first and second navies of the world comes to us from an expert who in nearly half a century of service held several most important commands and reached the highest existing rank. His position is such that we are not at liberty to use his name.—THE EDITOR.

THE simplest explanation of the incredible state of affairs today in Europe is that the Kaiser has suddenly become insane, and that it were better for all concerned to place him in a madhouse rather than in command of fleets and armies.

While not admitting this explanation to be wholly justified or satisfactory the fact that he has surely lost his head introduces a disturbing element of uncertainty into one's speculations as to what can happen. We may readily imagine what a prudent man would do under given circumstances, but what an arbitrary ruler suffering from megalomania and blinded by an unexpected check to his unbounded ambition will essay it is difficult to foresee. For this reason the rôle of prophet bristles with possibilities of error.

While Austria has a few battleships and while her cruisers may make an occasional raid on French and English shipping in the Mediterranean, it is not at all likely that stirring naval events will occur in that sea. The French, aided by England's wholly competent squadrons in those waters, will see to it that commerce there is not interfered with, and that Austria's fleet remains safely sheltered behind the forts at Pola and Fiume. If Italy sides with Austria in this struggle a wide and interesting vista of possibilities will open up, for she is not to be contemned as a naval power—but this eventuality is so improbable that to discuss it would be a waste of time.

A brief summary of Germany's interests on the water and across the seas will be helpful in focussing attention upon the naval aspects of the war now being waged. In the first place, what has Germany to gain by victory on the ocean? In a general sense, the answer must be—nothing. Without having had to burn an ounce of powder, she has developed the second largest mercantile marine in the world. This she owes to the equality of opportunity enjoyed with British shipping even in British home and colonial ports. More than what she now has in this respect she could have obtained, if at all, thru the medium of peace. If she seeks to acquire more colonies it is pertinent to suggest that she has not known what to do with those she has already in her possession. The desire to smash Great Britain's fleet and to dictate terms of peace at Westminster is really *un secret de Polichinelle*—something which everybody knows. Thoughtful Germans whom I have met have not hesitated to tell me they shared it. These terms would doubtless include the cession of certain British colonies which Germany (or the Kaiser, the expressions are absolutely identical) has long coveted. Permanent occupation of England may be dismissed from our minds as entirely out of the question.

On the other hand, what has she to lose if defeated by Great Britain? Whatever course the war may take on the land, that on the seas must be defensive in its nature, at least in the beginning. A consideration of what Germany stands to lose, taken in conjunction with her numerical inferiority in ships of war, should lead us to some interesting and even plausible inferences.

There is, first and foremost, her magnificent merchant navy. Many of its members will be captured—many will pass under other flags—we can be sure that England will let none escape save those already safe in neutral ports. When the war is over England will, without doubt, impose port and tonnage dues on German merchantmen heavy enough to hamper for years the activities and growth of her most formidable rival.

The list of Germany's colonies is surprizingly great. In Africa she owns Togo, Kamerun, German West Africa and German East Africa, 931,460 square miles of territory and over 13,000,000 inhabitants. In Asia there is Kiau-Chau, some 200 square miles and 168,900 inhabitants, with the best harbor on the coast of China north of Hong Kong. In the Pacific she has part of New Guinea, the Bismarck Archipelago, the Carolines, Pelews, Mariannes, Solomons, Marshalls, with Savaii and Upolu in the Samoan group, in all 96,160 square miles with 357,800 inhabitants.

While the majority of these possessions are of little worth, their loss would be a severe blow to Germany's prestige and to her policy of colonial expansion. To incur the risk of ceding these and of damaging irreparably her maritime prospects for a very doubtful chance of success but emphasizes the Kaiser's folly, since to protect the former against the attacks of the navies of Great Britain and Australia is quite impossible. Such of them as England may desire she will seize and hold. The Chinese are not likely to neglect so favorable an opportunity of canceling the ninety-nine year lease of Kiau-Chau or the British and their allies, Russian and Japanese, to pluck this thorn from China's side and their own. The problem then in Africa, Asia and the Pacific solves itself automatically. Remains the larger one in northern European waters.

Never has the advantage of an interior line of communications been more clearly manifested than today. By means of the Kiel Canal, Germany can concentrate her naval force at will in the North Sea or in the Baltic, thus menacing enemies in both. Moreover, she will inevitably block with mines the various passages leading from the one sea into the other, thus preventing a junction of the British and Russian fleets. It is idle to presume that so high-handed, unscrupulous a power will respect the neutrality of Denmark thru whose territory run the Great and the Little Belt, or of Sweden, which owns one side of the Sound, Denmark owning the other. These waterways are so narrow in places as to be very easily blocked.

It is a safe prediction that Germany will at once endeavor to get at the Russian fleet, to which she is vastly superior not only in ships but in the morale and training of her crews, or that Russia will keep her ships behind the fortifications of Kronstadt. We may look for merciless bombarding of all Russian towns and cities on the Baltic. Libau and Riga will be sacrificed to the mad lust of destruction. So will Helsingfors and Wiborg unless the Finns profit by the moment to rise in rebellion against the Czar and thus ensure immunity from German shells. Even Sweden may suffer in this manner unless she yields to the Kaiser's demand to "be with us." No permanent good will flow from these baneful acts. It is barely possible that the Kaiser, lost to all reason, will order his battleships into the North Sea there to grapple with the British fleet under Sir John Jellicoe and so play into his enemy's hands.

I am not among those who place in parallel columns ships, guns, armor and speed, assigning the victory to the heavier total. So far as the vessels themselves are concerned, the British have much the better in the comparison; but, in my judgment, they enjoy the advantages of excellent training (whether more perfect than that of the Germans no one knows), and what is of especial value the "sea

habit," a thing wherein their adversaries are distinctly deficient. The English man of war's man is a sailor to whom his ship is home and to whom voyages long in either distance or time are habitual. His German rival is frequently but a drafted recruit who has spent the greater part of his time in port. What that difference means was seen in the Napoleonic wars when Collingwood was at sea, I am quite sure, for two years and Nelson eighteen months without once anchoring. I think the chances of such a naval action are decidedly with the British, holding, as I do, the opinion that *celeris paribus*, the British seaman is markedly superior to the German.

The more probable course on Germany's part is to keep her fleet out of the reach of the British, who will be forced to establish a blockade of the mouths of the Elbe, Weser and Jahde, quite close together. The bulk of the vessels there will be off the Elbe, the exit to the Kiel Canal. Heligoland will be taken and used as a station for flying machines for scouting. Its insular position renders it peculiarly valuable for this purpose. A second fleet will cruise in the Kattegat to blockade the channels into and out of the Baltic. The Kiel Canal looms very large in this connection, enabling Germany, as it does, to move her strength to either end at pleasure—that is to say, to the Elbe or to the Baltic. For this reason, England may make a supreme if unpromising effort to wreck the locks at the western end to prevent egress of Germany's ships and to enable her to proceed to the Baltic in full force there to defeat the German navy, which has been so long a menace, not only to her, but indeed to the peace of the whole world. I rather doubt this attempt.

The two blockades just mentioned may be confidently expected. Neither will extend over a long stretch and both will be exposed to attacks from submarines concerning whose real value in warfare we may learn much. Of bomb dropping we shall hear a little. To me it seems a futile proceeding. The true rôle of the aeroplane is scouting. I pay slight heed to battles in the air. Encounters aloft there may be, but more thrilling in the lurid accounts of newspaper men who do not see them than effective in their results. It is the battleship which will determine the issue—just as it has in all naval history since gunpowder and cannon were invented. If the Germans prove superior to the British in the rapidity and accuracy of their shooting, they will have achieved a difficult and notable preëminence, for the British have worked wonders in this respect, having trebled or even quadrupled the number of hits within the past ten years.

Since the war correspondent no longer exists, it is to the official reports given out by either side that we must look for intelligence which in some cases will be misleading and in others most unsatisfactory. The statements and rumors printed in the daily papers except when marked "official" may be believed or not, according to the fancy of the reader. Whatever be the results of the first clash of arms the ultimate outcome cannot be doubted. The perseverance and grim determination of the British nation, forced against its will into the most unholy war of which we have any knowledge, will in the end prevail, leaving the Kaiser to mourn over the ruin of the vast and noble structure of his seemingly miraculous development of Germany's commerce and industries. To exchange this splendid record for the doubtful chance of being known as a second Napoleon or Frederick the Great evidences either poor judgment or a disordered mind.

Of one thing we may be certain, that while all Christendom will have to share the burden of distress it is upon Germany that the larger part will fall in useful lives extinguished, in financial misery, idle shipping, closed factories.

That this is all due to the insane growth of armies and navies stimulated, yes, necessitated by Germany's practise, no one can deny. This war is not a bolt out of the blue. It has long been recognized as unavoidable and it bears the earmarks of deliberate planning. Nothing was lacking but a good excuse. And this excuse has been found, or manufactured, as you please. It is right that Germany should pay heaviest.

Let us hope the plea for bloated armaments as essential to national safety may never again be heard. We now perceive what they lead to. And let us hope, that victory may rest with the British who, as a hundred years ago, are fighting in the cause of human progress and world-wide peace against the tyranny of personal, arbitrary government.

RED BY WAR

THE MIND OF NEW YORK

The title is fairly applied, on post-impressionist principles, to this photograph of all the daily newspapers—forty-four—which bring to the reservists and expatriates, each in his own tongue, news of the military fortunes of the old countries. They are dated on the Monday which brought news of the first movements in the Great War; together they link the Welt krieg and the World City

THE SUICIDE OF EUROPEAN CIVILIZATION

BY WILHELM OSTWALD

The following remarkable article was written shortly before the outbreak of the present European war and explains from a German viewpoint the conditions that have led to the conflict. Professor Ostwald held for many years the chair of chemistry in Leipzig University and in 1909 received the Nobel Prize for his researches. In recent years he has devoted himself to the application of scientific laws to philosophy and sociology and has energetically opposed the militarism which has now, as he foresaw, brought ruin upon Europe and struck a deadly blow at modern civilization.—THE EDITOR.

WHEN forty thousand Swedish peasants marched to the palace of King Gustav and demanded an increase in the armaments of Sweden, the high-water mark of Europe's militarist craze was reached.

In spite of the Baltic agreement which guaranteed the preservation of the kingdom, in spite of the protests of the most enlightened and most conservative elements of the population, Sweden was compelled to join the other nations of Europe, already groaning under the vast burden of their war preparation.

Why should Sweden arm, one may ask; what enemies has she, with her territory and her sovereignty guaranteed by all the Baltic powers? Everywhere it is the same answer that has induced the nations of Europe to burden themselves with huge military outlays—*the fear of Russia.* The woful economic depression from which Austria is at present suffering is no less a result of self-bloodletting for military purposes occasioned by fear of Russia than is the burden of billions of dollars imposed by the German Empire upon itself.

This war-crazy, billion-dollar taxation is not the only sacrifice the German nation is making. The extreme intensification of the worst form of militarism, the supercilious notion that the soldier, the man who wears a uniform, is higher, nobler and more worthy of respect than any other citizen, is the immediate consequence of the unseemly haste to grant so extravagant a military budget. The Zabern incident showed the whole world what we get in return for our military taxes, and the loss in cultural values the Germans must suffer is a heavier burden on our international credit than even the bleeding of our economic system of billions of dollars. For as the process of paying the tax is distributed over three years, it will in that long period make more effective propaganda against excessive militarism among those who have to pay it than could possibly have been done by all the pacifists and internationalists.

And why all this? On account of Russia, Russia which in all its great wars now for nearly a century has either been defeated or just managed to escape defeat. Was not Russia the first white nation that ignominiously lost a war against an army composed of men of the yellow race, against a state which in extent of territory and in population is but an infinitesimally small fraction of Russia? Has not Russia just passed thru a most violent internal revolution? Does not the revolutionary fire, tho trampled and suppressed, still continue to smolder under the surface, and is it not merely waiting for an opportunity to burst out again into a conflagration?

When you try to think these matters over calmly you clutch at your head in despair. You ask how it is possible that Europe, after creating a specter for itself, should seek to save itself by cutting deep into its own flesh and offering new bloody sacrifices to appease the idols of militarism. It is no longer merely the pardonable mistakes of diplomacy due to lack of far-sightedness and acumen on the part of statesmen. A real popular nationalistic craze is sweeping over the population of Europe, comparable to the craze that took possession of the people during the Crusades and the religious wars which worked havoc with reason and civilization.

Even France, the country which at first perhaps promised itself the greatest advantage from this state of things, does not benefit by it. The enormous military equipments which began in Russia and from there spread to Germany and the other European countries have not freed France from the almost intolerable burden which every citizen of the republic has to carry by serving two years in the army. On the contrary, as a logical consequence of this movement the French Government thought it essential to increase the term of military service to three years and thereby bring about so serious a setback to the country's progress that it is doubtful whether she will ever be able fully to recover.

To understand the beginning of this chain of mischief it is necessary to go a long way back. It began more than a hundred years ago, in the last decade of the eighteenth century, when the French people set about freeing themselves from the intolerable economic and political yoke of the decayed feudal rule and an incompetent monarchy. The Middle European legitimists saw their very existence threatened by the deposition and execution of the French king, and so undertook an invasion upon the French nation from the east. It had no other justification than to hinder the French people from independently shaping their own destinies in order to force them back to monarchism, from which, by a tremendous convulsion and with great sacrifice of blood, they had just liberated themselves. That irresistible combination of the forces of the people which later found its leader and ruler in the first Napoleon was nothing but a reaction against this violence from the outside. Napoleon's first work was to drive out the foreign invaders. Then, by a perfectly natural counter-reaction, he seized the opportunity afforded by the immense power of a popular army, then appearing for the first time in modern history, and used it for the conquest of the neighboring countries.

What course European history would have taken, had the great Corsican preserved his power of objective judgment intact a few years longer, has been a subject of frequent speculation. Had he applied his judgment as well as his remarkable energy to existing conditions and to the administration of technical, commercial and political affairs, operations of a more effective and more enduring character than his futile expeditions against Russia, the history of Europe might have been different. But he failed to do so, and his military power broke down.

The justifiable wars of liberation of the outraged nations of Middle Europe in the end brought no other result than the restoration of the old legitimist principles and the re-establishment of the royal power. The organization of the people's forces, which Scharnhorst learned to copy so well from the enemy, was effected only under the pressure of a foreign invasion, and after the victory was immediately abandoned. Among the people the idea of liberty was not yet sufficiently developed for them to make use of the power to create a government corresponding to the needs of the nineteenth century. Thus in Germany after every war a deep reactionary wave sets in, and worst of all after a victorious war. This is a phenomenon that may be observed in all modern history. Thus, a people that has achieved victory with its own blood is, so far as

freedom is concerned, always worse off after than before the war. Such was the case in France after the wars of Napoleon I; in Germany to a much larger extent after the war of liberation of 1812-13 and in consequence of the wars of 1866 and 1870. A similar reactionary wave is now pressing upon us.

Thus we see, if we follow the thread of history further, that the German wars of liberation involved France in new complications under the incompetent royal house restored to the throne. A strong legitimist and clerical reaction resulted, leading in turn to a series of revolutions culminating, as it was bound to, in a return to Cæsarism under Napoleon III. Altho at first Napoleon tried to follow a proper rational course for the economic advancement of his country, as he grew older and his intellectual faculties diminished he succumbed to the reactionary war party and the war of 1870 brought a speedy end to the empire.

Today, after a lapse of half a century, we are still suffering from the consequences of that huge blunder multiplied and intensified by a second one worse than the first. For the French nation, instead of regarding these war adventures as contrary to its real nature and imposed upon it by the Corsican-Spanish ruling pair, allowed its ambition, under the leadership of a few individuals who knew how to make clever use of the lower stratum of popular thought, to pursue the idea of revenge and to work on the national passions. Since then, instead of guiding and determining its policies first and foremost in the interest of progress, this highly gifted and civilized people has made them subservient to an atavistic principle, the principle of revenge, unworthy of a leading nation.

The natural and inevitable consequence of the policies pursued is shown by the fruit it bore. I do not speak of the positive decline in French creative force during that time. In science and art France has been ousted from the leading position that she unquestionably occupied half a century ago, and has been relegated to the second or third place. Since it is commonly held that the development of science and art is dependent upon a multiplicity of other factors, it may be doubted whether this is due to the same cause, tho an energetist like myself feels perfectly sure that such was the cause. An energetist knows that the amount of energy at our disposal is limited. If, therefore, a nation expends the largest portion of its energy, not in cultural and productive effort, but in work which at best can result only in the satisfaction of a feeling of revenge without yielding any cultural values, then, according to the law of the limited amount of energy, that nation will show a corresponding minus in all the other sides of its activity, that is, in real cultural work.

But even setting aside these considerations and regarding only the purely political facts we are still led to the same conclusion. What has forced France into this close alliance with Russia? In the whole of Europe there is no nation that in every field of culture is so distinctly the antithesis of France as Russia. It was only the hope that with the help of Russia she would be able to carry out her plan of revenge that misled France into the most unnatural of all alliances. What is the result? She has not only sunk her savings there. That may be a fairly good tho rather risky investment. But into the same abysmal pit as Russia she unexpectedly finds herself constrained to throw the youthful forces and energies of her growing generations. The energy of her youth is her most precious possession. She is getting less and less of it every year. To express her chagrin over the economic and commercial competition of Germany due to this same fundamentally false view of European politics, England has joined this alliance.

Fortunately, in the long run unreason will destroy itself. Thus we see in our day that the true, that is, the cultural, conception of European nations is at last slowly beginning to assert itself. From those who see in the retardation of progress the only possibility of conserving their position, which long ago became unstable and untenable, it has to overcome very strong opposition. As soon as Germany, France and England form a determined bloc for the peace of Europe, then the Russian menace loses all its force, since the other small states, especially Austria, will be bound to ally themselves with this overwhelming power. When such an alliance of the leading nations, in the interest of civilization, is effected, then, and not until then, may civilization hope to receive that care and attention from the economic efforts of the nations which it imperiously demands and must have if Europe is to preserve her leading rôle.

Unfortunately, this alignment of our European relations is too rational, too much in accord with true progress, to be at once realized. It is too rational and too progressive to be felt so strongly and deeply as to rouse our people in Germany to an energetic and irresistible movement for that purpose. In the preservation of the barbaric conditions that have hitherto prevailed our present reactionary ruling class of the northeast of Germany is too directly interested not to exert all its efforts to retard this development. It would hinder it entirely if it were in its power, but fortunately it is not.

To express it in the most general terms, the object of all the ruling politics today is solely to retard progress.

The great movement of civilization follows its definite course as laid down in the second law of thermodynamics. Along a certain line human affairs move irresistibly, regulating themselves in such a manner that more and more the friction surfaces disappear and everywhere well-ordered, coöperative activity with a just balance between opposite claims gives way to struggle and strife. The only question in relation to this law is the velocity with which this fixed course is traveled. This is the point where the individual and small groups of men may exercize a decisive influence in historic development.

In chemistry there are substances known as catalyzors which have the power of accelerating slow chemical processes even when present only in small quantities. The greater their amount the greater their action. They cannot change the direction or tendency of the process, but they can hasten or retard its inevitable progress. This is precisely the function of thinkers and workers in the political field. They can accelerate or retard, they cannot change or reverse the social process. The more clearly they understand the necessary course of evolution, the easier it will be for them to create the conditions for the acceleration or hindrance of that evolution. They must content themselves with the modest rôle of catalyzors if they are to exercize any influence at all. Even so self-willed a character as Bismarck chose as the expression of his activity the maxim, *unda fert, nec regitur*, "You ride on the wave, but you don't direct it."

In relation to the sad state of affairs now prevailing in our country the German patriot, in view of these facts, often asks what he is to do. There is only one answer. He can do but one thing. Of all our Government organs the German Reichstag is the most democratic, hence the most progressive. The thing to do, therefore, is always and in all matters to concentrate attention upon the German imperial idea and to make the national body the determining factor in German cultural politics. It is a long and difficult task, but it can be accomplished.

CHAUTAUQUA'S FORTIETH ANNIVERSARY

OLD FIRST NIGHT—RECORD ATTENDANCE—MUSIC FESTIVAL—THE GRADUATING CLASS ANENT MR. BRYAN

At the climax of the celebration of the fortieth anniversary of Chautauqua Institution, thirty-two persons in an audience of 6000 were present who had attended the first Chautauqua Assembly in 1874 and every annual session since. Exercizes of the anniversary culminated in gifts amounting to $6500 for summer schools scholarships and physical improvements, on "Old First Night," August 4, the date of the opening exercizes of the first assembly. Bishop John H. Vincent, one of the founders, led the anniversary ceremonial, a vesper service used for the same purpose in 1874. Representatives of the family of the late Lewis Miller, co-founder, included his daughter, Mrs. Thomas A. Edison. The Fortieth Anniversary Old First Night speakers were President George E. Vincent, Dr. Jesse L. Hurlbut, Professor Earl Barnes, Dr. Washington Gladden, Mrs. Frank Beard, Mrs. Mabell S. C. Smith, Mr. Edward Howard Griggs, Dr. Shailer Mathews. The Chautauqua European Travel Party, studying abroad under Dr. H. H. Powers, sent a cablegram of greeting from Florence, Italy.

Dr. Lyman Abbott, editor of *The Outlook* and member of Chautauqua's Educational Council, wrote:

Chautauqua has inspired the habit of reading with a purpose. It is really not much use to read, except as an occasional recreation, unless the reading inspires one to think his own thoughts, or at least make the writer's thoughts his own. Reading without reflection, like eating without digestion, produces dyspepsia. The influence and guidance of Chautauqua will long be needed in America.

The religious influence of Chautauqua has been not less valuable. Chautauqua has met the restless questioning of the age in the only way in which it can be successfully met, by converting it into a serious seeking for rest in truth.

To have been associated with the Vincents, father and son, and to have had even a very minor part in their work, I count one of the greatest honors and privileges of my life.

Old First Night comes now in the middle of a two-months' season which has been breaking all previous records of attendance. Music Festival Week gave a joyous note to the anniversary celebration. Mr. Victor Herbert with his orchestra, and the Schubert Club of fifty male voices, were added to the regular musical resources of Chautauqua—chorus, soloists, music school faculty, band and memorial organ—for the festival. Performances of Mendelssohn's "Elijah," Verdi's "Manzoni Requiem," the opera, "Chimes of Normandy," parts of Mr. Herbert's "Natoma," Bruch's cantata "Fair Ellen" and a Wagner program were notable. Endowment of a Chautauqua Symphony Orchestra is advocated.

President E. B. Bryan of Colgate University delivers the "Recognition Day" address at Chautauqua this week to graduates of the Chautauqua Home Reading Circle who have completed a four-year course. Members began with an English year of topics and, because one of the first books was "Studies in Dickens," chose the name "Dickens" Class of 1914. Motto: "The voice of time cries to man 'Advance.'" Emblem: wild rose. Class yell:

Dickens, Dickens,
Chau-tau-qua!
Nineteen Fourteen,
Rah, Rah, Rah!

The class officers are: President, Mrs. Mabell S. C. Smith, New York City; vice-presidents, Mrs. H. A. Deardourff, Jamestown, New York; Mrs. G. C. Ashton-Jonson, Farnham, Surrey, England; Miss Julia M. Elwin, Merrimacport, Massachusetts; Mr. H. E. Cogswell, Indiana, Pennsylvania; Mrs. A. M. Palmer, Paris, Illinois; Mr. E. Allard Compton, Stephenville, Texas; secretary, Miss Alice E. Sanborn, Wells College, Aurora, New York; treasurer and trustee, Dr. N. J. Lennes, University of Montana, Missoula, Montana.

On a string of eastern Chautauquas a program feature consists of an address by a man For Woman's Suffrage and another address by a woman Against Woman's Suffrage, both on the same day.

Here and there a newspaper Bryan-baiter sneeringly reports that Mr. Bryan is "off with the yodlers again" or "hitting the Chautauqua trail." The southern Baltimore *Sun* says: "If it could be demonstrated, we would be willing to wager that the average Chautauqua student has a far better knowledge of public questions than the average of those who sneer. And whether he likes it or not, no public official today can afford to disregard the Chautauqua movement." The New England Springfield *Republican* declares that "no one can read the sympathetic interpretations of the Chautauqua which The Independent has published, and long retain a snobbish feeling toward such an institution. The Chautauqua was ridiculed, sneered at and even maligned last summer by the newspapers that sought to discredit Mr. Bryan because he delivered Chautauqua lectures while holding the office of Secretary of State. The office does not exist that could be robbed of its dignity by the Chautauqua lectures of its occupant. Only mandarins of 'culture' or diplomacy could honestly think so."

Summer conferences at the Y. M. C. A. Camp, Lake Geneva, Wisconsin, have been so successful that an Association College for professional training during nine months of the year has been projected, on ground purchased near the University of Chicago.

CHAUTAUQUA PLATFORM ECHOES

"It is not wise to pray too earnestly for an easy job. With the medium which resists most stubbornly the best and most permanent work is sometimes done. You can carve a statue out of chalk or butter or dough, but it isn't likely to last as long as the Apollo Belvedere or the Winged Victory have lasted. Above all, let us not forget that the great work of the infinite Goodness has all been done upon a resisting medium. Out of chaos he has been bringing order, out of formlessness beauty, out of blind cravings and elemental appetites, kindness and justice, honor and fidelity, truth and love. He is the Great Overcomer. And he calls us to be coworkers with him in filling the earth with righteousness and peace."—*Dr. Washington Gladden, pastor emeritus First Congregationalist Church, Columbus, Ohio.*

"The work of town improvement cannot be done directly, for in the first place everybody wants to improve, nobody wants his neighbors to know that he needs to, everybody wants to improve the neighbors, and lastly nobody can improve his neighbors if the neighbors find out what he is up to. The way to succeed is to go about it indirectly. The first thing to do is to begin on one's self. A beautiful town is a town full of beautiful people. Seek to improve your own personal appearance, by reasonable dress, by seeking to improve your physical being with outdoor life and physical training. After you have made yourself an ideal appearing citizen, then begin on your own home."—*Henry Turner Bailey, editor School Arts Book.*

THE NEMESIS OF ARMAMENTS

BY CHARLES EDWARD JEFFERSON, D.D.

Dr. Jefferson, pastor of the Broadway Tabernacle in New York, is chairman of the executive committee of the Church Peace Union. A recent article from his pen in the "Atlantic Monthly" on "The Delusion of Militarism" takes its place among the most remarkable peace arguments of recent years.—THE EDITOR.

FROM the awful spectacle of Europe plunged into war two clashing conclusions are certain to be drawn.

The first and most obvious conclusion is that the pacifists are in a hole. They have been mistaken all along, and now their delusion is exposed. They have long been suspected of being visionaries and dreamers, but now the last doubt of it has vanished.

In the glare of the huge conflagration the peacemakers cut a sorry figure. A metropolitan newspaper editor scoffs at them as an "absurd group" on whom little sympathy need be wasted. He notes that they are not saying anything just at present and intimates that they should forever hold their peace. Such men—to quote one of our most distinguished fellow-citizens—are not only useless but mischievous.

The militarists, on the other hand, have been right from the beginning. All that they have said is true. Man is a fighting animal. Human nature cannot be changed. Nations have always fought, and therefore they always will fight. War soon or late is inevitable. The only sensible thing is to get ready for it.

The present predicament of the peace-workers is put graphically by a journal whose name the reader is left to guess. "It is in no gloating spirit that we call the attention of the Andrew Carnegies, the David Starr Jordans and other misguided peace enthusiasts to the vindication of the position of this journal which is furnished by this war array on the Danube. What has become of that army of bogies with which Mr. Carnegie, Dr. Jordan and others had peopled the imaginations of the unthinking? The roar of the guns in southeastern Europe has awakened those peace gentlemen from their foolish dream, and their phantom host of spooks has vanished into air."

This is so good that it is sure to be quoted all over the country, and many trustful persons will repeat it, supposing that it is an accurate statement of facts. Let us look into it a little, and find out, if we can, more about the character and fate of these spooks.

It should never be forgotten that there are two kinds of dreamers, and that there are two different species of spooks.

It is in no gloating spirit that we call the attention of the editor of the aforementioned journal, and other misguided armament enthusiasts, to the vindication of the position of the peace-workers which is furnished by this European war array.

What has become of that army of bogies with which the editors of Sunday papers have peopled the imaginations of the unthinking?

It would be saying too much to assert that the roar of the European guns has awakened these armament-loving gentlemen from their foolish dreams, for some men will probably never be awakened from their foolishness till the final blast of the Judgment Day, but we venture to call the attention of all men who are awake to the dramatic vanishing of the phantom host of spooks with which the militarists have peopled the imagination of the world.

It will be profitable for us to consider these spooks one by one.

Spook Number One

"Armaments are the only sure guarantee of peace." We have heard it a thousand times from men who seemed to know. It has been published in a thousand volumes and in ten thousand papers, and so men came to accept it as the truth. When now and then war seemed to threaten, we were assured that all would be well if the armament could be somewhat increased.

Thru thirty years the work of increasing armaments has gone merrily on. It was in this way that sensible men worked for peace. The experts in these high matters were confident that a nation by making itself formidable insured itself against attack.

This doctrine was especially convincing to Russia and Germany, and so they have gone on adding new battalions until the dimensions of their armies have astonished the world. In these two empires the militarist ideal had been well-nigh reached. The armament on both sides was so enormous that peace was guaranteed!

The people have been growing increasingly restless, but their murmurings have been quieted by assurances that all this increased taxation would secure for them the blessings of peace.

Not an appropriation for the increase of army or navy has been past within the last twenty years in any parliament in the world, which has not been secured by men who were pleading for peace.

When holes were punched in the doctrine by the Russo-Japanese war, and by the Spanish-American war, and by the Balkan war, the holes were covered over by the broad facts that Germany had not used her army for a generation, and that England's fleet had never fired a gun. The peace of Europe—so all the wise men said—was due to armaments.

It was a lie, and the lie is now being shot to pieces before our eyes.

It speaks well for the peaceful temper of the peoples of Europe that they stood the strain so long. Armaments are provocative of war. You may increase them for a season, but at last you receive the retribution which you invited.

The least surprized men in the world today are the men who for many years have been protesting against armaments. They may be dreamers, but the silly dream that armaments are guarantees of peace never entered their mind.

They have said in season and out of season: "This cannot go on. This must not go on. It is a crime against humanity. It will drag the world back into barbarism. It will end in a tragedy which will darken the heart of mankind."

The peace workers are not so guileless, and ignorant, and impractical as they are painted. They know history, and they understand human nature, and they are acquainted with the laws of the world they are living in. They are familiar with every move that has been made in the last thirty years. The man who imagines that they are soft and green is dreaming. He is in the grip of a spook. What the peace-workers have said from the beginning is now being confirmed.

In the fierce light of the European conflagration even blind men ought to be able to see that armaments are not guarantees of peace.

Spook Number Two

"Armaments are a form of national insurance." The doctrine has been promulgated thruout the world. The insurance comes high, but we must have it. A man insures his house; a nation must insure itself. Compare the annual cost of an army and navy with the aggregate wealth of a country, and any one can see that military and naval expenses are a mere bagatelle.

Six nations of Europe went into this scheme of insurance. Within the last thirty years they have paid in premiums six billion, five hundred and ninety-two millions of dollars, and now they find they are not insured at all.

Some fool in southeastern Europe threw a lighted match, and instantly all Europe was in flames. Why? The whole house had been saturated with kerosene.

Military and naval budgets are not insurance, they are kerosene. Their function is to render a nation inflammable. Europe had been so repeatedly drenched with kerosene that one match was sufficient to start an instantaneous and continent-wide conflagration: Russians, Germans, Frenchmen, Englishmen all heard at once the roar of the blazing rafters above their heads. The house is burning, and now other billions of dollars must be expended in putting out a fire which was made possible by the very means which were devised to prevent it. Another spook has vanished into air.

If one-tenth of the treasure spent by Europe in the last thirty years upon her armaments had been devoted to building rational safeguards against war, the present catastrophe would never have blighted the world.

Spook Number Three

"Only by armaments can liberty be safeguarded and justice secured." The advanced nations must protect themselves from the insults and assaults of the backward nations, and weak nations when attacked must be defended by the strong. Armaments are the natural protection of righteousness and truth.

It sounds plausible, but it is false. For years Abdul the Damned allowed his Christian subjects to be butchered, and altho Christian nations stood round and watched the streams of flowing blood they did not lift a hand in defense of the helpless. They could not. They were bound hand and foot by their armaments.

The other day the Balkan states were fighting each other with a ferocity surpassing that of savages, committing atrocities which in devilish cruelty have never been exceeded, and the great Christian Powers —like so many huge and unwieldy brutes—stood in armor, impotent, watching the frightful carnage go on, all of them so weighted down with steel that not one could move.

That mighty armies are an efficient instrument for the establishing of justice or the rescue of the oppressed is another of the spooks. All men who are awake know that swollen armaments block the way of justice and jeopardize the liberties of mankind.

Spook Number Four

"Only by great armies and navies can we have international law and order." The Hague Conferences attended to various important matters, but they left armaments untouched. By establishing certain rules of procedure, and laying sundry restrictions on combatants, it was thought by some that the nations would gradually turn their feet into the paths of peace. It was a delusive expectation.

The militarists are willing that all sorts of conventions shall be agreed to, if only the big armies and navies are left intact. They have no objection to Red Cross Societies, and to arbitration treaties, and to the neutralization of certain territories, but they insist that the armaments shall not be reduced.

After each of The Hague Conferences all armaments were increased. This is because Christendom is in the hands of the militarists, and for a generation they have had their way.

It is idle to talk of the observance of conventions and treaties so long as nations rely on their armies and navies for the accomplishment of their purpose. Italy stole Tripoli, because she had an army. Austria stole Bosnia because she had an army. Armies enable nations to steal. Armies make it easier to steal. Navies combined with armies make it easier still.

Germany bound herself by a treaty to respect the neutrality of Luxemburg, but when the hour arrived, Germany sent her army thundering thru Luxemburg defying the treaty, for mighty armies are not to be halted in their courses by the gossamer threads of treaties.

No wonder the House of Commons laughed at Germany's promise not to keep any of Belgium at the end of the war. In the act of trampling on one promise, she could hardly expect to be trusted in making another. No nation can be expected in time of excitement, with a huge sword in her hand, to be scrupulous about promises made long ago.

If nations dress like brigands, they will come at last to act like brigands. Conscience atrophies under armor-plate. European diplomacy has been frightfully debauched and degraded by the frenzied piling up of guns. The notion that nations can be trusted to keep their word and are more certain to work for the higher interests of mankind when they expend a large part of their revenues on instruments of destruction is another spook which has vanished into air.

Europe is uttering a solemn warning to America. The old world is speaking to the new. Ancient monarchies are offering counsel to our young Republic.

For a generation we have been aping Europe. The ideal of Washington and the other founders of our nation has been fading from many eyes. We have a Navy League, and we launch our dreadnoughts with the playing of bands, and the hurrahs of high state officials. We have our annual war-scares and our annual naval reviews—all just like Europe!

We have our swelling naval budgets, and our niggardly appropriations for the causes of social betterment, after the European fashion.

We have our interminable chatter about hypothetical attacks and conjectural perils, and the incessant speechmaking and magazine-writing and book-making of Colonels and Commodores, Admirals and Generals, active and retired, just as it is all done in Europe.

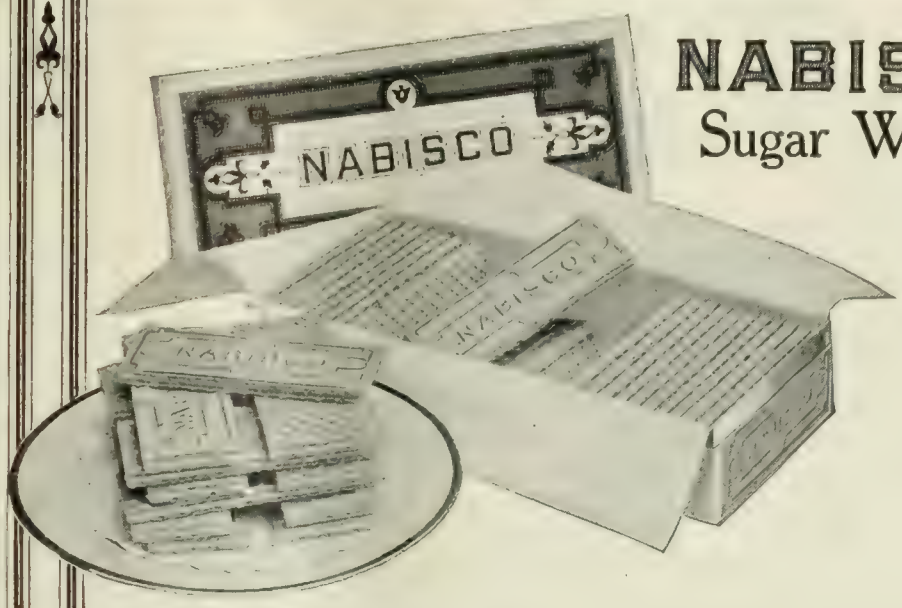
We have spent in a few years over two billion dollars on our navy, and this is but a trifle compared with what we are going to spend, if the naval oligarchy intrenched in Washington City has its way.

We have learned to talk glibly about naval tonnage, and naval prestige, and to admire fourteen inch guns, and to publish pictures of battleships even in religious papers. They do it that way in Europe!

We have even begun to send our boys to summer military camps, and are considering the advisability of introducing military instructors into our colleges and making target practise a part of the high school curriculum. We have caught the fever. We are in the race.

And now Europe, being in torment, calls to us, "O Republic of the West, do not follow my example! There are ways which seem right to a nation, but they lead down at last to the chambers of death. Do not believe the creed which we have long accepted. Armaments are not guarantees of peace. They are not insurance. They are not instruments of reason or righteousness. They create first suspicion, then hatred, and at last lead young men by the million to the fields of blood. Do not choose the path which we have followed. Work out your destiny along a different line. Make the new world different from the old. Beware of guns. Banish the implements of hate from your eyes. Take your mind off the machinery of slaughter. Cease to delight in the engines of destruction. Trust in reason. Have faith in brotherhood. Believe in love. Build your civilization on the principle of good will. Bind all the nations of the Western Hemisphere into a federation which by its fidelity to the law of kindness and its devotion to the Prince of Peace shall become at once the inspiration and guide of the world!"

New York City



THE NEW BOOKS

A PLEA FOR LITERATURE

MR. TREVELYAN apparently takes these essays of his with no great seriousness; his subtitle and his manner suggest that here the trained biographer consciously unbends. But many pretentious books contain far less scholarship and far less wisdom than this. Scholars and general readers both may profit by the fine protest against the narrow use of the term "literature," which includes so-called imaginative writing and excludes history. Mr. Trevelyan prefers, and illustrates, the older fashion that held literature to mean "not only plays, novels and *belles lettres*, but all writing that was above a certain standard of excellence." In his title-essay and in his other essays he speaks as an educated man rather than as a specialist; tho his acquaintance with particular books would not be questioned, he exhibits with more distinction his understanding of the nature of books and the use of literature in general. There are plenty of current essays that are scholarly but lack ideas; plenty that have ideas but lack common sense; plenty that have common sense but lack the spiritual gleam. This collection of essays is singular in its nobility of tone, in its wisdom, in the fertility of its ideas, and in the soundness of its scholarship.

Mr. Trevelyan pleads for old-fashioned history—for history as an art. He makes good fun of the historian who sets up pretensions for the philosophical or scientific services of his craft. With whatever care he gathers his documents, the final task of the historian should be to tell a story, and to tell it not to the specialist but to the layman. Gibbon is Mr. Trevelyan's ideal historian, and we are glad to hear once more a good word for Macaulay, for Carlyle, and best of all, for Walter Scott.

The fourth chapter, Poetry and Rebellion, is a revision of an admirable review of Brandes' *Main Currents in Nineteenth Century Literature*, part iv. Mr. Trevelyan amplifies Brandes' picture of the moral and political stagnation against which Byron and Shelley revolted; he would praise Byron's services to political freedom as highly as Brandes does, but prefers not to go so far in approval of Byron's philosophy of life; he would also put Wordsworth higher than does the Danish critic, and he would find other main

NABISCO
Sugar Wafers

THESE incomparable sweets are the most universally popular of all dessert confections. Whether served at dinner, afternoon tea or any social gathering, Nabisco Sugar Wafers are equally delightful and appropriate. In ten-cent tins; also in twenty-five-cent tins.

ADORA

Another dessert delight. Wafers of pleasing size and form with a bountiful confectionery filling. Another help to the hostess. In ten-cent tins.

NATIONAL BISCUIT COMPANY

A Tribute to the Memory of Miss Catharine M. North

DIED July 29th, 1914, Catharine M., daughter of the late Deacon Alfred and Mary Hubbard North, of Berlin, Conn.

A LONG time friend wishes to express her loving admiration of the character of Miss North, who recently entered into her heavenly rest. Her personality was strong, upright and most interesting, strong in the force of her mental gifts, and in her moral nature, upright in a most conscientious fidelity to all known duty, interesting, because responsive to many interests.

Her whole nature resonated in many chords. Did one seek her for advice, on any point, how quick she was with helpfulness and spirit of service! Did one lead the talk to music, art, travel, history, genealogical research, or the deeper things of the spirit, how she brightened and enlarged the subject by her own original ways of looking at it! Who could ever tire of such a companion? When one thinks of the physical pain endured for several years past, with the most heroic fortitude, one can but rejoice at the triumph of the inner spirit reaching its highest development [illegible] all in light and love. We, who were her friends, are grateful for the companionship of these years, and are glad to believe what has been widely said that Christians never meet for the last time.

S. C. C.

Berlin, [illegible].

themes than liberty in the poetry of even this liberty-singing period.

The whole collection of essays is admirable, and deserves far more attention than it is likely to get from readers whose discrimination has been dulled by cheap fireworks of epigram and paradox.

Clio, a Muse, and Other Essays Literary and Pedestrian, by George Macaulay Trevelyan. New York: Longman, Green & Co. $1.50.

THE FRAILTY OF WOMAN

The Fugitive, another of John Galsworthy's newest plays, is to appear in book form. It is a poignant study of insufficiency in a woman's character and ends in tragedy as dire and as ruthless as Pinero's *Iris*. In his playlet, *Half an Hour*, J. M. Barrie selected the same theme. Mr. Galsworthy's treatment is broad and in characterization it is vivid; the heroine has fineness of feeling, but lacks will to withstand the forces against her. Her experience has not trained her to cope with life, unprotected; she finds herself unfit outside the environment of her class. *The Fugitive* is not as big in its social philosophy as *Justice* or *The Silver Box*, but it maintains Mr. Galsworthy's value as a dramatist.

Scribners. 60 cents.

HOW TO APPLY RELIGION TO LIFE

The rector of Emmanuel Church, Boston, Rev. Elwood Worcester, has become distinguished for his investigation and exploitation of the psychotherapic power of Christianity, but in his new book on *Religion and Life* he leaves this field to lay emphasis upon the reasonableness and adequacy of the Christian faith as the source of social regeneration and the means of realizing complete personality.

Harpers. $1.25.

A GERMAN MASTERPIECE IN ENGLISH

An immortal theme traced thru the lives of Swedish peasants in Gottfried Keller's *A Village Romeo and Juliet* has lost little of its poetic feeling, its simple tragedy in A. C. Bohlemann's translation. The tale is taken from *Seldwyk People*, which Nietzsche has called one of the four masterpieces of German prose.

Scribners. $1.

BRUSHING UP OUR HISTORY

Professor Edward Channing's *Students' History of the United States*, in its new edition brings up to date and makes more serviceable than ever the most accurate, balanced and ably written school history of our country. It is a marvel of true perspective, compactness and breadth of knowledge.

Macmillan. $1.40.

A MODERN BEAUTY AND THE BEASTS

Beauty in distress is a somewhat threadbare theme, but a vigorous picture of a lumber camp in the grip of a Manitoba winter—tho forced to serve as a rough background for emotional cross trails—redeems the triteness of Herman Whitaker's story of the Northwest, *Cross Trails*.

Harpers. $1.20.

RELIGIOUS LIFE IN OTHER LANDS

Under the direction of Rabbi Stephen S. Wise, of the Free Synagogue, a social survey of Jerusalem and other parts of Palestine has been planned, and a beginning of the work will be made this summer or in the early fall.

Bishop Bonomelli, of Cremona, who a few years ago created a stir by his friendly letter to the World Conference of Missions at Edinburgh, has recently startled ecclesiastical circles by the declaration in a pastoral letter that the restoration of the temporal power of the Pope is both undesirable and impossible.

The recent meetings of the biennial Synod of the Spanish Evangelical Church were held in a building once occupied by leaders of the Spanish Inquisition. The dark subterranean passages leading to the torture chambers suggested a different world from that of the gatherings above, where ardent Protestants were discussing the relations of evangelical Christianity to Socialism and Free Thought.

The spirit of the Christian movement in Japan is well illustrated by the preparation of a Revised Version of the Japanese New Testament which is soon to be published. Altho not forty years of age the old version is felt to be inadequate because of inaccuracies and the changes that have come about in the Japanese language. Nestle's edition is the Greek text used by the translators.

A sensation was caused a few weeks ago in England by Rev. E. W. Lewis, pastor of the King's Weigh House Church, London, who wrote an urgent appeal to the clergy to renounce their comfortable incomes and seek poverty as an asset in the proclamation of the Gospel. He now follows his own counsel by resigning his pastorate with its stipend of three thousand dollars, and announces his intention of spreading the truth in the future by "a kind of wayside sowing of the seed."

The state church of Germany is in trouble over the Apostles' Creed, to certain clauses of which the liberal clergy and their followers object. The objectors are not yet strong enough to secure action making the repetition of the Creed optional, and the orthodox party is demanding that those pastors who cannot repeat every clause conscientiously should resign their places in favor of those who can. So far neither side gives signs of weakening in their struggle for supremacy.

In spite of many threats and much ecclesiastical opposition emanating from high Church dignitaries, an enthusiastic meeting of Spanish Christian Endeavorers filled to the doors the largest hall in Barcelona last month in order to welcome Dr. Francis E. Clark, the organizer of the movement. Hundreds of police and secret service men guarded the participants and scores of suspicious characters seeking admission were arrested or sent away because of a threatened riot.

Interlaken—
a school on a farm

where boys learn by doing. Actual contact, under competent, instructors with growing of crops and care of live stock on a 670 acre farm. Shops, work with tools and animals, deep woods, beautiful lake, boating, bathing, skating, healthful sports, right associates.

High standards of scholarship—under experienced instructors who know life and modern educational methods. Preparation for American and European universities. An exceptional school plant—gives opportunity for imitative and executive work. Only the sons of American business and professional men of good moral character admitted; the number is limited. THE MARKET PLACE

WAR'S EFFECT ON AMERICAN BUSINESS

FOR the suddenness and violence with which the European war crisis descended, at the end of last month, on a group of peaceful communities, there are few precedents in history. The rupture of the peace of Amiens in 1803 involved quite as formidable a chain of circumstances, in the shape of a general European war; but the scope of international finance was at that time a small affair. The Franco-Prussian war of 1870 broke out with practically only a week's warning to the outside world; but no more than two European states were involved in this; and nervousness as to the possible drawing-in of others was soon over.

On the present occasion, only a week elapsed between Austria's declaration of war on Servia and England's declaration of war on Germany. Within that brief period, covering the seven days beginning July 26, the great markets of the world appeared instantly to foresee, with the marvelous capacity that financial markets often display, that which was to follow. Precisely as the political developments of these seven days embraced Austria's declaration of war on Servia; the Russian mobilization on Austria's frontier; Germany's ultimatum to Russia, Germany's declaration of war on Russia; Germany's ultimatum to France and her declaration of war on that country; England's ultimatum to Germany and its declaration of war on Germany; so in the financial markets of the same brief period, there was included a rise in the Bank of England's rate to ten per cent, the highest in that institution's history; the closing of the London and New York Stock Exchanges, and the cessation of business on all other exchanges of the world; the suspension of the Bank of England act of 1844; declaration, at Paris, Berlin and London, of a month's "moratorium" on trade indebtedness; the authorizing of upward of $500,000,000 in emergency bank currency by the United States Government; the adoption of the Clearing House loan certificate expedient by the New York banks; and, finally, the almost complete embargo on the export and import trade of this country.

Why did all this happen? The events at London are explained by the fact that that market is the clearing house of the entire financial world. It holds deposit accounts in prodigious sums for all other great markets. When war breaks out, all such markets were certain to rush upon London to withdraw their balances, and they were sure to withdraw such credits in the form of gold. Especially was this bound to be so with the German clients and customers of London, who were confronted with the possibility of war between their Government and England.

The actual result was an event which, a month ago, would have seemed incredible—a run of the most formidable proportions and by the outside financial world in general on the Bank of England. It was impossible that such a situation should be allowed to continue. The Stock Exchange at London closed because that market, which is open to practically all the securities of Europe, was being made a market place for everything on which the continent could realize. Foreign exchange houses in Lombard street, which had accepted continental bills of exchange, found themselves confronted with the maturity of such bills and with no "cover" for such maturing liabilities in the shape of the merchandise against which those bills were drawn. A moratorium was absolutely necessary in order to preserve the solvency of the market—that is to say, the postponing by governmental edict of the date at which credit engagements of the sort should mature and be held as valid claims against the banking houses. Such a governmental declaration was made on Thursday.

The Bank of England act prescribes that every note issued by the institution should be "covered" by an equivalent amount of gold in the bank's own vaults. But the "run" of the continent on the Bank of England when war broke out—followed by something like a run on it by the London financial community—had the extraordinary result of drawing away more than one-fourth of the Bank of England's stock of gold. Its weekly statement of July 29 showed £38,100,000 in hand; the statement of August 7 showed only £27,600,000. Nor was this all; the banking reserve against deposit liabilities was reduced in the week by £16,900,000, while the loans and liabilities increased. Instead of forty per cent, which tradition marks as the lowest safe ratio of reserve to liabilities the ratio of August 7 was only 14⅝ per cent.

Suspension of the bank act means that notes may be issued, with permission of the Government, in excess of the gold in the institution's vaults. Since these notes, when once created by the Issue Department of the bank, are available as reserve in the Banking Department, against its deposit liabilities, the low "reserve percentage" can be thus corrected. It is not necessarily suspension of gold payments; but it is public notice that the bank is under desperate pressure. The expedient has only three times been adopted since the passage of the bank act—in the London panics of 1847, 1857 and 1866.

Rex Literary Bureau
57 Stockton Street, Brooklyn, N. Y.

The case of the United States—which has puzzled many people, in view of the fact that we are not even indirectly concerned in the war—was in some respects like London's. In the days on which our Stock Exchange was open, immediately preceding the closing of its doors on July 31, Europe sold its own holdings of American securities on the same scale as that on which the continent had liquidated at London. It drew out gold against the credit balances thus established in New York; in a single week it took for export the prodigious amount of $53,000,000. Continued for any length of time, this utterly abnormal process would have exhausted all our banking stock of gold.

It is true the banks might have refused to give up gold to depositors and have offered legal tender notes. But this would have merely shifted the strain from the banks to the Treasury, where large depositors, who had received legal tenders from the banks, could by law redeem them out of the Government's gold reserve. The first measure taken in the exciting final week of July was the shutting down of the Stock Exchange. Next, with the greatest promptness, Congress renewed the law authorizing an emergency bank currency.

The law under which such issues may be made was past a few months after the panic of 1907, with the purpose of obviating in the future certain events of that panic year. In October and November, 1907, the western banks ran on their eastern depositories, withdrawing huge sums of cash from the eastern bank reserves. Individual money hoarders followed suit. When it became evident that banks would not continue indefinitely making full cash payments to depositors, employers of labor, doubtful whether they could obtain their currency for their week-end pay rolls, followed suit, withdrawing huge sums of currency from their banks. In the end the New York banks shut down peremptorily on payments of cash except for small amounts. The inevitable result was a premium on all forms of currency in the open market, paid in depreciated bank checks, and, in the end, an emergency currency wholly outside the law, issued either by organizations of banks or by large employers of labor. With this came complete disorganization of our interior exchanges.

To avert any such consequences in the future, the so-called Aldrich-Vreeland act of 1908 was past. It authorizes, on a proper presentation of circumstances to the Government, the circulation by the banks of a special form of bank note secured, not like the present bank notes by United States Government bonds, but by other high grade negotiable collateral. In the law these issues were limited to $500,000,000; they were to be taxed from one-half of one per cent up to 6 per cent, according to the time they should remain outstanding; this arrangement being designed to insure their early redemption when affairs returned to normal. They are not legal tender notes and they are not a Government issue. They are merely, in principle, an extension of the

Atlantic Mutual Insurance Co.
Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,219,045,826.00
Received premiums thereon to the extent of	282,298,429.80
Paid losses during that period	141,567,550.30
Issued certificates of profits to dealers	89,740,400.00
Of which there have been redeemed	82,497,340.00
Leaving outstanding at present time	7,243,060.00
Interest paid on certificates amounts to	22,585,640.25
On December 31, 1913, the assets of the company amounted to	13,259,024.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.
For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

Two men came running at top speed toward the station, where the train that would run them to town in a few minutes was steaming ready to start. As they reached the station floor the whistle sounded and the train was off. Gasping for breath, one said to the other, with cheery good humor:

"Eh, Jim, tha didna run fast enough."

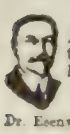
"Yea. Ah did," Jim instantly replied. "But Ah didna start soon enough."—*Manchester Guardian.*

A Bridge Between Hope and Accomplished Results

OUR new policy which provides for monthly payments to dependents in event of death of the insured. It is ideal protection. Its rates are low, but its benefits are many.

BERKSHIRE Life Insurance Co.
Pittsfield, Mass.

W. D. WYMAN, President
W. S. WELD, Supt. of Agencies



AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to
HOME LIFE INSURANCE COMPANY

THE HOME CORRESPONDENCE SCHOOL
Dept. 305, Springfield, Mass.

present familiar bank note issues. The purpose of such issue is to enable solvent banks at all times to pay currency to depositors on demand and instantly, and to effect the regular payment of balances between themselves. It may be seen at a glance, that the authorizing of such issues would at once check such a run of depositors as that of 1907; because, so long as the bank remained in a solvent condition, it could not shut down on cash payments for all legitimate demands. Under such circumstances no premium on currency would be possible, no uneasiness would be occasioned to employers of labor, and a run on solvent banks would be merely foolish. As a matter of fact, there has been no such run on the present occasion.

The issue of Clearing House certificates, which was also decided on in the opening week of August, is another question. It is doubtful whether the use of that expedient was necessary. Its purpose really is to enable banks which, in time of stress are temporarily weak in cash, to meet their debit balances to other banks at the Clearing House in due bills approved by the Clearing House Committee. The trouble in most cases with the expedient has been, that all banks, strong and weak alike, have adopted the expedient—thus placing themselves on a paper basis as against one another. But little criticism was heard in the present crisis over the adoption of any and all reasonable safeguards.

The larger problem which confronted the American markets was that of our foreign trade. It involved a double difficulty which, in its present form, has probably never arisen since the "Orders in Council" and the "Non-Intercourse Act" in the first decade of the nineteenth century. On the present occasion the dilemma arose from the fact that ships available for exporting American merchandise were suddenly lacking, at a time when all the German vessels were withdrawn from the ocean's service and when vessels under most other flags were unwilling to sail owing to the possible risk of capture. That this was a real misgiving was indicated by the extraordinary rise in the war insurance on the cargoes of such ships, which, in the first week of actual hostilities, got up to six and ten per cent of the value of the cargo thus insured. This, in fact, was first of the influences making for the rise in foreign exchange—for which the normal maximum is $4.89 to the pound sterling—first to $5 and later to $7; rates absolutely unheard of in the experience of this market.

What such a movement meant, however, was not only that the war risk was virtually prohibitive, but that, in the temporary breakdown of credit facilities in Europe, no means existed of securing payment for exported merchandise. As a result practically no export business could be done. In the wheat market, the resultant situation was dramatic, as a consequence of our unprecedented harvest which, for the southern wheat producing states, was completed a fortnight ago. Enormous supplies of exportable wheat were ready at the ports and storage points to be sent across the ocean; this at the moment when Europe's stored supplies were unusually low, when its own crops as a whole were short, and when the leading foreign markets probably had in hand not more than three or four weeks' supply. The wheat market itself, confronted, on the one hand, by the natural influence of a war market, with competing foreign supplies cut off and with the need of foreign consumers urgent, and, on the other hand, with the embargo on export facilities, moved wildly up then as wildly down. Probably no such confusion in a great staple market has ever been witnessed in this country.

The outcome of all these extraordinary situations is not altogether easy to predict. In a measure it necessarily depends on the character and duration of the foreign war. The reasonable probability is that shipment of our most important commodities will be arranged as soon as England's command of the seas is made unmistakable. Europe must have our wheat, and the declaration of war by England on Germany seems to insure the disappearance of the German navy from the open seas. The grain trade's feeling, even at the moment of greatest uncertainty, was that if only actual transit of the merchandise could be insured, drawing of exchange to pay for it would be resumed. The interesting problem still was left, whether the foreign merchant and banker would not himself have to find the means of guaranteeing and making such remittances.

Whether our export trade as a whole could be very soon restored by this or other processes is highly doubtful. Our goods could certainly not be delivered easily to countries at war with England, and, if the naval war assumes large proportions, there is bound to be a deficiency of ships. In any case, while the contest keeps that form, the important German merchant marine must be withdrawn from the open sea. Furthermore, there is left our enormous direct import trade from countries like Germany and France, as well as from countries in the interior of Europe. That trade for the present is completely blockaded—not only thru the hazards of ocean shipping, but thru the seizing of railways in the belligerent states to use for military purposes, thus checking access of merchandise to the interior. Prediction as to just how this part of the situation will work itself out is at the moment all but impossible.

That so unprecedented a situation in our import trade will involve important changes in our home production—certainly in case the war is long continued—is a foregone conclusion. Merchandise, textile and other commodities, which we have been receiving constantly in huge quantities from the continent of Europe and for which the demand of American consumers will continue, must be replaced thru goods produced by our own home manufacturers. To what extent all this will alter the

interior trade arrangements of the country and how far it will inure to the benefit or the detriment of the United States in its commercial affairs is one of the interesting problems of the hour. It may at least be said that very rarely has a neutral nation been placed in such a position of advantage as has the United States in the face of this European war.

THE FEDERAL RESERVE BOARD

Congress has at last permitted completion of the Federal Reserve Board. Mr Warburg was questioned by the Senate committee—or by one member of that committee—for seven hours. The effect of this inquiry was that he won the support of members who had vigorously opposed the nomination of Mr. Jones, and Mr. Bristow, of Kansas, was the only member who dissented when a favorable report to the Senate was made.

In place of Mr. Jones the President had nominated Frederic A. Delano, of Chicago, a member of the National Industrial Commission. A graduate of Harvard, Mr. Delano worked his way up from the shops of the Burlington railroad and became general manager of the Burlington system. Afterward he was president of the Wabash, and he is now president of the Chicago, Indianapolis & Louisville Railroad Company. A member of the Harvard Board of Overseers, he is also a trustee of the University of Chicago, a member of the associations of civil and mining engineers, and a director in several corporations.

In the Senate's executive session the vote on the Warburg nomination was 38 to 11, and Mr. Bristow was the only senator counted against Mr. Delano. He had spoken for three hours in opposition to both of the nominations. It is understood that Charles S. Hamlin will be made governor of the Reserve Board, and Mr. Delano vice-governor.

The system created by the new banking and currency law will soon be put in working order. There should be no delay that can be avoided. The central board is to appoint three of the nine directors of each of the district reserve banks. Altho the financial strength of the country has been clearly shown during an extraordinary attack upon international finance and credit, and there has been no actual demand, in domestic conditions, for the precautions taken by means of legislation and the action of the Treasury Department, the situation is one for which the new system is needed. The district banks should be organized at once, and they should promptly take up their work.

Reports from the ninety-eight railroads affected by what are called full crew laws show that this legislation has increased the annual cost of operation by $5,769,174.

The following dividends are announced:

Stone Bonsen Pond Company, preferred, quarterly 1½ per cent, payable August 15.

Pratt & Whitney Company, preferred, quarterly 1½ per cent, payable August 15.

Some Tire Prices

Will Buy You a Half-Inch Wider Goodyear

Note these amazing facts:

Today some tires are costing one-third more than Goodyears.

Their price—or less—buys a half-inch wider Goodyear. And the wider tire will fit your rim.

For instance, the price on a 30x3 will buy a Goodyear 31x3½. Their price on a 36x4½ will buy a Goodyear 37x5. So on other sizes.

Or you can buy four same-size Goodyears for the price some ask for three.

So the price of some tires will buy you in Goodyears a wider tire, or one extra tire in three.

Too-High Prices

Nowadays, 16 makes of tires are selling for more than Goodyear prices. Those prices, we claim, are too high.

Goodyear prices buy the utmost in a tire—the best we know after 15 years of research and experiment.

They buy four great features found in no other tire. And they buy the tire which outsells any other, the tire which holds top place in Tiredom after millions have been tried.

Our prices are low because of mammoth production. They are half what they used to be. But smaller output and higher prices do not signify better tires.

Exclusive Features

These four great features can be found in No-Rim-Cut tires alone. That is why these tires have become the most popular tires in the world.

The No-Rim-Cut feature—the only way known to make a faultless tire that can't rim-cut.

Our "On-Air" cure—which saves the countless blow-outs due to wrinkled fabric. This one extra process costs us $1,500 daily.

Our rubber rivets—hundreds of which we form in each tire to combat tread separation. We control this patent.

Our All-Weather tread—the tough, double-thick anti-skid. It is flat and smooth, so it runs like a plain tread. But no other tire grasps wet roads with such deep, sharp, resistless grips.

In No-Rim-Cut Tires at Goodyear prices, you get all those extra features. Any dealer will supply you.

LEND A HAND SOCIETY OUTINGS

A number of years ago Dr. Edward Everett Hale started a unique department of the Lend a Hand Society which he called "Outings for Men." He used to say that men are expected, and should be expected, to provide for themselves. But while as a rule this is true, there are men old and young who are exceptions to this rule, and these are the men we are asking The Independent's readers to assist in getting a breath of country air and nourishing food.

There are old men like the two we are just planning to send away, one of 76 and one of 78 years, without relatives and without the means or opportunity for a vacation; there are the young men who are put to work too early, whose strength fails them and who need two weeks in the country to recuperate; there are the invalids, many recovering from operations, as is a lad we have just sent away. While originally planned for outings for men, the work has been extended to include some women, especially those who are the sole support of their families. Ten dollars will pay for two weeks of rest, pure air, and wholesome food. We have already planned for twenty-five worthy persons to go into the country. Only sufficient money is left for a few more people, yet applications are coming in every day and we shall be grateful if you will assist us in carrying on this work.

Checks may be made payable to the Lend a Hand Society and will be promptly and gratefully acknowledged by the Superintendent, Miss Annie F. Brown, Lend a Hand Society, 101 Tremont Street, Boston.

REV. CHRISTOPHER R. ELIOT,
President.

MANUSCRIPT

Suitable for CLOTH BOUND BOOK issue; any field, 25,000 words and upwards, carefully read and considered WITHOUT charge. Published under our imprint and management, A-1 style, if accepted. Copy must be forwarded COMPLETE to warrant examination. Rox. Pub. Co., Inc., Boston, Mass.

Sanitary Brush Set

Four Brushes and Rubber Comb

Hair Brush

4½ inches long, 1 inch wide; including handle, 9 inches.

Nail, Hat and Clothes Brushes

4½ inches long, 1 inch wide. All made with ebonized solid backs, aluminum face, filled with 6 rows of gray Siberian hog bristles, waterproof, easily cleaned.

Bristles Can't Come Out

Usual price, $2.25; my price, with 3 year guarantee, **$1.45** per set, postpaid, insured.

CALENDAR

The national tennis championship tournament at Newport opens on *August 24*.

The tenth annual conference of the Chinese Student Alliance in the eastern states will be held at the Massachusetts Agricultural College from *August 28* to *September 4*.

The Forty-first Assembly at Chautauqua closes on *August 30*.

At the Ekwanok Country Club, Manchester, New Hampshire, the national amateur golf title will be played for between *August 31* and *September 5*.

A Colonial Exhibition will be held at Samarang, Java, from *August to November, 1914*. It is to "give a comprehensive picture of the Dutch Indies in their present prosperous condition attained since the restoration of Dutch rule in 1814."

There will be a national celebration in Chicago, on *September 1*, of the organization of the new Federal Reserve banking system. More than 1000 commercial and financial associations have been invited to send representatives.

The Biennial Conference of Friends (Liberal) will be held at Saratoga Springs, New York, from *Ninth Month, 2d*, to *Ninth Month, 8th*.

September 6 has been designated as Labor Sunday by the Federal Council Commission on the Church and Social Service.

The National Star-Spangled Banner Centennial, commemorating the successful defense of Baltimore at North Point and Fort McHenry, and the writing of the national anthem, will be held at Baltimore, *September 6* to *13*.

The annual conference of the International Law Association will be held at The Hague in the Palace of Peace from *September 7* to *12*.

At Denver, Colorado, from *September 8* and *9*, will be held the eighth annual conference on taxation, in charge of the National Tax Association.

The Baltic Exhibition at Malmö, Sweden, to which Swedish, German, Danish and Russian exhibits have been sent, is open until *September 15*.

World's Temperance Sunday will be observed on *November 8* in most of the states. In some states it will be *November 1* and in Ohio *September 20*.

At Leipzig an International Exhibition for the Book Industry and the Graphic Arts is scheduled to remain open until *October, 1914*.

The United Typothetæ and Franklin Clubs of America will hold their twenty-eighth annual convention in New York *October 6, 7* and *8*.

The annual convention of the American Bankers' Association will be held in Richmond, Virginia, *October 12* to *17*.

The American Bar Association will hold its annual meeting on *October 20, 21* and *22*, at Washington. There will be addresses by William Howard Taft, president of the association; Senator Root, the Ambassador from Argentina, and Sir Charles Fitzpatrick, Chief Justice of Canada.

The seven hundredth anniversary of the birth of Roger Bacon will be observed at Columbia with commemorative exercizes and the publication of a volume of studies. A great pageant of the culture of the thirteenth century will be given on *November 4*.

Barnard College, in Columbia University, will celebrate its twenty-fifth anniversary on *November 5*.

The annual convention of the National Suffrage Association will be held at Nashville, *November 12* to *17*.

The sixth annual Medical Missionary Conference will be held at Battle Creek, Michigan, *November 17-20*.

The Intercollegiate Prohibition Association will hold its national convention in Topeka, Kansas—the prohibition capital of the nation—*December 29* to *January 4*.

The International Congress on Alcoholism will be held in Atlantic City in *July, 1915*. Delegates from forty nations are expected to attend.

Between *March 4* and *April 15, 1915*. a monster naval parade from Hampton Roads to San Francisco via Panama will mark the formal opening of the Canal.

The biennial convention of the Anti-Saloon League of America will be held at Atlantic City, New Jersey, from *July 6* to *10, 1915*. It is expected that 30,000 delegates will attend.

The seventeenth International Congress of Orientalists will be held at Oxford University from *September 13* to *18, 1915*.

The Second International Eugenics Congress will be held at the American Museum of Natural History, New York City, *September 23-28, 1915*.

The Second Universal Races Congress will be held in Paris in *1915*. Mr. G. Spiller is honorary secretary.

The International Sunday School Conference will be held in Tokyo, Japan, from *October 18 to 25, 1916*. One thousand delegates from America and 300 from other countries are expected to attend.

KITCHENER OF KHARTUM

Earl Kitchener, next to Lord Roberts, England's most trusted soldier, as Secretary of State for War in the British Cabinet, is responsible for the security of the islands, as well as for the British troops on the Continent

The Independent

VOLUME 79 MONDAY, AUGUST 24, 1914 NUMBER 3428

AFTER THE WAR: A FORECAST

ALL Europe is in arms, and all the larger nations are actually at war, all but Italy and such minor powers as Spain, Denmark, Switzerland, Sweden and Norway, Bulgaria and Rumania. Even these have the sword drawn from the sheath and the bayonets pointed toward their borders. These smaller nations are in dire danger, like Holland; and Belgium and Luxemburg have already been invaded and may be annexed if the victors choose. Treaties of neutrality have failed to protect. They are written on parchment, and parchment crackles and crumbles in the fire of war.

The war is on: how will it end? We venture a forecast. On one side are Austria-Hungary and Germany. Their only possible recruit is Italy; and Italy, however bound by treaty as a member of the Dreibund, can hardly keep her pledge. The people hate and fear Austria. They know that Austria provoked and opened the war by her attack on Servia, and that this is no defensive war. Italy declares that she is under no treaty obligation to help Austria and Germany in a war which they have initiated. Austria is Italy's old foe, and were the Italian Government to join her allies in war the Italian people would refuse to obey. They would overthrow the government and the throne. So Austria and Germany are likely to have no partners; the rest of Europe is against them—Russia, France, Great Britain, and all the minor powers, Belgium, Holland, Denmark, Sweden, Norway, Switzerland in sentiment solid against the two nations that have dared to open the most tremendous and momentous war the world has ever known. It is practically all Europe against Germany and Austria; and not all Europe alone, but all the British dependencies of Asia, Africa, Australia, and America as well, not to speak of those of France, which more than balance those of Germany.

On the face of it, considering population and wealth and armies and navies, the heavier battalions ought to win. But in favor of the nations is the fame of the German army. It is said to be the most admirable, the best trained and equipped fighting machine in the world. It is not forgotten how like a tornado it swept to Paris in 1870, and carried back with it two French provinces. But the German generals and soldiers are not gods; they are men. They have the advantage of confidence, but perhaps they are too mechanical; and perhaps there will be more passion, more dash, more vengeance with the French soldiers. For forty years the children in French schools have been taught never to forget Alsace and Lorraine. The weakness of the Triple Entente is in the bulky but ill-trained Russian army, which was beaten by little Japan; but this is balanced by the overwhelming superiority of the British and French navies. On the whole it looks as if in a long war Germany and Austria would be defeated, hemmed in by land and water.

But of that we cannot be certain. Now what after the war? That is the greater question.

Let us suppose Germany and Austria by a sudden dash to overcome all obstacles and to capture Paris as in 1870, to escape the combined navies and to repel the Russian rabble; what would happen then?

First Austria would annex Servia and Montenegro, despite Italy's protest; and any other of the Balkan nations that might help Servia. Russia would lose her Polish province, and the neighboring provinces of Russia would go to Germany, from Riga to Warsaw, closing the Baltic to Russia and facing her on the Pacific Ocean, very likely with Finland or whatever else in the way of contiguous territory she may demand, driving Russia to the east. Then to the west, Germany would annex Belgium and Luxemburg, and extend her French border by the taking of the French line of defenses, so as to make France a second-rate power. France would lose to Germany all her African colonies except Algeria, while the Belgian Kongo would give more German sunshine. Great Britain would suffer less, for her own territory and her colonial empire would be protected against the German fleet. She would suffer chiefly in prestige. Germany would be the greatest military power in the world, Russia again humbled, and Great Britain and the United States the only two great powers that would not be dominated by her. The whole English-speaking world would be more closely joined in sentiment and purpose, and in practical alliance. Military autocracy would rule continental Europe from Berlin.

But let us suppose that the alliance against Germany and Austria should be successful, what would follow?

First and foremost Alsace and Lorraine would be returned to France. Next, instead of France losing her African colonies, the German colonies in Africa would probably be taken by France and England. Surely Germany would lose her foothold in China, to whom the German concession would be returned by Japan. What advantage Russia would gain beyond her relief from fear of Germany and Austria we cannot conjecture, but all Poland would become wholly Russian and self-governed. But Austria's loss will probably come in another way.

The most important result of German defeat is yet to be considered. We must believe it would be the end of the imperial dynasties of both Germany and Austria It will be remembered that the defeat of France in 1870 made France a republic, never again to be ruled by king or emperor. We may expect a like result in case

of the defeat of the present two emperors. They would have utterly lost their prestige in their own countries, and would be held responsible for loss of national honor as well as for terrible loss of property and life. It is they that have inaugurated the war; and the dynasties must suffer for it. The Socialists are already strong in Germany, dangerously so, and they are already anti-imperialist. They would even now acclaim a republic. They are not so strong in Austria, but Hungary is only loosely attached to Austria, and when the political revolution comes that will make Austria a republic, it is likely that Hungary will set up for herself, as she tried to do in the early fifties under Kossuth, whose son is now a chief Hungarian leader. Thus a great war would accomplish what came so near a success in 1848. Europe would become a continent of republics, for when Germany and Austria dispose of their rulers by divine right, the smaller nations, Denmark, Norway, Sweden, Belgium, Holland, will begin to consider, as Norway already questions, whether the luxury of a king is not one that can well be dispensed with. Even Russia may drift with the tide, altho on the winning side, and Italy will soon after follow the example of her south European sister nations, France, Switzerland and Portugal; and the Spanish throne will totter. Only the English throne will be safe; and that will be safe only because the House of Lords will be drastically reformed, and Great Britain will be a republic under a permanent titular king who will, because he is not elective, be maintained as an interesting archeologic relic saved from the time when the ax tempered disobedient kings. The Liberal Ministry will be returned to a long lease of power, as was our Republican party after the Civil War.

Then the civilized world will be ruled by the people. Then there will be a long peace between the nations, not to be broken by any great war, until, which God forbid, Russian pressure or Anglo-Saxon arrogance shall provoke China, and the last great war of the world, the Yellow Peril that Emperor William anticipated, shall come. But it will not come. While China will learn western civilization as Japan has already learned it, the better western influences which are converting the West to the doctrine of peace and good will, will yet forbid western insult or aggression, and will assure the sense of justice and patience and good will in the East, so that with the rule of peace-loving peoples will come the kingdom of heaven in the republics of the world.

And that will come in the end, and will be only delayed if those who made the battles should be victors in this gigantic conflict.

JAPAN AIDS ENGLAND

WE have been glad to see Italy refuse to be entangled in the Great War; we are very sorry to see Japan make ready to join in it. The demand of Japan to Germany that she withdraw her Pacific fleet and retire from Kiau-chau within a week is equivalent to a declaration of war. Of course Germany will refuse and then Japan will attempt with probable success to drive Germany out of China.

It is quite evident that Japan would not have taken this step without a direct appeal from England, for altho Article II of the offensive and defensive alliance between Japan and England requires Japan to come to the aid of England whenever any "special interests" of England in the Far East are menaced, we cannot see that British interests were greatly endangered by a garrison of 5000 troops at Kiau-chau and by the presence of four German cruisers and a dozen gunboats in Asiatic waters. Altho Japan has unquestionably acted within the letter and spirit of her treaty, her motives will be misunderstood in the United States. Hence it seems to us that England should publish the correspondence that led up to Japan's ultimatum.

In the meantime it is significant that Japan disclaims any thought of territorial aggression. This we believe to be sincere and we are glad that President Wilson takes the same view. The American people need have nothing to fear from any of Japan's conquests.

It will be the irony of fate, however, if Germany, who shared in despoiling Japan of the fruits of her victory over China in 1895 and forced her to evacuate the Liao Tung Peninsula and then herself seized Kiau-chau to punish China for the murder of the European missionaries, should now be driven out of China by the nation she wronged. Moreover, the power who ruthlessly breaks treaties now finds it is the sacredness of treaties that has brought England and Japan into the fray.

GERMANY'S APPEAL TO AMERICA

GERMANY'S appeal to America for sympathy in this war, which we print on another page, is very extraordinary, but is a straightforward and most proper address. The German Imperial Chancellor directly asks for our approval in this war. It is "with a heavy heart," he says, "that we see England ranged among our opponents," but he looks for "the sense of justice from the American people."

America loves Germany and greatly admires her scholarship and her commercial enterprise. Our educational relations with Germany have been of the closest character. We have among our people those of German birth and parentage by the million. Sympathy with England cannot blind us to the merits of Germany. It is with no prejudice that the United States receives this appeal in time of Germany's stress. We only listen to learn what is the ground for the request that we should side with her in this deadly conflict rather than with our other friends, Great Britain and France.

The Chancellor von Bethmann-Holwig thus puts it in the first sentence: "The war is a life and death struggle between Germany and the Muscovite races of Russia," and he ends with the declaration that "the purpose of the war was the humiliation and suppression of the German race by Russian pan-Slavism." Because of Russia's "barbaric insolence" he asks that "the sympathy of the American nature will then lie with German culture and civilization, fighting against a half Asiatic and slightly civilized barbarism."

Can we believe this? Is it history; is it fact?

Russia did not begin the war. It was begun by Germany's ally Austria against a small Slav nation, Servia. It is incredible that it had not Germany's consent. "We warned Russia," says the Chancellor, "against kindling this world's war." But it was not Russia that kindled it, but Austria. Doubtless Germany did warn Russia not to help Servia, but to let little Servia be gobbled up. That is, Germany stood behind Austria in the grab. Russia stept in to defend her feeble sister; and Austria knew, and Germany knew, and all the world knew that

it was to be expected. And so the great war began, not Russia's war, but that of Austria, and her backer who had made it possible previously to absorb Bosnia.

The Chancellor says that the purpose of Russia was "the humiliation and suppression of the German race by Russian pan-Slavism." There is no evidence that Russia desired any such thing and the world does not believe it. Russia does object to Austrian and German seizure of small Slav countries, but she does not try to seize German territory. Nor did Germany need at all to fear Russian aggression.

Then the Chancellor charges that Britain "avails herself of the long awaited opportunity to commence war for the destruction of commercially prosperous Germany." This is an absurd obsession. England had taken no step to limit German commerce. At her ports and in her colonies she has made no tariff discrimination against German imports. Goods "made in Germany" had free competition with goods made at home. There was absolutely fair dealings with German commerce, and it was Germany only that raised a restrictive tariff.

In this war it is impossible to give the approval asked for to our good and powerful friend Germany. We regret that she is in the wrong, and are profoundly sorry that she has brought on herself the condemnation of the world.

AMERICAN WAR LOANS

THE decision of the United States Government opposing loans by American bankers made to nations at war is heartily to be approved. It does not dodge the question. It does not haggle over the matter whether or not the law of nations will allow such loans. It simply goes to the root of the question, to the spirit, not the letter of rules of neutrality, and says with the utmost brevity that such loans "are inconsistent with the true spirit of neutrality."

To be sure, our merchants have the right to send foodstuffs, at their own risk of capture, to countries at war; and, to be sure, the loan asked for might be all expended in this country for foodstuffs, so that no gold goes out of the country; but a hundred millions borrowed here and spent here for wheat releases as much over there to be spent for war material. We would not sell powder or guns, but we would make it possible for them to do so. In this action the Government has accepted the principles laid down, first, we believe, several years ago by Mr. Bryan himself and elaborated in an address three years ago at the meeting of the American Peace Congress by the banker, James Speyer, to the effect that one of the best ways to reduce war would be for bankers to refuse to finance a war by loans.

This decision by our Government is proof of a real desire to put an end to war, without regard to our own interests. It is to the present interest of our bankers, and of our people who would buy bonds, to make such loans at profitable rates. We decline to take that benefit. We take the larger world-view of peace and war; and in the end the advantage which will come from shortening the war and forcing peace will be greater than the immediate gain which takes profit out of a sister nation's calamities. We could lend to both sides; we lend to neither; we keep clear from complications, and we help the cause of peace.

This is a splendid precedent to make in the practise of international law and forecasts the day when neutral nations will automatically cease all intercourse with those who engage in war.

THE EXPULSIVE POWER OF A NEW PASSION

WAR kills, smothers or absorbs all passions. War means life or death for men or country, and what will not a man give up for his life? "War is the greatest of all games because the stake is death."

It was a high passion which drove British women of rank and education to fight with men's weapons, and weapons of criminals and madmen, for their political rights; which made them dare prison and starvation and even the contempt of their sisters and brothers. It filled or seemed to fill their souls. But when the flame of war shot across the sky all this was forgotten, and they were ready to scrape lint for the hospitals, and it was safe for the English Government to open the prison doors to the whole of them at once and bid them go their way.

Then there is the great Ulster nightmare. Actual civil war was boldly threatened, and a northern Protestant army and a southern Catholic army were actually mustered and armed. But it was not real war, only hot political passion, and it all dissolved like morning mist when a genuine war smote the land; and Redmond and Carson made truce and shook hands.

There are France and Germany, only a month ago each distracted by a powerful Socialist faction that in one country threatened and in the other had actually achieved rule. What do we see today? The Socialists of either nation contentedly accepting the tyranny of military rule, while at command the proletariat masses enthusiastically shoulder the musket.

And how is it here, where no thunder of musketry can reach us? With a sudden enlightenment of moral and political vision our Senate shoots off a whole quiver full of peaceful treaties, long held in suspense; and the President bids Congress re-create our commercial navy, a navy which in the infancy of our nation covered the seas, but which was lost by the blind greed which sat and saved at the spigot of a protected industry, while our commerce escaped at the bunghole. It has taken war to reverse near a century of dishonor.

And must we say as much of Christianity itself, forgotten when war breaks out from the gates of Hell, and, in the madness of slaughter, Church and the Christ of God are trampled in blood?

Yes, forgotten while the mad outburst lasts, for war has no reason. It is folly, insanity; and while it lasts all other interests fail, rights of women or men, rights of property, of race, of life, all law, all morality, all religion, of no more account than the gay motes that people the sunbeams. But the madness passes; Hell's gates are left open for the monster to be driven back; and one day they will be barred strong against his escape. Is this war the climax and the suicide of war? It may be so.

MR. BRYAN'S PEACE TRIUMPH

THE Senate last week confirmed nineteen of the twenty-one peace treaties negotiated by Mr. Bryan and they are now the law of the land. The two with Panama and Santo Domingo are postponed for further consideration. We have discussed these treaties in detail in

previous issues of The Independent. Suffice it here to reiterate that they mark a real advance in the movement for the substitution of law for war, providing as they do for a suspension of hostilities for one year pending an investigation and report on the questions at issue by an impartial commission of inquiry.

These treaties are peculiarly Mr. Bryan's. He first gave out the idea on which they are based in an address before the Conference of the Interparliamentary Union in London in the summer of 1906, elucidating it almost simultaneously in an article in The Independent.

Had their like been in existence between some of the European nations two weeks ago the world might have been spared the Great War.

DESTROYING A GOOD TRUST

THE decision in the International Harvester case, if it is subsequently affirmed by the Supreme Court, will put a vital question before the American people.

That question is, In dealing with big business shall we punish mere size, or shall we reserve punishment for conduct that is detrimental to the public welfare?

The International Harvester Company is commanded to dissolve itself into at least three parts. The reason for the command is a dual one. First, the five concerns which united to make the International Company by so doing eliminated competition among themselves; second, the new company did from eighty to eighty-five per cent of the business in harvesting machinery.

The case is unique among the great cases decided under the Sherman anti-trust act. The court finds the company guilty of no acts detrimental to the public interest, or oppressive either to competitors or to consumers. Three opinions were rendered by the three members of the court, two concurring, one dissenting. The first judge cites two specific acts of the defendants as worthy of criticism, but these two are so insignificant as to be effectively covered by the maxim *de minims non curat lex*—the law is not concerned with trifles. Judge Hook, in his concurring opinion, says: "It is but just, however, to say and to make it plain that in the main the business conduct of the company toward its competitors and the public has been honorable, clean and fair." Judge Sanborn, in his dissenting opinion, says with even greater emphasis: "No case has been found in the books and none has come under my observation in which the absence of all evils against which that law was directed at the time the suit was brought and for seven years before was so conclusively proved as in this suit—the absence of unfair or oppressive treatment of competitors, of unjust or oppressive methods of competition, the absence of the drawing of an undue share of the business away from competitors and to the defendants, the absence of the raising of prices of the articles affected to their consumers, the absence of the limiting of the product, the absence of the deterioration of the quality, the absence of the decrease of the wages of the laborers and of the prices of the materials. . . ."

Here, then, was a good trust, if there can ever be one. Here was a combination honorable in its dealings, fair in its treatment of rivals and the public. But it had a fault—it was big; it had by the very terms of its existence committed a heinous crime—it had eliminated competition. Therefore, says the court, honorable and fair and decent as were its acts, it must go.

Whether the decree of the court is good law or not will be decided by the Supreme Court and the rest of us must await its word. But whether it is sound public policy or not is a question for no court to decide. It is a question for the American people. If the Supreme Court shall finally decide that mere bigness and the mere elimination of competition, unaccompanied by unfair and unjust dealing with competitors or the public, is forbidden by the Sherman act, it will remain for the people to determine whether such a law shall continue to be the foundation stone of their trust legislation.

We do not believe they will so decide. For we do not believe that the court's decision in the International Harvester case is sound public policy.

In this day of the world combination in business is as inevitable—and as desirable—as competition at an earlier stage of the world's development. Competition was and is good as a protection of the public interest. But it is no thing sacred in itself. To make a fetish of competition is to exalt a means into an end, is to erect an altar to a false god.

Not enforced competition but regulated combination is the direction in which a rational, enlightened, effective policy for dealing with big business must move.

That a trust—meaning by the word a combination of business units into a larger unit for purposes of efficiency and economy—can be a good trust, not harmful to its competitors, profitable to its stockholders, beneficial to the public welfare, the record in the present case has shown.

JOIN THE RED CROSS

THE Red Cross is the symbol of mercy in war, and under its flags ships are safe, hospitals immune from attack, doctors, nurses and helpers free to serve the wounded and dying without molestation.

The American Red Cross has issued an appeal for funds for the purpose of sending instant and hearty help to the organizations in the countries now at war. A ship will be chartered and will sail under the Red Cross flag, laden with physicians, nurses and hospital supplies. It will be under the protection of the Treaties of Geneva and The Hague, and may thus enter any harbor for the discharge of its beneficent duty. The appeal concludes as follows:

> The American Red Cross appeals most earnestly to all of our people; to the governors of states, as presidents of the Red Cross state boards; to the Red Cross chapters; to mayors of cities; to chambers of commerce; to boards of trade; and to all associations and individuals, for contributions to carry on this work. Contributions may be designated by the donors, if they so desire, for the aid of any special country, and will be used for the country designated; but assistance will be given to all, in the true spirit of the Red Cross represented by its motto, "Neutrality—Humanity." Grieved as we may be over this terrible war, the agonizing cry of suffering men cannot appeal to us in vain. The American Red Cross asks for a prompt and generous response. Contributions may be sent to the American Red Cross, Washington, D. C., or to state and local treasurers of the Red Cross.

By the action of the official board of the organization every one who contributes not less than two dollars to the American Red Cross fund for relief work will be enrolled as a member-at-large of the society for the remainder of this year, and will receive the October issue of the Red Cross Magazine free.

Join the Red Cross.

Japan has more than a million members. America should have two millions.

THE STORY OF THE WEEK

Veiling the European Struggle

As the great European conflict advances into its fourth week greater grows the wall and more inscrutable the veil which the censor has thrown about its momentous events. Well have the nations learned the lesson of secrecy in war, which Japan taught in her struggle with Russia.

From Belgium has come practically the only news of battle. Great victories by the Belgian troops over the Germans have been reported, but strangely each day's "victory" finds the Belgians farther back and the Germans slowly advancing. Liège, it is believed, still holds out, but the Germans rather than delay their advance with a siege, by an enveloping movement have past round it to the north and west, and are thus in contact with the main Belgian army and the forces of the allies. A gigantic battle is now in progress.

From the great British fleet somewhere in the North Sea nothing has been heard since it sailed from Portland; British troops are on the continent, but neither their number nor position is known. Nothing is known of the disposition of the French armies nor of the whereabouts of General Joffre.

Preliminary skirmishing is all that has marked the Russo-German campaign, altho it is announced that Russia has completed her mobilization, some two weeks in advance of the time anticipated by Germany. To secure the loyalty of the Poles, the Czar has promised autonomy to Poland, while the report of the destruction of the Russian fleet, the occupation of the Aland Islands, and the burning of Libau by the Germans proved to be erroneous. From Nish come intermittent dispatches that the Servians and Montenegrins not only are holding their own against Austria, but have occupied Bosnia and Herzegovina, and are preparing to attack Sarajevo.

Finally in order that the record be complete, France, followed by her ally, England, has declared war on Austria; Servia on Germany, and Montenegro on both Austria and Germany; Japan has delivered an ultimatum to Germany that German interests in the Far East must be withdrawn; while Holland, Switzerland and Italy have made active preparations to defend their neutrality.

A WEEK OF WAR

August 11—British mobilization complete. Liège forts still hold out

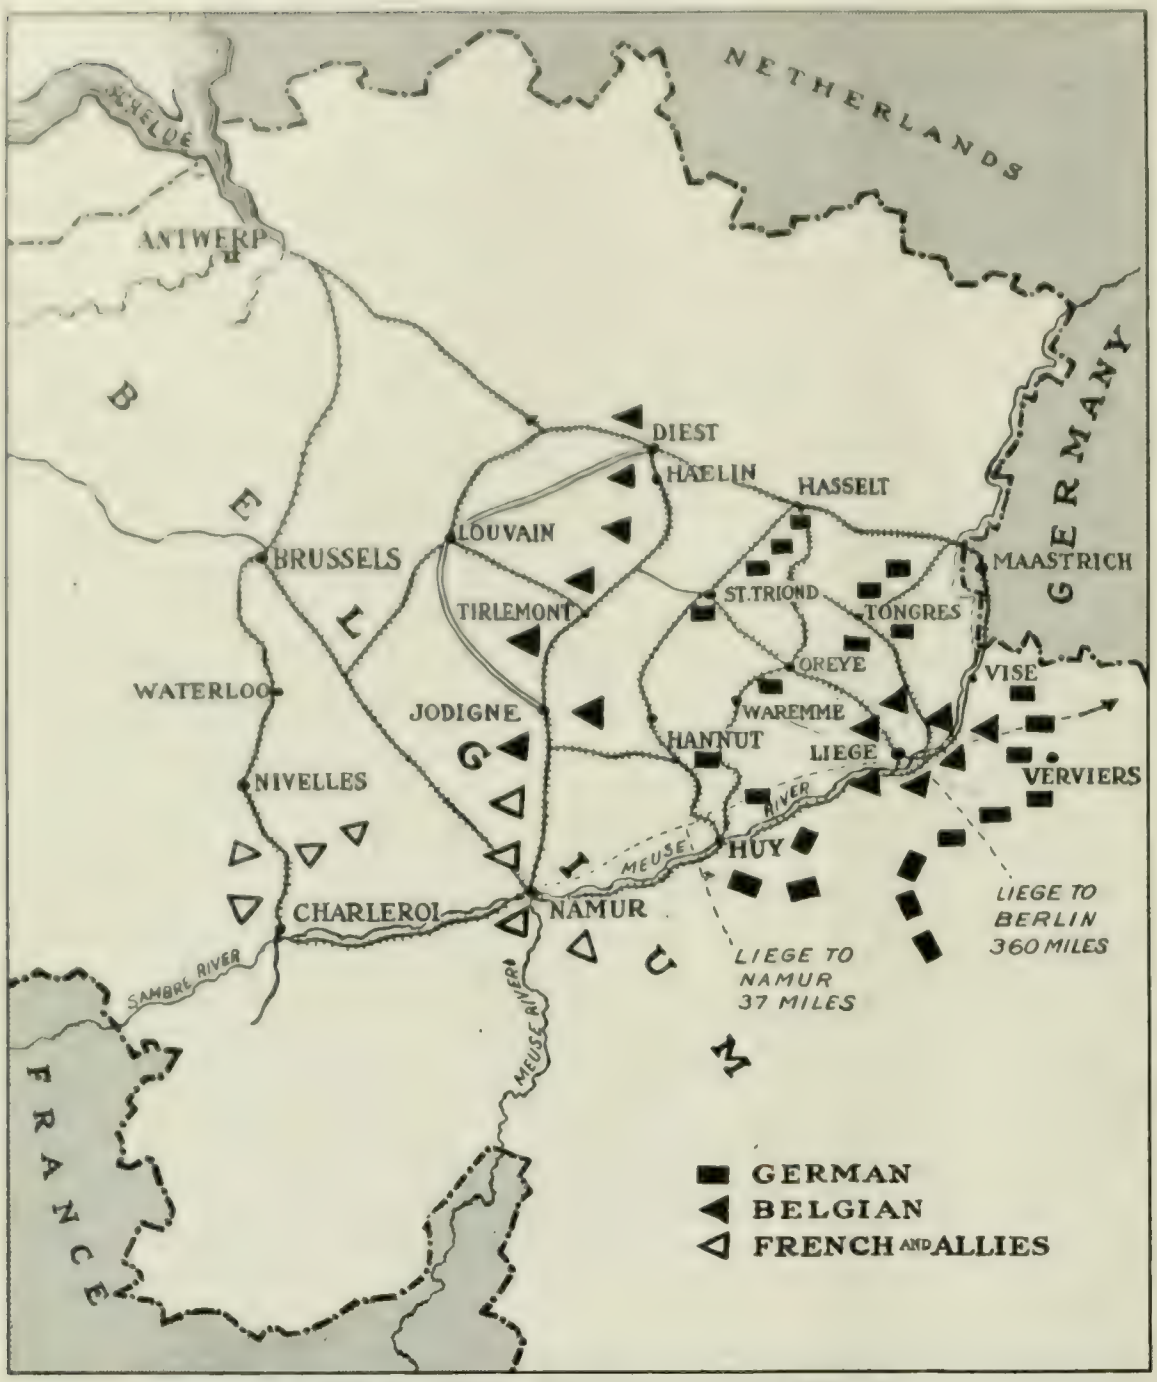
August 12—French cavalry drives back Germans in a battle at Torgres; the allies take positions protecting Brussels

August 13—Great Britain in state of war with Austria. The German cruisers "Goeben" and "Breslau" sold to Turkey. Admiralty announces the Atlantic as safe for British commerce

August 14—French army gains control of Vosges passes to both Alsace and Lorraine. Germans lose in cavalry skirmishes along the Belgian frontier, losing three-fifths of a command at Haelen

August 15—France announces offensive movement in Alsace in force. Austrians driven back on Servian frontier

August 16—Japan sends ultimatum to Kaiser demanding German evacuation of Kiao-chou, China, and the East by August 23. Czar promises autonomy to Poland



August 17—Belgian capital removed from Brussels to Antwerp. French advance in Alsace penetrates within fourteen miles of Strassburg

WITHIN SIGHT OF THE FIELD OF WATERLOO

The Belgian and allies' left rests at Diest, the center at Louvain, and the right wing at Namur. The Germans first attempted to turn the left wing at Diest and Haelen, but late dispatches report an attack on the right near Namur

The Operations in Belgium

From Belgium have come conflicting reports that somewhat obscure the position of the opposing forces. Belgian "victories" have been numerous, according to the dispatches, but despite them the German advance, altho slow, seems to continue. Liège, cut off from communication, remains untaken after a two weeks' assault, but the Germans after the first delay, have resolved to avoid that difficulty by going round it. By Monday and Tuesday it became apparent that the main German columns were being deflected around Liège to the north and to the west. Altho exposed to the very grave peril, in the case of disaster, of an enemy in the rear, it was thought that the Germans intended to give battle to the Belgians and the allies drawn up from Namur to Diest, whose center protected Brussels, and thus clear the road to France. Numerous engagements with German cavalry—the foundation of many of the "battle" reports—and the appearance of Germans in force at Tielmont and Diest in what appeared to be efforts to turn the Belgian left flank, gave color to the view that a battle was imminent.

At Haelen on Wednesday a German cavalry force of about 5000, supported by artillery, attempted to cross the River Gethe and in advancing in close order to the Belgian position suffered heavy losses. According to Belgian reports the Germans were forced finally to take refuge behind hastily constructed ramparts of dead horses and dead comrades. The German losses are placed at over 3000. With the exception of Liège this has been the bloodiest battle reported, altho the French have admitted heavy losses in the occupation of the Vosges passes and at Mülhausen.

After these checks the German advance in the direction of Brussels stopped, and the next activity reported after a two days lull was at Dinant, in Luxemburg, south of Namur and only ten miles from the French frontier. Thus while threatening the allies, the Germans were still advancing southward, endeavoring to envelop Namur as they had enveloped Liège. The French war office, in this connection, warns the public that this battle will probably extend over the entire frontier of more than three hundred miles, involving millions of men, continuing for several days with the French victorious at some points and the Germans at others. The communication concludes thus: "These observations have for their object the preparation of the public for a battle in new form and without precedent in history."

Announcement has been made by the French War Office that the invasion of Alsace is in force and that French troops have occupied a num-

ber of Alsatian towns, including the Saale Pass, which is the key to the important valley of Bruche. They are only fifteen miles from the fortress of Strassburg.

Czar Promises Autonomy to Poland

Almost as significant as the news of a great battle is the word that comes from Russia that on August 15, the Czar, thru Grand Duke Nicholas, the commander-in-chief of the Russian army, in a manifesto promised to the people of Poland in return for their loyalty, the autonomy of the ancient kingdom dismembered and divided more than one hundred and fifty years ago among Germany, Austria and Russia. They are to have not only automony, which shows at once the despoliation of Germany and Austria that is to be made by Russia in case the allies are successful, but their language is to be restored and the restrictions on their religion—the Poles are Catholics—are to be removed. Not only is Galicia, with its ancient capital of Cracow to be taken from Austria, but Posen in Prussia—almost at the gates of Berlin—and the district about Danzig, are to be restored to the old kingdom.

So remarkable is the text of this manifesto that it is here given in full:

The hour has sounded when the sacred dream of your fathers may be realized. A hundred and fifty years ago the living body of Poland was torn to pieces, but her soul survived, and she lived in hope that for the Polish people would come an hour of regeneration and reconciliation with Russia.

The Russian Army brings you the solemn news of this reconciliation, which effaces the frontiers severing the Polish people, whom it unites conjointly under the scepter of the Czar of Russia. Under this scepter Poland will be born again, free in her religion, her language, and autonomous.

Russia expects from you only the loyalty to which history has bound you. With open heart and a brotherly hand extended, great Russia comes to meet you. She believes that the sword which struck her enemies at Grünewald is not yet rusted.

Russia, from the shores of the Pacific Ocean to the North Sea, marches in arms. The dawn of a new life begins for you. In this glorious dawn is seen the sign of the Cross—the symbol of suffering and the resurrection of a people.

Thus as in the wars of the past, the great European war has already been the means of wringing concessions to progress from the Russian autocracy. As the Crimean war resulted in the freeing of the serfs, and the disastrous struggle with Japan in the establishment of the semblance of a constitutional government, so the Great War already has resulted in the freeing of the Poles. Thus this politic move of the Czar assures him of Polish loyalty, attested by the enthusiasm with which the news was received by Poles all over the world, and it will seriously disaffect the loyalty of Polish troops in the armies of the Kaiser and of Francis Joseph, who will thus be brought to fight against their own most patriotic desire for national unity, which both Germany and Austria, and up to this time, Russia, has sought to crush out by policies of "Nationalization." As a result Poles in France and England have rushed to enlist in the armies of the allies; thus giving another care to the sorely tried Kaiser, who is said to have contemplated a similar scheme, but which was forestalled by the action by the Czar.

Japanese Ultimatum to Germany

Altho it was reported that the Japanese battleship fleet had put to sea and that army transports were being prepared for service, facts which showed that Japan, as the ally of England, was seeking a pretext to enter the war against Germany, it was not until August 15 that the purposes of the Japanese Government were disclosed.

At eight o'clock, on the night of Saturday the 15th, Japan issued an ultimatum to Germany, forwarding it by no less than six different channels to insure delivery, demanding the withdrawal of German warships from the Orient and the evacuation of the German protectorate of Kiauchau. Sunday, August 23, was set as the date for the expiration of the ultimatum.

Altho the alliance with Great Britain is given as the basis, Japan, according to those in Washington who believe in the imminence of an American-Japanese conflict, has two reasons for wishing to engage in the

GERMANY'S APPEAL TO AMERICA

CHANCELLOR VON BETHMANN-HOLLWEG ASKS IMPARTIAL JUDGMENT

The war is a life and death struggle between Germany and the Muscovite races of Russia, and was due to the recent royal murders at Serajevo.

We warned Russia against kindling this world war. She demanded the humiliation of Austria, and while the German Emperor continued his work in the cause of peace and the Czar was telegraphing words of friendship to him, Russia was preparing for war against Germany.

Highly civilized France, bound by her unnatural alliance with Russia, was compelled to prepare by strength of arms for an attack on its flank on the Franco-Belgian frontier in case we proceeded against the French frontier works. England, bound to France by obligations disowned long ago, stood in the way of a German attack on the northern coast of France.

Necessity forced us to violate the neutrality of Belgium, but we had promised emphatically to compensate that country for all damage inflicted.

Now England avails herself of the long awaited opportunity to commence war for the destruction of commercially prosperous Germany. We enter into that war with our trust in God. Our eternal race has risen in the fight for liberty, as it did in 1813.

It is with a heavy heart that we see England ranged among our opponents.

Notwithstanding the blood relationship and close relationship in spiritual and cultural work between the two countries, England has placed herself on the side of Russia, whose instability and whose barbaric insolence have helped this war, the origin of which was murder, and the purpose of which was the humiliation and suppression of the German race by Russian pan-Slavism.

We expect that the sense of justice of the American people will enable them to comprehend our situation. We invite their opinion as to the one-sided English representations, and ask them to examine our point of view in an unprejudiced way.

The sympathy of the American nation will then lie with German culture and civilization, fighting against a half Asiatic and slightly cultured barbarism.

International News

OPENING THE GREAT CANAL TO COMMERCE

While barges have been using Panama Canal for some time, the first cargo-laden ocean-going steamship to pass thru the Canal was the "Ancon" of the Panama Railway Company, which past from the Atlantic to the Pacific on Saturday, August 15, in a little more than eleven hours

world conflict. Besides gaining for herself the important naval base of Kiau-chau, fortified and built up at great expense by Germany, and thus strengthening her own position in China, she wishes to place England, with a view to certain "eventualities" in the future, under definite obligations to her. Altho purely defensive in its nature, and providing that in case either power is attacked in the East by an aggressor, the other is to render aid, Japan has chosen to see that British interests are threatened, and finds herself called upon "to remove the causes of all disturbances of peace in the Far East and to safeguard the general interests as contemplated by the agreement of alliance between Japan and Great Britain." In the treaty as well as by her representations to the United States, Japan is bound to respect the territorial integrity of China, with the eventual restoration of Kiau-chau to China, and to preserve the *status quo* of all the powers in the East. Should Japan's activity against Germany extend to the seizure of the Samoan Islands, it would make Japan a neighbor of United States possessions, and give her a coaling station in the South Pacific.

Another element in Japan's action is probably the memory of the stand taken by Germany after the China-Japanese War, when Japan was deprived of the fruits of her victory at Port Arthur at the insistence of the Kaiser and a German fleet occupied Kiau-chau, claiming it as an indemnity for attacks on Germans.

Ships for Exporters

With the purpose of increasing the number of ocean carriers under the American flag, and thus facilitating the exportation of wheat and promoting the international trade which has been paralyzed by the war in Europe, both the House and the Senate have past a bill admitting foreign-built ships to American registry, under certain conditions relating to ownership. There are many ships owned by Americans which are now under foreign flags. The number is about 150, with a total measurement of nearly 1,000,000 tons. And there are foreign ships which, on account of the war, can be bought. It is reported that $20,000,000 worth of Hamburg-American ships, now tied up in the ports of New York and Boston, are in the market.

The bill has been opposed because, as past by the Senate, it would admit the newly purchased and registered ships to our coastwise trade. The Senate's bill authorized the President in an emergency so to admit them. In conference the provision objected to by a minority was made broader, authorizing all foreign-built ships admitted to American registry within two years to engage in the coastwise trade. In opposition it is asserted that we have an abundance of coastwise ships, many of them now being idle, and that this provision would ruin our shipyards. Final acceptance of the conference report was delayed by controversy as to this part of the bill. Exporters have encountered an obstacle in the very high rates of marine insurance. At a conference of business men with officers of the Government at Washington a committee was appointed which recommends the establishment of a Government Bureau of War Risk Insurance. The New York Chamber of Commerce asks the Government to assist exporters in this way.

Trust Cases and Legislation

By a majority decision, at St. Paul, the Federal Circuit Court has declared that the International Harvester Company is a monopoly in restraint of trade and must be dissolved. Ninety days are allowed for dissolution into at least three substantially equal, distinct and independent corporations, with wholly separate owners and stockholders. The controlling opinion and decision are those of Judge Walter I. Smith and Judge William C. Hook. Judge Walter A. Sanborn dissented. The court found that there had been no overcapitalization; that the company's treatment of smaller competitors had been just and fair, and that there was nothing to be condemned in the history of the expansion of its business. But the original combination of five companies in 1902, when the present company was formed, is held to have been an unlawful restraint of trade, and therefore the company from the beginning has violated the Sherman law.

The opinion of Judge Sanborn, who dissents, is wholly favorable. No case has been found in the books, he says, and none has come under his observation, "in which the absence of all the evils against which the law was directed, at the time the suit was brought and for seven years before, was so conclusively proved as in this suit." The company will appeal to the Supreme Court.

The first of the administration's three trust bills—all of which were passed in the House some time ago—has been past in the Senate by a vote of fifty-three to sixteen. All but two of the Democrats voted for it, and there was almost an even division of the Republicans. It is provided in this bill—which creates a Federal Trade Commission of five members—that the present Bureau of Corporations shall cease to exist, and that the offices of Commissioner and Deputy Commissioner of Corporations shall be abolished. The new commission is authorized to investigate the organization, financial condition, conduct, practises and man

agement of corporations engaged in interstate business, and to issue orders against unfair competition, which is forbidden. For these orders there may be a restricted court review. All amendments designed to define unfair competition were rejected. It is said that Joseph E. Davies, now Commissioner of Corporations, will be placed at the head of the commission.

The New Haven Railroad

Trial of the suit of the Government for a dissolution of the New Haven Railroad system is to be avoided, owing to an agreement between the company's directors and Attorney General McReynolds for peaceful compliance with the Government's demands, altho these demands are modified. In substance, however, the agreement is a renewal of the original one, which was affected by Massachusetts legislation concerning the sale of Boston & Maine stock. It was on account of this legislation, which provided that each share should show by a stamp that it must be sold to the state on demand, that the company was unwilling to carry out the original agreement, and that the Government resorted to the courts. The new agreement, like the old one, allows two and a half years for the completion of the sale of the Boston & Maine Stock, but also provides that if, within one year, the company and the Massachusetts Legislature shall reach an agreement satisfactory to the Government and the court, it shall be adopted by court order. The company will strive to obtain a modification of the Massachusetts legislation. If it fails to do this, the court may fix the terms of sale.

The company gains by permission to retain the New York & New England and the Rutland roads. It will dispose of its trollevs. The proposed criminal action will not be prevented or delayed by discontinuance of the civil suit. Evidence will soon be laid before a grand jury.

Carranza's Men Hold the Capital

General Obregon, with 15,000 rebel soldiers, marched into the City of Mexico on the 15th, and peacefully took possession of it. Many of the buildings were decorated. The streets were crowded with cheering Mexicans. They were to be seen on roofs, balconies and sidewalks thruout the three miles from Chapultepec to the National Palace. Women strewed flowers under the soldiers' feet. There was every sign of popular support. The troops were under perfect control. There was no disorder. Obregon had posted a decree that any officer or soldier guilty of disorder should be put to death. At the National Palace he reviewed the marching men. Carranza had intended to enter the city on the following day, but he did not come, and it was said that he would assume the provisional presidency a few days later. Carbajal was in Vera Cruz, and all the Federal troops had been withdrawn. Carbajal had placed the city in the hands of General Eduardo Iturbide, governor of the Federal district, and Iturbide had signed a peace compact with Obregon.

This compact had been written after the conference between Carranza and the diplomatic representatives of Great Britain, France and Brazil. John R. Silliman, President Wilson's agent, was present. Carranza was told that our Government insisted upon an agreement of this kind. For a long time he argued against it, demanding unconditional surrender. At last he yielded, but he would not sign. The signature was General Obregon's. In this agreement were guarantees for the lives and property of citizens, with a promise that the occupation should be peaceful. Federal soldiers were treated with much consideration. In various places they were to be disarmed, but they were not to be molested, and those who were without means were to be assisted to reach their homes. Villa remained in the north. There were rumors that he could rely upon the support of the four states of Chihuahua, Sonora, Sinaloa and Durango. His ally, Governor Maytorena, arrested and placed in prison General Alvarado, a friend of Carranza and the commander of the garrison at Guaymas. Our Government, it is said, has sent George C. Carothers to reason with Villa and to warn him that he must not oppose Carranza. Three of the American battleships have sailed away from Vera Cruz. Full possession of Mazatlan was gained by the rebels on the 11th, after four days' fighting. Fifteen captured Federal officers were put to death in front of the custom house.

Harris & Ewing

THE FEDERAL RESERVE BOARD MEETS

The first meeting of the Federal Reserve Board was held in the office of the Secretary of the Treasury last Thursday. Seated from left to right: Charles S. Hamlin, William G. McAdoo, Frederic A. Delano. Standing from left to right: Paul M. Warburg, John S. Williams, W. P. Harding and Adolph C. Miller. While commissions have not been given out it is understood that Mr. Hamlin is to be governor of the board and Mr. Delano vice-governor

Santo Domingo

President Wilson has sent to Santo Domingo a special commission, composed of ex-Governor Fort, of New Jersey; Charles C. Smith, of Portsmouth, N. H., and the United States Minister, James M. Sullivan. They will present for the consideration of President Bordas and the revolutionists a plan for the pacification of the country. It is understood that Mr. Wilson's plan involves united action by the two factions for the establishment of a provisional Government, and for a general election, which may take place under the supervision of United States officers. The commission will ask for an extension of the armistice which was recently ordered, and which will expire on the 21st.

Reports from Hayti say that the time is approaching when the government must apply to the United States for help. It is said that President Zamor is now inclined to ask for such a fiscal protectorate as was established in Santo Domingo, but that this is bitterly opposed by influential politicians, who tell the people that it would mean slavery for them. It is asserted that he has been restrained by threats of assassination.

THE SOCIALISTS AND THE GREAT WAR

BY WILLIAM ENGLISH WALLING

Ever since the Great War began there has been almost no reference in any of the dispatches as to the part the Socialists and workingmen of Europe are playing in the situation. This is most surprizing, for the workingmen are the one class of citizens in all nations who are persistently and consistently the bitterest in their opposition to war. Accordingly we have asked Mr. Walling to explain to our readers the present attitude of the Socialists. No writer of the United States is more competent to discuss this question than he, as for years he has been a thoro student of the subject as his numerous magazine articles and books attest. His volumes, "Socialism as It Is" and "The Larger Aspects of Socialism," are standard works of their kind.—THE EDITOR.

IF we get down to actualities, the Socialist parties of the countries involved have done nothing whatever to stop the war. After all these years of anti-war talk they inaugurated no general or partial strike, interfered in no organized or effective way with military discipline and did not delay the mobilization a single hour.

Italy, possibly, is an exception. She is not in the war, but it is probable, as many of the dispatches state that the threat of a general strike and insurrection by her Socialists—both reformers and revolutionists—by her labor unions, by her Republicans, and other radical and democratic elements, carried the day. Two great forces, however, were at work in the same direction—the anti-Austrian ultra patriots (deadly enemies of the Socialists) and the accident of a general strike in June, which involved nearly 2,000,000 strikers, caused twenty deaths, brought barricades and revolts in many places and as an aftermath brought no less than 6000 strikers before the courts —so that another general strike was being seriously considered as a protest against such reprisals, when the war broke out. It must be admitted, however, that the general strike of June was in reality anti-military, being a protest against the effects of the Tripoli war.

It will only take a moment's reflection to see that—after the German invasion of Belgium—the Socialists of Belgium, France, and Great Britain are also in an exceptional position. The Socialists of France had voted in favor of an international general strike in case of war as late as the fifteenth of July and the majority of those of Belgium and Great Britain also favored the well known Keir-Hardie and Vaillant resolution which was to have been decided this month at the proposed international Socialist Congress. French and British parties alike took the stand, most desired by Germany, that Russia—by mobilizing—was the aggressor in the war.

On the invasion of Belgium—which was admitted to have been a wrong even by Bethmann-Hollweg—all was changed in a day. The international congresses have been unanimous in declaring for the rights of the smaller nations. The *majority* (led by Bebel) has always favored the defense of every country against the invader—and the congresses have been *unanimous* again in declaring that such resistance ought to be made where the aggressor was a markedly less democratic country—nearly all agreeing that the German Government is far preferable to the Russian and the French to the German. *Neither in Italy, Switzerland, the United States, nor anywhere in the world was a single Socialist voice raised in protest when the Belgian Socialists hurled themselves into the war to defend their country against this wanton invasion.*

The record of the British Labor Party is not so clear. After the country was already at war it declared itself ready to fight—*because* the government had declared war. The day before the British declaration of war when Belgian workers had already decided to defend their country, and when Belgium had appealed to England for aid, the Laborites had been against war. The Daily Citizen declared that Continental conditions did not concern the British workers, while J. R. MacDonald denied in Parliament that Belgium was in danger—even after she was invaded. Compare this with the *Daily Citizen's* statement the next day, after the declaration of war:

> Our horror at the origin of the war must give way to an understanding of Great Britain's position. We are at grips with a power which has set itself to a life-and-death struggle with this country. That is an outstanding fact which no argument can dispel, no regret can alter. While grave danger to our existence as a nation confronts us, all of us must stand together in defense of our motherland.

We must also make an exception of Russia. There is no doubt that the Czar's Government was an aggressor, nor that it is the worst of all governments. Every Russian Socialist will gladly admit both points. Nor can there be any doubt that Russian Socialists have done everything to overthrow their Government and will redouble their heroic sacrifices during the war. Every Russian Socialist leader has declared as much.

But if there was any doubt it must have been removed by the recent general strike which involved 200,000 men in St. Petersburg and surely from the various reports no less than 500,000 in the country. After the twenty-first of July, when President Poincaré was visiting the capital, it turned into an imposing anti-war revolt. The Cossacks were instructed to use the knout in order that the reactionary representative of the $4,000,000,000 France has invested in Russian military railways and Cossacks might not get an idea of how the people loved the Government and its projects of war.

From riots the workers past on the 23rd to barricades in St. Petersburg, where they had never been before—*not even in the giant revolt of 1905*. On the 24th they held up trains in Finland, on the 25th they stopped the trains at many points between Moscow and St. Petersburg, many railroad workers struck, and large bodies of troops were ordered out to protect this all-important line. On the 26th (two days before the Austrian-Servian war) a state of siege was declared in St. Petersburg and Moscow.

Doubtless overwhelming military forces and the most bloody repression will have suppress this revolt at the beginning of the war. But who can doubt—after the mutinies and disturbances of the Russian-Japanese war—that they will break out again at the first favorable moment, or that this moment will soon arrive? It is significant that the revolt was still going on in Warsaw on the day of the declaration of war—and of the Russian censorship—July 28. One of the largest magazines in Warsaw was blown up on that day. And of course the sharpest revolts may be expected in Finland, Poland, the Baltic Provinces and the Caucasus.

This leaves us only Austria and Germany to consider. What did their Socialists do to stop the invasions of Servia and Belgium by their governments? When it comes to overt action, as I have pointed out, none of the other parties was tested, so that we cannot say what they would have done had their governments been wholly in the wrong. But it is admitted that Austria was the aggressor against Servia, and Germany against Belgium, whatever the rôle played by Russia and France.

The Austrian and German parties were undoubtedly tested, and failed to *do* anything—beyond issuing proclamations against the war. But the real question remains: Were they unwilling to take the risk, or were they utterly powerless?

The Austrian situation need not detain us. No Socialist party is more strenuously opposed to militarism and nationalism. This is the very condition of the party's brilliant success in the past, and even of its existence in a country of many naticnalities like Austria. But the Austrian Socialists are both proportionately weaker than the German and are confronted by an even more autocratic government.

But how about Germany? The leading German Socialists have declared that they would fight in defense of Germany against an aggression of the Czarism. They have also declared that Germany could have no legitimate quarrel with England or France. And Kantsky has declared that Socialists should resist to the bitter end a world war involving all these powers. But few German leaders have so definitely outlined their position as to a world war.

Then the party has been equally wavering as to the means to stop war. They have neglected the international general strike proposed by the Socialists of France and England as being utterly beyond the power of the Socialists to carry out in any of these countries—and they are doubtless right. They favored instead the rejection of military supplies by Parliament—a much wiser and more effective policy—and replied to the British Socialists by showing that they had voted in favor of budgets carrying military supplies.

But last year, 1913, after half a century of this policy *the German party in Parliament voted the Government money specifically devoted to an increase of the German army by 40,000 men, and were sustained by two-thirds of the party congress*—against the bitter and still continued opposition of the minority. After this all talk of the anti-militarism of the German party *as a whole* is monstrous pretense. The party had this *one* opportunity to act—the opportunity for which it had claimed to be waiting for fifty years. The German party acted. *And it acted in favor of militarism.* It gave the Kaiser 40,000 additional troops with which to begin this war.

The lame defense was that the rich were to pay the new taxes. As if we could favor the increase of an army and military expenses merely because somebody else pays the money bill. The workers furnish the bulk of the 40,000 men and pay in blood.

The majority claimed the bill would have past without its support. But this was not admitted by the minority, who pointed out that this was the opportunity at least for resistance to militarism. The majority claimed that it had not voted that the new military expenditures should be made, but had merely voted the money to be specifically devoted to these expenditures (I have explained the whole situation at length elsewhere).

The very nature of the excuses shows they were mere pretexts—which is finally proved by the admission of two or the majority leaders before the Party Congress, admission quoted against them in *Vorwärts'* leading editorial, that the majority was influenced by the fact that to vote otherwise would mean that the Socialist delegation would be reduced from 110 to 40 (which would include the loss of their own seats). Because militarism is popular among the middle classes who hold the balance of political power—especially when the rich pay for it—the Socialists abandoned their principles and voted the money to increase the army! Thus at the time when their anti-militarism ought to have reached its highest point it absolutely failed. *So that the German Socialist Party must take its full share of responsibility for this war.*

The powerful minority, however, representing at least 400,000 party members, if not more (of the 1,150,000 members), did not cease their revolutionary agitation. Karl Liebknecht and Rosa Luxemburg especially (now reported to have been shot by the Kaiser) were a host in themselves, and recently have won the most powerful Socialist body in the country, that of greater Berlin, to their standpoint.

The Reichstag elections, because of the unequal election districts which give one voter in Hohenzollern the same voice as ten voters of Berlin, are entirely controlled by middle-class voters, who hold the balance of power in all but some fifty industrial districts, and a somewhat large number of rural districts in control of the Prussian nobility and the middle-class are militarists. But the industrial masses, who furnish the soldiers, are not only anti-militarists, but are embittered against the officers to the last degree. There have been over 10,000 suicides, due largely to brutality, since the Franco-Prussian war. And when Rosa Luxemburg said that such brutality was an "every-day affair," and was prosecuted by the Government, she was able in a short time to produce over a thousand witnesses and her lawyers accumulated 32,000 cases of abuse.

At the same time Liebknecht has shown that many of the officers and officials are corrupt and that all the great armament firms, the chief source of corruption, were international in their ownership and operation—catering to Germany's chief enemy, Russia, and even subsidizing the anti-German press of Paris.

Only a small part of the German revolutionary Socialists imagined that a general strike would be possible at the time of the declaration of war, but all hope to take advantage of the fact that the Government is at war, at first, to weaken, and later to overthrow it. In view of the fact that probably no less than a million of the Kaiser's soldiers hate their officers more than any foreign foe (to say nothing of the Poles, Alsatians and Danes in the army) a number of highly interesting developments may be expected:

1. Breaches in discipline. The reckless disregard of the soldiers' lives by the officers will often lead, as before Liège, to refusals to charge again. Discipline will be steadily undermined.

2. Single desertions and surrender by groups have already been reported in considerable numbers. Some captured soldiers in Belgium explained that they did not know they were fighting Belgium, others that they didn't know who they were fighting, others that they had been butchered or starved, others merely that they were Socialists and opposed to the war—all being excuses for surrender. Many declared they were not going back to Germany.

3. *As night attacks are becoming frequent officers will be more and more frequently shot by their own soldiers.* They may even be decimated in this way before the war is over, as happened in a number of Russian regiments in the Japanese war.

Many embittered German Socialists, tortured and driven into the shambles against peaceable Belgians or French, will remember the advice that the recent Premier of France, Aristide Briand, in his Socialist days, gave to soldiers ordered to fire on strikers. "If the order to fire persists," said Briand, "if the obstinate officer still tries to coerce the will of the soldiers in spite of everything. . . . Oh, no doubt, the guns may go off, but perhaps not in the direction intended." This speech has been circulated by the hundred thousand in France and is not unknown in Germany.

4. With defeats and demoralization

which will certainly occur here and there, if not all along the line, successful mutinies will become more and more frequent—as was happening at the close of the Russian-Japanese war.

5. And, finally, it is hoped that some section of the army will turn its guns against the home government. Even such a non-revolutionary Socialist as Wells expects this contingency "I do not know," he says, "how long the swaggering Prussian officer will be able to drive his crowded men to massacre before they revolt against him. Nor do I know how far the inflated vanity of Berlin has made provision for defeat."

But the chief Socialist advantage will be after the war. In times of peace Socialist parties and labor unions have not been able to advance the working classes in proportion to the advance of the more prosperous classes. They have been weak on the offensive. With existing organization and education they will be infinitely stronger on the defensive.

Who is to pay for the vast burdens the war will entail? The classes that pay will have to submit to a *lowering* of an already fixed standard of living. Everybody knows how much harder people will fight against such an outcome than they will to gain an advance. And the working people will be the most formidable in this fight. In desperation they will not only use the methods of sabotage, they will use every method. And even if they did not resist, the efficiency of industry requires the efficiency of the workers and minimum standards of living. If the employers of one country do not see this those of another will take away their trade.

The resistance of the workers will force the capitalists—large or small—to pay the bill. And another and even fiercer class war will break out to see which group of capitalists shall pay the bill. In this war the large capitalists are bound to be annihilated (as capitalists) and genuine democracies established both in Germany and in every country where existing governments are sufficiently humiliated and where Socialists have prepared the way. The large capitalists' functions will be assumed by the new state Socialist governments and society will pass into the firm control of the small capitalist and skilled labor majorities.

Such will probably be the ultimate result in France and Great Britain. But in Germany, Austria and Russia it is probable that the people will find a much shorter and radical solution. The larger part of the wealthy classes of Russia and Austria and a large part of those of Germany are landlords. It is these that furnish the nobility, the army officers and higher officials; it is they who sustain militarism and religious persecution, and live on the backs of the millions of peasants, keeping them in ignorance, poverty and degradation.

Their wealth—the land—is what is most needed by the people and is most easily confiscated. But besides this there will be no other source of wealth sufficient to pay the huge costs of the war—far greater for Germany and Austria than for the other contending governments, to say nothing of the almost certain indemnities. As to impoverished Russia, she is near bankruptcy now. Six months of such a war as this will mean, first, the repudiation of the national debt—which would involve the loss of some $3,000,000,000 to France, and cause an absolute financial collapse there (which is what the French Socialists desire)—and, second, it would necessitate the expropriation of all large estates.

But the process of confiscation will not stop here. The fortunes of the great armament firms, of the big bankers, of all the monopolists will also be involved. And where the process of confiscation stops that of a nearly confiscatory taxation will begin.

In a word Socialists have everything to gain if the military autocracies of Russia, Austria and Germany are crushed, and if the reactionary nationalist upper classes of England and France are given a fearful lesson, by this war.

This—approximately—is what the majority of Socialists hope for and expect from the war. The British Laborites, above referred to, do not even claim to be Socialists. The compromising majority of the last German Party Congress seems no longer to represent the majority of the Party members, if it ever did so—and certainly it will no longer control the Party after this debacle.

A few voices in America have represented the opposite extreme, that no good can come from this or any other war. But in America as elsewhere (with the possible exception of Germany) the majority of Socialists expect a tremendous advance of Socialism. And no better expression of this view has fallen into my hands than a recent editorial in *The New York Call*. I shall therefore close by quoting from it at some length:

> The staff and business departments of this paper are composed of many so-called nationalities. There are Americans, Germans, Russians, British, French, and even people from the Balkan States. But all stand for and desire but one thing out of this war—social revolution. That consideration subordinates everything else.
>
> The Germans on this paper would gladly see the hosts of the "fatherland" beaten to their knees, the Kaiser made a "fatherlandless rascal," the militarism and imperialism of the country irretrievably smashed, if the victory of the proletariat were certainly insured thereby.
>
> And in like manner, the Britishers would be not only content, but immensely pleased, if the British Empire were to fall to fragments, the mighty navy sunk to the last ship a thousand fathoms deep in the sea, if that in particular would insure the destruction of world capitalism.
>
> And the French and Russians and others here feel exactly the same way—for they are all Socialists to a man—and a woman.
>
> All Socialists everywhere are our brothers. All workingmen everywhere are our friends. And conversely all capitalists, militarists and imperialists of all nationalities are our enemies.
>
> One German workingman is more to us than a thousand British, French or Russian capitalists. And one British workingman is more to us than all the Kaisers, Czars and Emperors that ever curst the earth. Apply this philosophy of things all around and it gives our general position.
>
> We want to see the workingmen of all these lands turn on their butchers and murderers, and rend them into fragments, and stamp out forever the abominable class rule, the capitalism that has turned a continent into a shambles.
>
> And now the thing has started we don't care how they do it, *whether with cannon, musket and saber, or with confiscation and legislation.* Any old way that is most convenient, provided only that they do it.
>
> The things that our correspondent speak of as "Germany," "England," "Russia," etc., represent nothing to us but the capitalism, imperialism and despotism of those countries, and we are only interested in the destruction of these things, wherever they exist.
>
> Between what our German remonstrants call "Cossack domination" and the"military imperialism" of Germany, we have no choice. We should accept neither, and do our best to destroy both. With one or the other dominant, our fight against it would go on just the same. And that goes for the capitalist domination of all the others as well.
>
> We have not the slightest interest in the so-called "civilization" that it is claimed one or other group is fighting for. It is the same thing in all cases—imperialism, militarism, dominion, wage-slavery, exploitation and capitalism. Art, science, culture, music, painting and literature will survive in any case. They are not dependent on militarism and capitalism. The latter, in fact, are deadly enemies to them.
>
> We have not started this thing, and we hope that our correspondents will comprehend us when we say that, now that it is started, the most cold-blooded calculation on our part at the present moment is that they should all bleed each other to exhaustion so that the coming social revolution may have an easier job of sweeping out the stinking fragments. We are thru with protesting, mourning and deploring. That time has past, and now we stand for destruction—the destruction of capitalism. (Italics mine.)

MINES, SUBMARINES, COAL AND NEUTRALITY

INTERPRETATIVE COMMENT ON THE NAVAL SIDE OF THE GREAT WAR BY THE INDEPENDENT'S NAVAL EXPERT

THE naval side of the Great War, as it has been called, is not likely to present very astonishing or thrilling episodes, altho certain of its features may be fruitful in lessons, tactical or strategic.

That the indiscriminate sowing of contact mines in waters navigated by friendly as well as by inimical vessels must eventually be classed with the use of explosive bullets if not with the poisoning of wells may be taken for granted. "Controlled" mines operated by men who, from stations either afloat or ashore, can fire them at will are in a different category. They are legitimate weapons of warfare. The recent reported sinking of a Norwegian steamer in the North Sea thru one of these infernal machines emphasizes their inability to distinguish friend from foe. Great Britain has officially claimed the right to follow the German example in this particular, but it is decidedly open to question whether she will exercize a right which embodies rather the malevolent rage of the weak than the confidence of the strong. Indeed, it is stated that she is employing "trawlers" to sweep for contact mines in places where they may possibly be found. For this purpose the "trawler" is admirably adapted and equipped.

The straits to which German men-of-war are forced in order to replenish their bunkers proves the sagacity with which for a generation and more, the British authorities have established their coaling stations. In a general way it may be said that no steamer today can undertake an extended voyage without touching at a British port for fuel. It is evident that England's grip on the supply of this indispensable article the world over has made naval campaigns of any geographical magnitude quite impossible to her enemy. The case of the "Karlsruhe," interrupted off Bermuda in the task of coaling from the "Kaiser Wilhelm," by the appearance on the scene of British cruisers, may be quoted in support of this view. Incidentally, the advantage of superiority in speed was well illustrated by the escape of both German vessels from their slower antagonists. This advantage has always been conceded by those who believe ships were made to fight and not to run away.

The "Goeben" and "Breslau," altho frequently sunk—on paper—have reached the Dardanelles and are no longer a menace to British and French commerce in the Mediterranean. While not so stated, the inference is obvious that it was lack of fuel, present or prospective, which drove them into Turkish, for the moment neutral, waters. To the proposition by Turkey to buy them vigorous protests are entered, especially by Greece. Their acquisition is not unlikely to line Greece up with the powers of the Entente Cordiale. Why they did not rush to Pola and add their weight to the Austrian squadron is a paradox. The "Breslau" is but a lightly armed craft about the size of our "Chicago," and credited, like the "Goeben," with a speed of twenty-eight knots an hour. The latter is a sister ship of the "Moltke," which our readers have doubtless seen, and is a battle cruiser carrying ten guns of eleven inches and twelve guns of six inches in caliber. She would have been a notable reinforcement to Austria's sea power.

The submarine appears to be less dangerous than was thought as witness the prompt sinking of the German V 15 in the North Sea. The first shot from a British cruiser smashed her periscope, the optical apparatus by which those inside of a submarine can see what is going on outside. Crudely it may be described as two mirrors set on angle of 45° with the vertical. The upper, carried above water on a hollow spindle, receives the image and throws it down into the body of the vessel where the second mirror reflects the image back into a plane parallel to the horizon. When V 15's periscope was destroyed she had to come to the surface for a peep when a second shell sent her to the bottom. While something serious to be reckoned with, the submarine is not necessarily omnipotent. The British have shown how best to meet its attacks.

The administration in Washington is exhibiting a fine combination of strength and prudence in enforcing its neutrality proclamation. Nowhere can greater mistakes be made than in dealing with wireless stations on our soil powerful enough to communicate across the seas. Information may be quite as valuable as the ability to issue instructions for the movements of cruisers and it is to prevent our violation of our obligations that a rigid censorship of messages transmitted by such stations, owned and operated by corporations belonging to one or another belligerent, has been established and placed under the protection of our Navy Department.

W A R

BY EDWARD BLISS REED

They who take the sword,
  To slay for lust of gain,
With fleets in air, with ships at sea,
Vast armies, Death's artillery,
Can they break the might of the Lord's decree?
  With the sword they shall be slain.

They who take the sword,
  In swords have put their trust.
Their foes shall be the unnumbered dead,
(No sentry hears that army's tread)
Who shall dash the crown from the victor's head,
  And trample it in the dust.

They who take the sword,
  A child shall their end foretell.
One dying mother's faintest sigh,
One girl's imploring, piercing cry,
Shall ring like a blast in their souls till they die,
  Shall ring thru their souls in Hell.

They who take the sword,
  What gain is victory?
Their blood-drenched flags in triumph float?
Their new-won lands are a burial moat;
Better, with mill-stone round the throat,
  Were they flung to the pitiless sea.

They who take the sword,
  For lust, and hate, and gain,
The strength of the hills 'gainst them is set,
The sword of the Spirit is sharper yet,
For God hath said—shall God forget?
  With the sword they shall be slain.

AMERICA'S OPPORTUNITY

BY ELLERY C. STOWELL

One of the most important and interesting phases of The Great War is the question of neutrality. Professor Stowell is particularly well qualified to discuss the subject. He is assistant professor of international law at Columbia University and was one of the secretaries of the Second Hague Conference and secretary of the American delegation at the Naval Conference in London in 1908. —THE EDITOR.

TO one with any realization of the actual consequences of this disastrous war the thinly veiled gloatings of some of our editorial writers seem as deficient in good sense as they are in good taste. We shall all suffer terribly, neutrals as well as belligerents. No doubt as we suffer less from a relative point of view, our national position will be enhanced. But we, as patriotic citizens, may well be glad of an opportunity which comes to this country as a result of the present conflict. It is to take under our protection and transmit undiminished to posterity the enjoyment of neutral rights.

For neutrality alone has gained any decisive victory in the ceaseless war which civilization is waging against war. The neutral says: "I will keep out of the struggle, and I am ready to fight if necessary to protect my reasonable rights as a neutral. I recognize that you belligerents must in the crude stage of our actual development be allowed extensive liberties for grappling with each other, and if in the conflict some of my lesser interests are bruised and battered, I must cheerfully accept the inconvenience because some day I myself may need an equal forbearance on the part of my sister nations. This does not mean, however, that you are at liberty to practise freely any abomination of war your fancy chooses. If you may not poison each other's wells, still greater reason is there that you should not strew the sea with floating mines to sink friend as well as foe. With our powerful navy we may demand a reckoning from any nation which to gain an immediate belligerent end so transgresses the fundamental rules of humanity and the reasonable rights of neutrals."

For over a century this country has made every effort diplomatically to secure the adoption of the principle of the inviolability of private property in naval warfare. If ships were free from seizure, our sea-borne commerce would not be thrown into the confusion which we witness on the outbreak of this war. With the exception of contraband of war, our ordinary sea-borne commerce might continue on its way to the general benefit of international relations. Blockade and contraband would still permit the belligerents to strike at the commerce of his enemy. It is doubtful if the ability to seize private property will ever be of great moment in deciding a conflict. In the present situation England's food supply is upset and suffering entailed which is not, however, likely to be sufficient to cause an outcry, and consequent pressure on the Government. Germany is likely to suffer in the same way, but even in her present hemmed-in situation it would require a blockade of her ports to cut her off from food supplies.

The transfer of belligerent shipping to a neutral flag is closely related to the question of inviolability of private property in naval warfare. For, as has been said, if belligerents' merchant ships were not liable to seizure, the outbreak of war would not frighten them from their regular commerce and there would be no occasion for them to seek refuge under a neutral flag. It is of great importance to our neutral trade to provide immediate shipping facilities, and Congress is preparing an act to facilitate the transfer of belligerent shipping to our flag. But the belligerent, if prepared to exercize his extreme rights, might seize the ships so transferred on the ground that the transfer was an attempt on the part of the belligerent to avoid seizure. It would then have to be shown before the prize court that the transfer was not temporary, nor with any string tied to it. If transferred ships fear they may be liable to seizure and long detention until the transfer is examined and its validity established, the transfer of shipping to our flag would be of little advantage to our neutral interests. We must therefore let it be understood, firstly, that we will not allow any colorable transfers to be made to our flag; and secondly, that the transfers made according to our laws are not to be lightly seized on mere suspicion.

Whichever of the belligerents acquires control of the sea will be tempted to stretch every point to confiscate as contraband all supplies directed to his opponent. Here again there is cause for regret that the liberal proposal of Great Britain at the Second Hague Conference to abolish contraband entirely was not vigorously supported by this country, for it would have been a great step in advance. Eventually our delegation did rally to the support of the British proposal to the extent of advocating the abolition of conditional contraband. When the Hague Conference could not reach a unanimous agreement upon the proposal, Great Britain and a large majority of the nations represented at the conference were on the point of entering into a separate international agreement to this effect, but were prevented by the protest of Germany, who considered such action a violation of the spirit of the Hague Conference requiring unanimous action for the adoption of the proposals under discussion—and so the matter had to be dropt.

Two elements are required to constitute contraband. First, the fitness of the goods in question to increase the equipment of the army or to sustain its fighting force, as by feeding and clothing the troops, or caring for other bodily wants. Those goods, like ammunition and arms, which are directly serviceable for offensive action, are termed absolute contraband and may be seized when bound for a belligerent territory, even tho an intermediate port of trans-shipment should intervene. Other contraband is called conditional contraband.

Second, if belligerents should be allowed the same freedom in seizing food supplies, for instance, as they are in the case of absolute contraband, it would be an insufferable blow to innocent neutral commerce, and to away with any necessity for a belligerent's establishing a blockade. It is necessary, therefore, to draw some equitable compromise between rights of the neutral shipper and the rights of the belligerents bent upon interfering with the military operations of his adversary.

Argentina with her shipment of food supplies, grain and frozen meats and Brazil with her coffee are also interested with the United States in preventing unjustifiable confiscation of these cargoes on the ground of their being contraband.

We as neutrals must see that the belligerents do not interfere with our legitimate neutral trade especially in food supplies. Vigorous action taken early is the only effective means. Vacillation would lose us prestige and might lead possibly to serious friction. Any action we, the leading neutral nation, may take for this purpose serves not only our own present national interests, but what is more important still to the world those rights of neutrals which may be compared to the fortifications of civilization against the horrible invasion of war.

THE PROBLEM OF INSTINCT

WHAT I BELIEVE AND WHY—TWELFTH PAPER

BY WILLIAM HAYES WARD

THE reason of man, and to a less degree that of animals, is something to wonder at and admire; but the instinct of animals, and particularly of insects, is even stranger, more mysterious. Reason accomplishes ends, and knows why it uses the means; instinct does as much but does not understand why it does them. Reason rises so high in the realm of freedom that instinct is not needed; for it makes its own rules, finds new ways to meet every new condition, uses tools instead of feet and horns, thinks, plans, contrives, combines, controls the forces of nature and creates civilization. In this highest realm of nature we seem to see God walking in the garden, but may we not see Him quite as really in instinct?

Instinct does the works of reason without its reasons, without knowing why, without being taught. The worker bee just hatched from the pupa state flies unaccompanied to a distant flower, gathers its honey, returns to the hive and deposits it in a cell, and all without knowing that the honey placed there is to be food for the next generation. We know why we store our provisions; the bee knows nothing, simply does it.

THE SOURCE OF INSTINCT

Both instinct and reason are found in man, but instinct is soon nearly suppressed, while in the lower animals, and particularly in insects, it is reason that is little developed and instinct controls. The new-born child takes the mother's breast by instinct, and for a period all, or nearly all its activities, seem to be instinctive; but in a few days it moves its eyes for a dim purpose, and in a few months walks about a creature of reason and will. A grown man is conscious of scarce any act that is instinctive. But the action of the bee as it builds its honeycomb, or of the solitary wasp when it provides for its young, may be regarded as wholly controlled by instinct. It is to be considered whether these actions of instinct can be regarded as purely the product of unconscious evolution, or whether they have been guided by a foreseeing, superintending Intelligence.

In the higher vertebrates it would seem as if some forms of instinct could have been the product of normal evolution. The instinct which sends wild geese from their nesting summer home to escape in more southern lands a hungry winter may seem to have its origin in some more indefinite and gradual pushing toward more abundant food as the northern supply was exhausted with the freezing of the waters. Those which happened to do this once may have followed the sun back in the next spring, altho we do not see exactly why, and their young may have inherited, so it is said, altho such power of inheritance is not evident, the memory of the spring and autumn journey. It is not clear that such northern nesting birds could have survived the winters, small insect-eating birds, before they learned to start, while food was yet sufficient, for their journey of thousands of miles forth and back every year; but perhaps geology may help us. The changes may not have been so extreme then between summer and winter, and the annual trip may not have been so long. Let it be allowed that the instinct of birds of passage may have developed out of the slow accidents of undesigned advantage, remembered and repeated and then transmitted to posterity; yet such migration hardly touches the fringe of the problem of instinct. It has to do with a class of animal life that possesses the mask of reason.

But take another case, instanced by Prof. J. A. Thompson, that of the eel, which has a brain of a very low order. Those of northern Europe probably begin their life on the verge of the deep sea west of Ireland and southward toward the Canaries. The eel rises to the surface, for months a small transparent larva. After a year it is one of a million "elvers" passing up a river. Some have traveled three thousand miles. Here they grow, but do not breed. They return to the deep sea. Can this be explained on the machine theory of life? Can it be explained by any happy accident of environment and evolution? The movements seem too immense and complex to be thus accounted for, without some intelligent guidance in the process of evolution. When I consider this case, which can be matched with the migrations of salmon and many other fishes, I begin to feel more doubt whether evolution will explain the migrations of birds.

THE CASE OF THE HONEYBEE

Let us return to the case of that honeybee whose first flight has led it safely to a difficult flower. Capture it now, and carry it about, and when let fall it turns around and flies to its hive. It knows where it belongs; it has a strange sense of direction beyond reason. That is the way bee-hunters find the hole into which bees enter in a hollow tree in the forest. I cannot see how that sense of direction could have come by evolution, seeing that each colony has a new hive or hollow tree, and has to be born with a separate sense of direction. You can't explain the flight back as you can the return flight of a boomerang.

Is it easy to conceive how among bees the marvelous development of instinct should appear in neither the male nor the female, the drones and the queen bee, neither of which do any work, nor inherit any skill, while the workers, who show such marvelous instinct in finding the flower and expressing its sweet and finding their way back to the hive, and then building the waxen cells and filling them with honey, and then killing the useless drones, are neuters, sexless, and have inherited none of their skill? Can all this have come by the slow process of inheritance, where there is no sexual inheritance? Not a worker will transmit its skill to its progeny, for it has no progeny, and its parentage had no such skill to transmit. One cannot help thinking that this purposive, but not inherited, power has been imposed upon the bee from some outside intelligence, which has even taught it how to select a grub in one of the cells and nourish it to be the future queen. And what has been said of bees can be said of ants whose colonies are divided into masters and slaves. Is it any wonder that Virgil says in the fourth of his Georgics that bees "have received a share of the divine intelligence and drafts from the heavens; for God pervades all, earth and the expanse of air, and the deep vault of heaven."

BLIND PARENTAL INSTINCT

Of the various phases of instinct the parental instinct is one of the most necessary, essential to the continuance of the species, yet apparently inexplicable on the theory of evolution, for it provides for the future of the young of which only mammalia and birds can have any knowledge. And in the case of birds we cannot suppose that they have any knowledge why they sit for weeks most uncomfortably on their eggs. They do not know that young birds are to be hatched from the eggs, nor do they know the eggs must be kept warm. They simply do it from instinct. It is the law and they must. But we can see no way that instinct of law can have been acquired under the mere provisions of nature thru

development. The human race has this parental, or at least maternal, instinct, and adds to it reason. The mammalia have it, and will fight for their young, at least till they are weaned. But it is among the insects, which know nothing of their young, that the most remarkable illustrations occur of the parental instinct.

This parental instinct, often so wonderfully developed, is not easily explained by evolution. In the case of man, who has reason, a plausible explanation can be conceived. The mother consciously carries the child in her body, anticipates its birth, thinks much about it, suffers for it the pains of childbirth, and feels the necessity of suckling it. Both she and the father know the value of the child as he grows to be the defender and the provider of the home and the tribe. Mother-love and father-love are by no means all instinct. But it is not so with the lower animals. They do not feel the eggs or the young growing in the maternal body. They have no sense of prospective value of the young when they shall become adult. What is done for the young is a burden to the parent. The selfish instinct would lead the mother to desert her offspring, as the ostrich is said to leave its eggs to hatch in the warm sand. But parental instincts overcome the interest of the parent. This appears not only in the higher mammalia and birds, but also in fishes and insects which will never have any knowledge of their young.

BUTTERFLY AND WASP SHOW IT

Consider the case of the cabbage butterfly, as one of many. It takes pains to lay its eggs on the cabbage on which its young must feed, but on which it does not itself feed. We call this instinct, but by what power or what evolution does it come to select for the nidus of its eggs the one plant on which its young must feed? It is difficult to refer this instinct to the slow process of eliminating in generation after generation for many tens of thousands of years all the butterflies whose grubs did not happen to find a suitable food in the cabbage. But even so, how came the butterfly to choose the cabbage to lay its eggs on, particularly when it never has seen and never will see its progeny, and does not itself feed on the cabbage? To be sure, as a caterpillar it fed on the cabbage, and it might be said that somehow as a butterfly it remembered its previous incarnation and returned to its first love, but it is not easy to conceive that it had any physical basis for such memory, when we consider that when it passed from the pupa into the chrysalis state all its interior parts were disorganized and reduced to pulp, nervous system as well as digestive, and only the germinal disks left which were to reorganize the butterfly out of the worm.

Consider the parental instinct of the solitary wasps in providing for their young, of which they will know nothing. With the egg they put a caterpillar of some sort which will be food for the worm when hatched from the egg. They choose different victims, of which one has a single nervous ganglion, another three or even more. They sting it in one or three or more places, just where the ganglia are, as if with as much knowledge as a surgeon, so as to paralyze and not kill; and they even crush, when necessary, the head of the victim so that it can live inactive until the wasp's eggs can hatch and it can supply food for the grub. Here is parental instinct and much more, too. We have an extraordinary surgical skill which Bergson tries to explain as "a sympathy (in the etymological sense) between the wasp and its victim which teaches it from within, so to say, concerning the vulnerability of the caterpillar. This feeling of vulnerability, he says, "might owe nothing to outward perception, but result from the mere presence together of the wasp and the caterpillar, considered no longer as two organisms, but as two activities." To my mind this is a meaningless explanation. It explains nothing. They are two organisms and must be so considered, and they are two activities. It is a mad attempt by a mist of words to escape from the easier explanation of a Superior Intelligence which has taught instinct what to do. I do not know why teleology may not be as legitimate as any other device of philosophy. But I agree with Bergson that this parental instinct and this clairvoyance is not to be explained by evolution.

NEW BERRIES AND PIPPINS

THE man who adds a new fruit to the almost infinite variety now afforded to man deserves as well of his fellow men as the proverbial man who makes two blades of grass grow where one grew before, and this is what Father Schoerner, parish priest of Brooks, Oregon, has done. By pollenizing the wild blackberry with the Cuthbert raspberry, or, in other words, reversing the process by which the Logan berry was produced, the Oregon horticulturist has produced an entirely new variety of berry which he has named the "Willamette" in honor of the valley in which the berry had its origin. In the Portland *Oregonian* the new berry is described after this fashion:

> The fruit is firm and of a most delicious, distinctive flavor. It has nothing of the acid sourness of the Logan berry nor of the heavy sweetness of the raspberry. Nor does it resemble the taste of its wild mother. It is neither tart nor sugary and cannot be described. It must be tasted.

To add a new and delicious berry to the blackberries, strawberries, raspberries, blueberries, huckleberries, etc., of our woods, fields and gardens is a distinct achievement and one that will add to the enjoyment of humanity in general, for in these days of cold storage and rapid transportation the humblest dweller in New York or Boston may buy the choicest fruits of the Pacific coast, the tropics, or South Africa at the corner fruit store, and often at a remarkably low price, considering the distance the fruit has traveled to market. These prices would be still lower if it were possible to save the entire fruit crop, but in Canada, for instance, we are told that tons of berries go to waste every season simply because there is no one to gather them and ship them to a market. Whether the new berry of the Pacific is better than those with which everybody is now happily acquainted can only be determined by a referendum to the berry eaters of the world.

But not in berries alone are there additions being made to fruits that recall those of the Garden of Eden. From Hobart, Tasmania, comes the report of the production of what is called the pipless pippin. A horticulturist there is said to have produced an apple without the trace of a pip and with a smaller and softer core than in any other variety. The apple has been named from its producer Cannon's pipless pippin, and is said to be a good keeper, very bright in color and a splendid fruit for dessert. With these qualities it will probably not be long before dwellers in Europe and America will be able to enjoy the new Tasmanian pippin and in season to get a new taste of deliciousness and enjoyment from the Willamette berry of Oregon.

THE RED CROSS AND THE GREAT WAR

THE Red Cross is the symbol of mercy in war, and under its flags ships are safe, hospitals immune from attack, doctors, nurses and helpers free to serve the wounded and dying without molestation. Not since the Red Cross was organized has that organization been face to face with so great a task as that which confronts it today in the war-ridden countries of Europe. But the Red Cross is rising to the test and already thousands of dollars are pouring into its treasury daily for its great work of mercy.

At a time when so many people in all parts of the world are contributing to the various Red Cross war funds, it is of interest to know what this great organization will do with those funds. First of all it must pay the expenses of its huge field force which will operate with all the armies, it must pay for its great stores of medicines and medical supplies and hospital equipment, it must support a service of intelligence with which friends and relatives can communicate to ascertain the fate or whereabouts of soldiers in the field, and it must organize and have in efficient working order great supply depots, easy of reach and from which can be instantly drawn the articles that are needed in hospital work on so gigantic a scale.

Brown Bros.

REAR ADMIRAL AARON WARD, U.S.N.
Who takes command of the American Red Cross Relief Ship

In addition to its work on the battlefields the Red Cross will be expected to have men and means of transportation available for the removal of the sick and wounded from field to base hospitals, to provide the medical nursing forces that will be needed to carry the work forward, and the providing of countless other things which will be needed to ease suffering and make the lot of the wounded soldier more comfortable. There must be central bureaus of medicine, nursing, material, and intelligence, and each must be in charge of an experienced person with an ample force of capable assistants.

The American Red Cross has issued an appeal for funds for the purpose of sending instant and hearty help to the organizations in the countries now at war. A ship, commanded by Rear Admiral Aaron Ward (retired) will be chartered and will sail under the Red Cross flag, laden with physicians, nurses and hospital supplies. It will be under the protection of the treaties of Geneva and The Hague, and may thus enter any harbor for the discharge of its beneficent duty. Assistance will be given to all in the true spirit of the Red Cross, represented by its motto "Neutrality—Humanity."

Admiral Ward is eminently suited to take command of the relief ship. He is an officer of wide experience and speaks French, German and Russian fluently.

Dr. Ernest P. Bicknell, the National Director of the Red Cross, accompanied the Government representatives on the cruiser Tennessee so that he might personally give direction to the co-operation which the Red Cross will lend in assisting American refugees in Europe.

President Wilson in his capacity as head of the American Red Cross has issued the following appeal to the American public:

To the People of the United States:

The present wars in Europe are certain to impose upon the Red Cross of the nations engaged a burden which demands the sympathy and aid of the world.

The American Red Cross is earnestly desirous of assisting its sister societies in their endeavors to alleviate distress and suffering among the combatants and therefore appeals for funds to be expended impartially for the relief of the sick and wounded soldiers of the nations at war.

Contributions for this purpose may be sent to the American Red Cross, Washington, D. C., or to local treasurers of the society in the United States. I confidently hope that the humanity and liberality of the people of the United States, so often manifested in the past, will cause them to respond promptly and generously to this appeal.

WOODROW WILSON,
President, American Red Cross.

Contributions to the American Red Cross may be sent to the American Red Cross, Washington, D. C., or to Hon. Jacob H. Schiff, New York City.

JOIN THE RED CROSS

BY the action of the Official Board of the American Red Cross every one who contributes not less than Two Dollars to the organization's fund for relief work will be enrolled as a member-at-large of the Society for the remainder of this year, and will receive the October number of the "Red Cross Magazine" free. Japan has more than a million members, America should have two millions. Join the Red Cross!

MISS MABEL T. BOARDMAN
Chairman Red Cross Relief Board

DR. ERNEST P. BICKNELL
National Director of the American Red Cross

THE MAIN DEFENSE OF THE KAISER'S FLEET: THE KIEL CANAL

This great naval waterway between the North Sea and the Baltic, recently reconstructed at a cost of $55,000,000, enables the German High Sea Fleet to play "hide and seek" with the British squadrons. It is protected by great fortifications at Heligoland and Wilhelmshaven

EDUCATIONAL SUMMERTIME

BY FRANK CHAPIN BRAY

CHAUTAUQUA EDITOR OF THE INDEPENDENT

FORTY years ago people did not consult college catalogs to discover where they might spend the best vacation. Today college announcements of summer attractions are the first thing many persons consult. Illustrated announcements are the rule; the Columbia University Bulletin, for example, contains 190 pages. This practise of exploiting the college and university as an ideal summer resort is distinctively American, and increasing attendance year by year is phenomenal. Such a development comports with the spread of the Chautauqua movement which has emphasized the educational opportunities of vacation-time. How to make recreation educational and education recreational is the summer problem that established institutions are trying to solve. Chautauqua's influence in setting a summer educational fashion is everywhere recognized.

Note some of the devices adopted by various institutions of wholly different size and environment.

Dartmouth College offered for the third time this summer a Festival course dealing with theoretical, historical and practical phases of pageantry. Elementary and advanced courses in festival dancing, folk dancing and pantomime, lectures by specialists on dramatic structure, costuming, festival music and the pedagogic and social significance of the festival were supplemented by the actual out-of-doors production of a midsummer festival. Professional performances by the Coburn Players and amateur performances in the new Little Theater were correlated with the work in dramatic literature and composition.

Columbia University offered evening courses in accounting, advertising, business administration, English, French, German, mathematics, mineralogy, stenography and typewriting. Organ recitals, open-air military band concerts, a music festival and open-air plays were announced, and an elaborate series of university excursions to historical sites, museums and other institutions in and near New York formed part of the summer program.

Among specialized summer schools one finds the School for Rural Social Service and the School for Rural Community Planning at Massachusetts Agricultural College, Amherst. Kalamazoo College, Michigan, held a three-weeks' summer school for ministers under auspices of the Baptist Association of the state, funds being provided for attendance of poorly paid pastors. Unitarians held three summer institutes for religious education at Meadville, Pennsylvania, Andover, New Hampshire, and the Isle of Shoals, seventy-five of the attendants being sent on scholarship funds. The Roman Catholic summer school was held for four weeks at Cliff Haven as usual. More than 3000 persons attended the summer session at the University of California, Berkeley, whose open-air Greek amphitheater is famous, and there were 1000 students in the summer extension correspondence courses. The summer Bulletin of public lectures, classes, library extension, educational exhibitions and entertainments, covering the entire city of Chicago and issued by the Council for Library and Museum Extension, is unique and is the only publication of the kind which has thus far come to our attention. Parks and open-air recreation centers of Chicago put popular programs within reach of thousands of citizens, old and young.

Educational summer camps for boys and for girls have recently become very numerous, and even the Circuit Chautauqua which does not have a Junior Chautauqua organization is considered behind the times. The summer playground movement has indeed become an all-the-year affair; eighty-three cities employ year-round play leaders, and the Playground and Recreation Association reports campaigns in twenty cities with decision in thirty-five others to develop recreation systems side by side with their school systems. In the United States Steel city of Gary, Indiana, night recreation is provided by the public school system for pupils and adults. At Gary, by the way, it is reported that 5000 adults attend night schools compared to 4300 children attending day schools. The roof of Madison Avenue Baptist Church, New York, is a fully equipped children's playground.

Besides the agitation for keeping the public schools open all the year (New Jersey is one of the states where success is reported) the increase of Daily Vacation Bible Schools thruout the United States is remarkable. A national association and denominational associations are behind this movement for the summer use of churches by the children. For instance:

Over the door of a Protestant Episcopal church on Fourth avenue, New York, hangs this summer placard: "Calvary Daily Vacation School Here. A happy morning for boys and girls between the ages of 8 and 16 years. 9:30-11:30 every day. Good Singing, Good Dancing, Good Stories, Good Games. Boys learn to make hammocks and baskets. Girls learn sewing, reed work and raffia. An automobile ride every week. Come In." Ten of these Episcopal Vacation Schools at different churches employ about forty teachers and more than 2000 New York City children are cared for.

A nation-wide acceptance of various vacation school methods quite familiar to "old Chautauquans" is indicated by the citations above made at random. In an anniversary year of Music Festival, Dramatic Productions, Schools of Religion, Mothercraft, Storytelling for Children, even European Travel Party abroad, Chautauquans not only look backward but look forward to significant Chautauqua Institution achievements in that interplay of education and recreation for every member of the family for which it stands.

Introduction of speakers to Chautauqua audiences is almost an art. "I am not going to bore you with any address," announced one nervous platform manager, "but I will now introduce to you the man who will."

The introduction of the late Dr. P. S. Henson at Chautauqua years ago by Bishop John H. Vincent has become classic:

Bishop Vincent said: "I now take great pleasure in announcing the lecture on 'Fools' by one—(great laughter) of the wisest of men."

Dr. Henson arose, bowed, and began: "I would have you understand, ladies and gentlemen, that I am not as much of a fool as Bishop Vincent —greater laughter)—would have you believe."

There are two Chautauqua Circles in the Hawaiian Islands and two in South Africa. Members of the Chautauqua Literary and Scientific Circle who are taking the Chautauqua Home Reading Course report from China, Japan, Siam, New Zealand, Australia, the Philippines, India, Italy, Germany, Norway, Switzerland, England, Canada, Bermuda, Cuba, Porto Rico, Isle of Pines, Jamaica, Panama, Argentina, Brazil and Chile.

Sixty children from twenty-three states took part in the Playground Festival at Chautauqua.

SOCIALISM—PROMISE OR MENACE?

A REVIEW OF THE HILLQUIT-RYAN DEBATE

FROM THE SOCIALIST VIEWPOINT
BY
W. J. GHENT
AUTHOR OF "OUR BENEVOLENT FEUDALISM" AND "MASS AND CLASS"

FROM THE INDIVIDUALIST VIEWPOINT
BY
T. N. CARVER
FORMERLY PROFESSOR OF POLITICAL ECONOMY, HARVARD UNIVERSITY

Rarely do we have public discussions of a burning question so ably conducted on both sides as the debate between Mr. Morris Hillquit, one of the leaders of the Socialist party, and Rev. Dr. John Augustine Ryan, a priest of the Roman Catholic Church, which has been published by Macmillan ($1.25 net) under the title of "Socialism—Promise or Menace?" Since it is a bipartizan book it logically demands criticism from a bypartizan standpoint. We present accordingly two reviews of the book, one by Mr. W. J. Ghent, one of the most able writers in the Socialist party, and contributor for many years to The Independent; the other review by Dr. Thomas Nixon Carver, who has recently become Director of the Rural Organization Service of the United States Department of Agriculture.—THE EDITOR.

THE SOCIALIST POINT OF VIEW

MR. H. G. WELLS somewhere sets down the ardent wish that each of the great controverted questions could be presented with all the arguments pro and con, so that the public might have the whole case before it. Here is at least a beginning to the fulfilment of his wish—the presenting of the case for and against socialism. No one can doubt the peculiar fitness for the task of the two controversialists; and no one can question the ability with which the task is performed. The plan of the debate, moreover—with its provisions for exchange of papers, for rejoinders and sur-rejoinders and for a general summary and conclusion—furnished the machinery and method which availed to bring about a thoro and systematic discussion.

Dr. Ryan comes perhaps nearer than most of the anti-Socialist warriors to an acceptance of the Socialist indictment of industrial society. Tho the indictment, he contends, is overdrawn, the reality is bad enough. Otherwise his performance is much the usual thing of the last quarter century in the periodic annihilation of socialism. Of course, the job is done better—that is, more skilfully, with a fuller knowledge of Socialist thought and generally a fairer treatment of Socialist contentions. But in the main it is the conventional onslaught in the face of which the Socialist movement has thrived and grown to giant proportions. It contains no new element of fact, or argument or religious plea which seems seriously to threaten a continuance of that growth.

For the admitted evils of present-day society Dr. Ryan, like most anti-Socialist contenders, offers an alternative remedy. "Social reform" is its somewhat nebulous expression; but he ventures upon certain constituent proposals. Some of them are too vague, either in themselves or their conditions, to be understood. For instance, the anticipation (p. 46), "when the working-class is in a position to secure an ever-increasing share of the national product, up to the limit of industrial resources and social well-being," may mean pretty much anything or nothing at all. But in other places he is more concrete, even if sometimes futile.

He would like to see the power of the trusts curtailed, and he entertains the naïve faith that President Wilson is the man for the task. He favors such legislative measures as the legal minimum wage and social insurance. He favors also an extension of co-partnership and coöperative schemes, tho he expresses skepticism regarding the success of productive coöperation. He even declares—tho there is no suggestion of the manner in which it is to come about—for the "distribution of a large measure of capital ownership among the workers." When such changes have been wrought, "there will be nothing left of the social question except that healthy measure of discontent which is a condition of all individual development and social progress." Here is a most socialistic sanction of discontent, even tho it is accompanied by a most unsocialistic faith in the efficacy of half-way measures.

It is of course as an official churchman that Dr. Ryan bases his main argument. He has the clerical distrust of human nature and particularly the nature of the average man, who must be held to his task by the whip of necessity. Like other anti-Socialist clerics, too, he treats the anti-ecclesiastical views of certain prominent Socialists as an inevitable outcome of their economic beliefs, quite ignoring the Charles Bradlaughs and Herbert Spencers and thousands of others whose antipathy to socialism was, or is, quite as pronounced as their antipathy to revealed religion. And finally, he repeats all the old, stale charges regarding the attitude of the Socialist movement toward the family.

Mr. Hillquit meets all of these arguments and assertions with a dialectical skill and a fullness of knowledge that leaves little to be said. Of course there is no phase of the subject touched upon that could not be vastly elaborated. But within the limits of the space decreed this joint brief contains, in admirable proportion of parts, the whole case. It goes now to the public, which is at once judge and jury. The ultimate verdict is one to which all Socialists can look forward with entire confidence.

W. J. GHENT.

THE INDIVIDUALIST VIEW

IT is with chapter II, where Mr. Hillquit presents the conventional socialistic indictment of our present industrial society, and Dr. Ryan examines that indictment and points out a few of its leading misstatements, over-statements and half-truths that the real debate begins. Starting with generalities Mr. Hillquit's argument consists of a series of bold, unsupported statements which all socialistic agitators repeat with phonographic persistency, and with phonographic persistency, which owe their certain amount of credence to that persistent repetition.

After several readings, the writer did not find in this chapter a single statement which he could conscientiously accept without qualification, usually such qualification as would destroy its cogency as an argument for socialism, while many of them seem to be diametrically contrary to the truth. In rebuttal, Dr. Ryan wisely takes up only a few of the more characteristic of these statements, the high points in Mr. Hillquit's indictment, and shows they are overdrawn or misapplied.

In pointing out the change of front which has taken place in the Socialist propaganda particularly with respect to land and capital owned in small units, Dr. Ryan begins by putting Mr. Hillquit in a difficult position. Such forms of productive property as are operated wholly

or mainly by their owners Mr. Hillquit proposes to exempt from Socialist public ownership. Dr. Ryan generously treats this as a genuine change of opinion on the part of Socialist leaders when it is probably a change of platform for the purpose of attracting votes. The farmers hold the key to the political situation in this country, and the Socialists are keen enough to realize that if they are ever to win they must play for the farmer vote. Such a proposition would involve a complete abandonment of the whole Marxian philosophy. If the private receipt of interest on capital is wrong, as Marx labored to prove, it is as wrong for one to receive a thousand as a million dollars in the form of interest.

Again, according to Mr. Hillquit, only those instruments are to be taken into the Socialist form of industrial organization which can be more efficiently operated by public than by private enterprise. Abstractly, to this everybody agrees. But the industries that can be more efficiently managed thus must be decided either as a matter of opinion or by a test of performance. Moreover, it would be hard to show any reason why such a scheme should not include small rather than large units, or why the farms rather than the factories should not be operated by the public. If it is to be determined by performance, as Dr. Ryan points out, very few would object to a real test; that is, to allowing the public to attempt to run a few businesses in competition with private enterprise.

But the present-day Socialist has not the faith of the Socialists like Robert Owen of the earlier half of the last century, who thought that all that was needed was to start a few communities on a socialistic basis, which would easily demonstrate their own superiority. The Socialists of today, however, will have no competition with private enterprise. The public must have a monopoly of whatever it undertakes. Which means that they are not willing to stand by their declaration that only those industries which the public can run more efficiently are to be taken over.

The doctrine of the class struggle is the natural product of a race which has been thinking in terms of class rather than in terms of the territorial state for well on to two thousand years. But the simple fact is that the antagonism of interests is stronger within what the Socialists call a class than it is between classes. This is involved in what economists call competing and noncompeting groups. The wheat grower's interests sometimes clash with those of the miller, but they clash even more with those of other wheat growers who are selling wheat in competition with himself. Moreover, the more millers there are, the better it is for the wheat grower and the worse it is for the miller. Similarly, the more wheat growers there are the better it is for the miller and the worse it is for the wheat growers. Every wheat grower is, therefore, directly interested in reducing the number of wheat growers and increasing the number of millers. Here is a large fact which the average Socialist has never comprehended and which his doctrine of the class struggle tends to obscure.

Moreover, this large fact absolutely determines the direction and the method of improving social conditions, the elimination of poverty, and the raising of wages. The more the doctrine of the class struggle is brought to the front, the greater the hindrances to social reform and the less is done for social improvement. What laborers need, more than they need anything else, is more capital or capitalists and fewer laborers. There is no such thing as a constructive handling of the labor problem except in one of these two directions.

Increase the number of capitalists and the amount of capital, and interest falls, industries expand and laborers gain. But the Socialist, with his class struggle, is doing his utmost to prevent this increase. The logical result of his preaching of class hatred is to discourage men from entering the capitalist class, from starting new enterprises and expanding the demand for labor. In short, he is doing all he can to make capital scarce in order that the demand for labor may be low.

As regards the doctrine of surplus value, it will be noticed that wherever there are many would-be employers and few employees, there is no great amount of surplus value. Where laborers are so scarce and hard to find that employers have to hunt about to find help, laborers are well treated and well paid. The conditions which Socialists describe in such lurid language never exist here. They are found only where there are so few employers and so many laborers that the latter have trouble finding jobs. Now, to assume that this latter condition is a dispensation of Providence which cannot be helped is a curiously unscientific attitude for people who boast of their scientific spirit and their economic interpretation of history.

Into the discussion of the relation of socialism to morality and religion the present writer does not care to go at length because he cannot agree fully with either antagonist. It cannot be too often pointed out, however, that socialism has become a political movement, and, as such, resorts to every device known to other political parties. There is no more harm in thus resorting to these tactics than there is in any other party doing the same. But we must understand this and not take all its protestations on the subject of religion too seriously. As it has sought to placate the farmer by exempting his farm from public ownership, so it is now seeking to placate the religious element by assuming a friendly attitude. It has discovered that Jesus Christ is rather popular and is now trying to annex him. Yet there is not a single socialistic utterance of his recorded, and if there is anything which he did not do, it was to preach or recognize a class struggle. His teaching regarding wealth was simply that wealth is tools and not means of self-gratification. Nowhere does he express disapproval of ownership or accumulation, but always he forbade selfish consumption. With this understanding, any one who rereads his New Testament will find that the teachings of Jesus fit into the individualistic system rather than into any socialistic system.

As a critic Dr. Ryan has shown himself fair, capable and discriminating. Mr. Hillquit is, as usual, an ardent apostle, attacking the present social order in unsparing terms, apparently realizing that the tactical advantage is always on the side of the attacking party. He and other Socialists have reason to dread the day when socialism can be put on the defensive. Every new movement gains ground so long as it has nothing to do but to attack. Its real test comes when it has to defend itself. While socialism has no achievements to its credit or discredit, it has little to boast of or defend.

The real way out, in the opinion of the writer, is neither the Socialist's way nor the Catholic way, but the economic way of so distributing human talent as to give us a balanced national life. We can have any degree of equality we want, and we can have it under private ownership, freedom of enterprise, freedom of initiative and competition. In short, we can have equality, not only of opportunity, which we must have at all hazards, but of income as well, at least as between occupations, if we want it, without sacrificing a single essential feature of the individualistic system. This is the direction of real progress. The Socialist is headed backward, and he has not yet even considered the right way.

THE INDEPENDENT, 119 W. 40th St., New York

THE MARKET PLACE

NO LOANS TO NATIONS AT WAR

Persons representing the French Government recently approached the firm of J. P. Morgan & Co. with respect to a loan of $100,000,000, the understanding being that no part of the money should be withdrawn from the United States. All of it was to be expended here for foodstuffs and other supplies. The firm at once reported the facts to the Government at Washington, seeking an opinion as to the relation of such a transaction to our nation's neutrality obligations, and saying that the firm would give the matter no further consideration if the Administration should object to the transaction or be in doubt about it.

Two or three days later, the Secretary of the Swiss Legation called at the State Department and asked what the attitude of our Government would be if Switzerland, a neutral nation, should attempt to negotiate a loan here. In answer to this inquiry, Secretary Bryan made public the following statement:

There is no reason why loans should not be made to the Governments of neutral nations; but, in the judgment of this Government, loans by American bankers to any foreign nation which is at war are inconsistent with the true spirit of neutrality

In taking this position, the President is in advance of recent practise with respect to neutrality obligations. In the war between Japan and Russia, loans for Japan were floated here, and Russia borrowed in Europe. Mr. Wilson's decision is one that deserves commendation without reserve. This, we think, must be the opinion of the people of the United States.

THE COUNTRY'S CROPS

A slight reduction is shown by the Government's August crop report, but the indicated harvest totals are still very large. The crop of winter wheat, now safe, is 675,000,000 bushels, instead of 655,000,000, the quantity indicated by the July report. But black rust has cut down the spring wheat crop from 275,000,000 to 236,000,000 bushels, and therefore the entire crop is to be 911,000,000 bushels, or 19,000,000 less than the quantity promised a month ago. It is well to bear in mind, however, that the largest crop harvested in past years, that of 1913, was only 763,000,000 bushels. There is a great abundance of wheat, with about 250,000,000 bushels to be sold abroad, but at present it cannot be carried across the ocean.

A loss of eleven points in the condition of the growing corn permits an estimate of only 2,634,000,000 bushels. This is a reduction of 283,000,000 from the July figures, but the estimated yield is above the average of yields since 1906, if the record-breaking crop of 1912 be excepted. We are to have 1,153,000,000 bushels of oats, against last year's crop of 1,121,000,000, and gains over last year's totals are shown in the figures for barley, rye, buckwheat, hay and potatoes. The conspicuous loss is in the crop of tobacco, which has fallen from 954,000,000 to 791,000,000 pounds.

With the best apple crop known in eighteen years, many of the growers are despondent because it is probable that the surplus cannot be exported. They had expected to send 4,000,000 barrels to Europe. But the embargo on transatlantic trade causes no complaint among the lemon-growers of California. The price of their fruit is rising.

WAR AND TARIFF REVENUE

When the normal flow of imports is checked, the Government's customs revenue suffers. This revenue in the last fiscal year amounted to about $290,000,000. Receipts at the port of New York have been at the rate of about $4,000,000 a week. They will soon be greatly reduced. Some expect that at least one-third of the entire tariff revenue will be cut off, and that provision must be made for a large reduction continuing for several years. The effect of the war upon our customs receipts will depend, of course, upon the duration of it and the work of the fighting navies. Whatever may be the result of the conflict, the shipment of certain dutiable commodities—notably the products of Germany and France—will be greatly reduced for a considerable time.

What action does this loss of revenue suggest? Probably there must be new taxes. It is thought that the shortage for the current fiscal year, which will end with June next, can scarcely fail to be $100,000,000. Higher tariff duties would yield but little revenue, because only a comparatively small quantity of the dutiable imports would be received. Some propose an increase of the income tax percentage, and a reduction of the income now exempt from tax. But nothing could be gained in these ways until after July 1, 1915. It is now expected that the desired revenue will be procured by such stamp taxes as were used at the time of the war with Spain.

It is not absolutely necessary that action should be taken before the end of the present session. The Treasury's working balance is sufficient to prevent any inconvenience before the beginning of the regular session in December. The blockade may be only a temporary one, so far as nearly all of the customs revenue is concerned. The imposition of new taxes should be avoided, if possible. One objection to new taxes, or to an increase of old ones, is that it is difficult to repeal the legislation when it is no longer needed.

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

FORGOTTEN BUT FAITHFUL

There is a curious little corner in that ponderous tome of dry-as-dust statistics called the Life Report of the New York Insurance Department, which is given over to information concerning the few insurance companies once active but not now transacting any new business in the state. The surviving remnants of these insurers only serve now as memorials of former activities—the shadows of dead and gone hopes.

The first name we come upon in this collection is that of the Eagle Insurance Company of London, a solid and prosperous corporation at home today. It was organized and commenced business in 1807, entering the United States in 1851, establishing its American branch in the city of New York. So inadequate to their purposes were the insurance reports of fifty and sixty years ago that it is difficult to trace the movements of the companies of those days, and it was by the merest accident we learned that the Eagle's premium receipts here in that year were $74,184. After the most diligent search we failed to find a statement of its financial condition from the time it entered this country to December 31, 1863—a period of twelve years. On that date the American assets were $181,757. The liabilities scheduled consisted solely of unpaid death claims to the total amount of $18,876. No provision was made for reserves on outstanding policies and, doubtless, the necessity for them was never even imagined. Nor was any record made of the total amount of insurance in force.

We conclude that the Eagle, exercizing a poor quality of business judgment, ceased doing an active business here in 1866; for the insurance report of that year informs us that it is "not authorized to issue new policies in New York." Its managers were evidently endowed with little vision, or they would have awaited the splendid harvests which have been garnered annually since about 1875; and if they had, there is no doubt their American assets and volume of insurance would now be several times larger than they are at home.

The American assets of the Eagle when it suspended writing on December 31, 1866, were $283,558. Its liabilities must be left to the imagination, for the Insurance Department permitted them to go unrecorded. But the Eagle was good for every obligation it assumed, for it has seemingly met them all satisfactorily and is still doing so. The report for December 31, 1913, shows the assets of the United States branch to be $86,520, with a clear surplus of $69,782. During 1913 it received premiums of $355.77 and $2,524 interest. It paid claims amounting to $3,022.25 and ended the year with $14,000 of life insurance in force. The holders of these policies must be very old and in the natural course it will be but a few years when death will have closed the long, unobtrusive and honorable career of the United States branch of the Eagle Insurance Company of London.

A NEGRO LIFE INSURANCE COMPANY

There are a number of life insurance associations and companies organized and conducted by and in the interests of negroes, but the Standard Life Insurance Company of Atlanta, Georgia, claims to be the only one operating on old-line, legal reserve principles. This company commenced business in June, 1913, with a cash capital of $100,000 and a surplus of $16,000, all furnished by members of that race. It maintains fifty-five branch offices and 208 agents in the states of Georgia, Alabama, Kentucky, Tennessee, Missouri and Arkansas, its entire staff in home, branch offices and field numbering 336.

The results of its first year's business show a total income of $100,756; death claims paid, $2,164; insurance in force, $1,876,761 on the lives of 9343 policyholders. The company has been twice examined by the Insurance Department of Georgia and all its affairs were found in satisfactory condition. Some of the wealthiest and most prominent negroes of the United States are among its stockholders.

The white population of the South should and will encourage institutions of this character for the constructive value they are bound to have in stemming the tide of thriftlessness and careless living so common among the masses of the negroes in that section.

BROAD FOUNDATIONS

In a statement just issued by the Insurance Department of Wisconsin showing the fire insurance premiums and losses paid in 319 towns entitled to fire department dues, covering the three years 1911, 1912 and 1913, we find the following totals and ratios: total premiums, $19,191,370.89; total losses, $8,007,934.26; ratio of losses to premiums, 41.73 per cent; average annual loss per capita, $2.24. So that the fire waste in Wisconsin, every year for three years past, has been $2.24 for every man, woman and child in the towns included in the list. Forty-six of the 319 towns show an insured fire waste in excess of 100 per cent of the premiums collected in them. In Scott Town the premiums were $812 and the losses $7,435, a ratio of 915 per cent. In West Salem, premiums, $12,838; losses, $94,278; 734 per cent. Kewaskum, premiums, $12,309; losses, $75,422; ratio 612 per cent. And so, in decreasing ratios, the record runs for the forty-six towns.

Now, while the experience of the fire

insurance companies in all the towns taken together is extremely favorable—for there is a good profit in a business that shows a loss ratio as low as forty-one per cent of the premiums—what should be their attitude toward the places yielding a loss ratio running from 100 to 900 per cent? Should they endeavor to recoup by raising the rates sufficiently in those localities? No, nor will they.

The Wisconsin electorate vote this year on an amendment to the state Constitution which, if carried, will make the state an insurer. Under the conditions named would the state, that is to say the people in the low burning towns, consider themselves unjustly treated if the places like Scott Town, with a loss ratio of 915 per cent, West Salem, with a loss ratio of 734 per cent, and Kewaskum, with a loss ratio of 612 per cent, continued to enjoy the benefits of a rating schedule precisely like that used in rating their risks? They would probably feel aggrieved.

There lies the advantage of an insurance fund collected from the nation, instead of from a state or a town. The smaller the area, the weaker the insurance scheme. If Scott Town had been dependent on its $812 premium to pay its $7435 loss it would have been bankrupt. In 1906 the premiums of San Francisco were about $3,000,000; its losses were $300,000,000, of which $200,000,000 were made good—by California?—the United States?—by the world.

NOTES AND ANSWERS

E. R., Andover, Maine.—The concern is not an insurance institution of any sort and its name does not appear in the official reports of the Insurance Department. From the information contained in the advertisement we conclude that it is a savings scheme on the tontine plan. That means that the savings of those who die are forfeited to those who survive. The tontine principle has been thoroly discredited in life insurance and should be in every other department of thrift.

H. E. B., Gulfport, Mississippi.—A semi-annual payment of $49.96 on a 10-year endowment policy should produce $1000 in cash at maturity. If the policyholder borrows $600 from the company at eight per cent on the security of his farm, interest payable semi-annually, the $24 you mention will care for that only and should not be related to the endowment contract. At the end of ten years the principal of the loan will still be outstanding and will absorb $600 of the endowment, leaving $400 in cash, or its equivalent in paid-up insurance, due the policyholder. You say the company, name of which is not disclosed, is a new one and want to know what would happen if it failed. It would be difficult to answer that question without the necessary facts as to the company's resources, how invested, system of business transacted, etc.

J. P. S., State College, Pennsylvania.—See full exposition of the subject in this department of The Independent for July 27.

INFORMATION !

The Independent invites inquiries from its readers, and will gladly answer all questions pertaining to Travel for pleasure, health or business; the best hotels, large and small; the best routes to reach them, and the cost; trips by land and sea; tours domestic and foreign. This Department is under the supervision of the BERTHA RUFFNER HOTEL BUREAU, widely and favorably known because of the personal knowledge possessed by its management regarding hotels everywhere. Offices at Hotel McAlpin, Broadway and 34th street, New York, and the St. Charles Hotel, New Orleans, La., where personal inquiry may be made. Address inquiries by mail to INFORMATION, The Independent, New York.

The Secret

of the "tidy" appearance of hundreds of men to-day lies in a pair of

COATES CLIPPERS

at home. Only barbers used to have clippers, but now they're becoming as common in homes as a comb or a razor—and as necessary. Clip your beard and your boy's hair. Wife trims the back of your neck when it becomes "woolly." Try hand scissors for Coates "Easy Running." If they haven't them send to us. Send name on for prices, etc.

COATES CLIPPER CO. - Worcester, Mass.

FISHERMEN! A Wonderful New Fish Catching Bait—Use one Live Minnow All Day

It is the new, live minnow bait that is making such a great record for itself that is the talk of the country. Looks like an ordinary but strong, clear, magnifying glass tube containing a live minnow. Wonderful power of attracting fish lies in fact that, when in water, the glass apparently disappears, leaving minnow clearly visible and greatly magnified. Minnow lives, fresh water, stays alive, never mutilated, can be used all day. Experienced fishermen tell us that it is the most wonderful bait they have ever used.

Price, $2.00 at all reputable dealers. Order no stamps, checks or drafts; we will send you or dealer from us direct. Postage prepaid.

DETROIT GLASS MINNOW TUBE CO., 75 Lafayette Blvd., West, DETROIT, MICHIGAN

ROMANCES OF MODERN BUSINESS

Introducing the Dutch Boy

ALL of you who read these lines are familiar with the Dutch Boy Painter. He is a happy, healthy little fellow, radiating a buoyant youthfulness and teaching industry and home pride. The story of the Dutch Boy is interesting, and this chapter of the "Romances of Modern Business" has been set aside to tell how he and his object lesson came into being.

One day, seven years ago, a number of men were grouped about a table in an office in New York City. They were the directors of a company which was in the peculiar position of having an article of merchandise distributed throughout the country but lacking a mark of identification as the output of the company.

The question puzzling these men was how to retain certain old trade-marks which had become sectionally famous for white lead and, at the same time, seize the advantages of nationalization offered by the consolidated organization, the National Lead Company. Abandonment of the old trade-marks, the directors reasoned, would be playing into the hands of competitors; for, though each of these long-used brands was supreme in its territory, not one of them had a national distribution.

Several plans had been considered from time to time and abandoned as inadequate. The directors at this meeting heard the suggestions of a new advertising manager, which were, in substance: "Retain all the old brands as factory marks on the head of the keg, but place one new and uniform mark on the sides of all kegs from all factories. And advertise the change! This will add the national prestige of a uniform, universally-distributed identification mark to the local prestige of each brand."

The directors adopted this plan, and at the same meeting the Dutch Boy Painter, the design which has since become famous, was selected as the national trade-mark of the company.

This was in September, 1907. By January first, of the following year, everything was ready for launching the new trade-mark on all the white lead manufactured by the National Lead Company. The February periodicals carried full-page announcements of the trade-mark and its significance in the white lead business. The Dutch Boy Painter thus began his ministrations as an apostle of beauty, cleanliness, and preservation; and he since has served as a vigorous little educator.

The Dutch Boy advertising was immediately effective. Only two issues of the magazines and weeklies bearing the announcement of the trade-mark were out when dealers began to report refusals on the part of their customers to buy white lead without this new trade-mark—this, too, in spite of the fact that the old factory brand was on the head of the keg as it always had been. Within a few months the periodicals had created a national interest in Dutch Boy White Lead.

The National Lead Company uses most of the principal media of advertising, but the nationally-circulated magazines and weeklies have always figured as the back-bone of the annual campaigns. This is because an important feature of the company's advertising is educational, and the periodicals have demonstrated their power in the field of education. White lead is not an article of every-day use in any household. Houses are painted only once in three or four years. Therefore, the value of white lead in painting must be told over and over again, whereas in the case of another product the repetition of the name may be sufficient.

"The advertising of a concern with a product like ours is responsible for a very definite result," said Mr. O. C. Harn, advertising manager of the National Lead Company, "but that result is in some respects different from the one aimed at by the advertiser of other commodities. The great bulk of white lead is paid for by the man who does not buy it—that is, he does not buy it as white lead. What he buys and pays for is a finished job of painting, of which the white lead is the most important part.

"Why, then, should we advertise to the property-owner? Why not advertise only to the painter who buys the material? It is because we have found that the most powerful influence which can be brought to bear upon the painter is to invest him with a conviction that his patrons prefer Dutch Boy White Lead and expect him to use it. This we have been able to do through our educational work in the national periodicals."

This is one of a series of articles that is being published to show how magazine advertising is serving the public

JUST A WORD

Among the letters speaking pleasantly of the recent issues of The Independent, we are glad to place before our readers the two which follow. The first comes from a lady in New Haven, Connecticut, and the second from a subscriber in Pittsburgh, Pennsylvania.

"I would like to express to you my appreciation of the usefulness of The Independent since the European war broke out. Your weekly was the first to give us interesting and helpful articles on the subject and your pictures and maps have been valuable to the whole family and superior to any on the news-stands."

"Tho it has nothing to do with the matter in hand, I cannot forbear saying something about The Independent. Of all the publications I receive, none has ever been more carefully read. But your last two numbers dealing with the war have surpast every previous excellence. I am more minutely familiar with European geography than with that of my own country—this by reason of my occupation—and am also fairly well versed in the history of the nations involved and have acquaintance and sympathy with their peoples. I am not putting it too strong, I believe, in saying that both the causes, proximate and remote, and the events of the war, so far as either causes or events are clearly known, could not be better stated in the given space than has been done in the news review, the editorials and the special articles of The Independent. You must have a great organization to be able to concentrate your batteries so swiftly and effectively."

CALENDAR

At the Ekwanok Country Club, Manchester, New Hampshire, the national amateur golf title will be played for between *August 31* and *September 5*.

A Colonial Exhibition will be held at Samarang, Java, from *August* to *November, 1914*. It is to "give a comprehensive picture of the Dutch Indies in their present prosperous condition attained since the restoration of Dutch rule in 1814."

There will be a national celebration in Chicago, on *September 1*, of the organization of the new Federal Reserve banking system. More than 1000 commercial and financial associations have been invited to send representatives.

The Biennial Conference of Friends (Liberal) will be held at Saratoga Springs, New York, from *Ninth Month, 2d*, to *Ninth Month, 8th*.

September 6 has been designated as Labor Sunday by the Federal Council Commission on the Church and Social Service.

The National Star-Spangled Banner Centennial, commemorating the successful defense of Baltimore at North Point and Fort McHenry, and the writing of the national anthem, will be held at Baltimore, *September 6* to *13*.

The annual conference of the International Law Association will be held at The Hague in the Palace of Peace from *September 7* to *12*.

At Denver, Colorado, from *September 8* and *9*, will be held the eighth annual conference on taxation, in charge of the National Tax Association.

The Baltic Exhibition at Malmö, Sweden, to which Swedish, German, Danish and Russian exhibits have been sent, is open until *September 15*.

World's Temperance Sunday will be observed on *November 8* in most of the states. In some states it will be *November 1* and in Ohio *September 20*.

At Leipzig an International Exhibition for the Book Industry and the Graphic Arts is scheduled to remain open until *October, 1914*.

The United Typothetæ and Franklin Clubs of America will hold their twenty-eighth annual convention in New York *October 6, 7* and *8*.

The annual convention of the American Bankers' Association will be held in Richmond, Virginia, *October 12* to *17*.

The American Bar Association will hold its annual meeting on *October 20, 21* and *22*, at Washington. There will be addresses by William Howard Taft, president of the association; Senator Root, the Ambassador from Argentina, and Sir Charles Fitzpatrick, Chief Justice of Canada.

The seven hundredth anniversary of the birth of Roger Bacon will be observed at Columbia with commemorative exercizes and the publication of a volume of studies. A great pageant of the culture of the thirteenth century will be given on *November 4*.

Barnard College, in Columbia University, will celebrate its twenty-fifth anniversary on *November 5*.

The annual convention of the National Suffrage Association will be held at Nashville, *November 12* to *17*.

The sixth annual Medical Missionary Conference will be held at Battle Creek, Michigan, *November 17-20*.

The Intercollegiate Prohibition Association will hold its national convention in Topeka, Kansas—the prohibition capital of the nation—*December 29* to *January 4*.

The International Congress on Alcoholism will be held in Atlantic City in *July, 1915*. Delegates from forty nations are expected to attend.

The Truth Set Forth

Why Royal Baking Powder is superior to an alum baking powder. An answer to inquirers.

In Royal Baking Powder the leavening gas is produced by the admixture of bicarbonate of soda (baking soda) and cream of tartar. Cream of tartar is of fruit origin—from grapes.

In an alum baking powder the leavening gas is produced by the action of the acid property of the alum upon the bicarbonate of soda.

The alum powders therefore leave in the food a mineral salt, sulphate of soda (Glauber's salt) and aluminum hydrate. These residues cause the objection of hygienists because they are believed to have a deleterious effect upon the alimentary organs.

Royal Baking Powder leaves none of these objectionable products or compounds in the food. This is why Royal Baking Powder is the most heathful.

ROYAL BAKING POWDER COMPANY

VOLUME 79 | MONDAY, AUGUST 31, 1914 | NUMBER 3429

THE PREMIER OF JAPAN TO THE AMERICAN PEOPLE

A MESSAGE FROM COUNT OKUMA

[*By Cable to The Independent*]

I GLADLY seize the opportunity to send, thru the medium of The Independent, a message to the people of the United States, who have always been helpful and loyal friends of Japan.

It is my desire to convince your people of the sincerity of my Government and of my people in all their utterances and assurances connected with the present regrettable situation in Europe and the Far East.

Every sense of loyalty and honor oblige Japan to co-operate with Great Britain to clear from these waters the enemies who in the past, the present and the future menace her interests, her trade, her shipping and her people's lives.

This Far Eastern situation is not of our seeking.

It was ever my desire to maintain peace as will be amply proved; as President of the Peace Society of Japan I have consistently so endeavored.

I have read with admiration the lofty message of President Wilson to his people on the subject of neutrality.

We, of Japan, are appreciative of the spirit and motives that prompted the head of your great nation and we feel confident that his message will meet with a national response.

As Premier of Japan, I have stated and I now again state to the people of America and of the world that Japan has no ulterior motive, no desire to secure more territory, no thought of depriving China or any other peoples of anything which they now possess.

My Government and my people have given their word and their pledge, which will be as honorably kept as Japan always keeps promises.

Tokyo, August 24, 1914

THE AUGUST MARTYR OF THE WAR

SINCE the Fisherman of Galilee was bishop of Rome no more simple-hearted, true-hearted, devout man has held the pontificate than the peasant's son, Giuseppe Sarto. His election illustrated the democracy of the Church of the common people, to whose richest cathedrals the beggar is as welcome as the king.

The whole world liked Pope Pius, in part because he genuinely did not wish to be Pope. He did not like the state and ceremony of the office. He was too democratic. He would have much preferred like any common priest to walk the streets of Venice or New York. He shocked his attendants by the way he rebelled against antiquated pomp.

He was not the first, but the most august martyr of this hateful war. His horror at its outbreak was inexpressible; and he refused to give his prayers and blessings for one combatant rather than another. He grieved over it as over the death of his own children. His last thought and effort were for peace, and the outbreak of war and its fearful extent shortened his life. They that made the war unwittingly slew the pure and gentle pontiff whom they claimed to reverence.

He began his pontificate with the pledge of his chosen motto, "To reëstablish all things in Christ." So he was to be a reforming Pope, to bring the Church back, as far as he could, to its pristine purity and simplicity of worship and faith. Tho no great scholar or statesman he yet secured important reforms in the inner economy of the Church. Accordingly, early in his reign he began the codification of canon law, a very important work. He regulated music in the Mass, forbidding female voices. More important was his care for children liable to be led astray in public schools, against which he provided by religious teaching and admission to holy communion at the age of nine. He took special pains for the education of priests, and consolidated Italian seminaries. He made stricter rules for marriage as a divine sacrament. He established at Rome a special school of Bible study to meet critical excesses; and he forbade priests to have financial control of social organizations.

We are obliged also to record that his aim to reëstablish all things in Christ seemed to him to forbid any yielding to the scientific or critical spirit of the age as to doctrinal matters once settled perhaps centuries ago. He was a follower of Pius IX, not of Leo XIII. He fought Modernism with all his power, to the serious loss of the Church and the driving out of many of its loyal scholars, while many others were content to bow their heads till the storm be overpast. From the eloquent Archbishop of St. Paul we have heard of late years no such bold urgency that the Church should move in the van of modern progress as he uttered in his sermon at the one hundredth anniversary of the episcopate at Baltimore. The late Pope required the strictest supervision of seminaries and dioceses and the reporting of theological novelties, under a system called delation, which drove out professors and suppressed a theological journal in New York. Meanwhile the Biblical Commission made pronouncements on the Bible which amazed and amused biblical scholars. All this was done, and more, by one of the best of men, and with the best of intentions.

The next Pope may be another Pius, or he may be another Leo. For the welfare of the Church we hope he will be one who will not antagonize France and Spain and all the Catholic countries, but who will recognize the duty of harmonizing faith and knowledge, and giving liberty of thought to the devout scholars of the Church which from Rome has ruled too stringently the larger half of Christendom. It can be done, and the welfare of the Church requires it.

FRANCE

THE France of Caillaux and Calmette is hushed and forgotten: the France of Descartes and Laplace, of Pasteur and Poincaré, of Hugo and Renan, is tense, and fighting for life.

More than any other nation France has suffered from those shallow judgments that mankind so dearly loves to form of men and things that do not fully reveal themselves to impressionistic observation. France so long ago attained the culture which can smile and remember rules of good breeding under hardship, or even in tragic situations, that the enlighten-you-while-you-wait philosophers have held her careless, heartless, wanton. Theirs is the world-old blunder of such as take themselves too seriously when estimating those who do not; it is the fatal error of Roderick Dhu, who assumed that the gracious James Fitzjames was only a "carpet knight," boasting "a braid of his fair lady's hair"; or, to take our figure from France itself, it is the mistake of those envious rivals who did not believe that Cyrano de Bergerac meant what he said when he promised that at the end of the last lines of his song his sword should "touch."

There is an unreal France known to the newspaper reader and to the loiterer on the boulevards, as there is an unreal and too often an unworthy man in every human being. A fine social culture, making light of follies and foibles in days of peace and luxury, permits unreality to be in evidence too much. The real France is happy-hearted, but not light-minded. It is polite and gracious, but not insincere. It does not bluster, but it has never been found wanting in bravery. It does not preach, but it pays its debts, and cherishes wife and child.

The heart of the real France was not in the Second Empire; it was not altogether in the war of 1870. In the war of 1914, the real France will spend the last franc of its hoardings and will give the last drop of its blood, if need be.

It will make this last sacrifice, if it must, because when all that is superficial has been stripped away, the soul of France is an idealistic and deathless love of civilization. No other people since Periclean Greece has cherished such a love, because no other people has seen so clearly what civilization is, and seeing, has so long defended and maintained it.

The elements of civilization are few and simple, but they are won and held at heavy cost, and only by those nations that love them supremely.

Civilization demands that men shall toil and save, practise thrift and raise the standard of living. France,

despoiled and humiliated, turned to "the instant need of things," and paid the five milliards. Civilization demands that men shall cultivate intellectual clarity, think accurately, and express their thoughts with precision. Every educated person knows that in these things France is exemplar to the world. Civilization demands that men shall put away rudeness of speech and demeanor, and treat one another in every-day intercourse with that outward consideration which keeps the way open for intelligence to master heat and impulse. In this achievement also France is the world's teacher.

Civilization demands that women and children shall receive not only personal attention and courtesy, but also opportunity. Nowhere in the world have real opportunities been so freely opened to women as in France. In business, in the professions and in intellectual life their competition with men is looked upon as a matter of course. Nowhere in the world have those elements of feminism which are sane and of good report been so largely realized, and nowhere else would militancy be so out of place.

Civilization demands admiration of intellect and its achievement. Above all other nations of the world France stands preëminent in the reality, the emotional sincerity, of popular admiration for intellectual ability. The acclaim that America yields to the financier, Germany to the soldier, England to the parliamentarian, France gives, not as an act of "good form," but of keen joy, to the man of letters, the engineer, the scientific discoverer, the mathematician, the creative artist.

And, finally, civilization demands that men shall have those qualities of soul which enable them to wait for results, to hold on thru years or decades of disappointment, of discouragement or small reward. This dauntless endurance, as Renan and Marillier in matchless analyses have shown, is the inmost soul of the Celt. Not the boulevardier, not even the glad Gascon, or the light-hearted Provençal, but the tireless Pasteur, or the Renan of undying faith, is the true representative of his people.

Whatever fate may be in store for France the political unit, the world will see to it that France the nation, France the people, France the bearer and exemplar of the fairest civilization, is not destroyed.

JAPAN AND THE GREAT WAR

THERE are three main reasons which caused Japan to enter the Great War.

First, England called her. Under the explicit terms of the Anglo-Japanese treaty either party could invoke the other's aid whenever and wherever attacked. England, of all the great powers, has been the one true friend of Japan. Japan could scarcely refuse her, even had there been no treaty.

Second, Germany has been the same disturbing element in Asia that she has been in Europe. She entered China by force, she has maintained herself there by force. Now is the opportunity to rid Asia of the mailed fist.

Third, the restoration of Kiau-chau to China will reinstate Japan in the good graces of the Celestial Republic. The yellow race will thus be unified and the only remaining element of disturbance in the Far East will be the territorial ambitions of Russia.

How will all this affect the United States? In no vital respect. It is certain that Japan is sincere in expressing her purpose of restoring Kiau-chau to China. It will be accomplished immediately or at least as soon as arrangements can be made with China for such preliminaries as the destruction of the fortifications. Japan has no intention of holding Kiau-chau. On a preceding page Count Okuma, the Premier of Japan, in a message sent to the American people thru The Independent, makes this declaration in no uncertain terms. He says: "As Premier of Japan, I have stated and I now again state to the people of America and of the world that Japan has no ulterior motive, no desire to secure more territory, no thought of depriving China or other peoples of anything which they now possess."

It is also certain that Japan will do nothing in Samoa or the Caroline Islands or elsewhere to harm the United States. Japan is well aware that England would forsake her for the United States in case she should affront us. England would no more remain in the alliance under those circumstances than Italy remains now in the Triple Alliance.

The United States can rest assured that Japan's primary purpose in entering the Great War is to preserve the peace of the Far East. Next to that her one thought, in which she is undoubtedly largely influenced by the desire of her ally, England, will be to preserve the friendship of the United States.

PEACE IN MEXICO

THERE is peace in Mexico. Huerta is in exile—exile seemingly voluntary, actually forced by the logic of events. Carranza is in Mexico City, declared Provisional President. The Federal army is disbanded; the Constitutional forces are in power.

It is a double triumph—for President Wilson and his unspectacular policy of watchful waiting, for the A B C powers and their public-spirited service of mediation. If the United States had not refused to recognize Huerta, if President Wilson had not persisted in his policy of patience and aloofness, would Huerta be gone and Carranza in the President's chair? We do not believe it. If Argentina, Brazil and Chile had not made their offer of mediation would peace have come in Mexico so soon, and without war with the United States? We do not believe it.

It had become the fashion to speak jeeringly of "watchful waiting." What other policy could have hoped for better and quicker success?

But is this a lasting peace? It looks doubtful. Villa, holding his forces together in the North, seems to be sulking in his tent. But if a second revolution comes and Constitutionalist fights Constitutionalist, it will not be the first time that fellow soldiers have fallen out over the fruits of victory.

The troubles of Mexico are too grievous, its problems too vext, to be likely to be resolved by any single event or series of events. The birth pangs of popular government are wont to be protracted and severe.

Meanwhile the duty of the United States is plain—an attitude of watchful waiting, of warm friendliness to the people of Mexico, of stern opposition to tyranny and bloodshed, of persistent encouragement to the cause of constitutional government and popular rule.

SANTO DOMINGO IN DISTRESS

THERE is nothing surprizing in the news that Haiti and the Dominican Republic are both involved in intestinal strife and facing financial ruin. It is the natural consequence of our own neglect, and what has happened is just what was foretold long ago by those who had the interests of the island at heart. In 1869 and again in 1874 the Dominican people knocked at the door of the United States and asked our help and both times their plea was rejected. Since then the twin republics have been on the decline, until in 1905 the condition of Santo Domingo became so bad that the European powers threatened to take charge of affairs if we did not. To prevent such foreign intervention the customs service was placed under the control of American fiscal experts and their administration has given satisfaction to both the foreign creditors and the Dominican republic. In fact, it has been too successful, for it is the increased revenue of the Government that has set six factions to fighting for it. It is now evident that we can no longer ignore the internal chaos of the Dominican Republic nor altogether neglect Haiti, which is suffering from the same troubles and threatened by the same danger.

So long as merely the welfare of the island was concerned we paid no attention to it. But now, when it is apparent that the interests of our own country are involved, something will doubtless be done. By one of those curious shifts of the current of commerce such as brings an obscure way-station on to the main line of a railroad the opening of the Panama Canal places the island of Haiti in the midstream of world traffic. The two main channels by which the shipping of Europe and America may enter the Caribbean Sea and thence the Pacific Ocean pass on either side of it. On the west is the Windward Passage, between Cuba and Haiti. On the east is the Mona Passage, between Santo Domingo and Porto Rico. Now on the Windward end of Cuba we have Guantanamo Bay and on the other side of the Mona Passage we have Porto Rico, but nothing at all on the island that stands between. On the western and Haitian half of the island opposite Guantanamo is the harbor of Mole St. Nicholas, which Germany covets, and on the eastern and Dominican side, opposite Porto Rico, is Samana Bay, which would have been ours forty-five years ago if the Senate had not by a tie vote rejected the treaty of cession negotiated by President Grant. The island thus occupies a position of unique importance in both naval and commercial strategy. It is already apparent that whether the Panama Canal will attract enough traffic to repay us for the $400,000,000 we have sunk in it depends more on fuel facilities—that is, on the coal and oil stations of the route—than on the rate of tolls, and if the Senate will devote a tenth of the time to the consideration of this point that it wasted in discussing the question of tolls there will be a better chance of seeing some returns for our investment.

To say "I told you so" is not regarded as good form, but what is unmannerly in a man may be permissible in a periodical, so we hope that we may be pardoned if we quote from an editorial of The Independent of April 13, 1871, and say these are our sentiments still. Others may have lost faith in the value of American institutions and in the vigor of the American people, but we have not. At any rate, the logic of events is now bringing about what argument could not then accomplish:

> The case is simply this: a distracted people, not too far distant from us, offer us themselves and their land at our own terms. They want protection to their industry and a chance for development.
>
> There are two ways of considering the matter. We may look at our immediate interests, or at theirs. If asked whether we need Santo Domingo, we should certainly say, No. We can get along without it. . . . And to many this will be argument enough. But Santo Domingo needs us and to us that is argument enough. . . . As philanthropists and Christians and no less in the interests of the broadest patriotism, we would annex any neighboring territory which our institutions would bless. Our own interests may say, No; broader interests say, Yes. Party may say, No; Christianity says, Yes.
>
> If the United States has one mission it is to propagate liberty under the direction of education and morality. True, this, like charity, must begin at home, but it has begun at home, and we can afford to go abroad—at least, to those that ask our help.
>
> Our country has had some experience in annexation, but even where intended for evil it has turned out for good. Nobody is sorry now we made the Louisiana or Florida purchase. No one charges that we are weaker for having taken Texas and California. All these Territories had a population and language utterly diverse from ours, but we have assimilated them. Our assimilating power is no feebler now and it is just because Santo Domingo needs this energetic Anglo-Saxon influence that we are in favor of extending our mission. We are not insensible to the glamor of "manifest destiny," which means a destiny of power and control; but there is a higher and no less manifest destiny to which the nation must not be untrue—a destiny to extend sound government and stable institutions.

A SCRAP OF PAPER

THE London *Times* would hardly make a false report of the closing conversation of the British Ambassador at Berlin with the German Imperial Chancellor. Expressing his surprize at the declaration of war by Great Britain the latter said, "Why should you make war upon us for a scrap of paper?" Ambassador Goschen replied that England attached value to that bit of paper because it bore her signature as well as Germany's.

Great Britain's action in going to war for a scrap of paper is a promise, a warning and an example that treaties are to be sacredly kept.

RACE OR LANGUAGE?

WE hear much of late of the antagonisms of race, Teuton against Slav, or Caucasian against Mongol. Are we quite sure about it, quite certain that it is race that makes the antagonism?

This country is the melting pot of the races. Europe thinks of us, not as a melting pot which brings all into unity, but as a cockpit of discordant nationalities: Irish against English; German, French, Bohemian, Russian, Jew. That is all nonsense. The grown men and women who come here when in masses remain in sentiment and prejudice what they were, but their children, who are of precisely the same race, are Americans, have been melted into the mass, and have no personal interest in the fatherland. They read American papers; they think American thoughts; we cannot tell them in looks, or speech, or politics, or character from those of us who are of Anglo-Saxon origin. Their names in the school catalogs are in all languages, but that is the only way that we can classify them racially, and there we are apt to blunder, for they may have got the name five generations ago, or the foreign name may have been Anglicized.

Race does not count. What counts is mainly language.

It is language that keeps nations apart. In the old days men were classified roughly as Greeks and barbarians, and barbarians were those who did not talk Greek. When conquest made the old world Greek in language it mightily broke down the wall between nations and races. People who understand the same language can understand each other. England is our mother country not because Englishmen settled Jamestown and Plymouth, but because the language of England prevailed, and not that of the Dutch settlers of New York, or of the German settlers of Pennsylvania, or of the French settlers of Louisiana, or of the Spanish settlers of Florida.

Unity of language greatly conduces to unity of culture and so of sentiment and thought. German Poland holds to its Polish language because the people know that if their children talk German they will become Germans. So Hungary and a dozen smaller integers industriously cultivate the speech that separates them for fear they will be inundated by the larger language. We even see Jews recovering a dead language in Palestine so as to develop a separateness from their neighbors.

So we do not believe that the native, inherent hostility of Teuton to Slav has any real basis in fact. It is language which keeps them so suspiciously apart. The Slav dialects constitute one group, and very different from the Teutonic. The Slav people understand each other and hold together. Were Europe freed of the curse of Babel we should not hear any more of races in Europe. A Russian who talks French is very French. The spread of the English language does much to make the world kin.

THE WOMEN FOR PEACE

THE great demonstration to be made by a parade of women in New York City in favor of peace has the approval of President Wilson and of every one else. In accord with his advice they will carry no national flags and hear no speeches. It will be a silent but impressive protest against war, that evil from which mothers and wives suffer most and longest. Soldiers are killed and cease to suffer, but their mothers and wives and orphan daughters live to weep and too often to starve. Yet women are commanded cheerfully to send their sons and husbands to be blown to pieces by cannon. Women are bidden to breed sons just to be mown down like grass before the scythe. They now protest; later they will rebel.

THE PRESIDENT'S APPEAL FOR IMPARTIALITY

PRESIDENT WILSON, in his address which we print in full on another page, earnestly and admirably urges on the American people the full exercize of the spirit of impartiality, in speech and action, as between the combatants in this sad war. He warns us that only by avoiding the partizanship of hostile expression can we do our proper duty as a nation loving peace and friendly to all combatants when the time comes "to play a part of impartial mediation and speak the counsels of peace and accommodation."

All this is true. We "must be impartial in thought as well as action." But that does not deprive us of the right to have and express opinions and judgments, as individuals or as journals, on the actions of the nations involved. We have done it freely; we expect to do it in the future, but never with bitterness or passion. We cannot suppress our balanced judgment. What America thinks is of value to the world, and the world has the right to know. Newspapers and magazines, ministers in their pulpits and men on the streets, to mention those to whom the President appeals, have the right, and it may be duty, to express themselves, but always with calmness and courtesy and without passion.

We thank the President for his warning, and expect to heed it, yet without suppression of our proper judgments.

WEAR A RED CROSS BUTTON

EVERY contributor to the Relief Fund of the American Red Cross, for the sending of a relief ship loaded with hospital supplies to the hospital camps of Europe—if the contribution is not less than two dollars—becomes a member-at-large of the Red Cross for the remainder of the current year, and will receive without charge a copy of the October issue of the *Red Cross Magazine*. As a member each contributor is entitled to wear the Red Cross button, the outward and visible sign of identification with this greatest of all international humanitarian organizations. Contributions may be sent directly to The Independent, if desired, by which they will be immediately transmitted to Mr. Jacob H. Schiff, Treasurer for the Department of New York. The Independent is authorized to send to each contributor of two dollars or more a certificate of membership in the Red Cross, and will also at its own expense send a Red Cross button in white and red enamel.

It is just fifty years since the signing of the Treaty of Geneva, which established the international status of the Red Cross. In those fifty years no greater opportunity for service has confronted the Red Cross. He gives twice who gives quickly.

THE GERMAN AMBASSADOR TO THE AMERICAN PEOPLE

COUNT BERNSTORFF, the German Ambassador to the United States, upon his return to this country from Berlin last Monday, found himself in an unprecedented situation. Circled by her foes, with all telegraphic and cable communications with the outside world destroyed, Germany is incommunicado indeed. Not even the Imperial Ambassador can get word from his government save by the tardy agency of the mails, rendered more tardy by war.

The word which the Ambassador is denied by the inevitable course of events, how can the rest of the world hope to obtain? For the present, at least, our news about Germany must be fragmentary and often colored and partial.

For this reason, we are particularly glad to be able to announce that Count Bernstorff will contribute exclusively to next week's issue of The Independent a full statement of Germany's position in the Great War. We believe that every reader of The Independent will be eager to lay aside any possible prejudice and bias in reading this official statement from the Ambassador of a people for whom Americans have only friendship, admiration and regard.

THE STORY OF THE WEEK

The First Great Battles

After weeks of preliminary skirmishing and cavalry clashes, as the general staffs have sought to uncover each other's points of strength and weakness, the great armies of Europe have at last met in the shock of the first great battles. Along the French frontier from Mons to Luxemburg the allied French and English armies are in contact with the Kaiser's forces; the Russians are already in Prussia, moving westward over a front of more than a hundred miles, and have occupied Johannisburg, Ortelsburg, Arys and Insterburg, of which the latter two are the centers of important railways of great strategic value. The Russian invasion of Austrian Gallicia is also reported well under way, and from Servia comes the news of a great victory over 200,000 Austrians at Losnitza on August 18.

Japan failed to receive any reply to her ultimatum to Germany demanding assent before Sunday, August 23, to the evacuation of the German base at Kiau-chau, and at six o'clock that afternoon proceeded to declare war. Three Japanese fleets are now bombarding Tsing-Tau, the port of the possession, while 45,000 troops are said to have been disembarked to invest it from the land side. The Germans are provisioned for an eight-months' siege, but the Japanese expect to reduce the fortifications within three months.

THE GREAT WAR

August 18—Germans advance on Brussels. Austrians suffer serious defeat on the Servian line near Saboc. Russians announce mobilization complete.

August 19—Germans reach Louvain. Battle raging from Namur to Diest.

August 20—German cavalry occupy Brussels. Belgians retire toward Antwerp. French recapture Mulhausen. Russians occupy Gumbinnen in East Prussia.

August 21—German cavalry occupy Ghent. Allies report victory at Tirlemont. Antwerp prepares for siege. Germany levies tribute of $40,000,000 on city of Brussels and $10,000,000 on Liège. Namur partially invested by Germans.

August 22—Allies and Germans battle from Charleroi to Namur. French forced back east of Vosges Mountains. Servians defeat Austrians on banks of the Drina.

August 23—Japan declares war against Germany. British and French line extend from Mons to Luxemburg frontier.

August 24—Germans drive the allies close to the French frontier and left wing enters France, capturing Lunéville and Longwy. Japanese blockade Tsingtao. Russians occupy greater part of eastern Prussia beyond the Vistula. Austria abandons Servian campaign.

From Italy come reports of growing dissatisfaction and increasing friction with Austria. The Italians claim that in the bombardment of the Montenegrin port of Antivari the Austrians deliberately turned their guns on Italian property, notwithstanding the fact that it was protected under the Italian flag. Austria, on her part, is claiming that Italy by the shelter of her harbors and in other ways has aided the allied French and British fleets in the Adriatic, which are expected shortly to shell the Austrian ports of Pola and Trieste.

One of the three Austrian army corps aiding the Germans against France is said to have been withdrawn in order to protect the Italian frontier. In London and Paris there is a general belief that Italian neutrality cannot much longer be maintained and that Italy soon must be drawn into the war, not as the ally of Austria, but as her foe.

The German Operations

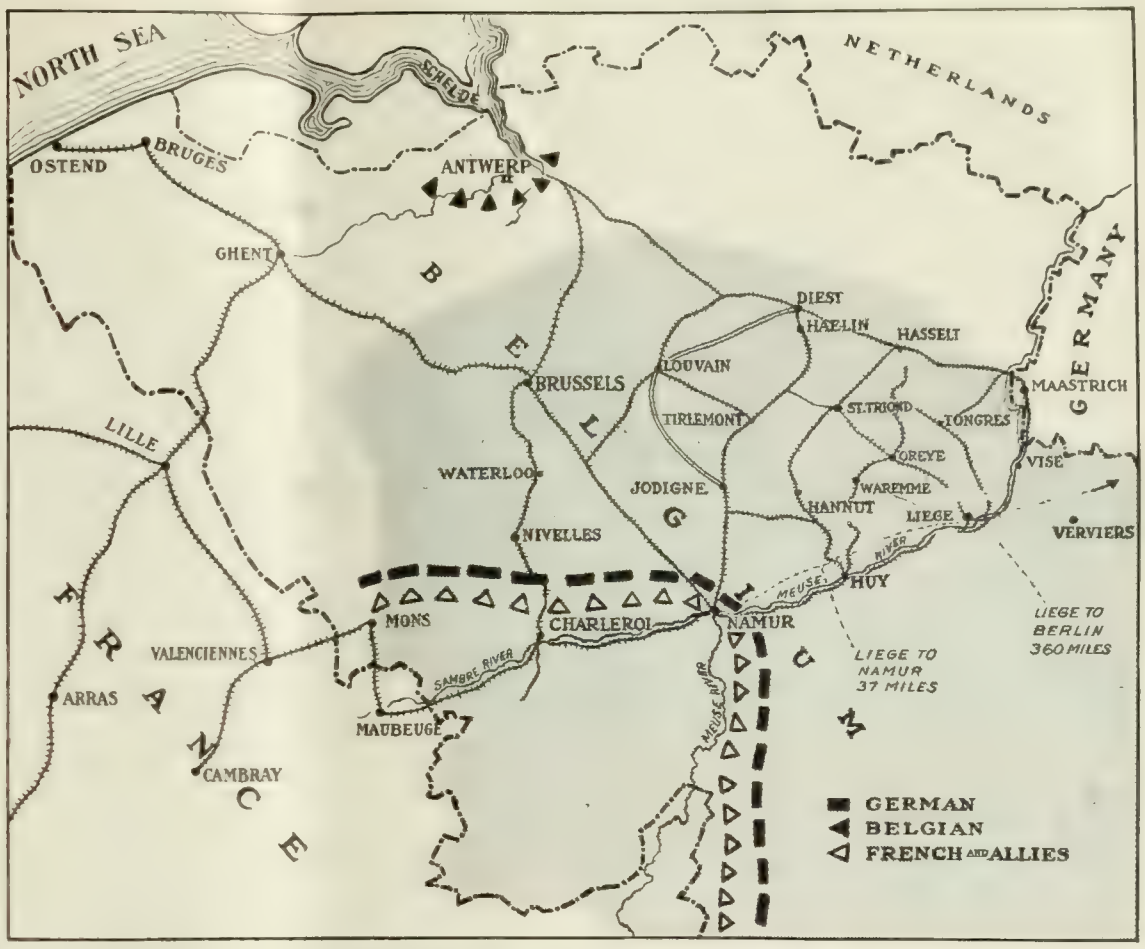
The record of the week has been one continuous victorious German advance in Belgium, altho its net results still find the German armies beyond the French frontier except at Lunéville, where the German advance guard has penetrated.

Underwood & Underwood

FOR THE RELIEF OF LIEGE

One of the first pictures from the front, showing Belgian soldiers crossing the Meuse for the relief of one of the surrounding forts. The bridges were destroyed to delay the German advance

The battle before Brussels expected last week, where it was thought the allies would meet the German columns deflected around Liège, did not take place, either because the Germans were in superior numbers or because of the success of the German flanking movement. A strong German column, sweeping far to the north and around the left flank of the Belgian army centered on Louvain, forced the Belgians to retreat in order to save themselves from being cut off from Antwerp. Brussels was thus left undefended, and on Thursday it was occupied by the German troops, which swept immediately thru and then turned south to meet the allies at Mons and Charleroi. Raiding parties of Uhlans occupied Ghent, Bruges and Ostend, but encountering no Belgian troops, withdrew. A war tribute of $40,000,000 is said to have been levied on Brussels and $10,000,000 on Liège, whose forts, the Belgian Legation in Washington reports, are still holding out, altho official announcements in London say that General Leman, their commander, has been taken prisoner.



On Saturday, August 22, the German advance south from Brussels encountered the allies from Mons to Namur and the Luxemburg frontier, and for three days the struggle went on absolutely concealed behind the veil of the censorship, only to be broken by the announcement in London on Monday that the Germans had penetrated the allies' line and hence that it was necessary to withdraw to the first line of French defenses inside the French border itself. Simultaneously with this, came the announcement from Berlin by wireless that the Germans under the Crown Prince had gained a decisive victory in Lorraine, routing

A GERMAN POSTER SPY IN FRANCE

Innocent looking posters scattered thruout northern France were recently ordered destroyed by the French Government because they were believed to be information signs for the German army. By clever devices and color combinations in the product advertised they were made to tell clear messages of information about the surrounding country

THE GERMAN FLOOD IN BELGIUM

After overrunning all Belgium, their cavalry penetrating to the coast, the Germans swept down upon the allies from Mons to the Luxemburg frontier. Here the battle raged from Saturday until Monday, when the fall of Namur caused the allies to fall back to the French frontier

five French army corps and capturing a number of French generals and more than one hundred and fifty guns. Pressing their advantage, the Germans then occupied Lunéville and are said to be threatening Nancy. Three new French armies are being rushed to the points in danger.

While the invasion of Lorraine has thus ended so disastrously, if the report be true, and the French are being pushed back to their first lines of defense, the French offensive in Alsace is also reported to have halted. After retaking Mülhausen from the Germans on August 8, they are reported beset by new German advances. Three Austrian corps are said to be aiding the Germans in Alsace.

The War on the Sea

While the British and German North Sea fleets have not yet come in conflict, the Mediterranean has been the scene of several smaller engagements. The German cruisers "Goeben" and "Breslau" managed to escape the French and English fleets, by which they were reported sunk, and took refuge in Messina harbor, but Italy, having declared her neutrality, refused to protect them unless they were interned to the end of the war. The cruisers therefore again put to sea in a supposed dash for Austrian ports on the Adriatic. While the allied fleets, according to the Admiralty announcement, were busy convoying French transports from Africa, they made their escape, finally turning up in the Dardanelles where they were promptly purchased by the Turks.

France and England, in view of the German influence at Constantinople, immediately assumed this as an unfriendly act on the part of Turkey and made vigorous representations to the Porte. Turkey replied that the cruisers had been purchased to take the place of the battleships building in England, which had been seized by the Admiralty, and that she had no hostile intent. The German crews, it was explained, were also to be repatriated, and the vessels manned by Turkish seamen. Both Greece and Italy, who have recently had wars with Turkey, took alarm, and have begun to make preparations for a possible conflict.

The declaration of war against Austria by France and England made her Mediterranean fleet also subject to attack, and the allied fleets have already caused the Austrian fleet to raise the bombardment of Antivari and to retreat to its base at Pola, which is in imminent danger of bombardment. Several Austrian cruisers have already been sunk, the "Zeuta" and the battleship "Zrimya" being reported destroyed, and the Adriatic cleared as far north as Cattaro. Russia also has announced her intention of defying Turkey and forcing, if necessary, the passage of the Dardanelles for her Black Sea fleet in order to co-operate with

THE GATEWAY TO FRANCE

The River Meuse which the Germans must cross on their way into French territory. At Liège, Namur and Dinant their progress has been fiercely resisted, but all three are now in German hands. The view is from the citadel of Dinant

France and England in the Mediterranean.

Austria Abandons Servian Campaign Because of the pressure of the Russians on her northern border, and the menace of Italy, which is rapidly assuming alarming proportions, in addition to the fact that no Austrian troops have yet been able to set foot in Servian territory, Austria announced on August 24 that she had abandoned the Servian campaign, which would henceforth be merely a "punitive expedition." The note is the first official admission of Austrian losses:

> The considerable losses sustained by Austria on the banks of the Drina are not surprizing, in view of the superiority of the numbers of the enemy and the fact that the latter are fighting for their existence.

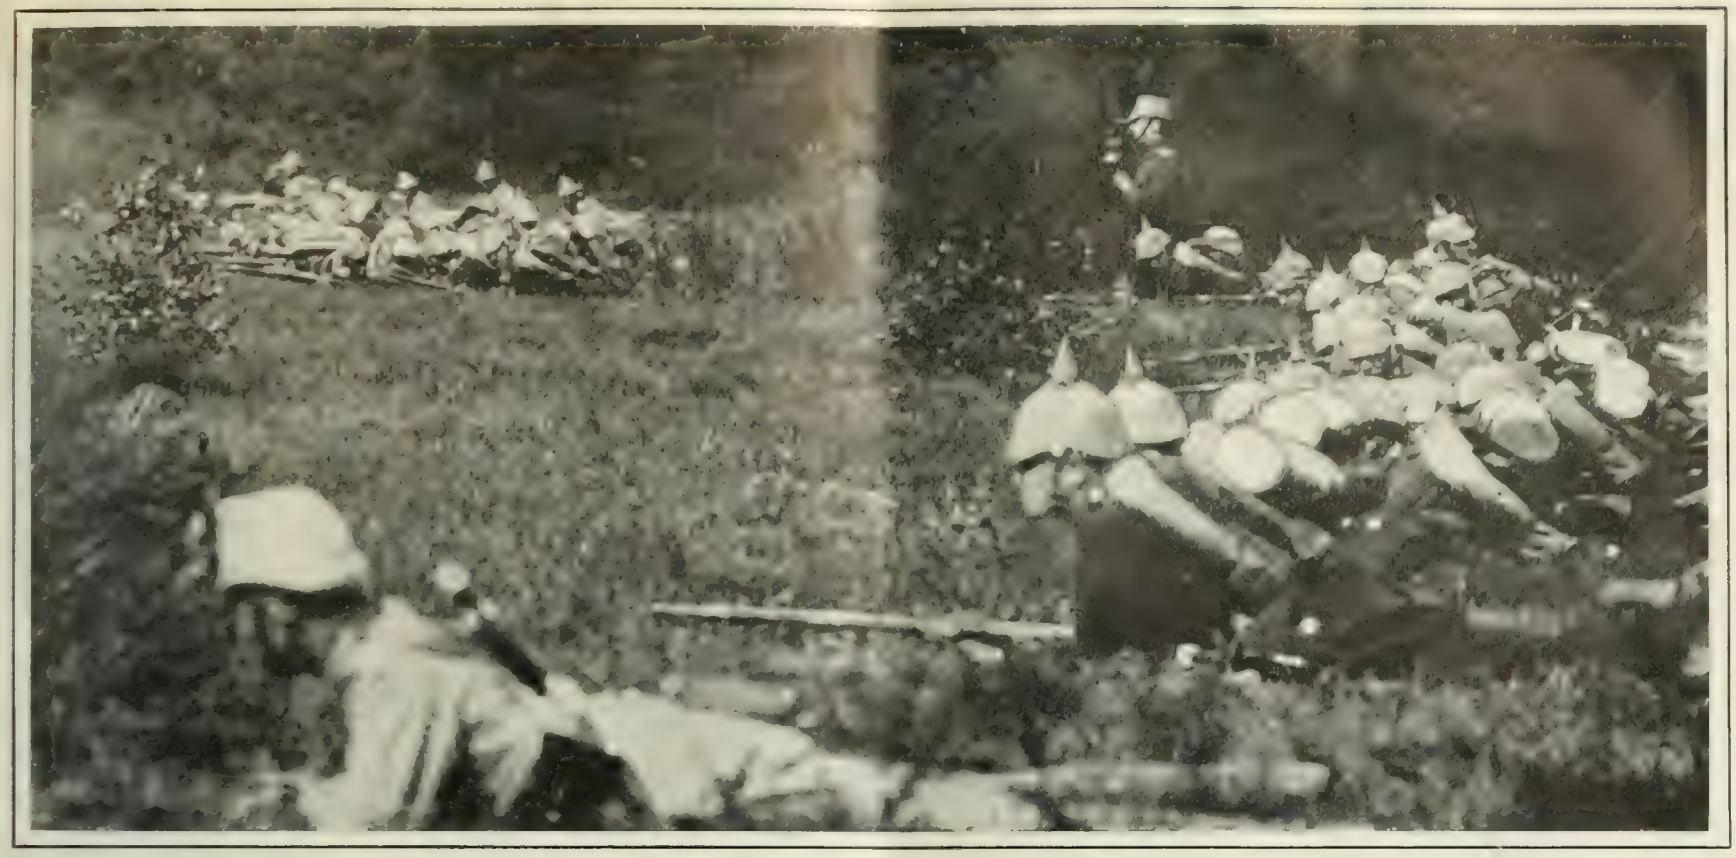
Thus are confirmed the Servian reports of great victories on the Drina at Losnitza on August 18. According to the Servian dispatches more than 200,000 Austrians, in attempting to cross the river, were led into an ambuscade and then routed by the Servians with losses of over 20,000 men. The Serbs took 5000 prisoners, with more than sixty guns and large amounts of supplies and ammunition.

The Servians are preparing to follow up their successes not only by an invasion of Bosnia, but of Hungary. Belgrade, tho unfortified, and subjected to a heavy bombardment from the Austrians, is still held by the Servians.

Death of Pope Pius X So complete has been the absorption of the world in the drama of the Great War that as a complete surprize came the news of the death of Pius X at the Vatican, on Thursday, August 20. Only on Tuesday it had been announced that the Pope was suffering from a slight cold, which, owing to his advanced age and his deprest spirits at the devastation of Europe, rapidly developed into the fatal attack of bronchitis. An appeal to the nations to pray for peace was his last official act and almost the last words on his lips were thoughts of the war.

Born of peasant parentage at Riese in 1835 and elevated to the Papal throne because Emperor Francis Joseph, under an ancient right of the Hapsburgs, vetoed the election of Cardinal Rampolla, the leading candidate to succeed Leo XIII, the pontificate of Pius X was notable for three things. The renewal of the conflict between Church and state in France, Spain and Portugal, with their final separation in France, stands out as its most distinguishing feature, followed by the conflict with Modernism, in which Pius resolutely set his face against all attempts to reconcile the doctrines of the Church with science. The great work of Pius was the codification of the canon law. Pius X was particularly friendly to America. During his papacy not only were the archbishops of New York and Boston created cardinals, but under his decree of November 3, 1908, the United States ceased to be regarded as a missionary country and was raised to the same rank and standing in the Church as the countries of Europe.

The task of choosing a new occupant to the papal throne, a difficult one at best, is complicated by the war. Of the sixty-six cardinals who must make the choice, Italy has a majority, and in view of Italian relations with the powers, a foreign Pope, besides breaking a tradition, would be very unwelcome to the Quirinal. Ten days after the death of the Pope the conclave meets to elect his successor, who must have a two-thirds majority of those present. Among those mentioned as possible candidates are Cardinals Ferrati Gotti and Serafino Vanutelli.



War Measures in Congress The Senate unexpectedly rejected the conference committee's report on the Ship Registry bill, and, by a vote of forty to twenty, past the bill in the form given to it by the House. In this way it rejected its own amendments and the changes reported by the conference committee, and the provisions permitting the newly registered foreign-built ships to enter the coastwise trade were lost. Rejection of these provisions was due mainly to the earnest objections of the owners of coastwise ships and the shipyards, and the petitions of shipyard employees. The bill finally past and signed was the House bill. Promptly upon the signing of the bill application was made for American registry for one hundred foreign-built ships, owned by the Standard Oil Company, the United States Steel Corporation and the United Fruit Company. The owners of other ships, however, appeared to be unwilling to transfer them, because of navigation laws

A GERMAN SKIRMISH LINE

Under the enemy's fire, the advance is made by crawling from cover to cover until within charging distances

that, they assert, make the cost of operation from twenty-five to forty per cent higher than it is under foreign flags. Several of these laws the President is now empowered to suspend.

To supplement this bill and to promote the transfer or purchase of ships the Government proposed the creation of a War Risk Insurance Bureau in the Treasury Department, with a fund of $5,000,000. A bill for such a bureau was favorably reported in the Senate and the House, and was past in the Senate. Passage in the House was delayed.

It became known that Mr. Wilson, desiring to facilitate the exportation of wheat and other products, was in favor of the purchase of merchant ships, to the value of $25,000,000 or $30,000,000, by the Government, using the agency of a corporation, fifty-one per cent of whose capital stock the Government should own. Ships of two German lines tied up in New York, and valued at $50,000,000, were for sale. It was not clear, however, that the purchase and use of them on the high seas would be acceptable to Great Britain and France. The project, brought forward because private capital seemed unwilling to enter the foreign trade under the American flag, excited strenuous opposition. Ship owners asserted that Government ownership would discourage private enterprise and prevent the purchase of foreign ships, because private capital could not compete profitably with the Government. It was also asserted that the purchase of German ships would be a violation of neutrality, and that the use of such ships would expose the Government to complications and risks which might involve the United States in war. The proposed bill was withheld and many thought the project would be dropt.

Nominations at Washington

The President has nominated Attorney General James C. McReynolds to be an Associate Justice of the Supreme Court, thus filling the vacancy caused by the death of Justice Lurton; Thomas Watt Gregory, now special assistant Attorney General, to be Attorney General, and Frederic C. Howe to be Commissioner of Immigration at the port of New York. Mr. McReynolds, a native of Kentucky, who for some years practised law in Nashville, was an assistant Attorney General from 1903 to 1907. Some time afterward he was employed as special counsel to represent the Government in the Tobacco Trust case. It is known that he differed with Attorney General Wickersham as to the decree approved by the Government in that case, believing that it was not sufficiently severe. Recently he was not in full accord with the Interstate Commerce Commission and its counsel as to the proceedings concerning the New Haven Railroad Company, but the recent suit for the dissolution of that company was begun under his direction.

Mr. Gregory, a native of Mississippi, and for many years a resident of Texas, has recently been employed as special assistant in charge of the proceedings against the New Haven road. Mr. Howe, a lawyer, is an authority concerning taxation, municipal ownership and municipal administration. He practised law in Cleveland, where the late Tom L. Johnson had his support. He was special United States Commissioner for the investigation of municipal ownership, has been a lecturer of the University of Wisconsin and else-

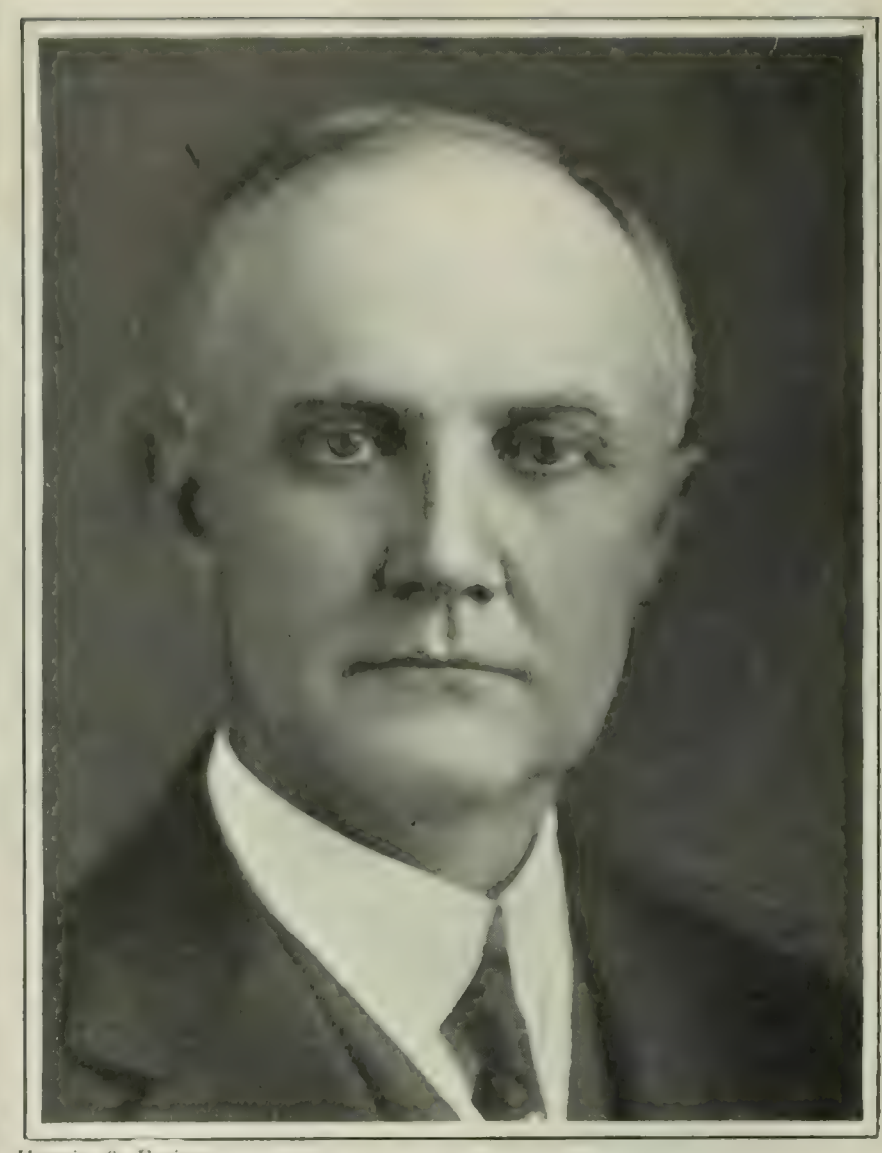
WILL THEY REACH BERLIN?



As the Germans have Paris for their objective, so the Russians have set out to march to Berlin. They are already fifty miles over the frontier and have occupied important German towns

Harris & Ewing

MR. JUSTICE McREYNOLDS

The nomination of Attorney General McReynolds to be an Associate Justice of the Supreme Court, made by President Wilson last Wednesday, August 19, marks the first break in the President's official family. Attorney General McReynolds has been especially active in enforcing the anti-trust laws

Harris & Ewing

THE NEW ATTORNEY GENERAL

Nominated by the President to succeed James C. McReynolds. As Assistant Attorney General Thomas Watt Gregory had charge of the Government's investigation of the New Haven Railroad. He was born in Mississippi in 1861, and acquired his experience as a trust prosecutor as special counsel for the state of Texas

where, and is the author of several books relating to the subjects which have engaged his attention.

Mexico's New Government

Carranza entered the Mexican capital on the 20th, escorted by cavalry and infantry, and was received with manifestations of loyalty and respect. There were 150,000 people on the route, six miles long, from a point in the suburbs to the National Palace. The First Chief carried a national flag on which was a portrait of Madero. School children in white sang patriotic hymns, the cathedral bells were ringing, and there was a salute of twenty-one guns. In an address from the balcony of the palace, Carranza promised justice and reforms, saying he and his forces had had no foreign aid except sympathy. Huerta was authorized to issue $60,000,000 of gold bonds on notes, and $10,000,000 of them are in circulation. This issue Carranza has repudiated or annulled, in fulfilment of a promise publicly made in April last. He has restored the old stamp taxes, which were doubled by Huerta. The head of his cabinet is Ysidro Fabela, Minister of Foreign Affairs. He says that the financial condition of Mexico is good, but it is known that more than $100,000,000 is needed. In the past, Mexico has looked to Europe for loans, but the money cannot be borrowed there now, and some think it cannot be obtained in the United States without the assistance of our Government.

There has been no disorder in the capital. Criminal tendencies were restrained by severe orders and prompt punishment. One of Carranza's colonels was put to death for killing a citizen in a quarrel, and his body was exhibited for several hours with a warning placard on it. A man was shot for stealing a watch, and two thieves were hanged in a public place. It is asserted that before the rebel troops arrived Carbajal asked that the American troops at Vera Cruz be sent to the capital to preserve order, and that President Wilson, while declining to send them, gave Carranza a very emphatic warning. A mass meeting in Saltillo has asked Carranza to procure the withdrawal from Vera Cruz of the American forces, whose presence there was called "an affront to the nation."

Villa and His Army

Villa, with an army of 40,000 men, remains in the north, and his course has caused misgivings at Washington. For some time past he has been ignored by Carranza, who overlooked him and his friends in forming the new cabinet. He continues to assert that Carranza has broken the agreement made and signed at the Torreon conference. His ally, Maytorena, Governor of Sonora, is in open revolt against Carranza's authority. In recent engagements between Maytorena's forces and the Carranza soldiers commanded by Colonel Calles, at points near the Arizona border, thirty or forty have been killed. Villa sent word to Calles that interference with Maytorena would compel him to attack Calles.

Many of Carranza's soldiers, no longer needed in the vicinity of the capital, are moving northward. It is said that they will be stationed at San Luis Potosi, Saltillo and other points not far from Villa's territory. Many believe that he can control the four northern states of Chihuahua, Sonora, Sinaloa and Durango. For some time, George C. Carothers, as an agent of the State Department, has been striving to bring him to the support of Carranza. He was unsuccessful, and the President recently sent to him Mr. Paul Fuller, a prominent lawyer of New York. The result of his mission has not been given to the public. Carranza has asked Villa to confer with General Obregon concerning the quarrel between Maytorena and Calles.

THE AMERICAN PEOPLE AND THE GREAT WAR

ADDRESS OF PRESIDENT WILSON TO THE PEOPLE OF THE UNITED STATES, AUGUST 18, 1914

MY fellow countrymen: I suppose that every thoughtful man in America has asked himself during the last troubled weeks what influence the European war may exert upon the United States, and I take the liberty of addressing a few words to you in order to point out that it is entirely within our own choice what its effects upon us will be and to urge very earnestly upon you the sort of speech and conduct which will best safeguard the nation against distress and disaster.

The effect of the war upon the United States will depend upon what American citizens say and do. Every man who really loves America will act and speak in the true spirit of neutrality, which is the spirit of impartiality and fairness and friendliness to all concerned. The spirit of the nation in this critical matter will be determined largely by what individuals and society and those gathered in public meetings do and say, upon what newspapers and magazines contain, upon what our ministers utter in their pulpits and men proclaim as their opinions on the streets.

The people of the United States are drawn from many nations, and chiefly from the nations now at war. It is natural and inevitable that there should be the utmost variety of sympathy and desire among them with regard to the issues and circumstances of the conflict. Some will wish one nation, others another, to succeed in the momentous struggle. It will be easy to excite passion and difficult to allay it. Those responsible for exciting it will assume a heavy responsibility—responsibility for no less a thing than that the people of the United States whose love of their country and whose loyalty to its government should unite them as Americans all, bound in honor and affection to think first of her and her interests, may be divided in camps of hostile opinions, hot against each other, involved in the war itself in impulse and opinion, if not in action.

Such diversions among us would be fatal to our peace of mind and might seriously stand in the way of proper performance of our duty as the one great nation at peace, the one people holding itself ready to play a part of impartial mediation and speak the counsels of peace and accommodation, not as a partisan but as a friend.

I venture, therefore, my fellow countrymen, to speak a solemn word of warning to you against that deepest, most subtle, most essential breach of neutrality which may spring out of partisanship, out of passionately taking sides. The United States must be neutral in fact as well as in name during these days that are to try men's souls. We must be impartial in thought as well as action, must put a curb upon our sentiments as well as upon every transaction that might be construed as a preference of one party to the struggle before another.

My thought is of America. I am speaking, I feel sure, the earnest wish and purpose of every thoughtful American that this great country of ours, which is, of course, the first in our thoughts and in our hearts, should show herself in this time of peculiar trial a nation fit beyond others to exhibit the fine poise of undisturbed judgment, the dignity of self-control, the efficiency of dispassionate action, a nation that neither sits in judgment upon others nor is disturbed in her own counsels, and which keeps herself fit and free to do what is honest and disinterested and truly serviceable for the peace of the world.

Shall we not resolve to put upon ourselves the restraint which will bring to our people the happiness and the great and lasting influence for peace we covet for them?

Drawn Especially for The Independent

THE SCENE OF THE FIRST ACT OF THE GREAT WAR

The first act of the great drama has been played in Belgium, Luxemburg, and in Alsace, with the brave Belgians in the leading rôles. For the second act the scene divides between France, as the Germans battle their way toward Paris, and Prussia, with the Russians advancing toward Berlin

THE FLOWER OF ENGLAND'S ARMY IS ON THE CONTINENT

WHEN THE BRITISH CAME TO FRANCE

BY AN AMERICAN REFUGEE

"VIVE l'Angleterre!" "Vive la France!" It was an enthusiastic, gesticulating, jubilant crowd of several hundred Frenchmen that was gathered before the offices of one of the local papers in the port of Havre. A bulletin had just been displayed, announcing that several thousand English troops would be landed here the next day.

This was exciting news, indeed. To no one was the prospect of witnessing the disembarkation more pleasing than to me and my American fellow passengers on the "France." On August 4th we had arrived from Paris after a ten-hour ride in a train of cattle cars, my palatial equipage bearing the label "moutons" (sheep). At Paris we had been thru three days of standing in line consecutively at the banks and express offices, the steamship lines, the American consul's headquarters, and the police prefecture; then had wrestled with an excited crowd of compatriots for a sheep car railway ticket; and finally had encamped at the Gare St. Lazare from nine in the evening till three in the morning to make sure of getting a place in this train-de-luxe. As each of us was permitted to carry but one piece of hand baggage, our encampment at the station had been preceded by a wholesale donation of trunks, suit cases, wearing apparel (my evening dress suit now has found a place of honor on the garcon of the hotel), to the delighted personnel of the various Paris hostelries. Some ladies, it is true, added to the ludicrous character of our situation at the station by wearing four or five party gowns on their persons and topping these off with costly furs and capes. But on the whole the gathering was one of fellow citizens whose tribute to the European war consisted in the sacrifice of many a coveted article of utility or adornment.

We expected to heave anchor that same evening. But a sudden telegram from the Minister of Marine at Paris, stating that the ship could not sail for the present, "on account of the insecurity of the Atlantic," inflicted upon us the most severe test of our "watchful waiting" abilities that any of us had yet encountered.

Day after day the smoking funnels of our floating palace gave us hopes that we might sail almost any moment. Anxious inquiries from the officers in command elicited but a characteristic French shrug of the shoulder. "Perhaps we shall sail today," was the daily answer.

After a few timid ventures off the boat—in no case farther than the end of the dock—we grew bolder, and between tides would stroll down into the city to relieve the monotony of our enforced imprisonment. Some of us were held up as spies and had to prove in fifty-seven varieties of ways that we were bona-fide subjects of Uncle Sam; others were run into police headquarters for carrying a kodak or for casting too admiring glances at the preparations under way for converting the ocean liners into navy transports. But everything had in every case come out all right in the end, and I felt emboldened to join the crowd before the newspaper office, and to throw my hat into the air with the rest.

Back and forth they surged, now bursting into the strains of the "Marseillaise," now attempting, with an accent all but English, to give vocal expression to "God Save the King." Old men clasped hands in the exuberance of their joy; children waved their tricolors; women forgot the sorrow of their husbands' departure to the front, and joined in the general exultation; what few soldiers were left as a garrison were the recipients of ovation after ovation.

The evening papers contained a proclamation from the mayor of Havre, asking his fellow citizens to decorate their houses with the British emblem in honor of the beloved allies. The French boy scouts were asked to report for duty, and to act as guides, messenger boys, or what not for the English comrades. Impulsive editorials were given to the

[illegible] of the ever trusted friends from England, who remained true to their traditional friendship when the hour of need came.

The next day the city gave every appearance except that of war. It might well have been carnival day, or the day of some Franco-British sporting event. Side by side the Union Jack and the tricolor fluttered in the breeze, King George's picture was in evidence in every shop of importance, as if by magic a whole industry of bunting, pennants, emblems and flags of the various allied forces had sprung into life. One could not pass a street corner without being approached by some vendor who charged you with the rankest unpatriotism if your coat did not give the appearance of a spot-map with the flags of half a dozen allied powers!

And then the British came. At first there were only a few officers, who evidently were charged with making advance preparations. Spick and span they looked in their trim khaki suits, much like our own Rough Riders, and decidedly more attractive than the French zouaves in Havre, with their ungainly long coats. Every time one of these officers past a French private, the latter would present arms and salute just as tho a superior officer from his own army were passing him.

The tone of these officers was one of supreme confidence. Germany, to them, was already off the map. The English were merely coming to join their French comrades in the celebration of victory!

When the first transports arrived—and they kept coming from August 10 to August 14, when the "France," on which I had secured passage, left for America—the whole population lined upon the docks and quays to cheer and welcome the allies from across the channel.

The transports presented one moving mass of tan. Closely crowded the English lads stood on deck, waving white handkerchiefs and singing their national anthem. On the promenade deck the cavalry horses were lined up, somewhat bewildered at their surroundings and still more so at their strange quarters. From every mastpole there waved alternately the British and French insignia.

The days during the week of August 10 were hot and sultry, and, to make matters worse, the troops, each soldier carrying some eighty pounds of military accoutrement, had to be disembarked during the heat of the day. It seemed an endless procession that, day after day, wended its weary, hot way along the quays, thru the long and narrow streets of the lower city, and then up, up the steep road to the suburb of Sanvic, behind which it disappeared from view. Now it was a detachment of infantry, then of cavalry; now of motor-cyclists, then of supply wagons—everybody cheerful as could be expected, and making light of the untoward situation by humorous sallies or attempts at pronouncing the French words.

For some the ordeal proved too trying, and, overcome by heat, now this one, now that, staggered, dropt out of the ranks, and fell on the hot pavement. It was then that the French women came into their own. Out of their houses they would rush, to minister to them with fresh, cooling water.

Along the coast is a series of bathing establishments. It was little wonder that every soldier, as soon as he was off duty, plunged into the refreshing waters and, temporarily at least, forgot the hardships of military life.

One day during our involuntary ten-day confinement at Havre, I took a tramway to Sanvic. I was rather surprized not to find more evidence of the presence of the English in the village. A French lady stepped to me and asked whether I was looking for the English. My affirmative answer was followed by her pointing out a narrow, hilly road to me. I followed it for some five minutes, when there was an abrupt turn to the right. There, below me, lay a vast plain of several hundred acres, dotted with upward of a thousand tents, among which the khaki-clad warriors moved in and out. To the left was the huge fortress that commands the port of Havre. The location was an ideal one. Some 100,000 troops, one of the soldiers informed me, were to be landed at Havre. From there they were to march to the Belgian frontier.

THE WAR LORD AND GEN. VON MOLTKE, HIS CHIEF OF STAFF

The Kaiser is reported to have gone to join the General Staff at Mainz, in order to be near his armies

Stain Not the Sky

By Henry van Dyke

Ye gods of battle, lords of fear,
  Who work your iron will as well
As once ye did with sword and spear,
  With rifled gun and rending shell,—
Masters of sea and land, forbear
The fierce invasion of the inviolate air!

With patient daring man hath wrought
  A hundred years for power to fly,
And shall we make his wingéd thought
  A hovering horror in the sky,
Where flocks of human eagles sail,
Dropping their bolts of death on hill and dale?

Ah no, the sunset is too pure,
  The dawn too fair, the noon too bright,
For wings of terror to obscure
  Their beauty, and betray the night
That keeps for man, above his wars,
The tranquil vision of untroubled stars.

Pass on, pass on, ye lords of fear!
  Your footsteps in the sea are red,
And black on earth your paths appear
  With ruined homes and heaps of dead.
Pass on, and end your transient reign,
And leave the blue of heaven without a stain.

The wrong ye wrought will fall to dust,
  The right ye shielded will abide;
The world at last will learn to trust
  In law to guard, and love to guide;
The Peace of God that answers prayer
Will fall like dew from the inviolate air.

The Hague, Netherlands

WHEN THE POPE DIES

HOW THE COLLEGE OF CARDINALS ELECTS THE NEW POPE

THE meeting of the cardinals for the election of a Pope is called a conclave, from *clavis*, a key. The name is justified by the fact that during the election the princes of the Church are actually under lock and key. This custom arose out of stern necessity, and can be traced back no further than the thirteenth century. Several times in those troublous days the need of an immediate choice became so imperious that the people resorted to the expedient of shutting the college up until an election was made. Such was the case when Innocent III died at Perugia, in 1216, and the election of Honorius III was in consequence accomplished in two days. Gregory IX was elected under similar circumstances at Rome in 1227, the election requiring but eleven days.

In the Middle Ages a papal election might be held almost anywhere in southern Europe, but for a long time there has been no election out of Rome, and usually the conclave is held in the Vatican. The conclave that chose Pius VI in 1775, however, was held in St. Peter's. Directly after the death of a Pope, under the direction of the chamberlain, the arrangements are made for the coming gathering. For centuries it has been the custom to erect little wooden cells, each about nine by twelve feet; and the materials, numbered for putting together, were kept always in readiness. At the conclave of 1878, for the first time these cells were not used, but small apartments of three or four rooms each were specially constructed in the great halls of the Vatican. These little suites were much more convenient than the cells, since each cardinal is allowed two attendants, who were thus able to lodge near him and be constantly at his service. On the other hand, this arrangement necessitated the spreading of the cardinals over a large space in the palace, which made communication less easy.

On the morning of the tenth day after the death of a Pope occurs the inaugural of the conclave. The cardinals form in solemn procession in order of rank, and usually proceed to St. Peter's, where the mass of the Holy Spirit is sung, at the close of which a sermon is delivered by some ecclesiastic previously appointed by the college. This is known as the election sermon (*"Pro Eligendo Pontifice"*), and the preacher's duty is to exhort the cardinals to lay aside all prepossessions and preferences of their own, and to fix their eyes on God, so that as speedily as possible a shepherd may be chosen who may be equal to the exigencies of the times. A master of ceremonies then takes the papal cross and behind him follow the cardinals. Before the cross go the attendants and the pontifical choir singing *"Veni Creator Spiritus."* Having arrived at the chapel of the conclave, the dean of the cardinals reads the Apostolic Constitutions relating to the election of a Pope, and each cardinal takes in turn an oath to observe them. The dean exhorts them to fulfil the obligations resting on them in so grave a matter as the election of the head of the Church, and the cardinals then betake themselves to their cells or apartments.

In the afternoon the college meets and receives the oaths of all the officers and attendants of the conclave. Of these there is a large number, of which it is necessary to specify only two: a governor, who is a prelate, and a marshal, a secular officer. In the evening the conclave is officially closed. Then all except the cardinals, their authorized attendants and the sworn officials, are required to leave the palace. All doors save one have been walled up ere this; now the last is locked and the keys placed in the keeping of the chamberlain. The governor and marshal henceforth keep strict charge of this door and both egress and ingress are forbidden. To this rule there is an exception, however: a cardinal arriving late must be admitted and a member of the conclave may be permitted to leave on account of sickness. Three cardinals with the chamberlain verify the report of the officials that all but those having business there have been excluded, and the chamberlain usually makes a further round before retiring for the night to assure himself that all is right.

The night is spent in silence, the hours not given to sleep being pre-

sumably devoted to prayer and pious meditation. The chamberlain does not trust too much to this charitable presumption, but stations sentinels to see that no communications are held in secret during the night. In spite of this cardinals do manage to prowl about and electioneer every night while the conclave continues. On the following day the real business begins, that of election. In theory there are three methods by which a Pope may be chosen. The first is election by "inspiration," "acclamation" or "adoration," for all three terms are used to describe it. This is accomplished in those rare cases when all minds turn at once to some one as the sole possible candidate and he is saluted by unanimous acclamation. The election of Gregory VII is described as occurring in this way. The obsequies of Alexander II were performing and Hildebrand as archdeacon was directing them. All at once clergy and people with one voice cried out "Hildebrand is Pope! It is the will of St. Peter! Hildebrand is Pope!" And he was immediately enthroned and crowned. Such elections, however, tho always possible in theory, have been rare and none has occurred in recent times. Another method is known as election "by compromise." Not infrequently a deadlock occurs in a conclave and the cardinals agree to depute the election to a committee and to abide by its decision. Elections by this method have been not infrequent, but it has not been necessary to resort to it latterly. The commonest method is now, and probably always has been, election "by simple ballot."

The rules of Gregory XV for the preparation of ballots are curiously minute; in connection with his bull, "*Decet Romanum Pontificem*," he not only gives a full description, but diagrams accompany the text, as sample ballots. The voting is secret, and therefore the ballot is in three divisions. In the upper part of the ballot each cardinal writes his name and title, thus: "*Ego Robertus Card. Bellarmine.*" This he folds down and seals and it is not examined save it becomes necessary to verify all ballots. In the lower division he writes a number and a motto, known only to himself, so that he may be able to identify his own ballot in case of necessity, thus: "18. *Gloria in Excelsis.*" This he folds up and seals. All that is visible to the tellers is the middle part of the ballot, in which he writes: "*Eligo in Summum Pontificem Rev. D. meum Card. ———*," filling the blank with the name of his candidate.

In general only a member of the College of Cardinals has been regarded as eligible to the papacy since the time of Nicholas II. But he admitted exceptions to this rule in case of necessity, and as a matter of fact, between his day and that of Urban VI (1378) nine Popes were chosen from outside the college. Since that time none but a cardinal has been elected and the precedent has acquired practically the force of law.

The voting sessions are held in the Sistine Chapel and two ballots must be taken each day, the first directly after the morning mass, the second in the afternoon, usually about four o'clock. About two hours are ordinarily required for the taking of a vote. When the votes are ready to be given each cardinal advances in order of rank to the altar, where the tellers stand, kneels and offers a short prayer and then, holding his ballot over the great silver chalice that serves as an electoral urn, he repeats in a loud voice the electoral oath: "I call to witness Christ the Lord, who will judge me, that I choose him who I judge before God should be chosen, and I will do the same on the 'accession.'" Then, laying the ballot on the paten, he causes it to slide into the chalice, salutes the cross and returns to his place.

When the votes have been verified and counted and the result is announced, if nobody has received the necessary two-thirds majority, cardinals have the privilege of changing their votes. A ballot of the same general character as the one before used is prepared, but in the middle each writes "*Accedo Rev. D. meo Ego Card. . . .*" If he does not wish to change his vote he writes in the blank space *Nemini*, nobody. At a late conclave a nervous or absent-minded cardinal wrote in his first ballot "*Eligo, etc., Card. Neminem*," and the ballot was read out by the tellers amid the hilarious laughter of the cardinals. It sometimes happens that exactly two-thirds of the total number of votes have been cast for somebody. In that case all the votes are carefully verified; the tellers open each one and if it turns out that any cardinal has voted for himself the result is invalidated and there is no election.

After the concluding of the voting the ballots are burnt in a little stove kept for the purpose; and when the people gathered without see the smoke go up they know that no Pope has yet been chosen. This is supposed to be their only means of information, for besides the oath of secrecy imposed on all inmates of the palace, no communication with outside persons is permitted except in the presence of the marshal and governor. Nevertheless, in some way the secrets leak out and the proceedings are reported from day to day with tolerable accuracy. The rules of Gregory XV provided that if a choice were not made within three days, for the next five days the cardinals should be restricted to one dish at each meal and thereafter should be confined to bread and wine or water until they completed the election. These rules have been relaxed in these later times, but long deadlocks have also become infrequent.

Will it surprize anybody to learn that, notwithstanding all these strict rules and these solemn oaths, there is often a great deal of wire-pulling and electioneering in a conclave? As so often happens in our Presidential contests, the successful candidate is frequently not one of the several who have been hotly prest by friends or have used all their arts to advance themselves, but a "dark horse." Some of the ablest and best, and also some of the weakest and worst, of the Popes have been chosen because the favorites were only strong enough in the conclave to kill off each other.

When, by any of these methods an election has been made, the dean of the cardinals goes to the Pope-elect and in a loud voice asks, "Do you accept the election, canonically made, to the supreme pontificate?" The answer is communicated to the assembly by the prefect of ceremonies. By a second question the dean asks the new Pope what name he wishes to take and on receiving his reply announces it in a loud voice to the electors. The official act of election and acceptance is then prepared and in the meantime the Pope is conducted to the altar if he has not gone there at once on notification of his election. The robes of a cardinal are removed, and the pontifical garb, made ready in advance, is put upon him. He is then placed on a chair, back to the altar, the chamberlain puts on his finger the Fisherman's Ring, and all the cardinals in turn give him the first obeisance, kneeling before him and kissing his foot and hand and receiving from him the kiss of peace. The first official act of the new Pontiff is to confirm the powers of the former chamberlain, or, if he prefers, to appoint another.

Preceded by a choir singing "Ecce Sacerdos Magnus," the senior cardinal deacon goes to the balcony and says to the people: "I announce to you a great joy. We have as Pope the most eminent and most reverend ———, Cardinal of the Holy Roman Church, who has taken the name of ———." And thus the world is made aware that the Church has a new Pope.

A MARTYR TO THE WAR

Grief at the turning of the Christian nations of Europe against each other in bloodshed hastened the death of Pius X. who succumbed to a throat attack on August 20

THE SCHOOL-MA'AM

BY THE BACHELOR MAID

A DISTINGUISHED writer, discussing from his Easy Chair the results of The Independent's voting contest for the most useful American, with the question raised by it whether "the great actor, author, painter, sculptor, preacher," shall ever again "be counted a supreme friend and helper of a grateful generation," meets the question, in part, by answering, "That depends a great deal upon how the coming generation is taught."

Considering the amount of pedagogical literature, and the lecturers, training schools, book agents, not to mention mothers' clubs and "social center" school houses, now abroad in the land, it would seem at first thought as if slight peril could menace the teaching of the coming generation—except perhaps that of its being talked—and vaccinated—to death. Yet I wonder if everybody is not too busy talking of education to find any serene moments for actually thinking how much of the *real thing* is sticking to the intellect of the coming generation. Accordingly I am moved to do some talking about it myself. As must be perfectly obvious, the object of *my* talking is to inspire thought in my fellow creatures.

How the coming generation shall be taught depends directly upon the teacher, but more vitally upon the influences, laws, schools and popular opinions which are teaching the teacher herself. I say "herself" in compliance with the up-to-date grammatical rule, whereby "teacher" is now made feminine gender. But I do not look with complacency upon this conceded victory over the laws of English speech. While I earnestly desire to see every profession known to man freely entered by woman also, I have never desired that women should monopolize any one of them. And just as I should find exceeding satisfaction in seeing about half the hands that rock the cradle protruding from masculine coat sleeves, so I should view with dissatisfaction the shoots of the young idea being trained exclusively by feminine fingers. Therefore I do not consider it a good sign for education that "teacher" is becoming practically a synonym for "schoolma'am."

Not that I could be so traitorous to my own sex and profession as to make the admission that women cannot be as good teachers as men. A considerable acquaintance with members of the noble army of pedagogs leads me to the opinion that, given the same education and general equipment for their work, there is practically no difference in their educational effectiveness. Yet even the complacent "middle class" is dimly perceiving that there is a vast deal of villainously bad teaching being done in these United States, and even the nimblest feminist can hardly dodge the fact that most of the teaching is being done by women. The conclusion following upon these two premises I myself have no desire to evade except with the incontestable rejoinder that men are doing some very bad teaching too; but I tender here an explanation of what I cannot deny. It is that the schoolma'am is *not* generally given the same equipment for her business as is the man, and, because her kind so greatly outnumbers the schoolmaster's, she has become, thru no fault of her own, a most powerful influence in disseminating a false public sentiment and general ignorance which is really responsible for what she is.

Perhaps one of the worst things which the world has done to the schoolma'am is to make her feel that if for a phrase in a previous paragraph I had said "the noble army of martyrs" instead, it would have made no appreciable difference. When the great originators of the woman movement sought the privilege of teaching school along with other "women's rights," they really sought it as *a privilege*. Those brainy young women who became distinguished old women looked upon the profession as one especially congenial for the exercise of strong and active brains struggling for freedom to grow. The light of this twentieth century beams upon a great company of women seeking opportunities to teach—for the growth of their brains? Oh, dear, no! Simply that they may attain, perhaps, a maximum of seventy-five dollars a month to keep them clothed and fed until somebody will marry them, or to keep them outside of the poor house after they have abandoned the hope (which, according to their detractors, they never do) that anybody ever will. One of the worst things, I repeat, which we have done for our schools and for women is that, while we have now admitted women freely into the teaching profession, we have made it a purely financial and correspondingly sordid matter on both sides. The woman wishes to teach because she can earn a little money thereby; the public also wishes her to teach because she is willing thereby to earn a *little* money. Men have left her there an almost uncontested field, as one which is too unprofitable for themselves.

I do not propose to brand myself with a certain most undesirable epithet by rushing in where political economists may fear to tread, but I have at least observed that cheap teachers generally mean cheap teaching, because they generally represent cheap preparation and cheap educational ideals. In a certain city there has recently been much friction between the public school teachers and the school board, the former complaining with justice of certain regulations promulgated by a collection of business men whose knowledge of school teaching is just about equal to the teachers' knowledge of business. But while one can give only cordial sympathy to the most of the teachers' complaints, one significant remark has been often heard:

"Why don't they just *fix* our salaries at seventy dollars, and let it go at that, instead of worrying us with saying that we must take university extension courses if we want them raised to seventy-five? We'd be perfectly satisfied with seventy, if we could be sure of that, and not be bothered with having to do more studying all the time."

Do you want your children taught by a company of women who do not even suspect that in confessing themselves satisfied to remain seventy-dollar teachers till death they confess their present worth to be about seventy cents? But if not your children, at least thousands of children of others, are getting their instruction and their ideals of life from just such teachers.

I am not attempting just now to put the case upon the high plane of the altruistic motives that should animate the teacher. Everybody's *theory* is that the supreme consideration of the teacher should be the greatest good of the pupil. But this is unlikely of realization unless it has some less sublimated and more humanly selfish motives for a foundation. In my belief the very cornerstone of that foundation is the teacher's own desire for self-improvement and mental growth. No teacher who is not burning with the desire to know can kindle that same fire in the souls of the future citizens whom she teaches. And no teacher brought up on the doctrine that it is a calamity for her to be teaching at all, and that no woman should do it but from financial necessity, can possibly know that burning desire.

It is perhaps not surprizing that in a state so conservative as

Louisiana, a recent act of legislature should contain the words, "Provided, that the marriage of a female teacher at any time shall *ipso facto* vacate her position." Possibly also it can be explained that in New York there should survive the antediluvian (with apologies to the contemporaries of Noah) idea that motherhood unfits a woman for teaching children; but no easy explanation is apparent when there comes out of the progressive and big-minded West this sentiment from one of Colorado's representatives at Washington, *in a speech delivered there in favor of female suffrage:* "Women . . . are not earning a livelihood in competition with men of their own election. No one will ever assert that women voluntarily leave their homes to become wage-earners."

I am not making a plea for "women's rights," but I do plead for a recognition of the effect of such a sentiment upon the efficiency and elevation of our schools. What standard do we expect them ever to attain or maintain if we deliberately, and by law, turn them into a vast eleemosynary establishment for the support of impecunious females until marriage?

To call teaching the most vitally important work in the world may be platitude, but it is not exaggeration. And a child's habits and ideals are most generally established at the time of his life when we permit and encourage the worst teaching, the period between the primary grades and the high school. Personally, I think that that arid desert of intellectual barrenness known as "the grades" need never have taken so many years to cross as we have prescribed, if the elaborators of our public school machine had spent a tenth as much thought and money upon the provision of good teachers as upon the construction of a "system." But it being a cardinal principle of that system that school boards should always be entirely composed of men unconnected with school work, it naturally follows that any nice high school girl with a "pull," or any needy woman with a gift for inspiring compassion in the masculine breast, may secure "a grade position" wherever there is a vacancy. It would seem to me that a good teacher, *a scholar,* might find something as worthy his scholarship in superintending the unfolding of the minds of children of from seven to twelve years as in the kindergarten or the senior class of the high school. But public sentiment is not with me on that point. It has developed to the point of paying, in some sections, extra salaries to the trained kindergartner or primary teacher, and of exacting a collegiate degree of its high school instructors, but any old thing will do to fill the gap between; and any old thing—or, more often, any young thing—all too generally fills it. The president of a large middle western institution which maintains a normal department told me last summer of a letter he received from a rural teacher desirous of making some additions to her store of knowledge. Its opening words ran thus:

"Dear Sir: I seen your ad in the paper."

This instructor of English as she is wrote, likewise spoke, *already held a position and a teacher's certificate,* which last being near expiration, she merely desired a few weeks of bolstering up to meet the examination necessary to its renewal. I do not overlook the hundreds of ambitious teachers who flock to the various summer schools to add to their knowledge and teaching efficiency. Yet, full of hope for the educational future as this spectacle is, it is offset by the deadly blankness of the thousands of teachers who desire no more study, and even resent the suggestion of "extra work."

There is another cause for a pessimistic forecast of the future of the schoolma'am and of American education in her hands. For some reason the idea prevails that the proper "practical" preparation of women for teaching is by an education, if not of an inferior type, at least standing on its head. My meaning, I think, may be conveyed by the remark to me of a young woman who was entering college after a considerable time spent in well known "schools of education." She said that she had devoted some years to acquiring "methods" when it dawned upon her that what she principally needed to know was *something to teach.* Somehow the fact seems to be rather generally overlooked that the woman teacher needs to be a *scholar,* and the most salient feature of our "education courses" is the fractionally educated type of woman they turn out. One cannot but wonder just what contribution to education those schools consider themselves to be making which offer "a short course for teachers," as if a teacher need know less than an ordinary college sophomore. I think myself that while it is desirable that a teacher should know enough to suspect adenoids in a backward pupil, it is at least equally important that she should know how to teach arithmetic intelligently to the unafflicted. But at present education is more keenly alive to adenoids than to fractions and compound interest. My own acquaintance embraces a primary teacher and special student of child psychology who gives no evidence of herself knowing the parts of speech. She is also somewhat hazy upon the distinction between a vowel and a consonant, but she addresses public gatherings upon the subject of defective children. This is a statement of fact.

I do not mean to say that teachers should be ignorant of the valuable results of investigations that have been made into the relation between the physical and mental conditions of school children. But it is too common to meet teachers carrying advanced extension or summer school courses in psychological and pedagogical subjects when they have never had enough of mathematics, or ancient or modern language, to place them beyond the second year of the high school. We find schoolma'ams seeking to meet the need of more English in our schools by advanced courses in literary criticism, when they have much ado to analyze a moderately complex English sentence.

From the instruction of women trained to value only immediate visible results, to value their profession only for its alleviation of their financial necessities, there can only come a generation of pupils with the same ideals. Such a generation of the ill-taught has already had time to grow up, with its inability to appreciate all but the obvious, and its complacency in that inability, and is particularly vocal in the demand for the "useful" and "practical" in education. We have the curious and not entirely hilarious spectacle of mediocre teachers having trained up a public which in turn would train *them* to satisfaction with ever-increasing mediocrity. For the present dissatisfaction with educational conditions is no "divine discontent," but a superficial idea that *a change* will accomplish more than good use of what we already have. What we need to improve our schools, I opine, is neither nature study, nor home economics, nor agriculture, nor hand-made furniture, nor any other excrescences upon the traditional curriculum, but teachers with *minds.* Minds so well trained for training younger minds that they cannot be deceived with any cheap and showy substitutes for the business of education: the production of thought, not of tabourets and tea cakes to carry home to a doting mother. When that is the standard for the would-be teacher, there need be no further discussion of the gender of that noun.

Campbell Studios

A S. UNPOLITICAL APPOINTMENT

The post of Commissioner of Immigration at the Port of New York is preeminently one the incumbent of which should be selected for other than political reasons. The keeper of the nation's gate at Ellis Island not only must be an efficient administrator, but also should be a man of broad human sympathies. The millions of immigrants who pass thru the gateways into the new land should find themselves looked upon by those who receive them there not as inanimate units in an administrative problem, but as men and women. In selecting as Commissioner at Ellis Island Frederic C. Howe, the head of the People's Institute in New York, an institution notably human and in the best sense popular in its civic activities, President Wilson has made an appointment as admirable for the completeness with which it fulfils these requirements as for its freedom from any taint of utilitarian politics

Scenes like this come as grim interruptions to the pictured revels of the Queen's palace. The film is brilliantly staged and surpasses *Quo Vadis* in spectacular effect

THE MOVING WORLD

A REVIEW OF NEW AND IMPORTANT MOTION PICTURES

ANIMATED AFRICA

LAST year Paul Rainey astonished the public by bringing to them in motion pictures the life of wild animals in the heart of Africa. His second series, now on exhibition, is more remarkable than the first, for he has got closer to his game. By concealing his camera at a water-hole he shows us the animals which congregate there, as they behave when they do not know they are having their pictures taken, the rhinoceros and the oryx, the elephant and the gnu, herds of zebras and baboons, the little Dick-dick, an antelope hardly larger than a rabbit, and the giraffe, which some schoolboy rightly called "the highest form of animal life." Then we are shown wild buffalo by the hundred and we see how the cheetah is hunted by dogs and killed by the poisoned arrows of the arboreal natives, the Wandorovos. As a grand climax we have the hunting of the king of beasts with a lion charging straight at the camera, only thirty-five yards away when a bullet stops him.

In the study of zoology the approach toward reality is made by steps in this order: (1) verbal description of the animals; (2) drawings of them; (3) still photographs; (4) mounted specimens in a museum; (5) one or more specimens in the cages or pens of a zoological garden; (6) motion photographs as they live in their natural habitat; (7) actual observation on the unconscious animals in the open. Each of these has its peculiar advantages, but next to the last—which is impossible for most of us in the case of African animals at least—comes the moving picture, for that leads us to the true object of zoology, the study of life in the living, not the examination of specimens which once were alive. *(Shubert Feature Film Co., New York.)*

ANTONY AND CLEOPATRA

The story of Mark Antony's treason and overthrow has furnished the theme for innumerable dramas and romances, but the cinematograph finds in it the opportunity for a new version with merits of its own. Neither painter nor dramatist, for instance, has been able to produce so effective a contrast as the series of scenes where Antony and Cleopatra banquet in state in the palace of the Ptolemies while every few minutes the fête is interrupted by views of the avenging legions of Rome, landing from their galleys on the Egyptian coast in the darkness and tramping along the sands at the edge of the surf, a procession seemingly without end, steadily drawing nearer to their unsuspecting victims.

For those of our readers who have seen "Quo Vadis" it will be sufficient to say that this film is prepared by the same company, the Italian Cines, imported by George Kleine, New York, and that it surpasses the Sienkiewicz play in spectacular effects. The cast, it is claimed, numbered over 7500 and we cannot disprove the statement, for they were too many for us to count. In any such census of the cast the animal actors ought to be included, for here we have the lion and the cheetah, the crocodiles to which the charming Charmian was thrown, and the asp by means of which Cleopatra escaped being led thru Roman streets behind the triumphal chariot of Octavius. From a medical point of view we must commend the experiments in applied toxicology with which the Queen employed the moments immediately preceding her demise.

The Italians beat all the rest of the world in the artistic setting given to their photoplays, and in this case they have the advantage of being able to reproduce Roman villas and streets with ease and accuracy. The scene of the debate in the Roman Senate is admirably handled, and this, as well as the one in which the Roman galleys go into commission for the battle of Actium, will give the classical student a more vivid sense of the reality of ancient life than he can get from books.

PSEUDO-EUGENICS

An amusing instance of the way in which a popular scientific phrase will be caught up and misapplied is afforded by the feature film adapted by D. W. Griffith from Armstrong's play, "The Escape." This is advertized in New York as a eugenic play and is preceded by a lot of views of amœbæ, spirochætæ, vorticellæ and frog skeletons having no perceptible relation with what follows, which is a well-acted melodrama of the slums, but its lesson, if it has one, is quite the opposite of eugenic. The degenerate son of a dipsomaniac sire owes his evil propensities chiefly to a blow on the head and is cured of them by a trephining operation. But his sister, who of course has the same bad heredity as he, is married to the hero, who as a physician should have known better, for their children or half of them are likely to turn out as bad as their uncle and grandfather. In a state ruled by eugenists such a marriage would be prohibited and we fear that the play would also, on the ground that it teaches a false and hence immoral lesson. So long as dramatists insist upon happy endings they must let heredity alone or choose a better set of characters. *(Mutual Film Corporation, New York.)*

FOREST AND STREAM

Of the many "movied novels," as we shall soon be calling them, one of the most attractive on the screen is *The Conjurer's House* by Stuart Edward White, of which the Jesse E. Lasky Company of New York has put a version into pictures under the title of "The Call of the North." It is a tale of the Hudson Bay Company in the days when that gigantic trust held sway over the greater part of this continent. The plot is somewhat too involved for the observer to follow in spite of the very ingenious way of introducing the characters in the prolog, but one watches with delight the succession of beautiful scenes supposedly in the Canadian Northwest, the voyageurs on their snowshoes and the Indians in their canoes amid the mountains, forests and lakes of that region. We do not know what salary was given to the cast headed by Robert Edeson, but whatever it was they were underpaid for the strenuous action demanded by the story.

The cinematograph is speeding up. Photographs at the rate of a hundred thousand a second is its latest triumph. This extreme rapidity was necessary for recording the trajectory of a pistol ball and showing in detail how it penetrated a thin board. At the instant of firing an electric coil giving sparks at the rate of a hundred thousand per second is set going and the views of the flight are taken on a ribbon film. Since this film is mounted on a wheel making nine hundred revolutions per second the individual images are distinct and can be projected as slowly as desired for the analysis of the motion.

FOUR HEADS OF EDUCATIONAL DEPARTMENTS AT CHAUTAUQUA

DEAN SHAILER MATHEWS

Educator, editor, author; director of religious work; Dean Divinity School, University of Chicago, President Federal Council of Churches of Christ in America

MR. EARL BARNES

Author of *Women and Society, Where Knowledge Fails;* head of Department of Pedagogy; the leading lecturer on education in the country

MR. ALFRED HALLAM

President of the New York State Music Teachers' Association; musical director; Director of Conservatory, Skidmore School of Arts, Saratoga Springs, New York

MR. HENRY TURNER BAILEY

Head Arts and Crafts Department; author *Art Education, The Flush of the Dawn, Twelve Masterpieces of Painting,* etc.; editor *School Arts Magazine,* Boston

WHAT CHAUTAUQUA PLATFORM SPEAKERS ARE SAYING

"IN a very fundamental sense, Chautauqua has revolutionized many of the basic educational concepts of the last century. Educational formulas and methods, initiated or adapted in the great Chautauqua System of Home Education, are so familiar and unchallenged now that to state them would seem trite; yet when first put forward here from this Chautauqua, which the New York *Herald* once called 'the visible center of the greatest university in the world,' these formulas and phrases came with the force of innovations."—*Justice William L. Ransom, of New York City.*

SPECIALIZATION AND CULTURE

"Education and training nowadays are everywhere tending more toward specialization. The range of scholarship is becoming increasingly small and follows more and more narrow lines. This same tendency is seen in practical life. Again and again, we ask ourselves the question 'will it pay?' Some of the things most worth while 'do not pay.' We must apply the question on a higher plane. To know anything well, you must know it in its relation. No more pathetic spectacle is to be seen anywhere than the 'cultured ne'er-do-well.' The tendency toward specialization is very apt to overreach itself and err on the other side. The larger liberal culture is absolutely necessary. The merely specialized individual along a certain line to the exclusion of every other kind of knowledge will be nothing more than a human cog-wheel. Emerson pointed out that when a man becomes either head or hand he does not do good work with either his head or his hand. He must be able to use his whole body. He must be able to balance his specialization with something else, or else he will defeat his own end."—*Edward Howard Griggs.*

EDUCATIONAL VALUE OF WORK

"Mind never gets beyond its instrument, and the most perfect mind in the world is destroyed if the nervous system on which it depended is thrown out of gear.

"It is very difficult to make people accept this psychological explanation of work, because of the old theological belief that work came to man as a curse. The French writer was nearer right who maintained that God first cursed man with life and then gave him work as an ameliorating circumstance. Our thinking is further confused by the emphasis we have laid upon the industrial product, especially in these last years of industrial democracy. The fact is that there are only two things of transcendent value in the world for man or woman; one of these is love, and the other is work.

"Every child must be taught to work in order that he may develop a strong, well-integrated nervous system, which will give him intelligent use of himself. Without work there cannot be a strong and vital development of the subjective life.

"The educational value goes far beyond this. It trains these qualities which we call will, determination, persistence, courage and independence. It goes further, and helps the girl to relate herself to the social group in which she is a unit. An absolutely idle girl can never understand her father or mother in terms of service, devotion and sacrifice. She can never understand the communal whole in terms of mutual responsibility, obligation to play a fair game, loyalty to leaders and admiration of human excellencies. Hence, my second plea would be that a girl must work, not only to become an intelligent individual, but that she may become a socialized individual."—*Professor Earl Barnes on Vocational Training of Girls.*

THE WASTE OF HOME COOKING

"There is great waste in the kitchen. Ninety-eight per cent of the kitchens, of the kitchen utensils, of fuel, light and other kitchen supplies is wasted, and useless. The waste in the purchase of food is the greatest of all. The waste in purchasing is that amount of money which maintains the retail men, upon which milk trusts fatten, upon which all the commission men thrive. There is an immense difference between the cost of living and the price of living. We are struggling to reduce the cost of living as it affects the dealer. What we should be doing is to reduce the cost of living as it is affected by our handling of the food.

"I do not advocate coöperative housekeeping. Coöperative housekeeping means a union of families to engage a common cook and a common kitchen. It is a hopeless, predestined failure. Each woman must specialize; each woman must take up the work she is best fitted for. The business of cooking shall be recognized as a trade, as an art, as a handicraft, and as a business, the biggest on earth.

"Today it takes an immense proportion of our strength to wrestle with our food. We don't know what to eat, or when. The new law shall read: 'A private family in a private home, without a kitchen.' We shall be buying food cooked instead of raw —food cooked by a new generation of women who have the specialization, the organization and an exchange of products. As a result there will be less work, trouble and expense but the work will be better done and the income will be vastly increased."—*Mrs. Charlotte Perkins Gilman, editor "The Forerunner."*

THE THIRD "R" FOR WOMEN

"The third 'R' is the ability to reckon. This is perhaps one of the weakest points in the education of women. Women are not interested in the scientific matter that is sent out by the Government and from other sources simply because it implies the art of reckoning. Therefore the study of foods and dietary processes proceeds slowly, because women do not learn to think in percentages. How can we expect women to do anything with dividing the income, or in studying out labor unless we are stronger in this question of arithmetic. In spite of all this the woman spends money. She does not always spend intelligently. The education of the girl should begin early in the use of money, and there is no better way than for her to have money which she has earned herself and of which she knows the value."—*Anna Barrows, secretary Home Economics Association.*

WOMAN'S MEASURE OF HUMAN LIFE

"As property is the product of man, the child is the product of woman. As the work of men for centuries has been with things, that of woman has been with human life. We measure human life in different terms than men. Man measures human life in terms of production, while woman measures it by adding to production its cost. Woman is particularly interested in legislation that protects humanity. Humanity is not sufficiently protected in this country and when women are allowed to express themselves on equal terms with men our laws will assume a more ethical and more humanitarian tone."—*Mrs. Scott Nearing, secretary Pennsylvania College Equal Suffrage League.*

THE COWBOY ROVER

"I've seen a lot of places where I'd like to stay,
But I gets a-feelin' restless and I'm on my way.
I was never meant for sittin' on my own door-sill,
An' once you get the habit—why you can't keep still."

—*Professor John A. Lomax's "Songs of the Cowboy."*

INFORMATION !

The Independent invites inquiries from its readers and will gladly answer all questions pertaining to travel for pleasure, health or business; the best hotels, large and small; the best routes to reach them, and the cost; trips by land and sea; tours domestic and foreign. This Department is under the supervision of the BERTHA KUPFNER HOTEL BUREAU, widely and favorably known because of the personal knowledge possessed by its management regarding hotels everywhere. Offices at Hotel McAlpin, Broadway and 34th street, New York, and the St. Charles Hotel, New Orleans, La., where personal inquiry may be made. SOUTHERN PACIFIC COMPANY

DIVIDEND NO. 32

A QUARTERLY DIVIDEND of One Dollar and Fifty Cents ($1.50) per share on the Capital Stock of this Company has been declared payable at the Treasurer's Office, No. 165 Broadway, New York, N. Y., on October 1, 1914, to stockholders of record at 3 o'clock p. m., on Tuesday, September 1, 1914. The stock transfer books will not be closed for the payment of this dividend. Checks will be mailed only to stockholders who have filed permanent dividend orders.

A. K. VAN DEVENTER, Treasurer.
August 13, 1914.

THE MARKET PLACE

NEUTRALITY AND WAR LOANS

Owing to the exprest opinion of our Government that "loans by American bankers to any foreign nation which is at war are inconsistent with the true spirit of neutrality," the tentative negotiations of representatives of the French Government with the firm of J. P. Morgan & Co. for a loan of $100,000,000 were promptly discontinued, at the suggestion of that firm, which, as Mr. Morgan said, desired to be "in harmony with the ideas of the Government" at Washington. It is known that Austria had been making inquiries about a loan of $100,000,000. These are at an end. There will be no American loan to any nation directly involved in the war. The London *Economist* remarks that our Government "has done honor to itself and a service to the world by maintaining neutrality in its strictest sense and refusing to allow its bankers to take profit by prolonging the carnage in Europe."

Senator Hitchcock, of Nebraska, has introduced a bill providing that it shall be unlawful and shall be treated as a violation of the neutrality laws for any person, firm or corporation in the United States to lend money directly or indirectly to any country engaged in war with any other country with which the United States is at peace, or during the hostilities of any two countries with which we are at peace. It also makes it unlawful to sell or to offer for sale, or to purchase or receive within the United States any bonds of such countries authorized or issued after the beginning of hostilities.

While the attitude of our Government with respect to the loans deserves emphatic commendation, the enactment of such a law is not required. No statute is needed now to prevent our bankers from financing a loan for any of the warring nations. The exprest disapproval of our Government was sufficient to restrain J. P. Morgan & Co. or any other great banking house. That disapproval will continue to be sufficient. It is supported by American public opinion.

OUR INDUSTRIES AND THE WAR

American industries are affected directly by the war in several ways. An industry that relies largely upon its export trade cannot ship its products. The most notable example of disadvantage on this account is seen in the cotton-growing industry. Two-thirds of our cotton, under normal conditions, is sold abroad. There is lack now of transportation, and also a slackening of demand. The unprecedented dislocation of international exchange facilities presents great difficulties on the financial side of the question. We have an exportable surplus of 250,000,000 bushels of wheat. The export movement was checked, but probably it will soon be

possible to supply the foreign demand. The steel industry's exports are reduced to almost nothing, and the prices of certain raw materials which it uses have been greatly advanced. There is a very small supply of ferro-manganese in this country. The price of tin, the metal, which we do not produce, has been doubled, to the great disadvantage of the tin plate mills.

Our supply of potash is controlled by a group of German companies, and for want of potash the manufacturers of fertilizers must be idle or be content with a product of little real value. There is but little raw silk in this country, and the silk manufacturers await with anxiety the day when there will be none. But with ocean carriers again at work, this raw material can be obtained. This will not be true, however, with respect to chemical dyestuffs, for these are made, or have been made, in Germany. If ships were free to bring them, they would not come, for several of the great factories where they have been produced for all of the world's manufacturers are now closed. The employees, chemists and others have gone to the war. It is said that a million workers here may be affected by exhaustion of the supply of dyestuffs and certain chemicals used in manufacturing, all of which have come from Germany. The supply on hand is enough for only a few weeks, and several textile factories have closed already because they have none left. The price advance for some of the chemicals and drugs in ordinary use is 200 per cent. For example, that is the increase for carbolic acid. Our Government, realizing how important to many industries is the supply of German chemicals, is striving to arrange for shipments. But, even if the ocean transportation should be permitted, the closing of German chemical plants may have left no products to be exported.

Chemicals used in photography are here only in small quantities. The price of one of them has risen from ninety-two cents to $15 a pound. Imports of leather have been checked; the price has advanced, and the cost of manufactures of leather is increased. Linens are up twenty per cent; scarcity and higher cost of burlaps affect the linoleum industry. About fifty per cent of our copper output has been exported. Lack of carriers and reduced foreign demand have made many workmen idle at the mines. One company laid off 2100 men last week. There are now no exports of automobiles.

The following dividends are announced:

American Telephone and Telegraph Company, coupons from 4½ per cent convertible gold bonds, payable September 1

American Telephone and Telegraph Company, coupons from 4 per cent convertible gold bonds, payable September 1

Federal Mining and Smelting Company, preferred 1 per cent, payable September 15

Southern Pacific Company, quarterly, $1.50 per share, payable October 1

Union Pacific Railroad Company, preferred semi-annual, $2 per share; common, quarterly, 2½ per cent, payable October 1

United Cigar Stores Company of America, quarterly, preferred $1.75 per share, payable September 15

St. Louis & San Francisco Railroad Co.

To Holders of 4% Refunding Mortgage Gold Bonds

Due July 1, 1951:

Notice is given as follows:

1. More than 75% in amount of the outstanding bonds have been deposited;

2. Central Trust Company of New York certificates for deposited bonds have been listed on the New York Stock Exchange;

3. Until October 1, 1914, Bonds may be deposited with Central Trust Company of New York at its office, 54 Wall Street, New York City, or in St. Louis, Berlin and Amsterdam with the depositaries in said cities;

4. In accordance with its notice, dated August 4, 1914, the Committee will make no further purchases of coupons which matured July 1, 1914.

THE BROOKFIELD SCHOOL

A New Open-air School for a Small Family of Girls

DIRECTORS: Miss Helen Fairman Cooke, A. B., Wellesley
Miss Marion F. E. Cooke, A. B., Wellesley

School Year—September 24, 1914—June 17, 1915

The wonderful increase in bodily and mental vigor observed in the case of the delicate child taught in the open-air school is making parents ask why similar conditions should not produce similar results with the normal child. It is in response to this growing demand that the Brookfield School has been established. The development of

A SOUND MIND AND HEART IN A SOUND BODY

is the aim of the school. No one factor has more to do with establishing and preserving health than life in the open air. Add to this abundant sleep, wholesome food, suitable exercise and play, cheerful surroundings, worthy occupation for hand and brain, and the girl's health is assured. The school aims to produce bodies not merely free from disease and reasonably well, but brimming with health. For circular address

The Brookfield School, MISS HELEN FAIRMAN COOKE, North Brookfield, Mass.

INDIANA

Interlaken—
a school on a farm

where boys learn by doing. Actual contact, under competent, instructors with growing of crops and care of live stock on a 670 acre farm. Shops, work with tools and animals, deep woods, beautiful lake, boating, bathing, skating, healthful sports, right associates.

High standards of scholarship—under experienced instructors who know life and modern educational methods. Preparation for American and European universities. An exceptional school plant—gives opportunity for imitative and executive work. Only the sons of American business and professional men of good moral character admitted; the number is limited. Send today for catalogue.

Rolling Prairie, Indiana

IN THE INSURANCE WORLD

BY W. E. UNDERWOOD

PRESBYTERIAN MINISTERS' FUND

We receive many inquiries in the course of a year for information about the Presbyterian Ministers' Fund of Philadelphia, Pennsylvania, and the abstract following is prepared for the use of those interested.

The Presbyterian Ministers' Fund was organized and began insuring lives in 1759, thus making it the oldest institution of its kind in the United States. Its membership is presumed to be confined to the clergy of the Presbyterian Church, their wives and families. The company is mutual in form; its expenses are unusually low; it is capably managed and policyholders' dividends are substantial. The funds are properly and profitably invested. Its annual growth is comparatively slow, but is steadily persistent. The policies provide for dividends annually and are up-to-date in every respect. In 1913 the company's actual mortality experience was but forty per cent of the expected. It writes a limit of $15,000 on one life up to age fifty-five and $10,000 over that age.

Its financial condition on December 31, 1913, was: admitted assets, $5,953,122 (of which $3,968,816 was in bonds and $1,144,042 in loans on its own policies); legal reserves, $5,205,708; surplus, $554,690. The interest earnings in 1913, calculated on mean investments, were 4.4 per cent.

Income and disbursements in 1913 were: premiums on new policies, $88,680; premiums on renewed policies, $564,768; dividends and surrender values applied, $187,097; annuity premiums, $5,991; interest, dividends and rents, $58,267; total income, $1,074,338. Total disbursements (including $192,473 for death claims, $136,289 surrender values, $142,520 dividends) were $540,998. The company wrote $2,347,426 new insurance in 1913 and ended the year with $19,378,373 in force.

NO NEED FOR ALARM

American policyholders in European companies which have been legally admitted and are doing a direct business—that is, issuing policies thru agents or brokers directly to insurants—need have no apprehensions respecting the security of the contracts they hold. Our laws virtually compel such companies to be domestic institutions, with capital, reserves and surplus maintained here independently of their home organizations. These funds are in the custody of trustees provided for by law and the United States branches are rigidly supervised by the several state insurance departments. Of course, the war has affected the value of all securities constituting the assets of domestic and foreign companies; but this is not material, nor is it expected to be of long duration.

MASSACHUSETTS

School for Social Workers

Maintained by Simmons College and Harvard University

ELEVENTH YEAR, 1914-15 18 Somerset St., Boston, Mass.

For study and training in social service; to men and women; for paid or volunteer work.

FIRST YEAR PROGRAMME begins September 23—A desirable preparation for any form of social service. SECOND YEAR PROGRAMME begins September 9—For further study and training in a selected field. Boston offers exceptional opportunities for practice work. Send for the 1914 Bulletin, and the circulars describing advanced courses offered—Organizing Charity, Children's Work, Medical-Social Service, Neighborhood and Community Work.

[illegible] NO EXTRAS.

THE HEADMASTER, Box 724, Lancaster, Pa.

Few, if any, of our readers do any business with a minor class of foreign companies, not admitted, but which accommodate owners of exceedingly large values by carrying what are known in the business as "surplus lines." These insurants are able to take care of themselves and proceed under the doctrine of *caveat emptor*.

There is also another class of foreign companies, legally admittted and maintaining United States branches and independent American funds. These confine their activities to reinsuring the excess lines of the direct writing companies. Their services are utilized by American and foreign companies alike. The latter will, of course, see that the security they accept is in every respect adequate.

POSTAL'S NEW POLICIES

In our article on the Postal Life Insurance Company, several weeks ago, we said it was reasonable to presume that to the extent it could do so, the company was taking up the policies of the Mutual Reserve, the Economic and the Provident Savings Life, the three companies reinsured by it.

We are advised by President Malone of the Postal Life that the company is not doing so and that it has never sought to make such substitutions. He continues:

"From every standpoint there would be no advantage in doing this, but a distinct disadvantage. For instance, the low mortality of the non-agency group might thereby be increased, which would be a decided unfairness to such policyholders. Furthermore, such a method of shifting the reinsured business would be an injustice to agents of the reinsured company whose contracts entitle them to renewal commissions; the Postal does not resort to such practises to secure 'new' business which in fact would not be new. Agents of reinsured companies will tell you the Postal is maintaining the integrity of their contracts."

The fact is of no great consequence and our observation was in no sense a criticism.

Since our original article was written the New York Insurance Department life insurance report has been received, and we are enabled to supply the number of new policies issued in 1913 and the total number in force at the end of the year. The number issued was 1563; number in force at end of year, 23,673.

The Insurance Club of Barcelona, Spain, has invited the World's Insurance Congress (which holds its first meeting at San Francisco in 1915) to hold its 1917 session at Barcelona.

There is a movement under way to amalgamate three accident underwriters' associations—the Detroit Conference, the American Association of Accident Underwriters and the National Mutual Union. A conference on the subject will be held at Atlantic City September 9-11, perhaps followed by the first annual convention of the consolidated bodies.

TRAINING SCHOOL FOR THE LIBERAL MINISTRY

including special courses to meet the growing demand for *Parish Assistants* and *Sunday School Directors*. Open to men and women. Modern, undogmatic, scholarly, practical. Liberal Scholarship provisions, including TWO SUMMER SESSIONS at CHICAGO UNIVERSITY. Traveling fellowship yielding $810. Apply to F. C. SOUTHWORTH, President.

MEADVILLE THEOLOGICAL SCHOOL,
Meadville, Pennsylvania.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,219,045,826.00
Received premiums thereon to the extent of	282,298,429 80
Paid losses during that period	141,567,550.30
Issued certificates of profits to dealers	89,740,400.00
Of which there have been redeemed	82,497,340.00
Leaving outstanding at present time	7,243,060.00
Interest paid on certificates amounts to	22,585,640.25
On December 31, 1913, the assets of the company amounted to	13,259,024.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

"Hello, Agin"

TENEMENT TOMMY

Tommy Asks for A Square Deal

HE lives in New York's stuffy tenement district, the most congested spot in America.

No trees. no grass, not even a whiff of fresh air,—in the only world Tommy knows. Ash cans are his background, and the rattle and roar of traffic his environment.

Tommy's widowed mother is broken with worry; his sisters and brothers are as pallid and frail as he. The winter struggle has sapped their vitality.

They need to breathe something pure and fresh,—a taste of sunshine and outdoor freedom,—an outing in the country or at the seashore.

But between Tommy and his needs stands poverty, the result of misfortune. He must suffer just as if it were all his fault.

And that is why Tommy appeals for a square deal. Nor does he wish you to forget his mother, or his "pals" and their mothers,—all in the same plight.

This Association every summer sends thousands of "Tenement Tommies", mothers and babies to the country and to Sea Breeze, its fresh air home at Coney Island. A dollar bill, a five dollar check, or any amount you care to contribute, will help us to answer Tommy's appeal.

Send contributions to Robert Shaw Minturn, Treasurer, Room 200, 105 East 22nd Street, New York City.

SUGGESTIONS

A lawn sociable by your class, Sunday School or Club.

A card party at your summer hotel or camp.

A subscription among your friends.

CALENDAR

The National Star-Spangled Banner Centennial, commemorating the successful defense of Baltimore at North Point and Fort McHenry, and the writing of the national anthem, will be held at Baltimore, *September 6* to *13*.

The annual conference of the International Law Association will be held at The Hague in the Palace of Peace from *September 7* to *12*.

At Denver, Colorado, on *September 8* and *9*, will be held the eighth annual conference on taxation, in charge of the National Tax Association.

The Baltic Exhibition at Malmö, Sweden, to which Swedish, German, Danish and Russian exhibits have been sent, is open until *September 15*.

World's Temperance Sunday will be observed on *November 8* in most of the states. In some states it will be *November 1* and in Ohio *September 20*.

A tuberculosis census of the churches of the country will be taken in *September* and *October* under the direction of The National Association for the Study and Prevention of Tuberculosis.

At Leipzig an International Exhibition for the Book Industry and the Graphic Arts is scheduled to remain open until *October 1914*.

The United Typothetæ and Franklin Clubs of America will hold their twenty-eighth annual convention in New York *October 6, 7* and *8*.

The Society of American Indians, the largest organization of native Americans in the United States, will hold its annual conference at Madison, Wis., from *October 6* to *11*.

The annual convention of the American Bankers' Association will be held in Richmond, Virginia, *October 12* to *17*.

The American Bar Association will hold its annual meeting on *October 20, 21* and *22*, at Washington. There will be addresses by William Howard Taft, president of the association; Senator Root, the Ambassador from Argentina, and Sir Charles Fitzpatrick, Chief Justice of Canada.

The annual meeting of the Association of Colleges and Secondary Schools of the Southern States will be held at the University of Virginia *October 22* and *23*.

On May 17, 1814, Norway adopted a Constitution as a free and independent kingdom, having just been released from Danish control. To commemorate this event a Centennial Exposition is being held at Christiania until *October 15*.

A Colonial Exhibition at Samarang, Java, will continue to *November, 1914*. It is to "give a comprehensive picture of the Dutch Indies in their present prosperous condition attained since the restoration of Dutch rule in 1814."

The seven hundredth anniversary of the birth of Roger Bacon will be observed at Columbia with commemorative exercizes and the publication of a volume of studies. A great pageant of the culture of the thirteenth century will be given on *November 4*.

Barnard College, in Columbia University, will celebrate its twenty-fifth anniversary on *November 5*.

The annual convention of the National Suffrage Association will be held at Nashville, *November 12* to *17*.

The sixth annual Medical Missionary Conference will be held at Battle Creek, Michigan, *November 17-20*.

The Intercollegiate Prohibition Association will hold its national convention in Topeka, Kansas—the prohibition capital of the nation—*December 29* to *January 4*.

The fifth International Congress of the American Republics will hold its opening session on *November 29* at Santiago, Chile. It will be in session for several weeks, adjourning about New Year's, 1915.

Between *March 4* and *April 15, 1915*, a monster naval parade from Hampton Roads to San Francisco via Panama will mark the formal opening of the Canal.

The general session of the Woman's Congress of Missions is to be held during the first week in *June, 1915*, in the new Civic Auditorium of San Francisco.

The International Congress on Alcoholism will be held in Atlantic City in *July, 1915*. Delegates from forty nations are expected to attend.

The biennial convention of the Anti-Saloon League of America will be held at Atlantic City, New Jersey, from *July 6* to *10, 1915*. It is expected that 30,000 will attend.

The Royal Historical Society of England is beginning preparations to celebrate the seven hundredth anniversary of the grant of magna charta, on *June 15, 1915*.

Paul Thompson

THE IMPERIAL GERMAN AMBASSADOR: COUNT J. H. VON BERNSTORFF

AN ARTICLE BY COUNT VON BERNSTORFF
ON "GERMANY AND THE GREAT WAR"
WILL BE FOUND ON ANOTHER PAGE

The Independent

VOLUME 79 MONDAY, SEPTEMBER 7, 1914 NUMBER 3430

BRITAIN'S ENTRANCE INTO THE GREAT WAR

ON another page Mr. Sydney Brooks, the London representative of The Independent, describes vividly the state of mind of the British people as they enter upon the Great War. Serenely confident of the righteousness of their cause they are silent, united, determined. A careful reading of the White Paper issued by the British Government and containing all the correspondence that past between the British Foreign Office and the Chancellories of Europe prior to England's declaration of war on August 4, reveals what a sure foundation it is that the British people have for their confidence.

From the first note of Sir Edward Grey to the British Ambassador at Berlin on July 20 to the final telegram to the same official on August 4 instructing him in effect to announce a declaration of war the British activities were upon the highest plane of international honor, disinterested friendliness and unimpeachable sincerity. Every communication from the British Foreign Office is infused with reasonableness and an earnest desire for peace.

In his first conversation with the German Ambassador Sir Edward Grey offered the invaluable suggestion that "the more Austria could keep her demand within reasonable limits, and the stronger the justification she could produce for making any demand, the more chance there would be of smoothing things over." From the first the British Minister urged that Austria should modify the strict time limit of forty-eight hours which she had imposed upon Servia for the reply to her ultimatum. But Austria would neither relax her demands in the slightest degree nor give Servia a minute more of time in which to meet them. Nor could Germany in any way be induced to exercize her influence at Vienna.

When his efforts for an extension of time were fruitless Sir Edward Grey urged again and again in every capital in Europe that representatives of the four governments least involved, Germany, Italy, France and Great Britain, should meet in conference in order to see if a peaceful way out could not be found. Again his efforts failed, for Germany and Austria held firm to their position that Austria's ultimatum to Servia was a question for those two nations alone, in which the other powers could have no word to say. Chancellor von Bethmann-Hollweg's persistent reply to Sir Edward Grey was that to preserve the peace of Europe Great Britain should join with Germany in efforts to "localize" the war.

Again and again Great Britain was urged by Russia and France to declare that she would support them if war broke out. But to the last Sir Edward Grey, with fine persistence, kept his country free from any entangling commitments, while at the same time warning Germany that circumstances might arise in which Great Britain could no longer hold aloof.

With infinite patience and great skill Sir Edward Grey sought day after day to find a road by which the great powers might avoid the awful recourse of war. There was no assertion that either side or any nation was right in the original premises, no insistence that anybody do anything but take time to talk things over quietly and reasonably and try to find a way out. A remark of Sir Edward Grey to the Austrian Ambassador early in the diplomatic proceedings is indicative of the spirit in which Sir Edward approached the critical situation. Count Mensdorff had declared that "all would depend upon Russia." The British Minster replied that "in a time of difficulties such as this, it was just as true to say that it required two to keep the peace as it was to say, ordinarily, that it took two to make a quarrel."

When it came to the last and Great Britain found no way of honor before her save that of war it was for the splendid cause of neutrality and loyalty to a weaker nation that she found herself impelled to enter the conflict. The final word that went from Sir Edward Grey to the British Ambassador at Berlin for transmission to the German Government must ever be an inspiring one for the British people to remember, "His Majesty's Government feel bound to take all steps in their power to uphold the neutrality of Belgium and the observance of a treaty to which Germany is as much a party as ourselves."

No nation could have done more than England to ward off the Great War. No man could have done more than Sir Edward Grey to preserve the peace of Europe. If the same spirit had animated all the Chancellories of Europe, there would have been no war. Germany has been loud in her condemnation of England for joining the Allies against her, but if the German Chancellory had been the least bit conciliatory on its part, Germany today might find herself at peace.

As late as July 31 Sir Edward said to the German Ambassador that "if Germany could get any reasonable proposal put forward which made it clear that Germany and Austria were striving to preserve European peace, and that Russia and France would be unreasonable if they rejected it, I would support it at St. Petersburg and Paris, and go the length of saying that if Russia and France would not accept it His Majesty's Government would have nothing more to do with the consequences." But he then added that if, under any other circumstances France became involved, Great Britain would be drawn in.

CIVILIZED WARFARE AND BARBAROUS

WAR is a denial of civilization. Nevertheless there is civilized warfare and barbarous warfare. The civilized nations of the world have agreed upon certain rules which they will observe when they are fighting each other. They are pledged to play the cruel game of war according to the rules of the game, to make war no more horrible than it must inevitably be. Like the prize ring, war has its ethics. And he who strikes below the belt is and ought to be an outlaw.

In dealing with Belgium, Germany has struck below the belt. She has made barbarous warfare upon the intrepid little country that resented with arms the perfidious violation of her neutrality.

The dropping of explosive bombs upon an enemy's city is not civilized warfare, it is barbarism. At the Second Hague Conference a declaration prohibiting the discharge of explosives from airships was adopted by the vote of twenty-eight nations, eight nations voting against the prohibition and seven refraining from voting at all. It is true that Germany, in company with France and Russia, was among the eight nations who voted against the prohibition. Germany, therefore, is not bound by her given word to refrain from the act which she has committed at Antwerp. But she should have been bound by the public opinion of the world. By two to one the nations had declared against the use of the air for the bombardment of cities. Even Germany's ally, Austria-Hungary, had recorded herself against the practise. And now we believe that the whole world outside of Germany and Austria stands aghast at the killing and wounding of a score of defenseless men and women by a rain of fire from the sky.

If additional basis for an indictment against Germany were sought, it might be found in the provision of the Hague Treaty, which she did sign, declaring that before a bombardment is begun, the officer in command of an attacking force must "do all in his power to warn the authorities." No warning was given at Antwerp; the bombs fell like a bolt from the blue.

But the indictment which the best opinion of the world has drawn against Germany does not depend for its weight upon any written covenant. It is based upon the essential difference between civilization and barbarism.

War is by its very nature cruel. But barbarism is needlessly, wantonly cruel.

The sacking of the Belgian city of Louvain and the wholesale killing of its inhabitants is no less barbarous. It is contended by the Germans that citizens of Louvain, not soldiers, had fired upon the German forces occupying the town. This is contrary to the rules of war. Only soldiers, uniformed and carrying arms openly and commanded by a responsible officer, may fight.

But even if citizens of the town did violate this fundamental rule, their action affords no justification for wholesale killing, wholesale destruction, wholesale pillage. Individual non-combatants who treacherously take up arms against an enemy render themselves liable to be killed without delay or warning. But their acts cannot render their community liable to extinction. Article 50 of the Hague Treaty declares that "no general penalty . . . shall be inflicted upon the population on account of the acts of individuals for which they can not be regarded as jointly and severally responsible." Article 47 declares that "pillage is formally forbidden." Against both these prohibitions the Germans have offended at Louvain. They have offended against civilization.

WHY THEY WENT TO WAR

THE British and German White Papers, giving the diplomatic correspondence that preceded the war, have been made public. From these it appears that the various nations involved went to war for the following reasons (accepting each nation's statement of its own case):

Austria. Because Servia would not permit Austrian officials to take part in investigations in Servia into the responsibility of Servians for the murder of the Austrian Crown Prince and Princess.

Servia. Because upon her refusal to accede to this demand of Austria on the ground that she would be sacrificing her own sovereignty, and in spite of her proposal to leave the matter to arbitration, Austria attacked her.

Russia. Because Austria was making war upon Servia.

Germany. Because Russia declined to cease mobilizing her army—a mobilization which Germany believed was directed at herself as well as at her ally Austria.

France. Because her ally Russia was attacked by Germany.

Belgium. Because her neutral territory, whose neutrality was guaranteed by a treaty signed by Germany, was invaded by German arms.

England. Because Germany had violated the treaty guaranteeing the neutrality of Belgium, of which both Germany and England were signers.

Japan. Because her treaty with England bound her to join with England when the peace of the Far East was threatened.

The impartial historian will some day know how to apportion the final responsibility for the Great War among the nations that entered it. We now merely report what each nation has to say for itself.

RUSSIA IN THE ALLIANCE

BEYOND all denial it is a curious alliance, this of despotic, tyrannous Russia with free, popularly governed France and England. It is plain that it is not popular sympathy that has created the alliance, but some temporary danger. What the reason is everybody knows. France and Russia both feared Germany, and Russia wanted French money for development, and so they came together. Later Great Britain was afraid of Germany, and so she joined the two strange partners. They will hold together as long as the outside necessity is supposed to last, and then they will fall apart, if occasion offers.

And yet we may say a good word for Russia. Russia is the unknown factor in European history, because she has no past to be worth the recording, but has a tremendous future before her. She has had a mighty mass of ignorant serfs, disunited, having no cohesion because no education and no intercommunication, and so no public sentiment. Such a people, if governed at all, are to be governed by an autocracy. The Russian governing

autocracy has had two aims—one to maintain itself by holding the people down, and the other to expand its territory, as if bulk made strength.

If we look at the past or the present of Russia there is little in her to make her a fit ally to the highly civilized empires of Great Britain and France. But we will do well to look forward a generation or two. The forward pressure of education cannot be resisted. The forward flow of civilization cannot be dammed; and the Russian people give fine promise of genius and independence. We must not judge of Russia by her throne and her pogroms, her Jewish pales and the persecutions of her sects. It is the people we must judge her by, her splendid novelists, her Tolstoys and Turgeniefs, her broad statesmen like Witte, her brave sons who have dared persecution and death, and the youth in her universities, who, with their teachers, have seen the vision of a new and free Russia which shall, as in the vision which in his youth Prince Ito saw of Japan, select and unite out of the civilizations of all nations those elements which shall create in free Russia the noblest nation in the world. And why not? Russia is in territory the greatest nation on earth. She holds half of Europe and a full third of Asia, all compact, with no outlying colonies. She owns well nigh half of the world's North Temperate Zone, the most fruitful region for the production of an energetic and ruling population. Her people are of various races, tolerant of each other, good mixers; and another century is likely to see them stand well in the forefront of intellectual culture and political power.

But why do we speak of political power? The day is fast passing when it will be the ambition of nations to exercize political power over their own citizens or over other nations. We are not looking forward to a Czar-dominated nation, but to a nation ruled by its own Duma, with a hundred smaller dumas governing limited territories, as we have nigh fifty legislatures and one Congress; and our Congress, not set to rule the people, but to help the people rule themselves. We are thinking of the time wished for in the old French song:

> If I were King of France,
> Or, what's better, Pope of Rome,
> I'd have no fighting men abroad,
> No weeping maids at home.
> All the world should be at peace,
> And if kings must show their spite,
> Let those that make the battles be
> The only ones to fight.

Russia will not, cannot dominate Europe. The victory of the three allies in this bitter war will leave her comparatively unharmed, but mightily influenced by her relation to the two free nations which she has aided. The defeat of Germany and Austria will be the defeat of absolutism, even of Russian absolutism. Liberty will rule Russia also, and there will be no more persecution of Jews or Christians. It is absurd to imagine that the fellowship in this war of Slav with Frank and Briton will send Cossacks galloping with brandished knouts all over Europe. It is far more likely that Siberia will cease to be thought of as the dismal prison of political convicts, and its old shame will be forgotten, as is that of the days of penal servitude in the now proud commonwealth of Australia. We are glad to see tyrannous, Czar-ruled, Church-ridden, blundering Russia awakened to seek the counsel and join fortunes with the freest and most enlightened nations of Europe.

THE NEW THEORY OF EVOLUTION

THE British Association for the Advancement of Science, fortunately meeting this year at the antipodes of the center of war, has had presented to it by its president a novel theory of evolution that is in some respects the direct opposite of that we have learned from Darwin and Spencer. Darwin assumed as the basis of his theory of descent the tendency of every species to slight spontaneous variation in all possible ways and declared that these variations were inheritable and so could accumulate and become established thru natural selection. Spencer taught that evolution was progress from the simple to the complex, from the homogeneous to the heterogeneous.

But now Professor William Bateson, in his opening address to the British Association at Melbourne, challenges both these fundamental assumptions. He questions whether there is any experimental evidence to support the belief "that variation in the old sense is a genuine occurrence at all" and whether it is possible in any case to produce modifications in a species by changes in climate or conditions of life. It is true that the creation of a new species—which Darwin's opponents asserted to be impossible—is now a common laboratory experiment. New plants and animals, breeding true, are being "made to order" right along to suit the needs of mankind or the caprices of fashion. But these new species are produced by the use of Mendel's principle instead of Darwin's, that is, by the crossing of species having severally the desired characteristics and not by the gradual accumulation of minute accidental variations. But all the peculiarities combined in the new species pre-existed in some of the ancestors, altho they may have been suppressed in the parents by the presence of some inhibiting factor. By the redistribution of the inherited elements effected by the cross-fertilization it may happen that in some of the progeny the determinant causing a certain quality, such as color in a flower, or horns in an animal or musical genius in a man, will be freed from its restraining factor and so attain a novel and striking development. That is to say, the variation is not due to the addition of a new factor, but to the elimination of one previously present. The course of evolution, according to this view, has, then, been in the direction of increasing simplicity rather than complexity, and so is contrary to the Spencerian formula.

Professor Bateson doubts whether there is any case of the origin of species that should not be thus explained by division instead of multiplication. For instance, the wild crabapple, he believes, contained hidden within it all the wide variety of size, form and flavor manifested in the cultivated apples which have been produced from it by the successive elimination of the inhibiting elements present in the original crab. He extends the theory also to the higher powers of the psychic life of man and says:

> I have confidence that the artistic gifts of mankind will prove to be due, not to something added to the make-up of an ordinary man, but to the absence of factors which in the normal person inhibit the development of these gifts. They are almost beyond doubt to be looked upon as releases of powers normally suppressed. The instrument is there, but it is "stopped down."

In concluding his address, Professor Bateson said:

> The outcome, as you will have seen, is negative, destroying much that till lately past for gospel. Destruction may

useful, but it is a low kind of work. We are just about where Boyle was in the seventeenth century. We can dispose of alchemy, but we cannot make more than a quasi-chemistry. We are awaiting our Priestley and our Mendeleeff.

In truth, it is not these wider aspects of genetics that are at present our chief concern. They will come in their time. The great advances of science are made like those of evolution, not by imperceptible mass-improvement, but by the sporadic birth of penetrative genius. The journeymen follow after him, widening and clearing up, as we are doing along the track that Mendel found.

The old evolution of Darwin is gone; the new evolution—of whom?—has not yet come. But the fundamental fact of evolution is only established more firmly by every new discovery.

THE FRINGES OF THE PATENT MONOPOLY

THE Senate has added to the Clayton Anti-Trust bill a provision for denying to the owners of patents the broad privileges now afforded to them. The decision of the Supreme Court in the mimeograph case declared that the owner of a patent is within his rights when he compels the purchaser of the patented article to use with it only materials purchased from the patentee, even tho the materials themselves are not patented. The manufacturers of the mimeograph, for instance, compel the owners of mimeographs to use with the machine only ink made by them. In this practise the Supreme Court upheld them.

This practise the amendment to the Clayton bill would prohibit.

It is a wise prohibition. There is such a thing as making the patent monopoly too broad. The purpose of the patent law is to encourage invention and to ensure the inventor the reward of his skill by granting him for a term of years a monopoly over his invention. It is framed not only in the private interest of the inventor, but in the public interest. It is for the general good that invention should be encouraged.

But when the patent monopoly is stretched to cover unpatented articles the advantage to the public disappears. The makers of sanitary enameled iron ware attempted in one way to stretch it and their endeavors were peremptorily stopped by the decision in the Bath Tub case. Other manufacturers have stretched it in other ways and their attempts have been upheld by the Supreme Court. It is right and expedient that the inventor should be assured a special profit from the product of his genius. It is neither right nor expedient that to it should be added other special profit from things with whose invention or discovery he has had nothing whatever to do.

VERTICAL AND HORIZONTAL TRANSIT

A CERTAIN town in New York state contains seven thousand people. They live mostly in separate houses of one or two stories which are scattered over a considerable area; so in order that they may get from one part of the town to another electric cars are run. For this service the people pay five cents a trip.

A certain building in New York City contains seven thousand people. They occupy offices arranged in layers one above another to the hight of 750 feet. In order to get from one to another of the fifty-one stories there are run electric cars known as elevators or lifts and this service is free to the people who occupy the building and their more numerous visitors. They can ride up and down as often as they please. Some of the offices have hundreds of visitors a day, others but few, so it would seem a fairer arrangement to make every passenger pay as he enters, say a cent a trip, or use the stairs. But the tenants would all rebel at such a system even tho it would relieve their rent of the expense of the service. They prefer to pay for the elevators collectively because it promotes business and gives them all an equal chance whichever floor they are on. The notion of an individualistic pay-as-you-go elevator service seems very funny when we think of it.

On the other hand the idea of an individualistic street-car service does not seem funny at all—until we think of it. When we do we cannot help wondering why it might not pay a town corporation to run its cars on the same system as the building corporation runs its elevators, that is, to regard it as a community obligation to provide transit facilities free of charge to all the inhabitants and strangers whenever they want to ride, just as sidewalks, street lights and drinking water are furnished free.

But obviously there is a great difference between the two cases. In one case the movement is vertical. In the other it is horizontal.

THE ACUTE NEED OF RED CROSS AID

MAJOR LOUIS LIVINGSTON SEAMAN, The Independent's representative at the front, cables an urgent appeal for Red Cross contributions, Red Cross supplies and Red Cross nurses.

The Hamburg-American liner "Hamburg" has been chartered to carry a Red Cross expedition of surgeons, nurses and hospital supplies for the relief of the suffering on the battlefields of the warring nations.

The horrors of the contest have been largely veiled thus far by the unexampled severity of the military censorship. But it is doubtless true that no tragedy so appalling has called for aid since the Geneva Conference of fifty years ago.

The Independent is receiving daily replies to its appeal for Red Cross contributions, all of which are forwarded at once to Hon. Jacob H. Schiff, Treasurer of the New York Fund.

To each contributor whose gift is two dollars or more The Independent is authorized to send a Certificate of Membership in the American Red Cross for the current year, and will also send at its own expense a Red Cross button in red and white enamel.

There is no distinction of nationality in the work of the Red Cross. The wounded of all nations are equally regarded.

Every man and woman who reads this issue of The Independent may join the Red Cross, and help on the work of mercy by wearing the Red Cross button, by contributing two dollars or more to the Red Cross Relief Fund.

Why not do it today?

THE GREAT WAR

WE are glad to see that two great English weeklies, the *Graphic* and the *Illustrated London News*, agree with the Independent that the name of this war is The Great War.

There has been no collusion between us. The name was arrived at entirely independently on both sides of the water. How could it be otherwise?

The name sprang, not from any one's invention or ingenuity, but out of the logic of events.

THE STORY OF THE WEEK

Fulfilling German Military Predictions

Too hasty were the judgments of those prophets who saw in the German delays at Liège and the heroic resistance of the Belgians the breakdown of the German military machine and the failure of its much-vaunted power of rapid and forceful attack. If the events of the past week are to be taken as a basis, not only must it be granted that the machine is in thoro working order, but that it is in a fair way of fulfilling all the predictions of its makers.

As rapidly as last week saw the German legions pushing their way thru Belgium, this week has seen their uninterrupted advance thru northern France. Gradually they have pushed the allied French, English, and Belgian armies before them back toward Paris, tho at tremendous cost. On Sunday, August 23, the British, holding the French left, were fighting at Mons, outside the French frontier; a week later they were before La Fere, only eighty-five miles from Paris.

But despite the success of this advance, the Germans have failed to achieve the one thing which each day makes increasingly urgent: they have failed to administer a decisive defeat to the Allies. Only in such a way can they detach a part of their armies to meet the Russians who each day are penetrating further into Prussia. With terrible energy and courage the German regiments have been thrown in assault after assault upon the Allies' lines in efforts to pierce them, but so far apparently without result, despite Berlin's claims of success.

Successful in every other respect, the one failure of the German plans has been in their time schedule. Like Frederick the Great, it was necessary for the Kaiser to crush the Allies singly, before they could join their forces in action against him. France crippled with a quick and smashing defeat, Germany could then turn to meet the Russian invader. This plan has failed because of the unexpected resistance in Belgium and the Fabian policy of the Allies. Germany, as a result, has lost no less than two weeks of precious time.

In a word, then, while Germany finds herself forty-five miles within the French frontier and only eighty-five miles from Paris, she still has before not only the entire forces of the Allies, as yet not decisively defeated, but there remains to be encountered a formidable second line of French defenses in the forts of Amiens-La Fere-Laon-Rheims. From Antwerp, where there is an effective force of nearly 200,000 men, she faces also the possibility of a strong flank attack by the Belgians. Thus, at a time when her army is most urgently needed to oppose the Russian advance beyond the Vistula, which they have already reached, there are still these obstacles to surmount, and Germany, with some degree of truth, finds herself, in the picturesque words of the French War Of-

THE GREAT WAR

August 25—Germans capture five Namur forts. French and British massed near Givet. French abandon Alsace campaign. Austria declares war on Japan. Zeppelin bombs fall in Antwerp.

August 26—French Ministry resigns and coalition cabinet formed on war lines. Allied forces withdraw to St. Die. Russians sweep over East Prussia.

August 27—German army, led by the Crown Prince, captures Longwy. All Namur forts captured. British cruiser "High Flyer" sinks "Kaiser Wilhelm der Grosse" off coast of West Africa.

August 28—British fleet sinks two German cruisers and two torpedo boat destroyers off Heligoland. Germans burn and sack city of Louvain, Belgium. British defeated at Maubeuge. Russians reach Allenstein. British marines land at Ostend.

August 29—Left flank of Allies repulsed at St. Guentin. Germans march on La Fere, in the second line of French defenses. Paris prepares for siege. Germans report repulse of Russians, but the report is denied at St. Petersburg.

August 30—German right wing continues advance. German aeroplane flies over Paris. France calls out 1914 reserves. Czar's forces advance to the Vistula, bombarding Thorn and Graudenz.

August 31—Allies again fall back before German advance. Germans report capture of 30,000 Russians. Another aeroplane flies over Paris.

THE BRITISH LANDING AT BOULOGNE

About 125,000 men, under the command of Sir John French, are aiding the Allies

fice, in the position of the "nut between the two bars of the cracker."

The German Advance on France

Were it not for the detracting elements mentioned above, the German success in France might be called complete, and such in a large measure it is. With the exception of two slight engagements favoring the French—slight in the scale of the general operations—the Germans have been uniformly victorious.

This success has been largely due to the strength of the turning movement on the left flank of the allied armies. It was a maxim of the elder von Moltke never to make a frontal attack when he could get around the flanks of the enemy, and it was on such strategy that the campaign of 1870 was so brilliantly won. From Brussels, this enveloping force, estimated at 600,000 men, swept west, threatening Ostend and Dunkirk to such an extent that on August 27 British marines were landed at the former place; next its advance caused the evacuation of Lille and Boulogne, and the retirement of the Allies to the Amiens-La Fere line.

On the British, holding the left flank, fell the brunt of this attack, and the report of Field Marshal Sir John French, issued from the War Office on Sunday, says that for four days they were engaged in a constant struggle. The German objective was to get between the Allies and Paris, and thus cut off their retreat. They would thus be brought into the same position as the French at Sedan and would suffer a like fate. So confident were the Germans of the success of this movement that on Friday, August 28, a wireless message announced its accomplishment at Maubeuge, but according to the British War Office the catastrophe was prevented by the coolness and orderly retreat of the British.

"On Monday, the 24th," says the report of Sir John French, "the Germans made a vigorous effort in superior numbers to prevent the safe withdrawal of the British army and to drive it into the fortress at Maubeuge. This effort was frustrated by the steadiness and skill with which the British retirement was conducted, and, as on the previous day, very heavy losses, far in excess of anything suffered by us, were inflicted upon the enemy, who in dense formation and enormous masses marched forward again and yet again to storm the British lines."

Desperation of the German Attack

There is no mistaking the determined and desperate character of the German attempt to thus administer a crushing defeat to the Allies. The losses of the Germans have been staggering, estimated in London at more than 60,000 killed and 150,000 wounded, or five to one to the losses of the Allies. The British losses in the four days of fighting were estimated by Sir John French at between 5000 and 6000 men. Beyond human endurance was the continuation of such an attack, and from Thursday to Monday, the 31st, the German offensive rested, giving the Allies a chance to bring up reinforcements under General Pau from the fruitless invasion of Alsace to strengthen their position. As this is written, it is evident that the German attack is again under way, and that a continuance of the enveloping movement in the vicinity of Amiens may cause the abandonment of the last line of forts, and again compel the retirement of the Allies, this time upon Paris itself.

Such have been the operations in the north. In the south, Longwy, after a heroic defense of twenty-four days, was captured by the army of Crown Prince Wilhelm on August 27. More than half the garrison had been killed in the siege and not a gun remained in operation.

In general, however, the French right and center have held their own against the German attacks. Indeed, a slight offensive has been attempted against the German left, but not with sufficient success to weaken the pressure on the Allies' own left.

The Germans burnt and sacked Louvain, one of the oldest and most picturesque cities in Europe, on August 28, alleging that civilians had fired on the troops. The son of the burgomaster of the city is said to have shot the German commandant of the city and that this was a signal for a general rising of the citizens against the Germans.

Similar in atrocity, according to the Allies' point of view, to the burn-

RESPONDING TO THE CALL OF THE MOTHER COUNTRY

Canada, from whence this picture comes, is sending 30,000 troops to the Continent. Australia, New Zealand and South Africa also are ready with men and supplies. Troops from India, as Lord Kitchener announced to Parliament, are already on the way to France

THE CRESTS OF THE GERMAN AND RUSSIAN WAVES OF INVASION

Beginning on August 3, when the Germans began the invasion of Belgium, the Kaiser's armies in almost a continuous battle have fought their way to within eighty miles of Paris. The Russian movement began on August 17 and except at Gumbinnen, their progress toward the Vistula has been almost unopposed

ing of Louvain, was the bombarding of Antwerp from a Zeppelin on the night of August 24. Ten non-combatants, most of them women and children, were killed by the bombs which are said to have been aimed at the Royal Palace but fell wide of their mark. More than 700 houses were injured. A Belgian commission has left Antwerp to lay the German outrages before President Wilson.

Russia Invades Prussia

No less startling than the German advance in France has been the rapidity with which the huge Russian army has been mobilized and begun its invasion of the Kaiser's empire. According to the accepted views of military experts Russia's army was not to be expected to take the field for at least a month. August 26 was set as the earliest possible date for her offensive movement to begin, yet fully two weeks in advance of that time the Czar's legions began to move and August 26, instead, found them inside both the German and Austrian frontiers.

On August 20 at Gumbinnen, in East Prussia, the Russians encountered and defeated three German army corps. August 21 found them at Goldapp and Arys, the 22d at Darkehmen, Johannisburg, Ortelsburg and Villinburg; on the 23d they took Soldau and Neipenburg, and the end of the week saw them investing the fortresses of Thorn, Koenigsburg and Grandenz in Prussia and advancing on Lemburg in Austrian Galicia. They are thus brought to the Vistula River, along which Germany has constructed enormous defenses to bar the way to Berlin. What the Meuse is to France, the Vistula is to Prussia.

While most of Eastern Prussia has thus been occupied and the Czar's forces brought within two hundred miles of Berlin, the Russian plan of operation, other than in a general way, has not yet disclosed itself. A double offensive against Germany and Austria is shown, which Austria tried to break up by an ineffective invasion of Poland, while the movement against Thorn and Posen indicates that the Russians are attempting to imitate the German flanking movement by passing around the Vistula rather than over it. The Czar is reported to be using four armies of two million men each against Germany and Austria, but conservative estimates place the Russian effective force at about half that number. No German army in any force as yet has been encountered, Germany having concentrated practically her entire army against France, leaving probably not more than five corps with the reserves to oppose the Russian advance. For strategic reasons it is imperative that the Russians be met east of the Vistula, and to free her armies for this purpose Germany has made supreme efforts to crush the French. Already Belgium is reported as having been

New York World

THE BEAR THAT WALKS LIKE A MAN

London Punch

BRAVO, BELGIUM!

stripped of troops, who have been sent east to oppose the invader. The garrison of Brussels is said to have been reduced to scarcely more than 300 men, while the German communications are reported to be practically unguarded. It is to this Russian menace that the Allies in France are looking to relieve the tremendous pressure which, applied unremittingly for ten days, has gradually forced them back on Paris. Each day's delay, therefore, is counted as an Allies' advantage.

England Sinks Five German Ships

If Germany's fleet does not come out to fight, the British battleships will go in after it seems to be England's determination as drawn from the engagement of August 28, when off Heligoland a battle-cruiser squadron and destroyers under the command of Rear Admiral Sir David Beatty attacked a German cruiser squadron and destroyers and in an eight-hour action sunk two cruisers and two destroyers and left a third cruiser in flames and in a sinking condition. Except for slight injuries to one cruiser and one destroyer the British warships escaped practically uninjured.

Taking advantage of an early morning fog the light cruiser "Fearless" slipped into the Bight of Heligoland with the purpose of reconnoitering and drawing out, if possible, the German fleet. Four German cruisers and destroyers pursued her until they fell into the trap of the waiting British cruisers and destroyers. The British then pursued in turn, with apparent disregard of the mine-strewn waters of the Bight. The "Mainz" and another cruiser of the "Kohn" class, believed to be the "Ariadne," were sunk almost immediately, and a third set on fire. The total British loss was twenty-nine men.

Rear Admiral Sir David Beatty is the youngest admiral in the Royal Navy and has seen service in both Egypt and China, and his most remarkable achievement was in getting gunboats over the cataracts of the Nile to aid Kitchener. Sir David's wife is an American woman, Miss Ethel Field, the daughter of the late Marshall Field of Chicago.

The German armed merchant cruiser "Kaiser Wilhelm der Grosse," formerly of the North German Lloyd and a sister-ship to the "Kronprinzessin Cecelie," the treasure ship at Bar Harbor, Maine, has been sunk off the west coast of Africa by the British cruiser "Highflyer," according to the announcement of Winston Spencer Churchill, First Lord of the Admiralty, to the Commons on Thursday, August 27. The "Kaiser Wilhelm" was formerly in the New York service, was of 14,000 tons displacement and cost between $3,000,000 and $4,000,000. At least three British steamers are reported to have been captured or sunk by her before the "Highflyer" found her.

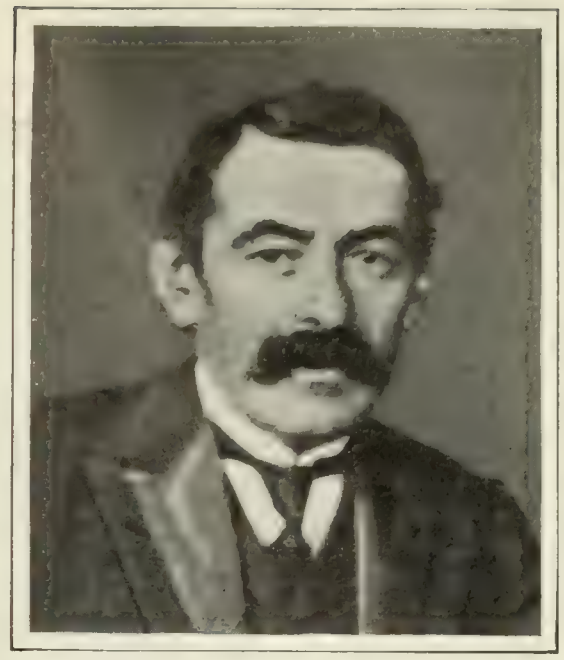
UNITED AGAINST A COMMON FOE

The picture shows a Belgian maid offering water to a French lancer. Everywhere in Belgium the French were welcomed as deliverers, just as the French at Boulogne hailed the English

French Ministry Resigns



On the very day that the Germans announced their successes at Longwy and against the Allies in the north, Premier Viviani announced the resignation of the Ministry and the formation of a new cabinet in Paris to conduct the defense of the Republic.

At 10:15 p. m. on Wednesday night, August 26, the Premier announced the resignation to President Poincaré, and within an hour the new Cabinet was accepted. As in Belgium and England all parties are cooperating in the work of the Government during the crisis, so the new Ministry included besides Premier Viviani, who retains his post, statesmen like Delcassé, Millerand, Briand, and such Socialist anti-militarists as Jules Guesde and Marcel Sembat.

The development of the Servian crisis, so rapid and unexpected was it, found both President Poincaré and Premier Viviani absent from the country and the Administration of affairs in the hands of one of those makeshift and mediocre ministries with which in recent years, the vicissitudes of politics have so often afflicted France. There is little doubt that the Government entered upon the war with almost as complete self-confidence, and as the evidence is beginning to show, at least some part of the unpreparedness that marked the campaign of 1870, when the Ministry proudly assured Louis Napoleon that the army was ready, "even to the last gaiter button." Not as complete, of course, have been the defections, but they have been seri-

Paul Thompson

THE THREE "STRONG MEN" OF FRANCE: DELCASSE, BRIAND, MILLERAND

While primarily France looks to her army for safety, the Ministry is responsible for both. In the reformed Viviani Cabinet Delcasse becomes Minister of Foreign Affairs, Briand, Minister of Justice, and Millerand is Minister of War

ous enough to destroy the advantages, which first belonged to the Allies.

It is evident that the French completely misjudged the strength of the German offensive movement through Belgium, and wasted the opportunity given them to prepare a defense in a hasty and fruitless invasion of Alsace-Lorraine. Commanders have blundered, in some instances been disgraced, while Lille, one of the strongest fortresses in France, was abandoned apparently without reason. The Allies should have been if not superior, at least the equal of the Germans in men, yet in the north they have been constantly outnumbered. Whether these are errors of judgment or the results of conditions impossible to foresee, it is at this time difficult to tell, but they have had the effect at least of sobering French optimism to a realization of the gravity of the situation and to the necessity of entrusting the deliverance of the Republic to its strongest and most able statesmen.

M. Theophile Delcasse, who has become Minister of Foreign Affairs, is a strong asset to the Government and its Allies, not only because of his previous experience in the office from which he was forced to resign at the time of the Agadir incident to assuage German feeling, but on account of his recent mission to Rome, where in conjunction with Count Witte he set forth France's claims for Italian support during the war. Millerand and Briand also have had previous experience in the posts of War and Finance, while Guesde as the friend of the late Herr Bebel of Germany is working for international peace, thrue *L'Humanité*, both belonging to the extreme Socialist faction which had sworn never to accept office of the Government, will aid greatly in helping to present a united France to the enemy.

Criticism of the new Ministry, however, is not entirely absent in France. "A Government whose first act is a manifesto," is its scornful characterization from Georges Clemenceau, who twice rejected Premier Viviani's invitation to accept one of its portfolios, and by many regarded as France's greatest statesman. Certainly none but Clemenceau would be permitted criticism like the following, from his journal, *L'Homme Libre:*

> Words! Always words! It is because there is no action to correspond that the public is growing sick of these manifestos. Men are asking to fight; they had only to be summoned without phrases. No one will ever be able to understand why we are inferior in number on the battlefield—altho they tell me the contrary—while the depots are choked with men not even being exercized, and they are sending home those already summoned, equipped and armed. It is a veritable scandal. What is to be done to end it?
>
> I had expected the Government's first act to be a frank explanation of this matter. Whatever they tell us, when the whole nation is spoiling for a fight they form a new little Parliament of War Office directors! Another lot of talkers! But we must wait before condemning. It will soon be shown if they are capable or not.

Legislation at Washington

The bill proposed by President Wilson, authorizing the Government, by means of a corporation, to expend $30,000,000 for the purchase of ships, and thus to facilitate the exportation of wheat and other products, was introduced in the House by the Chairman of the Committee on Merchant Marine. It became known that while Great Britain would not object to the purchase and use of the German ships now tied up in American ports, France would oppose such action as a violation of neutrality. Hearings on the bill were ordered, but at the first one no one appeared to commend or to object. The Committee on Naval Affairs prepared a bill (soon to be reported) appropriating $30,000,000 to enable the President to buy or build thirty naval auxiliaries which may be used as merchantmen during the present war. This bill is approved by the President.

In the House the bill recently past by the Senate, creating a War Risk Insurance Bureau and setting aside for it a fund of $5,000,000, has been past by a vote of 230 to 58. It tends to promote the transfer of American-owned ships to the American flag. Transfers have been delayed because owners of ships have not known the scope of the suspension of old navigation laws which is to be ordered by the President.

In the Senate there has been past a bill authorizing the Government to license warehouses for cotton, grain, naval stores, tobacco and canned salmon. It was originally designed to apply only to cotton, but at the suggestion of certain Senators the other products were added. If the Government inspects and grades the cotton, its certificates have an established and unquestioned value. Cotton-growers are embarrassed on account of the war. Secretary McAdoo has said to them that the Treasury will issue emergency currency to national banks on four months' notes secured by such certificates or warehouse receipts.

Mr. Smoot's bill authorizing the Government to buy 15,000,000 ounces of silver has been past in the Senate. It is intended to assist the silver mining companies. Amendments to the Clayton Trust bill, still pending in the Senate, provide punishment by imprisonment for certain offences to which the original bill attached penalties less severe, and forbid the owners of patents to compel the purchasers of the patented device to buy certain unpatented appliances or materials. This is aimed at the Supreme

Court decision in the mimeograph case. Mr. Wilson has consented to a postponement of action on the railroad securities bill—the third of the Trust series—and probably it will not be taken up at this session.

The Treaty with Nicaragua

When Mr. Bryan first laid his treaty with Nicaragua before the Senate Committee on Foreign Relations, some months ago, it contained provisions—resembling those of the Platt Amendment, in the case of Cuba—which virtually established a protectorate. These were opposed by the committee and by certain Central American and South American Republics. The treaty was withdrawn for a time, but not long ago it was again submitted to the committee. Both in committee and in the Senate it was the object of sharp attack. Then Mr. Bryan and the Nicaraguan Minister signed another treaty, shown of the protectorate features, and practically a copy of the one negotiated by the Taft Administration. It provided for the payment of $3,000,000 to Nicaragua, which in return was to give to the United States a perpetual option on the Nicaragua interoceanic canal route, a naval station in the Gulf of Fonseca, and two small islands near the east coast.

Similar treaties during the Taft administration were offered to the countries of Central America, but met with general opposition not only in Latin America, but in Congress.

But this excited opposition in the committee, and there have been additional changes. The second of Mr. Bryan's agreements provided that the money should be used for public improvements. The third, now under consideration, says that it shall be expended in paying Nicaragua's national debt. It is expected that in this form the treaty will be approved by the committee and ratified by the Senate.

Villa and Zapata Pacified

After Carranza and his forces had taken possession of the capital, he sought to lay the foundations of an enduring peace by conciliating Villa in the north and reaching an agreement with Zapata in the south. At the end of the week there was evidence that he had accomplished his purpose. A commission led by Luis Cabrera had two conferences with Zapata, who at last consented to recognize the authority of the Carranza Government, after he had been convinced that it would promptly undertake the agrarian reforms which he demanded. Carranza offered to make him Governor of the State of Morelos, but he declined the place, saying that he wanted no office.

To Villa, in Chihuahua, Carranza sent General Obregon, and urged the two to end the quarrel in Sonora, where General Maytorena, loyal to Villa, had attacked Colonel Calles, the leader of a small Constitutionalist force. Maytorena, with 2,000 men, had taken possession of Nogales. While Obregon was in the north, President Wilson said that certain outside parties who would profit by intervention were striving to make the public believe that there could be no reconciliation of Villa with Carranza. Villa and Obregon crost the boundary, were entertained by General Pershing, of the United States army, and then set out to conciliate Maytorena. At the conferences the terms of a peaceful settlement were agreed upon. The release of General Alvarado and others whom Maytorena had imprisoned was ordered. It was expected that Maytorena would be allowed to retain his office (he is Governor of the state), and that his Indian soldiers would be taken into the national army.

Before the conference with Obregon, Villa had said to the public that he had no feeling against Carranza, but was seeking to prevent military rule, of which Mexico had had too much. The Constitution must not be trampled under foot by the army and its dictator leaders. He was determined that Mexico should have good civil government, and would "bring every bit of moral suasion to bear" in defense of the people's rights.

At Mexico's Capital

There has been disorder at the Mexican capital, but strict censorship has not permitted all of the facts to be reported. Drunken soldiers quarreled with the police, and were rescued by their comrades after arrests had been made. Riots followed, and censored dispatches admit that seven were killed. The entire police force of 3600 men was taken into custody and locked up. Cavalry patrolled the streets. A mob led by drunken Constitutionalist officers tried to loot the Treasury, which was in the National Palace. The army interfered, and several men were killed. Carranza at first declined to recognize the currency issued by Huerta. Afterward he relented, and the banks, which had been closed for two weeks, were opened.

A part of the old Federal army turned against the new Government. While Luis Cabrera was making an agreement with Zapata, his two brothers were assassinated in Puebla by soldiers of Huerta's old regiment. The garrison at Puerto Mexico revolted and joined other malcontents at Salina Cruz, controlling the railroad across the isthmus. Residents of Vera Cruz urged Carranza to demand a withdrawal of the United States troops, but they will remain for some time to come. A large majority of Huerta's Federal soldiers have been mustered out and disarmed, and have gone to their homes. Many of them are penniless, because the currency paid to them is not generally accepted. The 5,000 Mexicans held under guard at Fort Wingate will soon be released, Federal officers excepted. In caring for them our Government has expended $500,000.

GERMANY AND THE GREAT WAR

BY THE IMPERIAL GERMAN AMBASSADOR

In order that the American people may have an opportunity of hearing the German side of the case from an official source, The Independent has asked Count J. H. von Bernstorff to reply to certain questions which have been much discussed in the press, and he has kindly consented to do so. The public will appreciate the frankness and definiteness with which he answers our queries.—THE EDITOR.

DID Germany approve in advance the Austrian ultimatum to Servia? Yes. Germany's reasons for doing so are the following. For six years Servia has been the outpost of Pan-Slavism against Austria. The principle of Pan-Slavism is the assumption that Russia is the protector of the Slav nations. This makes it clear to everybody who looks into the question that Pan-Slavism means the destruction of Austria, which is half Slav. Austria bore patiently for years the undermining campaign of the Pan-Slavic party, which was carried on in Austria. But the assassination of the Crown Prince brought her patience to a sudden end. It is believed by many people in the United States that Servia accepted all, or nearly all, of Austria's demands. In reality she did not accept the most important one, namely, that of issuing to the officers of the Servian army an official condemnation of Pan-Slavic propaganda and of the assassination of the Crown Prince. Now it has been proved that the assassination of the Crown Prince was prepared and arranged by Servian officers. He was shot with a Servian army revolver.

Could not Germany after the Austrian ultimatum was delivered have prevented Austria from precipitating the war?

If the Servian war is meant, the answer is that Austria could not possibly be kept back from going to war with Servia after her patience had been so overtaxed. I ask any American whether he thinks the American people would not have started war with Mexico immediately if during the Mexican troubles Huerta had hired assassins to kill the Vice-President of the United States? How would the reader answer this question? All European governments, with the exception of Russia, tried to localize the war between Servia and Austria. But then Russia, on Pan-Slavic principles, said that she had to defend Servia. Germany did its utmost to prevent a universal war. When asked by Russia to induce Austria to make concessions, she prest Austria as far as she possibly could within the bounds of her friendship and alliance. Thereupon Austria made the greatest possible concessions and promised absolutely to regard and uphold the integrity of the Servian kingdom. This concession was transmitted by the German Government to the Russian Government. No other answer was sent except the mobilization of the whole Russian army against Germany and Austria. Thereupon the German Government asked the Russian Government why they were mobilizing their whole army against Germany and Austria. Germany has not received the answer to this question to this day. Instead of an answer Russian troops crost the German frontier. The first Russian prisoners of war were taken before any declaration of war was made. After this act the German Government informed the Russian Government that they considered themselves in a state of war with Russia, and the rest followed as a consequence of the existing alliances in Europe.

What is the justification for the violation of the Belgian neutrality to which Germany was a party?

The violation of Belgian neutrality is an action which is universally regretted in Germany. But it was considered an absolute military strategical necessity. If Germany had entered France by the routes of Metz and Strassbourg, the French army would have entered Belgium and fallen on our right flank. We had absolutely reliable information that this intention existed in the French army. We were absolutely sure that Belgium would not be able to defend her neutrality against France, and would probably not even be willing to do so, as her fortresses had all been built against Germany and not against France. Furthermore, on the first day of the war French motor cars with French officers past thru Belgium to reconnoiter in Germany without being stopt by Belgian authorities. Equally French aeroplanes flew over Belgium without being stopt and bombarded German cities. Our information about the French army was furthermore corroborated by the fact that English generals visited Brussels in the spring at the time when the coalition was preparing for war against us. The governments of the coalition cannot suppose that we do not know that during the visit of King George to Paris the military negotiations were going on between England, France and Russia for the purpose of a joint attack against Germany.

Is not the dropping of shells without warning from an airship upon cities like Antwerp and Paris a violation of civilized warfare?

I am rather surprized at the words "without warning" in this question, because I do not see how a fortress, which is prepared for an attack in a country which is at war, should be without warning if it was attacked at any minute. The warning for every fortress in the country is the beginning of the war. I can only say that in our fortresses on the frontier women and children were sent away on the very first outbreak of the war. As long as there has been war in the world fortresses have always been bombarded. Whether they are bombarded from the air or from cannon on land is simply a technical detail.

Is not the destruction of the historic edifices and library at Louvain an act of vandalism?

To begin with I doubt whether the historic edifices and library at Louvain have been destroyed. But if they should have been, the responsibility rests solely with the population of Louvain, and the act of vandalism, if there has been one, has been perpetrated also solely by that population. The facts of the case are the following: One battalion of German troops was left in charge of the city, and of the communications of the army. They were not in line, but dispersed in the city. The priests of the city, thinking that the German army had retired, distributed arms among the civilian population and our soldiers were shot unawares. The principle of civilized warfare is based on the assumption that only the sol

forces of a country shall fight against the soldiers of the other country, but that civilians, women and children shall never join in the combat. To maintain these principles severe punishment has always been inflicted upon any population that joins in the fight, and I do not refrain for one moment from saying that they deserve it. In this special case, however, the German soldiers who were attacked by the people of Louvain were mutilated, and treated with acts of bestial cruelty. If the returning troops with these facts before their eyes burnt down many houses of the city, I do not see how they can be blamed.

What is the Slavic peril? And why should Germany fear it more than England or France?

Germany does not fear the Slavic peril at all. However, the existence of Austria as a great power has always been considered of vital interest to Germany because it keeps our flank covered. Furthermore it must not be forgotten that the alliance between Germany and Austria is quite a different kind of alliance than any of those among the powers who have formed a coalition against us. Austria and Germany have belonged together for a thousand years, and every fight between them has been regarded by both nations as a civil war. Historic developments since 1866 have changed the aspect of Austria and have formed a dual monarchy between Austria and Hungary. Austria is now half a Slav state and as such cannot permit the pretensions of Russia to be the protector of the Slavs. England and France are now fighting for Russia's purposes. Why they do so they will have to answer for themselves.

Would the purchase by the United States of the German merchant ships of New York harbor be a violation of neutrality?

According to my opinion, No. Because our shipping companies are absolutely private business undertakings without any interference of the Government. If, furthermore, these companies are, as the American Government has stated, not to receive payment until after the war I cannot see how the purchase of these ships can in any way help Germany. The opposition to these plans seems to me to come simply from the wish to prevent the United States from having a mercantile marine. England has joined our enemies for the chief purpose of getting our trade. It would naturally gain nothing even if England did win the war if their trade were taken by the United States.

What do you think of the employment of African and Asiatic troops in a European war?

I condemn it unconditionally.

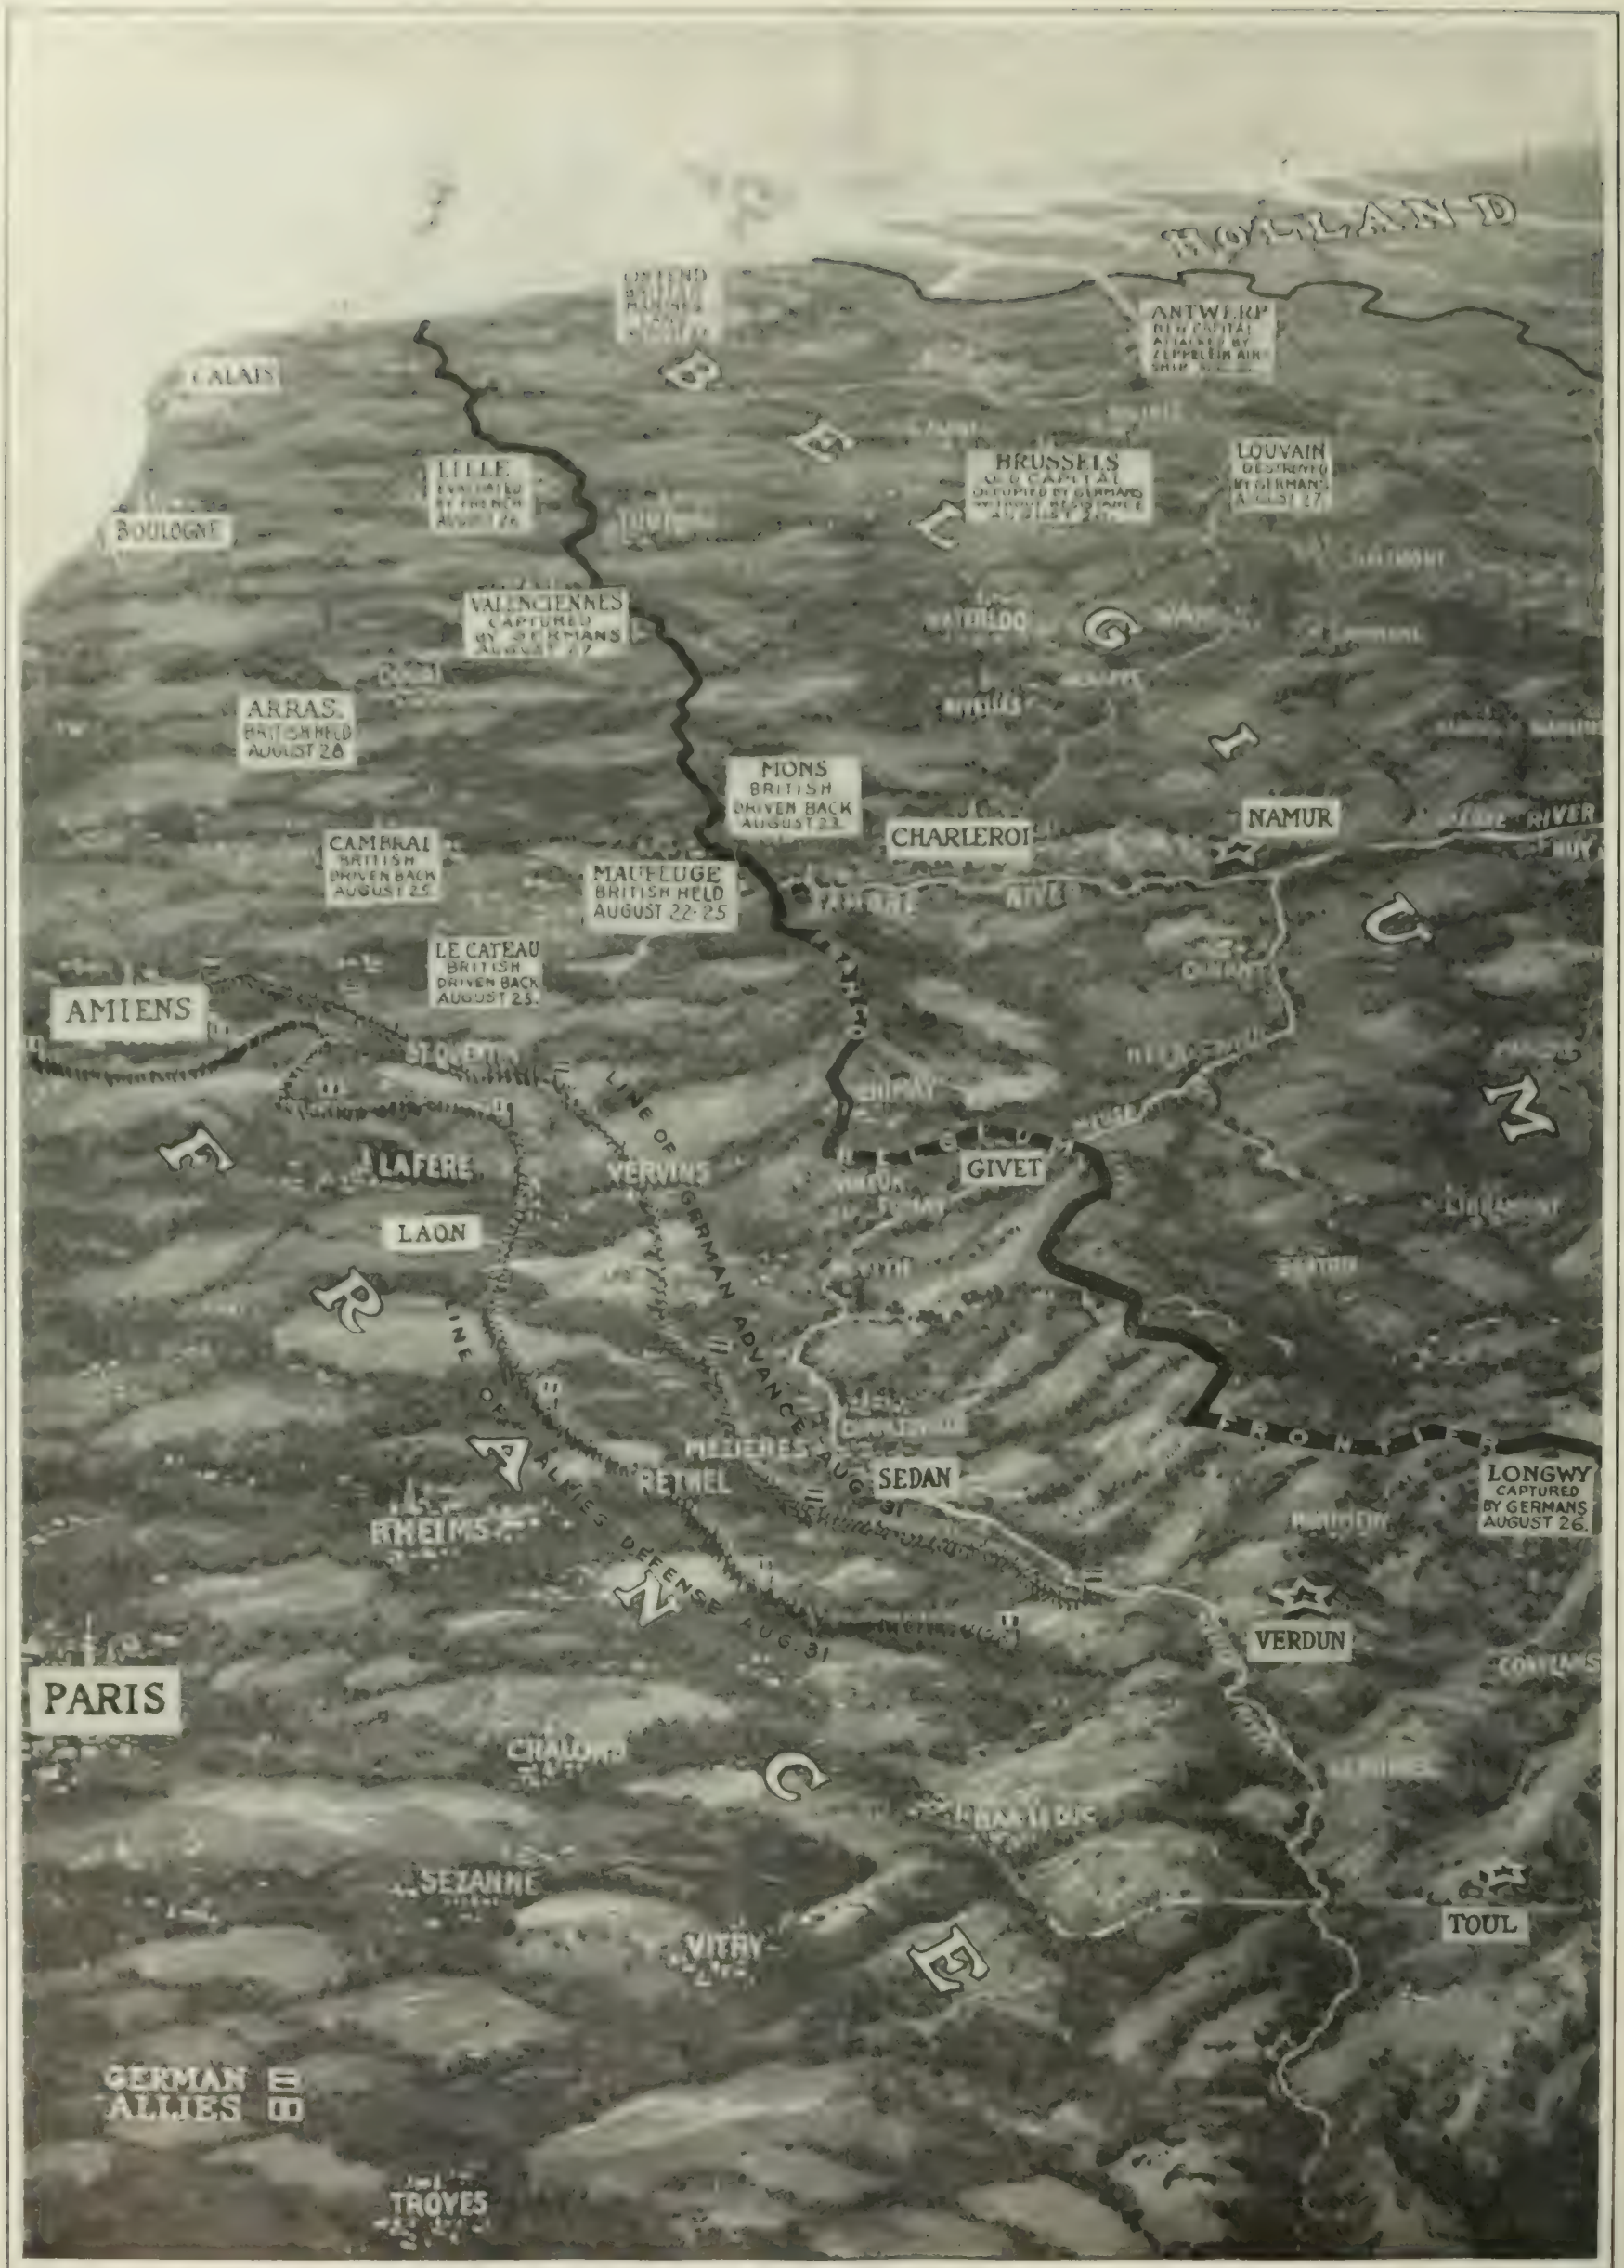
In conclusion I may say that it is one of the fundamental errors of American newspapers that this is a war of kings. Most emphatically is it a war of the German people. Do not be deceived about it. Every man who doubts this is fundamentally at error. I read all sorts of things about "the kings' war," but God knows it is the people's war. The absolute feeling of the German people was that the Emperor waited as long as possible, if anything that he waited at least two days too long. If any proof is needed for this statement look at the attitude of the leaders of the German Social Democrats, who are loyally supporting the Emperor. See how different it is in Russia where the Poles are in revolution; in England where the leader of the Labor group said that it was not a people's war and the government had not done enough to prevent it. The leader of the Social Democrats in Germany said: "We hate war, but since the German nation has been attacked we will stand up like one man against the autocrat who attacked us."

THE AEROPHOR

THE application of mechanics is coming more and more and in surprizing ways to aid art, and particularly musical art. Wholly aside from the numerous automatic instruments now familiar to everybody, from the highest grade player-piano to a myriad of musical toys, every little while nowadays appears some new and ingenious device or attachment designed to assist real music makers in their efforts to spread enjoyment to music lovers. The latest of these to be taken up by serious musicians, in their recognition of the fact that it is a real and not a factitious aid to artistic playing, is the "aerophor," as its inventor has named it, which makes it possible for the player of a wind instrument (particularly any instrument of the brass choir) to sustain any tone of which his instrument is capable for so long as he may desire. Thus it has the remarkable effect of abolishing the principal limitation on wind instruments, the inability, namely, to sustain tones at the will of the composer or to perform long phrases without stopping to take breath.

This aerophor is a small bellows-like affair with a thin rubber tube and a reed mouthpiece. By the pressure of his foot on the bellows the player forces a supply of air thru the tube to the mouthpiece. This is not in any way attached to the instrument. The air so supplied goes into the mouth cavity and is used to play the instrument with the ordinary embouchère, or lip position, just as if it were human breath. So the aerophor is not in any sense a "mechanical player," but simply an auxiliary breath supply.

The new device has been adopted by many of the leading orchestras of Europe, and had its first trial in America last winter when the New York Philharmonic Orchestra gave the first American performance of Richard Strauss's "Festival Prelude," into one of the orchestral parts of which the composer had written a tone sustained so long that no pair of human lungs could hold it, and had specified that it should be played with the help of the aerophor. Later in the season the inventor of the aerophor, Mr. Bernard Samuels, a Hollander, who is now first flutist at the Court-Opera in Schwerin, came to America to demonstrate his invention to conductors and members of the American orchestras, among whom it met with a hearty reception.



An instance of what its use means will help to make clearer its importance. In the prelude to "Das Rheingold" Wagner gives the tuba a tone to sustain for something like ninety bars. Until now it has been a physical impossibility to perform this as written, the tuba being a huge brass instrument which requires a very large volume of breath for its tones, and it has always been necessary for other instruments to help in sustaining this note. The tuba player at the Metropolitan recently secured an aerophor which he used thru the whole series of "The Ring of the Nibelung," and he had no difficulty in sustaining the ninety-bar note.

THE WOMEN'S PROTEST AGAINST WAR

On Saturday, August 29, fifteen hundred women, behind a white banner inscribed with the word "Peace," silently marched down Fifth avenue in New York as a protest against war. No speeches, no arguments, no blazoned banners, marked this protest, only the silent, black-clad ranks marching to the beat of muffled drums

ATTEMPTING TO REPEAT THE IRON RING OF SEDAN

By throwing a force of more than 600,000 on the left flank of the Allies, the Germans have sought to break the line of retreat to Paris and to force the Allies into fortresses like Maubeuge and La Fere, where they could be surrounded by the "iron ring" of soldiers, which von Moltke used so successfully in 1870. The heroism of the British and the generalship of the Allies so far has prevented its accomplishment

GLOW WORM AND MOCKINGBIRD

BY E. P. POWELL

AUTHOR OF "THE COUNTRY HOME," "HOW TO LIVE IN THE COUNTRY"

AS we went down our garden walk the other evening we saw a glow worm resting on the edge of a mockingbird's bungalow. Just why he did not put out his lantern as we came along we do not know, but keeping it lit, he showed us the little fellows inside the nest. Our Southern glow worms, you must remember, are not the little sparks of your Northern garden, but are real torches—streamers sometimes two or three feet in length, and lasting for two or three minutes at a time. It was well worth the while! a country house built by a bird and the whole family enjoying the moonlight evening!

The cardinal birds had been visiting us, and had taken baths in a concrete basin behind the power house; but we had had no indication of an adoption, nor of a thank you. Occasionally a brilliant fellow had dropt down with his wife into the chicken yard, to dine with the Rhode Island Reds. One day last week we found a couple evidently intending to home it with us, and not long after we found the home in a kumquat tree. It had been built and furnished cheaply but handsomely, and snugly in the trundle bed lay three young birds. Already these chaps, fed from our chicken cribs, have fledged and flown. Instead of having food carried to them they come now with their parents and have learned how to liberally help themselves.

Every morning we are waked up just before daybreak with a call from the mulberry tree, with "wake up, wake up"; but sometimes it is "get out, get out." Not much trouble is taken to infuse music into the order, and yet we do not take it amiss. It is a broad hint not to lose the glory of the morning, and we are quite willing to take it. Really it seems to be meant for laggard folk, to get out of bed with the dawn; and why not? Daybreak is the best of the day, and the birds have found it out.

We are watching now to see what will be done with the empty nest. Will another litter of eggs be laid, to add to our tenants? Really a home is not a home until the birds have found you out. If you are planting and living as you should, with plenty of shade, plenty of water and plenty of food, the birds will soon discover it, and those that feel safe with you will bide with you. It was a long while before we could get the wood thrushes to put their nests near our house, and the orioles stole our cherries several years before they swung their nests in our orchard, but they came nearer, and at last homed in our orchards.

We love all birds, that is, nearly all, excepting English sparrows, blue jays and that sort of oriole that sticks his bill into forty cherries, spoiling what he cannot eat. We have no sympathy for hawks, not if the Government does send out bulletins every month in their apology. But what would life be without plenty of catbirds with robins, and grosbeaks, goldfinches in the North; with nuthatches and chickadees for winter? And down here it does not become tolerable until the mockingbirds and cardinal birds bid us good morning and good night.

There is a funny fellow that chips in just after sunset, with "Will's Widow! Will's Widow!" and keeps it up until midnight. We have never found his nest, nor have we any idea whether he considers his ejaculations to be musical or prosaic. But he punctuates the hours until "Bob White," just at daybreak, crowds him out with his hearty calls under our window.

"Bob" is so wonderfully like our Rhode Island Reds that we are always glad to have him invade the yard, and if he brings a family of sixteen to twenty to breakfast, all the better. He is an inquisitive fellow and very soon finds out where he is welcome. Everybody likes him, but most people prefer him on the platter. No man shall glorify his sportsmanship by shooting "Bob" when he comes to us for protection. He has already found that out right well.

We are not quite sure that birds do not study us quite as much as we study them. There are kodaks pointed at us out of the bushes, and memoranda made that do not always go into Appleton's *Bird Lore*. It reads possibly like this: "A sober old couple lives in the cottage by Lake Lucy." "The people on Sconondo Knolls don't mind it if we help ourselves to cherries when hungry." "We know where an old lady lives that hangs out bones of cold mornings for birds to pick." This is not written out on foolscap, with Dixon's pencils, but a bird memory will serve as well as a school boy's slate.

Sure enough! We looked into the kumquat this morning, and there were three more mouths wide open and three pairs of eyes studying us potentially. Observation on both sides, and the birds were calling on an old inheritance for an explanation of our sort of folk. Some ancestor had laid up in their brains a bad record of human folk in general; "stupid," "selfish," "arrogant." We will try to correct the record and shall be on our best behavior while these fellows are watching us. Short on English, they gave us a bit of bird talk and we answered in the same pidgin English. We chippered a bit, and tried to get acquainted. In this way if we meet the valuable birds half way they will soon come the rest of the way, and home will be vastly more homeful.

We are ambitious to have a bird house at every turn in our garden walks. We have seven in the grape vines around our Northern home, mostly robins' nests. These fellows know that they are natural human companions. The indigo bird and the catbird are not far away, but they are well hid. In the fall one likes to run across a goldfinch nest in a currant bush, and all summer a right sort of man steps carefully in his clover field, and works in his raspberry lot with caution less he disturb a sparrow's home. It is curious what a company of co-workers we can become if we will. Only never lose yourself in the forest of supposing these song-full companions are not also thoughtful and friendly. God made this world in such a way that we need coöperation with all sorts of creatures to make our homes complete.

Down here in Florida we have not found a single bird's nest that shows architectural skill. The birds all seem to be so wrapt up in the simplicities of everyday life that they dispensed with art. The mockingbird is even more careless than a catbird, carrying a double handful of handy sticks into an orange tree, where he does little more than pile them together, without even lining them for his eggs. The cardinal bird also likes to have his house well ventilated, but there is a pretense of lining, made mostly out of pine needles. These, if woven together, do not make so bad a hammock. I do not think any of these birds could use the same nest two years in succession, altho very likely they might use it twice in a season. But, then, just think of it! What fun it is to find such a nest of birdlets in January—any day, all winter; not to mention the roses on your Marechal Neil, and calls to wake you up in the morning, as likely in midwinter as midsummer.

Sorrento, Florida

MAJOR LOUIS LIVINGSTON SEAMAN

SPECIAL REPRESENTATIVE OF THE INDEPENDENT AT THE FRONT

THE ZEPPELIN ATTACK ON ANTWERP

BY MAJOR LOUIS LIVINGSTON SEAMAN

SPECIAL REPRESENTATIVE OF THE INDEPENDENT AT THE FRONT

During the night of August 24 a Zeppelin airship past over the city of Antwerp, and, altho the city was not besieged, dropt bombs which were aimed at the Royal Palace and other public buildings. Ten people were killed and more than 700 houses suffered from the explosions. The first Red Cross surgeon to reach the scene was the Special Representative of The Independent, Major Louis Livingston Seaman. Major Seaman is an international authority on military sanitation, Red Cross work and the humanitarian side of war. The following description reached us by cable on August 31. —THE EDITOR.

MADDENED by the defeat of the general advance, which was checked by Belgium, the Germans attempted to destroy the sleeping royal family by dropping into the city of Antwerp nine bombs from a Zeppelin airship. The exploding bombs killed ten innocent men and women and severely wounded eleven.

Fragments of the bombs prove that their weight must have been 150 kilograms (about 330 pounds). The bombs were undoubtedly suspended from the Zeppelin ready to be dropt when the airship was in position over the city. A leg of one of the victims was blown off and slivers of the shell perforated coins in his pocket and blew them into his body. That the explosive was of the most powerful kind was proved by the complete fragmentation of the shells which fell at the Palace, the Cathedral and the Exchange.

The arsenal narrowly escaped destruction. At the Botanical Gardens, adjoining the Hospital of St. Elizabeth, the explosion shattered windows, sending fragments thru the wall and shattering a crucifix which hung over a sleeping child in the hospital.

The locations of the explosions all indicate that the object was the assassination of the royal family. This is not war, but murder.

I am sending fragments of the shells, and photographs of the destruction caused by them. The city is now in complete darkness at night in anticipation of another Zeppelin attack. The populace is calm, tho the excitement is intense.

The condition at Antwerp is pathetic. Many thousand refugees from Malines, Liége, Louvain and the surrounding country throng the streets, carrying little handkerchief bundles containing their entire possessions. Forty military Red Cross hospitals are crowded with wounded soldiers.

The Germans have broken the rules of The Hague Tribunal and have fired upon the white flag and upon Red Cross ambulances. A Red Cross officer was killed while burying German dead. Children and old men have been bayonetted. The soldiers burnt villages of noncombatants, thereby repeating the tactics of the Boxer wars, when Chinese villages were burnt and their inhabitants murdered, when the ransom demanded by punitive expeditions was not paid.

I have sent a protest to President Wilson, asking that emphatic measures be taken to stop these atrocities, making European disarmament possible. A continuance of such action means the destruction of civilization.

The Belgian army has been heroic, and with ten thousand wounded they are bearing their suffering with the stoicism of the Japanese. The Red Cross organization is good, but more trained assistance is needed.

I implore Miss Boardman and the managers of the Red Cross to send at the earliest moment a large unit fully equipped. Funds are greatly needed.

I have just returned from Malines, three miles beyond the Belgian lines. It is an unfortified city of fifty thousand inhabitants. It is now deserted, five priests being the only inhabitants who remain. The medieval cathedral, with its beautiful stained glass windows, and the town's historic monuments, have been shelled. The mortality in the recent battles has been heavy.

Louvain has been sacked, and the most famous library in the world, excepting perhaps that at the Vatican, has been burnt. Citizens have been massacred at Heyst. Opdenberg is in ruins, and many of its inhabitants have been killed.

A commission of Belgian officials leave tomorrow for the United States to present to the American Government and people the protest of Belgium at the atrocities perpetrated by the Germans at Antwerp and Louvain. Its members are M. Henry Carton Wiart, Minister of Justice; MM. De Sadeleer, Paul Hymans, Wile, and Vandevelde, Ministers of State. The last named is the Chairman of the International Socialist Bureau. I beg The Independent to assist them in their mission.

International News

EVIDENCES OF THE "WAR FOR GERMAN CULTURE"

[illegible] would go to war to uphold the treaty guaranteeing Belgium neutrality, a "mere scrap of paper," in the words of the German [illegible], came as a complete surprize to Berlin. Defending Germany's [illegible] before the Reichstag on August 4, Chancellor von Bethmann-Hollweg admitted that it was in violation of the law of nations. "We are acting in self-defense," said the Chancellor, "and necessity knows no law. . . . Whatever we are thereby compelled to commit, we shall rectify as soon as our military object is achieved." It is a heavy debt, indeed, that Belgium has laid up for future reckoning

A TITLED RED CROSS NURSE: THE DUCHESS OF SUTHERLAND

The Duchess of Sutherland, like many other titled women in England, has volunteered for service as nurse at the front. Country homes, town houses and private yachts have been turned over by their owners for use as hospitals. In response to the appeal of the Prince of Wales, more than $5,000,000 has been raised in England for Red Cross work, and for the relief of the widows and orphans of those killed in battle

ENGLAND, SILENT AND DETERMINED

BY SYDNEY BROOKS

LONDON REPRESENTATIVE OF THE INDEPENDENT

WE in England have entered upon this war with the greatest of all military assets on our side—a cause we believe to be just and a conscience we know to be clear. We did not provoke it; we did not want it; there is the unanswerable evidence of the White Paper to show how far Sir Edward Grey went to avert it. I venture to say that no American is competent to pass judgment on the origin of this appalling struggle who has not read and pondered every line of the State papers published by the British Foreign Office on August 5. They contain a full account of the attitude of Downing Street toward all the other Governments during the grim days when the fate of Europe hung in the balance; and it is a record in which Englishmen, and I hope I may add Americans too, may well take pride. Official documents are not as a rule dramatic, but these are. In them we see Sir Edward Grey struggling against the powers of darkness to the last minute of the twelfth hour, cool and persuasive, trying one dove after another, offering even to wash his hands of the consequences if France and Russia refused any reasonable accommodation that Germany might put forward, but all the time clear in his own mind as to the point beyond which Great Britain could not go, and finally rejecting with a splendid scorn Germany's unutterable proposal that we should bargain away the neutrality of Belgium and the French oversea empire—in return for what? In return for an assurance that Belgian territory would be respected at the end of the war if in the meantime she had not sided with Germany, and for a further assurance that a conquered France would only be required by her German victors to surrender all her colonies and that her European soil would be restored to her intact.

Such was the bait held out to us to abstain from taking part in the war! Such was the inducement to tear up our treaty pledges and betray our friends! That proposal, far more than Germany's refusal to second a single one of Sir Edward Grey's efforts for peace, made every Englishman hot. Only a Government with a profound misunderstanding of the British character, of British policy and of the sort of considerations that appeal to the British people could ever have suggested it. It was humiliating even to receive and to be at the trouble of rejecting. But I hope the time will come when the great mass of decent, honorable Germans will see that it was ten times more humiliating that such an offer should have been made in their name. Nothing could have shown more clearly the immersion of the ruling caste in Germany in the doctrines of a crude materialism, its opaque vision, its insensitiveness to any argument but that of force and self-interest. That ruling caste, I trust and believe, has misrepresented the German people for the last time.

If there is one thing clear in this cataclysmic welter it is that Germany, and Germany alone, brought it on; that the Kaiser could have spoken the word that would have insured peace and yet remained silent; that he was entreated by Sir Edward Grey to act and would not move a finger. What motives, calculations or urgencies influenced him we do not know and may never know. But this at least is certain—the guilt lies at his door. So far as one man can be said to be responsible for plunging Europe into the hell of this agonizing strife that will leave its mark on every human being in the Old World and on many distant and innocent millions in the New, that man is the Kaiser. If I insist on this it is not to anticipate the justice of the doom that awaits him; it is to emphasize the complete freedom from any thought or taint of aggression with which the British people have taken up arms. Their soul is tranquil; their consciences are at peace. And to say that, for any one who really knows them, is to say all. It is to explain the whole atmosphere in which, so far as we are concerned, this war is to be waged. Fifteen years ago, when we went to war with the Transvaal Republic, the national conscience was not at peace. Even those who never wavered in their belief in the justice of the British cause had to admit that it required a deal of proving, and there was a large minority that from the start hated the war, publicly denounced it and did what they could to thwart its prosecution. But the mass of the nation tried to swamp their doubts and shout down the small inner voice by a pandemonium of noise and bombast. The suspicion that they were in the wrong was never really downed; the consciousness that the best feeling of the civilized world was against them.

There is nothing of all that now. The spirit of the people is one of grim and silent serenity. Fatuous exaltation is just as absent as irrational depression. It is nearly three weeks as I write since we declared war. But I have seen little or nothing of the insensate demonstrations, the frothy flag-waving madness, that filled the streets and the very air fifteen years ago. Go about London today and you will hardly see a flag flying unless it be a French one. The feeling is that this is much too serious a business for any such antics. People are going about their normal affairs as much as possible. The grave, tense faces tell of the strain, but show no sign of weakening under it. The panic that in the first few days made some well-to-do weaklings hoard food and gold was over in a week. On the whole we have borne the shock of it all with an inspiriting self-command. Everybody is affected by the war, nobody can talk or think of anything else; but there is no war-fever, a good deal of anti-Kaiserism but very little anti-Germanism, no meretricious enthusiasm but a dogged shouldering of the burden imposed by duty and necessity.

It is a war of silences. I have watched regiments march through London to entrain for the front amid crowds that hardly so much as cheered them. In silence the fleet was mobilized, prepared, and sent away to its unknown posts in and around the North Sea. In silence and swiftness the expeditionary force was got together and transported across the English Channel. Not a word of either movement appeared in the British press. The French Government had officially announced the disembarkation of the British troops in France ten days before any English paper was allowed to mention it. And a like silence hangs over the whole nation. It is not the silence of apathy or impassiveness and still less of apprehension. It is the silence of a people caught up and somewhat dazed by an overwhelming emergency but with its mind made up and its purpose steeled.

Even war has its compensations and not the least of them is its virtue as a purgative of self. The whole country, the whole Empire, and the individuals of all classes have come visibly closer together in the past three weeks. We are one people in a sense we have never been in my life time. The political slate was wiped clean at a stroke of all animosities and contentions. Home Rule and Ulster, issues that seemed a month ago to threaten civil war, and over which passions had been wrought up to little, if at all, below boiling point, are now remembered only as an incomprehensible nightmare. Some

thing deadlier and more real has come since they held the field; and at its first touch the antagonisms, the comparatively artificial antagonisms, of Irish Nationalists and Irish Unionists shrivelled up. There is a united Britain; more wonderful still, there is a united Ireland, with not a single British soldier on its soil, but defended by the combined forces of its own sons. Even amid the anxieties and preoccupations of a struggle that, for Great Britain, is a struggle not for dominion but for life itself, statesmanship, I feel very sanguine, will find the ways and means of turning the revolution in the Irish situation to happy and permanent account. And that is merely a sample of the spirit of appeasement that has descended on all political activities. Parties have ceased to exist; the militant Suffragettes have suspended hostilities and are devoting their fire and self-sacrifice and their organising talents to the national cause; and the Government by its prompt and cool efficiency in meeting all the exigencies of the crisis—not merely the naval and military exigencies but those connected with the equally vital problems of credit, of food supply, and of the relief of unemployment and distress—has won for itself the unanimous confidence and admiration of the entire Kingdom. There is not a Tory in the land who would not be proud at this moment to join in cheering Mr. Asquith, Mr. Churchill, Mr. Lloyd George and Sir Edward Grey. It is no small part of the national calm that the Ministry should have made a universal impression of thoroly knowing its business.

But Great Britain under the stress of war has been a political unit before, tho never, so far as I can recall my history, to quite the extent it is now. What, however, is really novel and far more moving is the spirit that has been evoked of genuine fraternity. It is not only parties but classes that have ceased for the time to exist. Rich and poor beneath the compulsion of a common affliction have realized that they are alike Britons and bound as such to stand together and help one another and the nation thru the storm. The result is a great outpouring not merely of money but of the impulse to succor and to understand. We shall need everything we can get both of cash and of intelligent sympathy in the spending of it; for while these islands, if all goes well or even moderately well, are destined to be spared the desolating experiences that have ravaged Belgium, the misery must inevitably be very great, and starving and maddened multitudes of men and women thrown out of work and clamorous for peace might break down the national steadfastness and weaken the only means by which peace can now be secured. All Englishmen and Englishwomen see the danger and are preparing to fight it. Side by side with the war upon the enemy abroad there is being prosecuted a war upon poverty, unemployment and distress at home; and the latter war is all pure gain to the nation that wages it, as we in Great Britain mean to wage it, in a boundless spirit of compassion, benevolence, unity and good sense.

So far, of course, the pinch of the struggle has hardly made itself felt. There is universal retrenchment, a severe stringency of credit, and many factories that sell their products to, or draw their raw material from, the warring countries have been forced to close. But there is nothing as yet that foreshadows anything like a general paralysis of trade in the near future. On the contrary, the industrial machine, taken as a whole, has borne the shock surprizingly well and the most rational efforts will assuredly be put forth to keep it working. Compared with Paris, London is at this moment a normal city; compared with any of the Continental nations Great Britain is busy and prospering. That, I need hardly say, is the supreme advantage of our insular position. So long as we are not invaded and so long as we are still enabled to keep a large proportion of the workers at home instead of sending them to the front, our fundamental strength is being preserved while that of our foes and allies is being wasted. Therefore, it would be utterly discreditable to us if, with industry far from stagnant and with all the vital trade-routes open for the transmission of our food supply, we did not face the struggle with a tranquil resolution. The Belgians know what war means, but we may never know. Our towns and villages are not burning, our women and children are not being indiscriminately shot, no foreign soldier is on British soil, no alien aeroplane or airship has yet dropt a bomb upon us. These things may come and then the temper of the people will be tested indeed. At present between us and the havoc and butchery, the social chaos and utter commercial stagnation that prevail on the Continent, there floats—as thruout our annals there has always floated—the British navy. We trust in it. But even if the fortune of events turns against us and the terrible discipline of invasion is imposed upon us, the nation, I believe, will meet the greater ordeal with the same expressionless tenacity and sober competence as it is displaying today.

That belief is grounded on the fact that our people have a clear perception of the causes of the present conflict, of the reasons why Great Britain has been impelled to take part in it, and of the ends we seek. They are firmly convinced that German arrogance and agression, and nothing else, brought on the war. They are persuaded that it was sudden only in the manner and the moment of its coming and that in every other aspect it was the culmination of a long and carefully meditated plot for the domination of Europe, the humbling of British sea-power, and the building up by force of a Greater Germany overseas at our expense. Let Germany win and all Europe lies under the jackboot of Prussian militarism, the independence of the small northern kingdoms is gone forever, and the larger states, ourselves among them, live by German sufferance alone, their colonies wrested from them, their wealth forced into German coffers, their whole civilization twisted to conform with German ideas.

We have taken up arms to resist this ascendency and destroy it. We have met and defeated similar attempts to set up an overlordship in Europe in the past, and we shall meet and defeat this one. Everything we have and are and may be is at stake. Defeat means the disruption of the empire, the blotting out of Great Britain from the rôle of the powers that count, and the servitude of British policy to the dictates of Berlin.

We are fighting to defend the sanctity of treaties and pledges that Germany has violated with cynical insolence. We are fighting to ward off the intolerable menace of a Germany installed in Dutch, French and Belgian forts and disputing with us the very freedom of the English Channel. We are fighting to preserve what we already have, our standing in the world, our empire, our trade and the free exercize of all those ideals of society and of government that are dear to us because they are British.

We are fighting, finally, to ensure the inviolability of our island home and to reinforce our friends whose interests in this supreme crisis run parallel to our own, and whose triumph will be not only our triumph but the triumph of Liberty thruout Western Europe. These are great causes. They will nerve our people to suffer and dare all things till victory and salvation are assured.

THE GERMAN RED CROSS CORPS ARE AS EFFECTIVE AS THE KAISER'S FAMED BATTALIONS

BOOKS THAT INTERPRET THE GREAT WAR

MODERN GERMANY—ITS HISTORY, STATECRAFT AND NATIONAL AMBITIONS

THE American public was amazed at the suddenness with which Germany threw the great nations of Europe into the present bloody conflict. Our people have given little attention to the forces that were preparing the world for such a catastrophe, and most of them for the moment were under the impression that the war was precipitated by an egregious blunder, an erratic explosion. The great military preparations of continental countries were popularly regarded as a mere relic of the past, an aspect of European devotion to display, a great and useless burden assumed to please or overawe the common people, in short, a decorative part of old world life as much in keeping with its genius as a ruined castle or a hall of "old masters."

Few realized that these huge armaments were really a menace to civilization because they represented a false governmental interpretation of conflicting racial, economic and social forces. Yet to understand this great war we must lay aside narrow prejudices and inculcated animosities, and take a square look into the historic antecedents, the national resources, the popular aspirations and the governmental problems of the various countries involved in this upheaval.

Central in the whole situation, of course, is Germany, not only because she cast the die which set the peoples of Europe at each other's throats, but because her geographical position, her racial, industrial and commercial needs and her political history and organization have all conspired to create grave international complications and have in recent years been slowly urging her leaders toward the present crisis.

The rapid political development of Germany since 1870, and especially her astonishing industrial and commercial progress in the last two decades have served to call forth quite recently some valuable histories and discussions which throw a flood of light on the present situation and the causes which led up to it. A short history of *Germany*,[1] such as that just issued in the series "The Making of the Nations," will give one a proper background for an appreciative study of German problems. For hundreds of years of that history he will read of little else than wars.

In spite of the peaceful character of the mass of the German people their homeland has from time immemorial been the battlefield of many tribes and nations. The internal strife of petty states and the plundering inroads of foreign armies devastated the land and crippled its prosperity in every generation from Cæsar to Napoleon. Germany's sad history lends color to the Prussian contention that only a strong military leadership can keep the way open for national development in the arts of peace. It is no wonder that those who have felt the effects of the blighting experiences of the past bear with mild protests the present heavy military burdens and suffer the leadership of autocratic, warlike Prussia, because her ascendency has quelled the turbulent princely rivals within and stayed the destructive assaults from without the Germanic peoples. Germany has never before had such an opportunity for peaceful development as the Prussian hegemony has offered.

How this leadership was achieved, the movements that led up to it, the problems with which the Prussian statesmen were confronted from the eighteenth century onward, the forces which they have welded together, the national and cultural springs of modern Germany, the ideals and purposes of the present régime—these may be reviewed in the careful and illuminating studies of Mr. Perris in his *Germany and the German Emperor*.[2] The larger part of the volume deals with the social and political events and problems of the period since 1870, and is marked by keen insight into the characters of the German leaders and the trend of their *Weltpolitik*.

The volume by the late Price Collier on *Germany and the Germans from an American Point of View*[3] is a book of somewhat similar scope, but it devotes more space to the life of the people, the organization of the army, the recent industrial expansion, the political alignments, and the growth of various social movements. Mr. Collier's style is brisk and sparkling with *bons mots*. The criticisms are strikingly American and his comparisons are sometimes a bit overdrawn, but the sympathy with German institutions is genuine, and the whole picture of life and movement in the empire is as instructive as it is entertaining.

For a descriptive book of the *Germany of Today*[4] the reader will find an excellent volume with that title in the "Home University Library." The author, Mr. Charles Tower, describes in a terse and clear way the parliamentary and executive organizations of the federal states, the peculiar functions of the empire, the relation of Prussia to her sister kingdoms, the duchies, and other political units, the conduct of municipal affairs, the educational institutions, the resources of German industrial and agricultural life, and the relations of the various social castes and classes of the empire. The volume is admirable in its suggestiveness, condensation and scope.

The foregoing books will give an adequate notion of Germany's struggle for her present position in international affairs, a good résumé of her resources in peace and war, some pregnant suggestions of the real temper of her people, and indicate the distinct cleavage between her great progressive, industrial and peace-loving populations, and the ruling class of Prussian Junkerdom. But it is this latter class that gives the bend to the German bow, that definitely determines the nation's foreign relations, directs her armies and navy, strives to create and direct public opinion, and holds the power to leash or loose the dogs of war. What have been and are the policies and purpose of this ruling section of Germany? Three books have been recently devoted to the answer of this question. The most definite and laboriously argued is the volume of Professor Usher, already noticed in The Independent (Vol. LXXIV, p. 764), entitled *Pan-Germanism, a Critical Study of the German Schemes for the Conquest of the World*.[5] Altho some deductions from the author's conclusions must be made on the ground that individual utterances cannot be taken as deliberate state policies, and that he has too frequent recourse to the imagination, nevertheless, Professor Usher's array of German pronouncements interpreted in the light of passing events is worthy of serious consideration. Are force and craft necessary concomitants to the German ambition for world mastery, and are all these latent or active thoughts in Prussian diplomacy? Professor Usher would answer in the affirmative, and if one accepts this conclusion he will understand the marshalling of German industrial forces, the direction of her commercial agencies, the creation of armies and navies, her colonial schemes and diplomatic efforts in the light of this this great world purpose. All have been organized and pushed forward with a far-reaching view to Germany's armed domination of international policies.

This conception will be strongly encouraged in many minds by the

reading of Prince von Bülow's account of *Imperial Germany*,[6] where we get a view of German diplomacy and problems of statecraft from the inside. But that many responsible leaders have seen no issue out of Germany's struggle for supremacy without war we are assured by General F. von Bernhardi's *Germany and the Next War*,[7] which was regarded when published a couple of years ago as a sensational bid for heavier war appropriations, but is read now in the light of Germany's dash into Belgium as a singularly accurate revelation of the imperial army plans.

Such writers and diplomats as these, following in the wake of Treitschke and Bismarck, have never ceased to magnify the world destiny of united Germany and the necessity of a mighty military force to overawe her enemies and eventually to destroy all opposition to her demands. Slowly but surely during the last fifty years these efforts have attained a measure of success in Prussianizing the whole German people.

But if the military head of Germany is Prussia, the head of Prussia is William II. No man has fully gauged Germany until he knows the Emperor, who has done so much to transform the educational, industrial and commercial life of the country and embodies so many national traits and aspirations. An interesting biography of *William of Germany*[8] is at hand, written by an English admirer. The rise of Germany to a world power of dominating influence is coextensive with the life of her present ruler, and the story of his career is therefore history as well as biography. Much, indeed, that ought to be included under the latter term is unavailable because the subject of the sketch still lives. The book is more laudatory than critical, but it is well written and quite worth reading.

But, best of all, we have a book written by a great student of world affairs on *The German Emperor and the Peace of the World*.[9] The author, Alfred H. Fried, the recipient of the Nobel Peace Prize, makes a careful examination of the career and utterances of the Kaiser in relation to the whole modern peace movement. The general conclusion toward which the study points is well stated in a preface written by Mr. Norman Angell. He asserts that Fried's testimony "should, once for all, destroy the legend" that the ruler of Germany "is that disturbing element in the world peace which ignorance has so long represented him to be." This is certainly indicated by his utterances and the peaceful years

The Books of the Hour

YOU NEVER KNOW YOUR LUCK. The Story of a Matrimonial Deserter. By GILBERT PARKER. *Net $1.25*

"Does not suffer from the inevitable comparison with 'The Judgment House' and 'The Right of Way,' for in neither has Parker produced such characters. Kitty brings all the glory of morning happiness. She is the spirit of the wheatlands of the North-west."—*Baltimore Evening Sun.*

THE DUCHESS OF WREXE
A Romantic Commentary.
By HUGH WALPOLE *Net $1.40*

"The fortunes and insurgency of the new generation—a great theme, thoughtfully and powerfully presented, so a story of compelling interest. There is no flattery in the statement that this book is one of the really great pieces of modern fiction."—*New York World.*

MIDSTREAM. A Chronicle of Halfway
By WILL LEVINGTON COMFORT *Net $1.25*

"There are pages—glimpses of life in the army, in the slums, anywhere—whose skill no other writer has outdone. There are estimates of life, thrown out from prison, from the watches of a battle, that take place with the deepest in any other book."—*Boston Transcript.*

"UNTO CAESAR"
By BARONESS ORCZY *Net $1.35*

"This story of Rome is Baroness Orczy at her best and will probably prove to be the most popular of her works, which is saying a good deal, when the success of 'El Dorado' and 'The Scarlet Pimpernel' is considered—strong and impressive is 'UNTO CAESAR'."—*Boston Times.*

THE MIRACLE MAN
By FRANK L. PACKARD *Net $1.25*

"A book of surprises. A wonderfully interesting story, that is just as full as it can be of suspense and excitement and satisfying climax; tenderness and charm. The Patriarch is lovable and his gentle spirit seems to permeate every situation."
—*Book News Monthly.*

THE MILKY WAY
By F. TENNYSON JESSE *Net $1.25*

"The elusive, dainty charm of youth makes this the one novel of the season that must not be missed. The odd, delightful people in it are so light of heart and heel that they lift the most prosaic of us to the cloud-lands of romance."
—*Indianapolis News.*

GRAY YOUTH. A Very Modern Courtship. By OLIVER ONIONS. *Net $1.50*

"Modernity, the topmost toss and froth of it, is satirized in a thoroughly good new novel, GRAY YOUTH, which suggests comparison with the best work of Wells and Bennett. Keener, cleverer narrative and situation than has appeared this many a day."
—*Pittsburgh Dispatch.*

GILLESPIE
By J. MACDOUGALL HAY *Net $1.40*

"It is all vivid, distinct, alive. The salt spray blown over the little town tingles on one's lips; the scent of the heather rises to one's nostrils. One knows every turn of the narrow streets. A remarkable novel."
—*New York Times.*

of his rule. But Fried closes his fine volume with a great appeal and a prophecy. He declares that the Emperor could, if he would, greatly accelerate the peace movement and insure its dominance in the world. "He could," the author says, "link his name forever with this great time, and win the most precious laurels. If he does not, history will never forget that the most remarkable monarch, the most prominent personality of the age, was unable to grasp the possibilities of its greatest problem." "But the Emperor wishes to take the step. He is hindered only by the men who surround him, and who have not kept pace with him in their development. He is hindered by those who have an interest in the past . . . who wish to put the clock back. But the clock will not be put back. The hour will come when the Emperor will throw off his fetters, when he will perceive that it is now time to carry out the promise he gave when he said: 'I only wish that European peace lay in my hands, I should certainly take care that it should never be disturbed.' It now lies in his hands," continues Fried. "The world and history await a deed!" The deed which Fried expected was never performed. William hesitated. The opportunity was lost. History will write a strangely different record, and the world will pronounce judgment accordingly.

IDEALS AND PROGRESS IN MEDICINE

The place of research in medical practise and in medical education is well brought out in the thirty odd addresses and lectures gathered by Professor Cattell in the second volume of his "Science and Education" series under the title *Medical Research and Education.* The observer of tendencies in society and in education and the student interested in the advancement of science, no less than the practising physician, will find in this book valuable suggestions and inspiration. The idealists among the leading medical men are the first to recognize the demoralizing effects of economic competition; and they urge a readjustment of the relations between the physician and the community.

Science Press $2

WORD PICTURES OF THE WAR

From behind the censorship veil have come only the barest bulletins and the most meager details as to the life-and-death struggle now being fought, on which hangs so much of the fate of Europe. Only from the returning wounded and the refugees from the stricken districts is it possible to get any conception of its varying fortunes, of the ghastliness of its details, and above all, of the grim humor with which the human being seems to be capable of endowing any situation. Below are a few of these word-pictures of the war:

HOW THE BRITISH STEMMED THE GERMAN TIDE AT MONS

"When the history of the tremendous struggle in the neighborhood of Mons and Charleroi—a titanic combat lasting five days—is written," telegraphs the correspondent of the London *Daily Chronicle* from Boulogne, "the historian will pen perhaps the most glorious chapter whichever has been or ever will be added to the history of British and French arms. When, in the course of time, we are able to weigh all the features of that stupendous combat, in which were locked the vast, stern legions of Prussian military autocracy and the pick of the British and French military strength, the forces of freedom; when we know the gain and loss, the tragedy and heroism of it all, there will shine resplendently forth a stirring story of martial glory which will make it matter but little which way the advantage went.

"From the lips of those who took part in it, from the wounded taken out of the battle of giants, from refugees who fled from their blurred and blackened homesteads and their villages devoured by fire and shattered by shell. I have, during the last two days, heard enough to be able to piece together a story of the struggle which dwarfs all the decisive battles of the world.

"One of the men on the hospital train gave me this description:

"'As a rule, their big gun fire was mighty poor, tho they did go in for quantity. In the trenches we used to watch the German gunners trying to hit conspicuous parts of Mons, and every time they missed we gave them a cheer which they could hear. It was really astounding what they could miss. I think we can beat everybody at marksmanship.'

"'And the British artillery?' I asked.

"'Why, it was magnificent—if there had only been more of it. But the Germans got, as it was, perhaps a good deal more than they ever expected. The artillerymen, too, were desperately cool. On one occasion—I think it was late on Monday—we held a position about five or six hundred yards from the German lines. We could see them quite clearly. They mostly were standing up—fresh troops, I think they were, being brought up for another attack. The order was given to us to fix

bayonets. It was evidently to be a charge, the thing we especially had been waiting for. In the sunlight the bayonets flashed, and we waited for orders.

"'The Germans must have seen our bayonets flashing, for down they went on their faces. If there is one thing they fear, it is a bayonet attack. Suddenly there came a hail of bullets, and the order to charge did not come. We retired a little way after that, and advanced to much the same position again just as darkness came. We could see the ground well in front of us simply littered with German dead. It cost us a lot, too. At one time early the next day we got within a couple of hundred yards of them. I am sure we must have nearly wiped out those in front of us.'"

BAYONET CHARGE UP CLIFF

A Reuter dispatch gives this account of the fight for the ancient citadel dominating the town of Dinant:

"The citadel was captured by the Germans, who hoisted their flag on it at 1:30 o'clock in the afternoon. . .

"The French artillery silenced the German guns, and by seven o'clock in the evening the Germans were retreating. Only the citadel continued to shower lead on the advancing French. . . .

"The French, when the bugle sounded the charge, fixed their bayonets and began to swarm up the numerous steep and rocky paths leading to the summit, under a deadly hail from the machine guns and rifles above, keeping their eyes fixed on the German flag floating from the citadel. They climbed steadily, however, disregarding their losses, and a well-planted French shell silenced the machine gun fire a few minutes later. The French soldiers tore down the enemy's flag, while the scaling party fired down on the fleeing Germans."

HOW THE "AMPHION" WAS SUNK

First blood to the German navy came when the small British cruiser "Amphion" was sunk by striking a mine. Here is the account of one of the seamen who witnessed it:

"It was 6:30 o'clock when the 'Amphion' struck the mine. A sheet of flame instantly engulfed the bridge. The captain was rendered insensible and he fell to the floor. As soon as the captain recovered consciousness he rang to the engineers to stop the engines, which were still going at revolutions for twenty knots. As all the forward part of the 'Amphion' was on fire it was found impossible to reach the bridge or flood the fore magazine.

"The ship's back appeared to be broken and she was already settling down by the bows. All efforts therefore were directed to placing the wounded in places of safety in case of an explosion and in getting the cruiser in tow by the stern.

"By the time the destroyers had closed in it was clearly time to abandon the ship. The men fell in for this purpose with the same composure that had marked their behavior thruout. All was done without hurry or confusion and twenty minutes after the cruiser struck the mine the men, the officers and lastly the captain had left the ship.

"Three minutes after the captain had left another explosion occurred. This enveloped and blew up the entire fore part of the vessel. The effect of this showed that the 'Amphion' must have struck the second mine, which exploded the fore magazine. Debris falling from a great hight struck the rescue boats and the destroyers and one of the 'Amphion's' shells burst on the deck of one of the destroyers, killing two Englishmen and one German prisoner.

"The afterpart of the 'Amphion' then began to settle quickly until its foremost section was on the bottom and the whole afterpart was inclined to an angle of forty-five degrees. In another quarter of an hour this also had disappeared."

BLEW UP FORT AND DIED A HERO

The Paris Ministry of War issued the following communique concerning the holding out of the Liège forts:

"The Chaudefontaine fort at Liège was the scene of an act of heroism which brilliantly affirms once more the valor of the Belgian army.

"Major Nameche commanded the fort which controls the railway from Aix-la-Chapelle to Liège via the Verviers and Chaudefontaine tunnel. The fort was bombarded continuously and very violently by the Germans. When it was only a heap of debris and the commander judged that resistance was impossible he blockaded the tunnel by producing collisions between several locomotives which had been sent into it. Then he set fire to the fuses of mines in the tunnel.

"His task thus done, Major Nameche did not wish to see the German flag float ever over the ruins of his fort. He therefore exploded all the remaining powder and blew up everything, including himself. Such an act of heroism is beyond all comment."

RODE INTO DEATH S JAWS

A correspondent describing the fighting before Malines says:

"I could see dark blue masses of Belgian infantry falling back, cool as on a winter's morning. Thru a mistake, two battalions of carbineers did not rereceive the order to retire and were in imminent danger of destruction. To reach them a messenger would have had to traverse a mile of open road swept by shrieking shrapnel. A colonel summoned a gendarme and gave him the orders and he set spurs to his horse and tore down the road, an archaic figure in towering bearskin. It was a ride into the jaws of death.

"He saved his troops, but as they fell back the German gunners got the range and dropt shell upon shell into the running column. Road and fields were dotted with corpses in Belgian blue.

"At noon the Belgians and Germans were in places only fifty yards apart, and the rattle of musketry sounded like a boy drawing a stick along the palings of a picket fence. The railway embankment from which I viewed the battle was fairly carpeted with corpses of infantrymen killed yesterday. I saw peasants throw twelve into one grave."

ILLINOIS

NORTHWESTERN UNIVERSITY

SCHOOL OF MUSIC — Peter C. Lutkin, Dean

The University School of Music offers courses in Piano, Organ, Violin, Voice and Theory of Music leading to academic degrees. Also courses in Public School Music, and Piano and Voice Pedagogy. Literary studies in the College of Liberal Arts or Evanston Academy included without extra cost. Thorough Preparatory School maintained. BULLETS LIKE BUMBLEBEES

The first actual witness to give a description of the fighting on the French frontier is a reservist named Jacquin and his story is told by George W. Price, the special correspondent of the New York *Sun* and the London *Daily Mail*. This is Jacquin's story told on his hospital bed at Chambery:

"All night long we listened to the roar of gunfire. As the dawn appeared we could hear the first Prussian bullets pass our ears. It was a curious sensation. One could say at first that a swarm of bumblebees was passing him. Then we all take our breath and instinctively one opens his cartridge pouch. The officers there are as calm as during the July 14 review in the celebration of the fall of the Bastille.

"A brief order rings out. We lie down and a fusillade begins again. What a noise! We make a few leaps forward and lie down and begin firing again. We carry out this maneuver right to the frontier posts.

"A hundred yards further are the German positions. The charge bayonets order comes and we leap forward and the Germans decamp. They are afraid. When we past the frontier post and knocked against it it fell. One would have thought that the German frontier was firmer than that.

"At last we tread on Alsatian ground. Formidable shouts resound in our chests. I run fifty yards and fall senseless from sunstroke. I recovered twenty-four hours later, but the surgeon would not let me remain on the firing line.

"At one moment on the day preceding the fight at Col du Bonhomme we saw an aeroplane with a French flag plane over us. We were overjoyed. A minute later we saw it drop a couple of bombs near a transport train. One fell three yards and the other ten yards from the train and buried themselves in the ground. They did no harm. An officer called out, 'Pigs; they are Germans,' and ordered us to fire, but they were too high."

AMERICAN WOMAN HEARD ZEPPELIN BOMB

In the crowd of refugees arriving in London from Ostend were a dozen Americans, who made their way out of Antwerp with hand baggage only. Among them was Mrs. George Sparrow, of New York, who had left Liège soon before that city was besieged by the Germans. She said:

"In Antwerp I was aroused one night by a loud boom, which I imagined was caused by cannon firing in the fort, but, looking out of a window, I saw a Zeppelin airship, apparently quite near. I could plainly hear the buzz of its motor. A bomb from it fell only a few blocks away, the explosion of which was followed by an outbreak of fire.

"Many persons ran from the houses, panic stricken. Some of the women were hysterical. It was a fearful night. I got out of the city next morning with several other Americans and went to Ostend, where I spent last night. Ostend is very quiet, with gendarmes walking about the streets. I saw no signs of Germans this morning."

SOME SIDELIGHTS OF THE CHAUTAUQUA SEASON

NEW readers of the Chautauqua Home Reading Course who enrolled at Chautauqua organized the Class of 1918, the date of their completion of the four-year cycle to which they look forward. They begin this fall with an "English year" group of topics, "Democratic England," "Among English Hedgerows," "Thru England with Tennyson," etc., and therefore chose "The Arthurians" as the class name. The Tennysonian motto selected is "Live pure, speak true, right the wrong, follow the king." The class emblem is the gladiolus. Class officers are: President, R. H. Hudnall, Blacksburg, Virginia; vice-presidents, Rev. A. T. Terryberry, Preston, Ontario; Miss Elizabeth Miller, Akron, Ohio; Mrs. Kirk Dyer, Ardmore, Oklahoma; Mrs. James B. Berry, Oil City, Pennsylvania; Mrs. Maud Reynolds McLure, Louisville, Kentucky; Mrs. V. L. Griffin, Erie, Pennsylvania; secretary, Miss Rachel Miller, New York City; treasurer and trustee, Mr. C. N. Swinley, Norfolk, Virginia.

All persons who secure the Reading Course for the first time this year are automatically recorded at Chautauqua Institution offices as eligible members of the Class of 1918. For the Class of 1915 which graduates next year the new "English year" is the fourth. In other words, all undergraduates read the same course at the same time whether it be their first, second, third or fourth in the four-year cycle. Identification with class organization and activities is purely voluntary, but class spirit and enthusiasm have been very remarkable in the Chautauqua Circle movement. The Class of 1889 celebrated its twenty-fifth anniversary with a successful reunion at Chautauqua this summer. Members of the graduating Class of 1914 who were able to come to Chautauqua for "Recognition" and their diplomas enjoyed a record-breaking series of class festivities. At the class breakfast a $100 scholarship in honor of the class president, Mrs. Mabell S. C. Smith, was given, which will permanently assure the opportunity of reading the Chautauqua Course to some deserving person selected each year.

The Great War caught Chautauqua program makers unprepared in advance, but revealed the cosmopolitan resources of the summer population. An illuminating War Symposium was presented by a native German professor, a native French

NEW BOOKS WORTH KNOWING

Smiley and Storke's First Year Latin Course - - - $1.00

By JAMES B. SMILEY, Principal, Lincoln High School, and HELEN L. STORKE, Assistant Principal, West High School, Cleveland, Ohio.

A complete revision of the authors' successful Beginner's Latin Book. It embodies the suggestions of teachers who have used the earlier book, and furnishes the pupil with an adequate preparation for the reading of Cæsar.

Blanchard and Wade's Foundations of Chemistry - - - $1.25

By A. A. BLANCHARD, Ph.D., Associate Professor of Inorganic Chemistry, Massachusetts Institute of Technology, and FRANK B. WADE, B.S., Head of Department of Chemistry, Shortridge High School, Indianapolis, Ind.

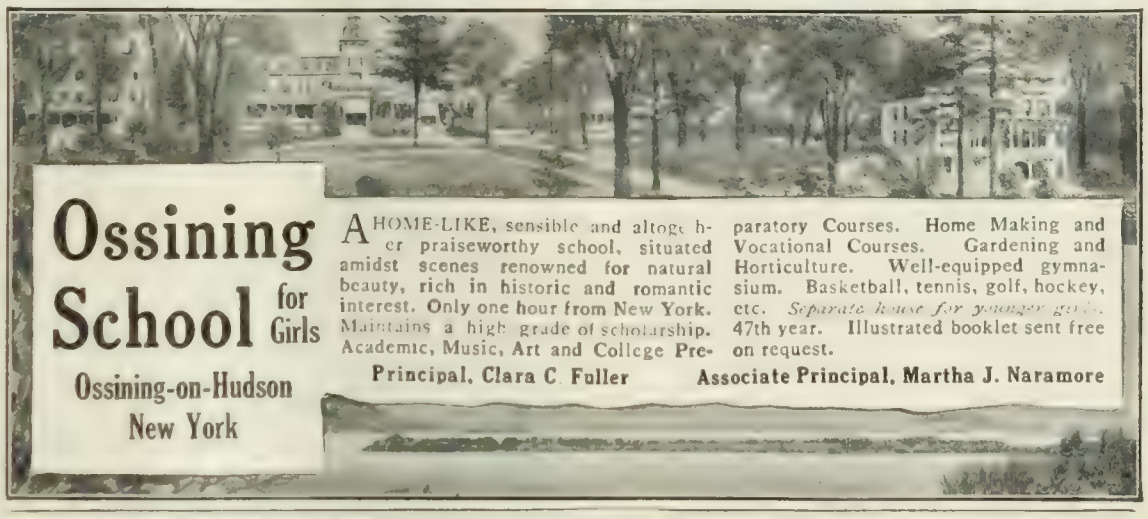
Teaches the practical applications of modern chemistry, stimulates original thinking, and presents the subject in a logical and scientific way. It is suited both for college entrance examination preparation, and for high school students who do not go to college.

Riess and Janes's Caesar. Gallic War. Books I.-II. **- $0.85**

Bound with **Janes's Second Year Latin Sight Reading - $1.20**

Edited by ERNST RIESS and ARTHUR L. JANES, of the Department of Classic Languages, Boys' High School, Brooklyn.

Furnishes all the material for an intensive study of Books I and II, with a thorough grammatical summary and many exercises in prose competition. Together with the Second Year Sight Reading, it supplies a complete course in Second Year Latin.



Conley's Principles of Cooking $0.52

By EMMA CONLEY, State Inspector of Domestic Science for Wisconsin.

A half year course for secondary and vocational schools, which teaches the general principles of cooking. Over 250 recipes are included, as well as directions for the economical purchase of foods.

Lilies Fresh From Beds
When you get lily bulbs fresh from the beds, with roots left on and packed in damp sphagnum moss, you often gain a whole year on them, because they don't need the time to recover that store bulbs demand. My spring catalog and autumn supplement offer a long list of hardy plants grown in cold Vermont. Send for my catalog before ordering.
F. H. HORSFORD, Charlotte, Vermont

professor, a surgeon who had been with Kitchener in Egypt, and a student-traveler recently back from Alsace-Lorraine. Professor Sidney L. Gulick, one of the first delegates to return from the interrupted Peace Conference at Constance, Germany, reached Chautauqua to lecture upon European conditions before the season closed. A Chautauqua Peace Society was organized early in the season.

A Chautauqua Sunday opens with a Bible Study Hour for adults at nine o'clock. At 9:30 there is Graded Sunday School, with classes held in different places, some outdoors, pupils grouped according to public school grades from kindergarten to college age, separation of boys and girls' classes beginning with the eighth grade. Ten o'clock is the hour for Devotional Service and Morning Prayer at nine different denominational houses. All join in the Amphitheater at eleven o'clock for the Sermon of the day. An adult class for the International Sunday School lesson is held at 2:30. At three the Junior Congregation or Children's Church Service is held. An Organ Interlude (recital) occurs at four. The famous C. L. S. C. Vesper Service (for which Mary A. Lathbury wrote the hymns—"Day Is Dying in the West" and "Break Thou the Bread of Life") is held at five. An open-air Lakeside Service comes at 6:45, and a Sacred Song Service at 7:45 in the Amphitheater closes the Sunday program. Entrance gates to Chautauqua are closed on Sunday to the outside public. Admission granted to individuals is by permit only, for specified reasons. Exit is open to all at any hour of the day. Such protection from Sunday excursion crowds maintains a unique Chautauqua tradition.

The Department of Religion enrolled four times as many people as ever before, classes sometimes exceeding 300 members. Enlarged plans for next year include day classes for children and young people in the various clubs, and a study class for grandparents. Classes for parents will be continued, but on a larger scale. The work in religious education and religious psychology will be expanded thru additions to the faculty and it is also hoped to have courses in biblical archeology. Courses in church history, the life of Christ, and in the teaching of the Old and New Testament, will be continued as in the past three seasons.

A twilight "college sing" for both sexes of college age was successfully introduced as a feature of the Chau-

tauqua season. A College Women's League maintained headquarters and organized a number of enjoyable social activities. College men finally took the cue and perfected a preliminary organization for a College Men's League next season.

As a tribute to the memory of Mrs. Woodrow Wilson, a Chautauqua Amphitheater audience gave the silent Chautauqua salute (holding handkerchiefs aloft without waving—"drooping lilies") at the hour of the funeral services in Washington. All Chautauqua exercizes were suspended for five minutes at the hour of services at Rome, Georgia, while the bells tolled in the Miller Bell Tower.

The Bird and Tree Club enlisted more than 400 members in its summer study and conservation propaganda. Fifty-five species of trees on the grounds were labeled, ninety-one varieties of birds were listed. Services of a forester have been secured and a tree-planting nursery has been authorized.

A Child Welfare Exhibition with educational demonstrations, sent from the New York State Department of Health, was supplemented by lectures from Chautauqua health officers. A consumers' League Exhibit was held for two weeks under auspices of the national organization.

The Alabama Club started out with a registration list of eighty-five natives at Chautauqua from that southern state, in which Bishop Vincent was born.

Motion picture films of characteristic Chautauqua activities were made and exhibited before the close of the season.

The board of trustees of Chautauqua Institution elected these officers in August: Chancellor, John H. Vincent; president, George E. Vincent, University of Minnesota; director, Arthur E. Bestor; and officers of the trustees as follows: President, Clement Studebaker, Jr., South Bend, Indiana; first vice-president, N. F. Clark, Pittsburgh, Pennsylvania; second vice-president, A. M. Schoyer, Chicago, Illinois; third vice-president, Ira M. Miller, Akron, Ohio; secretary, Arthur E. Bestor; treasurer, M. J. Gallup, Jamestown, New York. New members of the board of trustees elected are: Dean Shailer Mathews, University of Chicago; Justice William L. Ransom, New York City; Snell Hall, Jamestown, New York; Perry L. Lewis, San Antonio, Texas; H. A. Truesdale, Conneaut, Ohio.

Trouble-Savers
For the Users of No-Rim-Cut Tires

These are four of the greatest features ever employed in tire making.

Each combats in the best way known, one of the major tire troubles.

All four are exclusive to Goodyear No-Rim-Cut tires. That is why these tires rule. No other tires in the world today has so many users.

The Four

To end rim-cuts, these tires alone have our No-Rim-Cut feature. It completely wipes out this chief cause of tire ruin, in the only satisfactory way that's known.

To save blow-outs—to remove one of the main causes of them—we give these tires an "On-Air" cure at an extra cost of $1,500 daily. No other maker does that.

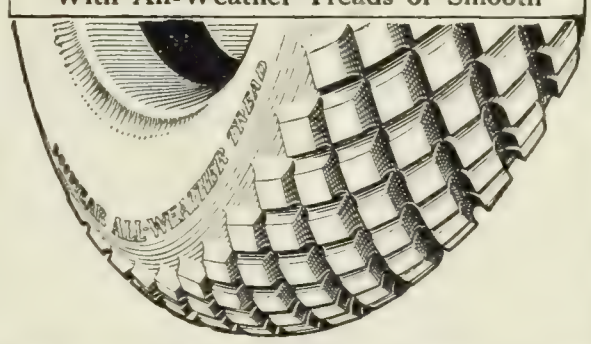
To combat loose treads, we form in each tire, by a patent method, hundreds of large rubber rivets. They reduce this risk 60 per cent.

For an anti-skid we give you our double-thick All-Weather tread. It is flat and smooth and regular, so it runs like a plain tread. But it grasps wet roads with deep, sharp resistless grips.

You Want Them

You want these trouble-savers. Every motorist wants them. This is to urge you to get them.

Hundreds of thousands get them now in Goodyear No-Rim-Cut tires. No man gets them in any other tire.



You get with them in Goodyears, in every way, the utmost in quality tires. And you get them at prices which mammoth production has reduced to the farthest limit.

They mean to you safety, sturdiness, strength—maximum mileage and minimum trouble. And any dealer, if you ask him, will supply you these premier tires.

For your own sake, get them.

THE MARKET PLACE

WAR AND NATIONAL TAXES

It was estimated at Washington two weeks ago that the loss of tariff revenue due to the war would not be less than $100,000,000 a year. This estimate has now been reduced. The customs revenue last week at New York, where the greater part of it has been collected in peaceful times, was about twenty-five per cent below the normal receipts, owing partly to the guarded freedom and safety of the Atlantic. The Government will not need so much as $100,000,000, but current expenses have been increased by the war. The cost of maintaining our neutrality by patrolling the coasts and in other ways is something. There has been a considerable expenditure for the benefit of American tourists in Europe. For the War Risk Insurance Bureau $5,000,000 is to be set aside, and it may be that from $10,000,000 to $30,000,000 will be paid out for ships. It is expected that there will be new taxes.

There are indications that the additional revenue will be obtained by increasing the tax on beer (which yielded $66,000,000 last year), and by such stamp taxes as were imposed during the war with Spain. The whisky taxes, or taxes on distilled spirits, last year were $163,000,000. These may be increased, altho the addition might yield but little, as a reduction of output was recently ordered. There is much opposition to a higher tax on tobacco (receipts were $76,000,000 last year) because the growers are losing something on account of the war. The French Government has been accustomed to buy a considerable part of the crop in Maryland, Virginia and North Carolina, but has now ceased to buy.

With the amounts in national banks and pledged for moving the crops excluded, there is now in the Treasury an unincumbered working balance of $57,000,000, and there are $241,000,000 of unissued Panama Canal bonds which can be used. New taxes should not be imposed unless they are imperatively demanded. Probably Congress will be in session thruout the year, with only a short recess. Tax legislation may safely be deferred for several weeks.

If the estimates of the authors of the income tax bill had proved to be correct, there would be very little need of more revenue now. The report of the Commissioner of Internal Revenue, published last week, shows that the income tax collected from individuals was only $28,253,534. To this sum, however, are added the corporation excise tax, $10,671,072, and the corporation income tax, $32,456,662, making a total of a little more than $71,000,000. The estimates were notably defective with respect to the sums to be paid by recipients of large incomes. These are in several classes. It was estimated that they would pay more than $50,000,000, but the Government was able to collect from them only $15,525,000. For the three high classes—$100,000 to $250,000, $250,000 to $500,000, and more than $500,000—the receipts were only $9,608,385, altho we think the original estimate and forecast was about $28,000,000. The estimates were based upon current gossip and reports about great American fortunes, and not upon the results of careful investigation.

THE RESERVE DISTRICTS

Errors were made by the organization committee that mapped out the twelve districts of the new banking reserve system. One of these was the assignment of the banks of northern New Jersey to the district of which Philadelphia is the reserve center. Another was the exclusion of the banks of southwestern Connecticut—situated in Stamford, Norwalk, Bridgeport, and other towns—from the district whose reserve center is the city of New York.

It is said that the first of these is now to be corrected. The New Jersey banks, it is asserted, are to be made tributary to New York. And at the same time, Pittsburgh, which has protested because it was placed in the Cleveland district, will be made tributary to the regional reserve bank in Philadelphia.

The banks of northern New Jersey, a majority of them situated just across the river from New York, are closely related to New York banks. It may be said that they are in the suburbs of the great city. To compel them to be tributary to the reserve bank in Philadelphia would cut their natural affiliations, causing loss as well as great inconvenience. The connection of the Connecticut banks with New York should not be severed. They also are situated in what are, in a financial sense, suburbs of New York. Both errors should promptly be corrected. The Central Reserve Board has power to make the changes that are required, and this power should be exercized.

BEET SUGAR

The rising price of sugar does not prevent the producers of beet sugar in the West from complaining. They cannot get their customary supply of beet seed from Germany, and they predict the death of their industry on account of the approaching removal of the tariff duty. They have imported the seed, because the seed produced in Europe is better than any that can be grown here. It is asserted that repeated attempts to grow seed of as good quality in this country have been unsuccessful. On the other hand it is said that one successful attempt has been made in Utah. At all events, the practise of the beet growers has been to use, and to rely

upon, the foreign seed. Their orders have usually been placed in September. This year, because of the war, the price has advanced 500 per cent, and the orders cannot be filled. Utah and Idaho need 1,400,000 pounds, and there is a demand for much larger quantities elsewhere.

The effect of the coming tariff change is not immediately impending, altho tariff legislation may have been one cause of the reduction of the American output from 5,659,000 tons in 1913 to an estimated yield of 4,826,000 tons this year. It may reasonably be expected that the effect of the tariff change will be depressing. The industry will suffer by reason of it, and may die. We have never been able to see that a slight reduction of the price of sugar, amounting to less than one dollar per annum for the average family (and a reduction that might not be made) would be sufficient compensation for the destruction of the cane sugar industry of Louisiana and the beet sugar industry of the West.

RAILROAD RATES

The Interstate Commerce Commission may be asked to reopen the case in which the Eastern railroads sought permission to increase their freight rates by five per cent. Before the beginning of the war, the reports of earnings, gross and net, were by no means satisfactory, and there was evidence of enforced economies in operation which tended to depress important manufacturing industries. The war, by checking or reducing both exports and imports, has unfavorably affected railway traffic. A large part of the gain which was to have been derived from the movement of our surplus wheat to the seaboard has not been received. But it may come to the roads hereafter. There is no longer any European market for American railroad securities. For a long time to come our railroad companies cannot look to Europe for any financial support.

The changes that have taken place since the commission announced its decision, on August 1, may warrant further consideration of the question, and a second decision more favorable than the first. It is not difficult to prepare an argument in favor of another hearing.

The recent advance of prices is shown by *Bradstreet's* index number for August 15, which relates to the wholesale prices of 100 representative commodities. On August 1 the number was 8.7087; fifteen days later it had risen to 9.8495. This increase of thirteen per cent makes a new high record.

It is estimated in Paris that the cost of the war to France is $9,000,000 a day. The London *Economist* says the cost of maintaining all the armies of the nations involved is not less than $22,000,000 a day.

Up to May 1, the Pennsylvania Railroad Company had paid nearly $10,000,000 ($9,012,667) in pension allowances to its employees. Last year's payments were $1,162,324. There are 1123 names on the pension roll.

STEINWAY

Choose a Steinway Piano for your home with the positive knowledge that it is the ideal of the most famous pianists:

Liszt
". . . a glorious masterpiece in power, sonority, singing quality and perfect harmonic effects."

Paderewski
"The beauty of the tone, the power of its resonance, and the perfection of its mechanism . . ."

Rubinstein
". . . your unrivaled pianofortes . . . for excellence and capacity for enduring the severest trials."

Josef Hofmann
". . . beautiful liquid tones of the treble, the singing quality of the middle, and the sonority of the bass."

Write for illustrated literature and name of the Steinway dealer nearest you. Mention this magazine.

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

N. Y., N. H. & H. SECURITIES

Several weeks ago the Superintendent of Insurance of Illinois criticized some of the fire insurance companies domiciled in the eastern states because they carried in the aggregate, among the other investments composing their assets, some $7,000,000 of the bonds and stocks of the New York, New Haven & Hartford Railway. The implication was that the managements of these fire insurance companies were derelict in their duty in permitting so large a sum of money to remain tied up in what one Illinois daily paper, commenting on the subject, characterizes as "worthless paper." One of the leading Chicago dailies, commending the Superintendent of Insurance on his vigilance, magnifies the importance of the investment by observing, in respect of the troubles in which the railway company has been involved for some time past: "And now comes this statement from the state's commissioner of insurance to show that this situation which we have been regarding with calmness, as alien to our interests, affects to a certain extent everybody who takes out a fire insurance policy in Illinois."

The criticism of the companies on this head is entirely unwarranted, and the sensational expressions of some of the Illinois press are purely gratuitous and baseless. The securities are far from "worthless"; but admitting that they are so, the amount involved is so small a proportion of the total value of the assets in which they appear as that the inclusion or exclusion of them would make no practicable difference in the security behind the policies. Such treatment of the subject as has been accorded by the Superintendent of Insurance and the newspapers is an injustice to the companies affected and creates needless apprehension among policyholders.

Doubtless the New Haven securities owned by the insurance companies were acquired years ago and it is admitted that until very recently they have been regarded as among the highest in that class, both as to safety and earnings. Owners of these stocks and bonds are to be sympathized with instead of being made the objects of unnecessary criticism. Of course, the insurance companies which own them cannot without loss dispose of them, and as no one of sense in this country believes that the New York, New Haven & Hartford Railway has no future, they will be retained until they regain their normal value or will be traded out on the best terms possible.

But the point is: The insurance companies which carry New York, New Haven & Hartford bonds and stocks are not appreciably affected by the decline which has taken place in their value, and the security which those companies offer to policyholders is in no wise diminished.

THE GILDER POLICY ASSOCIATION

The Gilder Policy Association has lately been incorporated by the relatives of the late Richard Watson Gilder. The object of the association is set forth as the obtaining of insurance on the lives of members without the intervention of agents. By this means, if policies were taken directly from the companies, the commission expenses would be canceled.

Until human nature becomes very different from what it is at present, the ordinary man must have the greatest and most persistent pressure brought to bear upon him before he is willing to sign an application for life insurance. This tendency to postpone or to suppress any thoughts of a death indemnity is deeply implanted in human nature.

Few of us really believe, with the certainty that we believe that the sun will set, for example, that we ourselves, our ambitions, our hopes, our loves will die. It takes a powerful imagination to picture the funeral cortege, the open grave, and their own vacant chair.

Thus it comes that some men, who will put themselves to every kind of trouble and anxiety concerning an indemnity for loss of property, and may push thru a storm for many miles to insure their houses and barns against fire, will turn from the life insurance solicitor as they would turn from something of abhorrence. Of course, this attitude of mind is not the attitude of all men, yet it is the attitude with which the agent is painfully familiar. And this is why the solicitor must plod his weary rounds, using up his vitality in striving with all his might and strength, to force men to safeguard their wives and children. And thus it is that commissions must be placed high enough by the companies to induce men who are skilled in the arts of special pleading to sell their services.

Only two companies have ever met with any success in issuing life insurance thru the mails and without the intervention of agents. And it might be questioned if the money that has been expended for necessary advertising and for circulars, and the cost entailed by much correspondence, would not have yielded greater results if it had been paid out in the form of commissions. And so long as most men look forward toward the future as if they had a first lien on all time it may be considered doubtful whether plans like the Gilder Policy Association will meet with any considerable success.

GREATER KNOWLEDGE AND EFFICIENCY

You Need It Every Day
You Need It In Your Private Life
You Need It In Your Public Life
And You Can Have It

In every issue of The Independent about fifty distinct subjects are discussed, not counting the minor items. This means that in the course of a year the opportunity is given of gaining information about twenty five hundred timely topics. For the business man there are weekly pages of practical talks on finance, insurance, commerce and industry. For the teacher there are discussions of all phases of education from kindergarten to the university. For the clergyman and the church worker there is abundant information about the modern movements in theology and about the methods of social service. And so on throughout all spheres of human labor.

You know the value of The Independent—if your next door neighbor knew it as you do he would be a reader also. Send his name and address and The Independent will send him a specimen copy with your compliments.

A Mark of Refinement

It is something to be proud of when you offer a cake of Pears' Soap to your guest. It indicates that you know and appreciate the best and purest soap obtainable in all the world. Pears helps the skin to retain its health without roughness, redness or irritation. It is matchless for the complexion and is a soap

Which Is Inexpensive

Its price is as low as that asked for inferior and often injurious soaps. It is absolutely pure, with no foreign substances: is best for the skin and lasts longest. It corrects the harm caused by common soaps. Pears continually beautifies, and as a woman's beauty is a woman's duty, it is a pleasant duty to use

Pears' Soap

15 cents a cake for the unscented

IMMIGRATION FIFTY YEARS AGO

From The Independent, August 11, 1864

It affords us pleasure to state that, in order to give practical efficiency to this law, an organization, on a scale commensurate with the magniture of the undertaking, and wisely adapted to the necessities of the case, is already in operation. The American Emigrant Company (to which we allude) is an incorporated company, chartered for the purpose "of procuring and assisting emigrants from foreign countries to settle in the United States, is composed of gentlemen of high character and undoubted responsibility, possess a large capital (a million of dollars, more than half of which is paid up), commands the confidence of the most influential men in the community, and is under the direction of practical business men, who bring to the performance of the work they have undertaken zeal, experience, and capacity.

CALENDAR

The Baltic Exhibition at Malmö, Sweden, to which Swedish, German, Danish and Russian exhibits have been sent, is open until *September 15*.

World's Temperance Sunday will be observed on *November 8* in most of the states. In some states it will be *November 1* and in Ohio *September 20*.

A tuberculosis census of the churches of the country will be taken in *September* and *October* under the direction of The National Association for the Study and Prevention of Tuberculosis.

The United Typothetæ and Franklin Clubs of America will hold their twenty-eighth annual convention in New York *October 6, 7* and *8*.

The Society of American Indians, the largest organization of native Americans in the United States, will hold its annual conference at Madison, Wisconsin, from *October 6* to *11*.

The annual convention of the American Bankers' Association will be held in Richmond, Virginia, *October 12* to *17*.

On May 17, 1814, Norway adopted a Constitution as a free and independent kingdom, having just been released from Danish control. To commemorate this event a Centennial Exposition is being held at Christiania until *October 15*.

The American Bar Association will hold its annual meeting on *October 20, 21* and *22*, at Washington. There will be addresses by William Howard Taft, president of the association; Senator Root, the Ambassador from Argentina, and Sir Charles Fitzpatrick, Chief Justice of Canada.

The annual meeting of the Association of Colleges and Secondary Schools of the Southern States will be held at the University of Virginia *October 22* and *23*.

A Colonial Exhibition at Samarang, Java, will continue to *November, 1914*. It is to "give a comprehensive picture of the Dutch Indies in their present prosperous condition attained since the restoration of Dutch rule in 1814."

The seven hundredth anniversary of the birth of Roger Bacon will be observed at Columbia with commemorative exercizes and the publication of a volume of studies. A great pageant of the culture of the thirteenth century will be given on *November 4*.

Barnard College, in Columbia University, will celebrate its twenty-fifth anniversary on *November 5*.

The annual convention of the National Suffrage Association will be held at Nashville, *November 12* to *17*.

The sixth annual Medical Missionary Conference will be held at Battle Creek, Michigan, *November 17-20*.

A business efficiency exposition will be held under the auspices of the Cleveland Chapter, American Institute of Banking, from *November 14* to *21*.

The twelfth annual Philadelphia Water Color exhibition will be held at the Philadelphia Academy of the Fine Arts, *November 8* to *December 13*.

The Intercollegiate Prohibition Association will hold its national convention in Topeka, Kansas—the prohibition capital of the nation—*December 29* to *January 4*.

The fifth International Congress of the American Republics will hold its opening session on *November 29* at Santiago, Chile. It will be in session for several weeks, adjourning about New Year's, 1915.

Between *March 4* and *April 15, 1915*, a monster naval parade from Hampton Roads to San Francisco via Panama will mark the formal opening of the Canal.

The general session of the Woman's Congress of Missions is to be held during the first week in *June, 1915*, in the new Civic Auditorium of San Francisco.

The biennial convention of the Anti-Saloon League of America will be held at Atlantic City, New Jersey, from *July 6 to 10, 1915*. It is expected that 30,000 will attend.

HIS HOLINESS, BENEDICT XV

Elected September 4, 1914, crowned September 6, 1914. As the last words of Pius X were of the horrors of the Great War, so the first utterances of the new Pope on mounting the throne of St. Peter on September 5 were misgivings as to his own ability to bear the heavy responsibility thrust upon his shoulders "when almost all the nations of Europe were stained with blood, and when the wounds inflicted upon humanity were also inflicted upon the Church." The Pope was formerly the Cardinal della Chiesa, Archbishop of Bologna. The four-day conclave of the College of Cardinals which elected him is one of the shortest in the history of the Church

The Independent

VOLUME 79 MONDAY, SEPTEMBER 14, 1914 NUMBER 3431

LEADERSHIP VERSUS LORDSHIP

DESCRIPTIONS of Berlin behavior on the day that William II drove in from Potsdam, made his balcony speech and declared war, are strange reading for Americans. It is difficult for us to get into the mental attitude of a populace intelligent but powerless, waiting to be told by an owner whether "his people" were to be driven forth to slaughter, or permitted to go on with peaceful pursuits.

Self-conscious abjectness is for us unthinkable, while the scene in the House of Commons, where the freely chosen representatives of a democracy, tense with an overwhelming sense of responsibility, were calmly asking what national honor and moral obligation demanded of them, holds us breathless with its reality.

Never before in the world's history has the distinction between leadership and lordship been so sharply drawn. Political thinking and, let us hope, thinking on all the problems of social democracy, has been clarified, for all time to come.

The apologists for privilege, for divine right, for ecclesiastical authority, strive unwearyingly to bemuddle the popular mind upon the relations of the few and the many, the minority and the majority, to efficiency and to truth. What do the many know, they say, about managing a business, operating a railroad, planning a military campaign? To such questions, put in this question-begging way, the answer of course is "Nothing."

If democracy required that the masses of mankind should be scientific, industrial and military experts, it would remain forever Utopian, a dream. But it does not. Democracy is based upon a truth more comprehensive, more profound. Democracy is possible because leadership, initiative, genius for guidance, are one thing, while ultimate responsibility, ultimate decision, sovereignty, are a wholly different thing. In democracy the few lead, inspire and guide; the many are sovereign, they make the final, the fateful decision, to them alone belongs ultimate responsibility. In absolutist industry, where the means of production are owned by a capitalist minority, in the authoritative church—Mormon, Roman, Greek, or Mohammedan—in the absolutist empire, the few not only direct, they also decide. They are sovereign. For all practical purposes they own the many, whatever the empty phrases of formal law may say to the contrary. They are not merely leaders, they are lords.

The resistless, overwhelming massing of intelligent sympathy thruout the western world upon the side of England, Belgium and France in this appalling struggle has come about, as our German friends will one day understand, because the western world instantly grasped the essential fact that democracy and leadership have been assailed by lordship. The attempt to raise a false issue by alleging that Russia is more to be dreaded than Germany has deceived nobody in his senses. Sufficient unto the day is the evil thereof. Whatever may happen in the future, Russia is today hurling her strength against the only enemy which as yet has aggressively attempted to substitute in the western world the law of *lése majesté* for constitutional liberty, and militarism for the moral obligation of solemnly accepted treaties. The crimes of Russian imperialism have been many, and the day of retribution will come, but Russia does not yet stand before the world forsworn. The German Empire does.

So the issue is drawn, and Mr. Winston Churchill with appalling clearness has portrayed its practical aspects. Leadership and lordship have closed in a life and death struggle. For the moment there is only one question. Which is stronger? Which can annihilate the other? For there will be no quarter this time, asked or given. It is the Darwinian fight for the survival of the fittest, at last.

HIS HOLINESS BENEDICT FIFTEENTH

VENERABLE was the Pope at the Vatican when he was a chief ruler among kings and kings held his stirrup. More venerable is he in these better days when he is freed from the mesalliance with temporal Rome, and his spiritual authority receives the loyal submission of half of Christendom. "Evil days are these in which my lot is cast," said Pius X; for while he was heartbroken over the terrible war which had set his spiritual children to killing each other, he also bemoaned the loss of the States of the Church which gave him the right to send his ambassadors to the capitals of the nations. So he was a putative prisoner in the Vatican. Will the new Pope choose to be a prisoner, or will be choose to enjoy the freedom from civil cares which Victor Emmanuel has bequeathed him?

This is the one question which every Catholic and every Protestant not embittered by narrow bigotry, must ask, earnestly desirous that Benedict XV may rule the Church with wisdom and courageous faith. We are all of us hoping that a new era of spiritual prosperity may come with this comparatively young Pope, who may well hold his throne as long as Peter or Leo and who may win, because he deserves, the sympathy of his generation.

We have hopes for this, for they all say, who know him, that he is not only good and religious like his predecessor, but is also a statesman, like Leo XIII, and that would mean that he will be a prudent ruler of the Church, and this would require him to be what they call a liberal Pope. It is something to be told that he is one of the most scholarly of the College of Cardinals from whom he was chosen; and being scholarly is almost tantamount to being liberal. It means living in one's generation, feeling its impulses, loving its devotion to knowledge and the search for truth, and having faith in humanity and in liberty of both thought and action.

It is something that he takes the name of Benedict, for the last Pope of that name, of a century and a half ago, was a broad man, a scholar and famed for his wise diplomacy. Such another Benedict is very much needed. We do not mean because of this fearful war which sets Catholics in opposite camps, for Kings do not much listen to Popes now, but because the late Pope was so unfortunate by his rigid policy as to set the Catholic nations of the world against the Church. Pius X, like Pius IX, wanted to put his Fisherman's ring into the affairs of Catholic nations, to rule their education, to hold to concordats which made the governments positively Catholic, but the nations would not have it so. Thus France broke away, discarded its concordat, turned the clergy out of the schools, broke up the religious orders and took possession of the ecclesiastical property, only leaving the churches to the officiating clergy. Spain and Portugal have done nearly as much; while Italy is a rebel to the Church, which repays insult for injury. It will be a most happy day for the Church if Benedict can find some way to make peace with the Quirinal, and peace with all Catholic Europe and America. The United States has no State Church, and no official relations with any Church, and yet it is in this country that the Catholic Church is most loyal and aggressive and prosperous.We would have Popes learn the lesson which Cardinal Gibbons or Archbishop Ireland could teach them on this matter. Perhaps the new Pope has learnt it; we are pleased to see that he was glad that his first blessing went to Americans.

Twenty-five years ago next month the Catholic Church of the United States celebrated the Centennial of the establishment of its hierarchy. The Independent sent its editor to attend the great occasion, when the first Catholic Congress was also held in Baltimore, and at Washington the Catholic University opened its doors for the education of priests. We felt a bit lonesome in that company, for not one representative of the Protestant religious press of the country was there to keep us company. Admirable and brave words were said there of which this new opportunity for the Catholic Church reminds us. We recall Archbishop Ryan's backward look of a hundred years since the first American bishop took office, and we recall that one hundred years ago from this present moment the six New England States had but one bishop, two priests, and two churches. Now New England is very nearly half Catholic, and the Church claims some thirty million adherents in this country and its possessions. But the new era under a new Pope recalls more vividly the sermon on the future of the Church and its duties preached by Archbishop Ireland. What could he do for a State Church? "Of inestimable advantage to us," said he, "is the liberty the Church enjoys under the Constitution of the Republic. No tyrant here casts chains around her; no concordat limits her actions or cramps her energies. . . . We have a dreadful lesson to learn from certain European countries, in which, from weight of tradition, the Church clings to thrones and classes and loses her grasp upon the people." It will be a blessed thing for the Catholic Church if Benedict XV can catch the tone of that sermon, can take a lesson from the Church in America.

The present war will wear itself out and come to an end; thrones will fall, and fall soon; but the Papacy will long hold its primacy in Christendom. It has just one danger, that of not knowing its generation. During the late papal reign it has failed of the encomium of the two hundred of Issachar "who had understanding of the times to know what Israel ought to do." With all good purpose and all piety toward God it has earned the prevenient condemnation of the American prelate who, speaking during the pontificate of Leo, said: "The world has entered into an entirely new phase; the past will not return; reaction is the dream of men who see not, who sit at the gates of cemeteries weeping over tombs that shall not be reopened, in utter oblivion of the living world back of them." Oh for a statesman, a scholar, in the person of the new Benedict, who will not devote himself to spying out the innocent dubieties of seminary professors, the honest conclusions of French Church historians, but who will give liberty of research to scholars and teachers, so that priests shall not be held in fear of being delated to Rome, and the faithful may not be required to have their scriptural pabulum premasticated for them by a medieval Biblical Commission. They had more liberty in the days when Erasmus and Cardinal More hobnobbed in Latin over questions which are the heresies of today.

BELGIUM'S APPEAL TO AMERICA

IT is peculiarly appropriate that the appeal to the American nation from stricken Belgium, which we print on another page, should come from the hand of the Burgomaster of Ghent. In Ghent one hundred years ago was signed the treaty of peace between Great Britain and the United States which put an end to the War of 1812. What is vastly more important, it marked the beginning of a century of peace among English-speaking peoples—a century during which England and the United States have again and again resorted to peaceful means to settle controversies which in other times and under other conditions would have been settled only by war.

So Ghent has a peculiar claim upon American sympathies. No American can be unaffected by the appeal which the chief magistrate of that historic city makes for American protection for its people and their country.

The appeal of Major Seaman, the special representative of The Independent, to President Wilson on behalf of Belgium, to which M. Braun refers in his cabled message, reads as follows:

> The Burgomaster of Ghent, where the treaty of peace was signed a hundred years ago, authorizes me to respectfully request that in case of invasion the city be placed under the protection of the American flag for the safeguarding of its people and its historic monuments.
>
> The German Government holding Brussels prevents the

American Minister from communicating with his Government.

Why should the American Government permit the German Ambassador at Washington to have free communication with his Government at Berlin?

Could not the United States join with other neutral nations, such as Italy, Norway, Sweden, Spain, Switzerland, Holland and the South American republics in demanding a cessation of the atrocities and barbarities now being committed by Germany?

As Major Seaman reported last week in his cablegram, a commission of five eminent Belgian officials has sailed for this country to present to the President and the people of the United States Belgium's plea for protection against a perfidious and barbarous invasion.

What reply can the American nation make to Belgium's appeal? Officially none. Our duty of neutrality is binding upon us. As a government we must keep silent unless and until—and this is unthinkable—we shall be prepared to take sides in the struggle by force of arms.

But individually, indeed collectively—provided it be not officially—we may do much. The American Government must keep silent. But American public opinion may, indeed it should, speak in no uncertain tones its condemnation of the violation of Belgium's neutrality, the pillage of the cities, the aerial bombardment of its capital.
